EDMUND THE MARTYR, SAINT, King of East Anglia, b. about 840; d. at Hoxne, Suffolk, 20 November, 870. The earliest and most reliable accounts represent St. Edmund as descended from the preceding kings of East Anglia, though, according to later legends, he was born at Nuremberg (Germany), son to an otherwise unknown King Alcmen of Saxony. Though only about fifteen years old when crowned in 865, Edmund showed himself a model ruler from the first, anxious to treat all with equal justice, and closing his ears to flatterers and untrustworthy informers. In his eagerness for prayer he retired for a year to a hermitage at Hunsanton, and learned the whole Psalter by heart, in order that he might afterwards recite it regularly. In 870 he bravely repulsed the two Danish chieftains Hinguar and Hubba who had invaded his dominions. They soon returned with overwhelming numbers, and pressed terms upon him which as a Christian he felt bound to resist. In order to avert a fruitless massacre, he disbanded his troops and set out for the abbey of Framlingham; on the way he fell into the hands of the invaders. Having loaded him with chains, his captors conducted him to Hinguar, whose impious demands he again rejected, declaring his religion dearer to him than his life. His martyrdom took place in 870 at Hoxne in Suffolk. After beating him with cudgels, the Danes tied him to a tree, and cruelly tore his flesh with whips. Throughout these tortures Edmund continued to call upon the name of Jesus, until at last, exasperated by his constancy, his enemies began to discharge arrows at him. This cruel sport was continued until his body had the appearance of a porcupine, when Hinguar commanded his head to be struck off. From his first burial-place at Hoxne his relics were translated to two prelates who had all his assets worth, since called St. Edmundsbury, where arose the famous abbey of that name. His feast is observed 20 Nov., and he is represented in Christian art with sword and arrow, the instruments of his torture.

THOMAS ARNOLD, Memoirs of St. Edmund's Abbey in B. S. (Cranbrook, 1880); in contained in History of Ely. Robert E. Edmund (1863), and UAVFERES DE PONTECHI, Infatia S. Edmundi (c. 1150); TINEMOUTH AND CAPHRAYE, Nova Legenda aurea, ed. RAWLES (Oxford, 1900); SIRROCK, Lives of the Saints (Dublin, 1872); MACKINLAY, Saint Edmund King and Martyr (London, 1895).

COLUMBIA EDMONS.

COLUMBIA EDMONS.
will later, as members of society, be useful or harmful, there is evidently needed some higher direction than that of the individual teacher, in order that the purpose of education may be realized. Both the Church and the State, therefore, have interests to safeguard; each in its own sphere must exercise its authority, if education is to strive for the true ideal through the best content and by the soundest methods. It is thus obvious that education at any given time expresses the dominant ideas in philosophy, religion, and science, while, in its practical control, the existing powers and temporal power and the spiritual assume concrete form. As, moreover, these ideas and relations have varied considerably in the course of time, it is quite intelligible that a solution of the central educational problems should be sought in history; and it is further beyond question that historical study, in this as in other departments, has a manifold utility.

A mere recital of facts is of little avail unless certain fundamental principles be kept in view, and unless the fact of Christian revelation be given its due importance. It is needful, then, to distinguish the constant elements in education from those that are variable; the former including man's nature, destiny, and relations to God, the latter all those changes in theory, practice, customs, and institutions, which are not essential to the conduct of educational work. It is with the first aspect of the subject that the present article is mainly concerned; and from this standpoint education may be defined as that form of social activity whereby, under the direction of mature minds and by the use of adequate means, the physical, intellectual, and moral powers of the individual human are developed and used to the utmost effect for the accomplishment of his life-work here and for the attainment of his eternal destiny.

Neither this nor any other definition was formulated from the beginning. In primitive times the helplessness and needs of the child were so obvious that his elders by a natural impulse gave him a training in the rude arts that enabled him to procure the necessities of life. It was only as he grew up that he was prepared for the accomplishment of his life-work here and for the attainment of his eternal destiny. Neither this nor any other definition was formulated from the beginning.

In primitive times the helplessness and needs of the child were so obvious that his elders by a natural impulse gave him a training in the rude arts that enabled him to procure the necessities of life. It was only as he grew up that he was prepared for the accomplishment of his life-work here and for the attainment of his eternal destiny.

The invention of writing was of the utmost importance for the development of language and the keeping of records. The earliest texts, chiefly of a religious nature, became the sources of knowledge and the means of education. Such were in China the writings of Confucius, in India the Vedas, in Egypt the Pyramid texts, and in Rome the Roman law. The main purpose in having these books studied by youth was to secure uniformity of thought and custom, and unvarying conformity with the past. In this respect Chinese education is typical. The sacred writings contained minute prescriptions for conduct in every circumstance and station of life. These the pupil was obliged to memorize in a purely mechanical fashion, whether he understood the words as he repeated them was quite indifferent. He simply stored his memory with a multitude of established forms and phrases, which subsequently he employed in the preparation of essays and in passing the governmental examinations. That he should learn to think for himself was of course out of the question.

With such a training, the development of free personality was impossible. In China, the family, with its sacred traditions and its ancestor-worship, was dominant; in Persia education was controlled by the State; in ancient India it was controlled by the priesthood; in India by the different castes. There was, doubtless, in the Oriental mind a consciousness of personality; but no effort was made to strengthen it and give it value. On the contrary, the Hindu philosophy, which regarded knowledge as the means of redemption from the miseries of life, placed in the hands of continental Hindus the means of individual education by the priestly society. The Hindu schemes of education, as contrasted with the systems of Oriental education, were an attempt to educate the individual through absorption into the being of the world. The position of the woman was, in general, a degraded one. Though the early training of the child devolved upon the mother, her responsibility brought with it no dignity. But little provision was made for the education of girls; their only vocation was to marry, bear children, and render service to the head of the family.

In view of these facts, it cannot be said that education as the Western world conceives it owes any great debt to the East. It is true that some of the sciences, as mathematics, astronomy, and chronology, and some of the arts, as sculpture and architecture, were carried to a certain degree of perfection; but the very success of Oriental education does not necessarily make it a model. Oriental and Western education differ by contrast the deficiencies of Oriental education.

Even in the sphere of morality the same antagonism appears between precept and practice. It cannot and need not be denied that many of the sayings, e. g. of Confucius, evince a high ideal of virtue; while some of the Hindu proverbs, such as those of the "Fanatha-vatvas", are not so developed as to make them of use. It only makes it more difficult to answer the question: Why was the actual living of these people so far removed from the formally accepted standards of virtue? Nevertheless, Oriental education has a peculiar significance: it shows quite plainly the consequences of sacrificing the individual to the interests of human institutions, and of reducing education to a mechanical process that of the subaltern mind is to mould all minds upon one unchanging pattern; and it further shows how little can be accomplished for real education by despotic authority, which demands, and is satisfied with, an outward observance of custom and law. (See Davidson, "A History of Education", New York, 1901.)

The Greeks.—If the education of the Oriental peoples was stationary, that of the Greeks exhibits a progressive development which passes from one extreme to another through a variety of movements and reactions, of ideals and practice. What remains constant throughout is the idea that the purpose of education is to train youth for citizenship. This, however, was conceived, and its realization attempted, in different ways by the several City-States. In Sparta, the child, according to the Code of Lycurgus, was the property of the State. From his seventh year onward he received a public training whose one object was to make him a soldier, by developing physical strength, courage, self-control, and obedience to law. It was a hard training in gymnastic exercises, with little attention to the mental side. The method here is to mould all minds upon one unchanging pattern; and it further shows how little can be accomplished for real education by despotic authority, which demands, and is satisfied with, an outward observance of custom and law. (See Davidson, "A History of Education", New York, 1901.)

The ideal of Athenian education was the completely developed man. Beauty of mind and body, the cultivation of every inherent faculty and energy, harmony between thought and life, decorum, temperance, and regularity—such were the results aimed at in the home and in the school, in social intercourse, and in civic relations. We are lovers of the beautiful," said Pericles, "yet simple in our tastes, and we cultivate the mind without loss of manliness" (Thucydides, II, 40). The means of culture were music and gymn-
ties, the former including history, poetry, the drama, oratory, and science, along with music in the narrower sense; while the latter comprised games, athletic exercises, and the training for military duty. That music was no mere "accomplishment" and that gymnastics had a higher aim than bodily strength or skill is evident from what Plato tells us in the "Protagoras". The Greeks indeed laid stress on courage, temperance, and the other cardinal virtues, and if their theoretical discussions could be taken as fair accounts of their actual practice, it would be difficult to find, among the products of human thinking, a more exalted ideal. The essential weakness of their moral education was the failure to provide adequate sanction for the principles they formulated and for the counsels they gave to youth. The practice of religion, whether in public or in the home, had no influence upon the formation of character. The Greek deities, after all, were no models for imitation; some of them could scarcely have been objects of reverence, since they were endowed with the weaknesses and passions of men. Religion itself was mechanical and external; it did not touch conscience nor awaken the sense of sin. As to the future life, the Greeks believed in the immortality of the soul; but this belief had little or no practical significance. Thus the motive for virtuous action was found, not in respect for Divine law nor in the hope of eternal reward, but simply in the desire to temper in due proportion the elements of human nature. Virtue is not self-repression for the sake of duty, but, as Plato says, "a kind of health and beauty and good habit of the soul", while vice or disease and deformity and sickness of it. The just man "will so regulate his own character as to be on good terms with himself, and to set those three principles [reason, passion, and desire] in tune together, as if they were verily three chords of a harmony, a higher, and a lower, and a middle, and whatever may be between the two; and that is precisely his business, to bring the many elements of his nature into unity as a temperate and duly harmonized man, he will then at length proceed to do whatever he may have to do" (Republic, IV, 443). This conception of virtue as a self-balancing was closely bound up with that idea of personal worth which has already been mentioned as the central element in Greek life and education. Belief in the duty to obey law and to be a good citizen is clearly that of man for the sake of his humanity, nor even that of the Greek for the sake of his nationality; it was the personality of the free citizen, and from citizenship the artisan and the slave were excluded. The mechanical arts were held in bad repute; and Aristotle declares that "they render the body and soul or intellect of free persons unfit for the exercise and practice of virtue" (Politik, V, 1337). A still more serious limitation, affecting not only their concept of human dignity, but their regard for human life as well, consisted in the exposure of children. This was practised at Sparta by the public authority, which destroyed the child that was unfit for the service of the State; while at Athens the fate of his offspring was committed to the care of the family, decided in accordance with purely personal interests. The matter was not much better than it had been in the Orient. Women were generally regarded as inferior beings, "impotent for good, but clever contrivers of all evil" (Euripides, Medea, 106). At best she was a means to an end, the bearer of children and the care of the household; her education consequently was of the slightest sort. The only exceptions were the heteras, i.e. the women who were outside the home circle and who with greater freedom of living combined higher culture than the legitimate wife could hope for. Under such circumstances marriage implied for woman a lowering of personal worth that was in marked contrast with the ideals set up for the education of men. These ideals, again, underwent a decided change during the fifth century B.C. In one respect at least it was a change for the better; it extended the rights of citizenship. The constitution of Solon was set aside and that of Cleisthenes adopted in its stead (500 B.C.). The democratic character of the latter, with the increase in prosperity at home and the widening of foreign relations, afforded new opportunities for individual ability and enterprise. The purposes of education, activity, however, was not put forth in behalf of the common good, but rather for the advancement of personal interests. At the same time morality was deprived of even the outward support it had formerly drawn from religion; philosophy gave way to scepticism; and education, while it became more intellectual, laid emphasis on form rather than substance. The Sophists, who supplied the growing demand for instruction in the art of public discussion and offered information on every sort of subject. Developing in practical directions the principle that "man is the measure of all things", they carried individualism to the extreme of subjectivism alike in the sphere of speculative thought and in that of moral conduct. The purposes of education were correspondingly modified, and new problems arose. Now that the old standards and basis of morality had been rejected, the main question was to replace them by others in which due allowance would be made on the one hand for individuality and on the other for social needs. The answer of Socrates was: "Know thyself" and "Knowledge is virtue", i.e. a knowledge drawn from personal experience, yet possessing universal validity; and the means prescribed by him for obtaining such knowledge was his maieutics, i.e. the art of giving birth to ideas through the method of question and answer, by which he developed the power of thinking. As an intellectual discipline, this scheme had indubitable value; but it left unresolved the chief problem of the highest kind to be translated into action? Plato offered a twofold solution. In the "Republic", setting out from his general theory that the idea alone is real, and that the good of each thing consists in harmony with the idea whence it originated, he reaches the conclusion that knowledge consists in the perception of this harmony. The aim of education, therefore, is to develop the soul so as to attain as far as possible to this kind of knowledge, and contributes him character and wisdom. In the "Laws", Plato attempts to revise and combine certain elements of the Spartan and of the Athenian system; but this reactionary scheme met with no success. This problem, finally, was taken up by Aristotle in the "Ethics" and the "Politics". As in his philosophy, so in his educational theory, he departs from Plato's teaching. The ideal of society is the happiness; "What we have to aim at is the happiness of each citizen, and happiness consists in a complete activity and practice of virtue" (Politics, IV). More precisely, happiness is the "consent of the activities of the highest part of man according to the law of his own excellence, not accompanied by adequate, external conditions". Merely to know the good does not constitute virtue; this knowledge must issue in practice, the goodness of the intellect (knowledge of universal truth) must be combined with goodness of action. The three things which make men good and virtuous—nairure, habit, and reason—must be in harmony with one another (for they do not always agree); men do many things against habit and nature, if reason persuades them that they ought.
We have already determined what natures are likely to be most easily moulded by the hands of the legislator. All else is the work of education; we learn some things by habit and some by instruction" (Polities, Bk. VII). Education, however, must always be adapted to the peculiar character of the State: "The citizen should be moulded to suit the form of government under which he lives" (ibid., VIII). And again, "It is right that the citizens should possess a capacity for affairs and for war, but still more for the enjoyment of peace or leisure; right that they should be capable of such actions as are indispensable and salutary, but still more of such as are moral per se. It is with a view to these objects, then, that they should be educated while they are young" (ibid., VIII). And again, "Neither must we suppose that any one of the citizens belongs to himself, for they all belong to the State, and are each of them a part of the State, and the care of each part is inseparable from the care of the whole" (ibid., VIII).

In the theories of Plato and Aristotle are found the highest reaches of Hellenic thought regarding the purpose and nature of education. Each of these great thinkers established schools of philosophy, and each has profoundly affected the thought of all subsequent time, yet neither succeeded in providing an education sound and permanent enough to avert the moral and political downfall of the nation. The diffusion of Greek thought and culture throughout the world by conquest and trade, couched in the language which its own good of evils which sprang from an exaggerated individualism. Once the idea was accepted that each man is his own standard of conduct, neither brilliance of literary production nor fineness of philosophic speculation could prevent the decay of patriotism, and of a virtue which had never looked higher than the State for its sanction. An Aristotelianelle, in A. B. 464; and in the "Ibid., II., p. 115," the radical difficulty: "Now if arguments and theories were able by themselves to make people good, they would, in the words of Theognis, be entitled to receive high and great rewards, and it is with theories that we should have to provide ourselves. But the truth apparently is that they are strong enough to encourage and stimulate young men of the right kind, forming a character in their children. And again, "he who was a capable of converting the mass of men to goodness and beauty of character." No such "conversion" was aimed at by the Sophists. Appealing to the natural tendencies of the individual, they developed a spirit of selfishness which in turn broke out in falsehood, thus checking the work of the conquest of Greece by Roman arms.

The Romans.—In striking contrast with the Greek character, that of the Romans was practical, utilitarian, grave, austere. Their religion was serious, and it permeated their whole life, hallowing all its relations. The family, especially, was far more sacred than in Sparta or Athens, and the position of woman in the home and family was unique. Still, as with the Greeks, the power of the father over the life of his child—pater potestas—was absolute, and, in the earlier period at least, the exposure of children was a common practice. In fact the Laws of the Twelve Tables provided for the immediate destruction of deformed offspring and gave the father, during the whole period of his life, the right to kill or slay them. Subsequently, however, a check was placed on such practices. The ideal at which the Roman aimed was neither harmony nor happiness, but the performance of duty and the maintenance of his rights. Yet this ideal was to be realized through service to the State. Deep as was the family feeling, it was always subordinate to devotion to the public well. "Parents are dear," said Cicero, "and children and kindred, but all loves are bound up in the love of our common country" (De Officiis, I, 17). Education therefore was essentially a preparation for civic duty. "The children of the Romans are brought up that they may one day be able to be of service to the fatherland, and one must accordingly instruct them in the customs of the State and in the institutions of their ancestors. The fatherland has produced and brought us up that we may devote to its use the finest capacities of our mind, talent, and understanding. Therefore we must learn those arts whereby we may be of greater service to the State; for that I hold to be the highest wisdom and virtue."

These words express, at any rate, the spirit of the early Roman education. The home was the only school, and the parents the only teachers. Their purpose was, to make their children good and useful citizens and as the citizens of the State. In the course of time, elementary schools were conducted by private teachers and were supplementary to the home instruction. About the middle of the third century A. D. foreign influences began to make themselves felt. The works of the Greeks were translated into Latin. Greek teachers were introduced, and schools established in which the educational characteristics of Greek education, as represented in the work of the orator, were carefully cultivated. The importance which the Romans attached to eloquence is clearly shown by Cicero in his "De Oratore" and by Quintilian in his "Institutes"; to produce the orator became eventually the chief end of education. Quintilian's work is the deepest and most tangible to educational theory produced in Rome. The heli-
scribing the minutest details of life and of religious practice. Throughout the Old Testament, God appears as the teacher of His chosen people. He sets before them a standard of righteousness which is none other than Himself: “You shall be holy, because I am holy” (Levit., xi, 46). Through Moses and the Prophets He gives them His Commandments and the promise of a Messiah to come. But He also placed upon His people the burden of the care of His household. “Hear, O Israel, the Lord our God is one Lord. Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength. And these words which I command thee this day, shall be in thy heart: and thou shalt tell them to thy children, and thou shalt meditate upon them sitting in thy house, and walking on thy journey, sleeping and rising” (Deut., x, 12-15). In ancient times, education, at least in the earlier period, was given chiefly in the home. Jewish family life, indeed, far surpassed that of the Gentiles in the purity of its relations, in the position it secured to woman, and in the care which it bestowed on children, who were regarded as a blessing vocalized by God and destined for His service by fidelity to the Divine law. An important function of the synagogue also was the instruction of youth, which was committed to the scribes and the doctors. Schools, as such, came into existence only in the later period, and even then the teaching was permeated by religion. Though the Old Testament contains no theory of education in the stricter sense, it abounds in maxims and principles which are all the more admirable because they were imparted “in the fulness of time.” Not only the utterances of the Prophets, but many signal events in the history of the Jews and many of their ritual observances were types of the Messiah; as St. Paul says, “All these things happened to them in figure” (1 Cor., x, 11), and “The law was our paedagogue in Christ” (Gal., iii, 24). As the master of mankind, God, while imparting to them the truth which they most needed, also prepared the way for the greater truths of the Gospel.

Christian Education.—As in many other respects, so for the work of education, the advent of Christianity is the most important epoch in the history of mankind. Not only does the Christian conception of life differ radically from that of ancient times, not only does the Christian teaching impart a new sort of knowledge and lay down a new principle of action, but Christianity, moreover, supplies the effectual means of making its ideals actual and of carrying its precepts into practice. Through all vicissitudes of conflict and adjustment, of changing civilizations and varying opinions, in spite even of the shortcomings of its own adherents, Christianity stands as the most perfect, practical, and altogether the most successful system of education that the world has seen. It was the suffering of Christ, as He entered into the very depth of life’s difficulties, which at last secured its triumph over the world, for “unsearchable are the riches and wisdom and knowledge of God” (Rom., xi, 33). It was the love of God, which in the person of Christ reconciled the world to Himself, that “for the which ye were called” (1 Cor., xvi, 14).

Jesus Christ as Teacher.—“God, who, at sundry times and in divers manners, spoke in times past to the fathers by the prophets, last of all, in these days hath spoken to us by his Son” (Heb., i, 1-2). This communication through the God-Man was to reveal the true way of living: “The grace of God our Saviour hath appeared to all men: instructing us, that, denying ungodliness and worldly lusts, we should live soberly, and justly, and holy, and godly in this world, looking for the blessed hope and coming of the great God and our Saviour Jesus Christ” (Titus, ii, 11, 12). Of Himself and His mission Christ declared, “I am come a light into the world; that whosoever believeth in me, may not remain in darkness” (John, xii, 46); and again, “For this was I born, and for this came I into the world, that I should give testimony to the truth” (John, xviii, 37). The knowledge which He came to impart was no mere intellectual possession or theory: “I am come that they may have life, and may have it more abundantly” (John, x, 10). He taught, therefore, as one “having authority”; He insisted that His hearers should believe the truths which He taught, even though these might seem to be “hard sayings” (John, vii, 51). His words, in fact, made no appeal either to pride of intellect or to self-sufficiency or to passion. For the most part, as in the Sermon on the Mount, they were diametrically opposed to the maxims that had obtained in the pagan world. They were, in the highest sense, supernatural, not only in proposing eternal life as the ultimate goal of human existence, but because they involved the denial of self as the chief requisite for attaining that destiny. Service to the neighbor was insisted upon, but this was to be rendered in the spirit of love, the new commandment which Christ gave (John, xiii, 34). Faithfulness also to civic duty was required, but the sanction which imparted force to such obligations was made to elevation to a higher citizenship in the Kingdom of God. To live in the light of Jesus and His teaching was earthly life, so far as possible, was the ideal to which every other good was subordinate; “Seek ye first the kingdom of God, and His justice, and all these things shall be added unto you” (Matt., vi, 33). 

Truths of this kind, so far removed from the natural tendencies of human thought and desire, could be impressed only upon the higher powers of the mind, and embodied in himself all the qualifications of a perfect teacher. They were, no doubt, the result of many years of preparation. But He who was to teach them could at any moment have simply declared “I am the way, the truth, and the life” (John, xiv, 6). And whatever power they attached in theory to personality was of far less significance than the actual realization of the highest ideals in Christ’s life and teachings, for it was these which truly appealed to that imitative tendency which is so deeply rooted in man’s nature and from which so much is expected in modern education. The axiom, also, that we learn by doing, and that knowledge gets its full value only when it issues in action, finds its best exemplification in Christ’s dealings with His disciples. He “began to do and to teach” (Acts, i, 1). In His miracles He gave to the world a foretaste of the greatness of His power, and by His death and resurrection He therefore of His authority to require faith in His words: “The works themselves which I do give testimony of me, that the Father hath sent me” (John, v, 36). To His disciples, when they hesitated or were slow to realize that the Father abided in Him, the answer was given: “Otherwise believe for the very works’ sake” (xvi, 12). What He demanded in turn was no mere outward profession of faith or loyalty: “Not every one that saith to me, Lord, Lord, shall enter into the kingdom of heaven: but he that doth the will of my Father” (Matt., vii, 21).

The necessity of manifesting belief through action is constantly pointed out both in the literal teaching of Christ and in His parables. These, again, illustrate His practical method as a teacher. They were drawn from objects and circumstances of which His hearers were familiar. In each instance they were adapted to the manner of thinking suggested by the local surroundings and the customs of the people; and they were often called forth by an incident that seemed unimportant or by a question which was asked now by His followers and again by His tireless enemies. Thus the simplest thing of nature—the vine, the fig-tree, the bird of the air, and the blade of grass—were made to yield lessons of the deepest moral significance. His aim was not to adorn His own discourse, but rather to bring its content into the minds of his hearers more vividly, and to secure for it greater permanence by associating in their thought some supernat-
ural truth with the facts of daily experience. Sensory perception, memory, and imagination were thus developed to form a mental setting for the great truths of the Kingdom. The same principle found its application in the institution of the sacraments whereby natural elements are made the outward signs of inward grace. As St. John Chrysostom aptly says, "Wert thou incorporeal, He would have bestowed on thee incorporeal gifts in their bare reality; but because the soul is bound up with the body, He gives thee intelligible things under sensible forms" (Homilia ix, ad populum Antioch.). In fact the whole teaching of Christ is the clearest proof of the principle that education must adapt itself in method and practice to the needs of those who are to be taught. In accordance with this principle we need to provide the persons beforehand for the institution of the Holy Eucharist, for His own death, and for the coming of the Holy Ghost (John, vi, xiv, xv); and He even reserved certain truths to be made known by the Paraclete: "I have yet many things to say to you; but you cannot bear them now. But when he, the Spirit of truth, is come, he will teach you all truth" (xvi, 12, 13). Thus the Church has been governed by the same rule, which may be called a natural rule of education. It makes human conjecture or speculation, nor to the theories of philosophical schools, but to the Spirit of God Himself. This of course was best realized by those who were nearest to Him; yet even those of the Jews who were not among the Apostles, but were, like Nicodemus, disposed to judge fairly, confessed His superior authority to them, "art thou a teacher of the law, and knowest not these things" (John, xiv, 12). For no man can do these signs which thou dost, unless God be with him" (John, iii, 2).

The Aim of Christian Education.—Had Christ's mission ended when He quitted the earth, He would still have been in word and work the ideal teacher, and would have influenced for all time the education of mankind so far as its ultimate aims and basic principles are concerned. How He taught is a matter of fact. He made ample provision for the perpetuation of His work by training a select body of men who for three years were constantly under His direction and were thoroughly imbued with His spirit. To these Apostles, moreover, He gave the command: "Going therefore, teach ye all nations .... and behold I am with you all days, even to the consummation of the world" (Matthew xxi, 20).

These words are the charter of the Christian Church as a teaching institution. While they refer directly to the doctrine of salvation, and therefore to the imparting of religious truth, they nevertheless, or rather by the very nature of that truth and its consequences for life, carry with them the obligation of insisting on certain principles and maintaining certain characteristics which have a decisive bearing on all educational problems.

1. The truth of Christianity is to be made known to all men. It is not confined to any one race or nation or class, nor is it to be the exclusive possession of highly gifted minds. This characteristic of universality is in plain contrast with the highest conceptions of the pagan world. In the case of the Pharaoh of Egypt, Greek philosophy, or the emperor of the Roman, the learned man was an authority for the Arabian, and the Roman looked upon outside nations as subjects to be governed rather than as people to be taught. But at Athens also and at Rome there was the distinction between free citizens and slaves, in consequence of which the latter were excluded from the benefits of education. As against these narrow limitations Christ charged His Apostles to "teach all men", and St. Paul, in the same spirit, professes himself a debtor to all men, Greeks and barbarians, the wise and the unwise alike. All, in fact, were to be dealt with as children of the same Heavenly Father and heirs of the Kingdom of God. In respect of these supernatural prerogatives, the distinctions which had hitherto prevailed were set aside: Christianity appeared as one vast school with mankind at large for its disciples.

2. The commission given to the Apostles was not to expel with them; it was to remain in force "all days, even to the consummation of the world". Perpetuity, therefore, is an essential feature in the educational work of Christianity. The institutions of paganism had indeed flourished and advanced from phase to phase of development, but they did not contain the element of enduring vitality. In the higher departments of learning, as in philosophy, school had followed school into vogue and into decay. And in education itself, one ideal after another had been put forward only to be displaced. Christianity, on the contrary, while it could never become a rigid system, held up to mankind certain unchangeable truths which should serve as criteria for determining the value of new truths and the validity of new schools. By insisting, especially, that man's destiny was to be attained, not in any form of temporal service or success, but in union with God, it proposed an ideal which should be valid for all time and amid all the variations of human thought and endeavour. That such changes would inevitably come to pass, Christ, without doubt, foresaw. In view of these, a merely human teacher who had not been taught by the Holy Spirit, as the Church would be, would have been powerless in the face of devices which would, if successful, have attested his foresight, or shrewdness, or knowledge of human nature. But Christ's guarantee to the Apostles is at once simpler and surer: "Behold I am with you all days". The task of instructing the world in Christian truth would have been impossible but for this permanent foundation of His appointed teachers. On the other hand, once the force of His promise is realized, the significance of Christianity as a perpetual institution becomes evident: it means that Christ Himself through a visible agency was to continue for all time the work He began during His earthly life as Teacher of the human race.

3. It has already been pointed out that some of the pagan peoples, and especially the Greeks, had attained a very high conception of personality; and it has also been shown that this conception was by no means perfect. The teaching of Christianity in this respect is so far superior to any other that if a single element could be designated as fundamental in Christian education it would be the emphasis which it lays on the individuality of the person. As the Church in its conception of personality had its origin, not in any abstract speculation as to goodness or virtue, but in the actual, concrete life of a Person who was absolutely perfect. It was not, then, obliged to cast about for the ideal man, or to present a theory as to what that ideal might possibly be: it could and it did point to a realization which far surpassed the most exalted ideas of human wisdom. In Christ first appeared the full dignity of human nature through its elevation to personal union with the Word of God; and in Him, as never before or since, were manifest those traits which furnish the noblest models for imitation.

Christianity, furthermore, elevated human personality by the value it set upon each human soul as eternal, and thereby set the supreme objective against which all the claims of the world must be measured. In that there is no longer the supreme arbiter, nor is service to the public weal the ultimate standard. These, it is true, within their legitimate sphere have just claims upon the individual. Christianity by no means teaches that such claims can be disregarded or the corresponding duties neglected, but rather that the discharge of all social and civic obligations will be more thorough when subordinated to, and inspired by, the duties that man owes to God. While the value of personality is thus enhanced, the sense of responsibility is correspondingly increased; so that the freer development of the person is not allowed to culminate in selfishness nor in that extreme individualism which is a threat to social organization.

4. From these principles Christianity drew consequences which were totally at variance with the
thought and practice of paganism. The position of woman was lifted at once to a higher plane; she ceased to be a chattel, or a mere instrument of passage, and became the equal of man, with the same personal worth and the same eternal destiny. Marriage was no longer a union entered into through caprice or convention, but an indissoluble bond involving mutual rights and duties. Moreover, it was raised to the dignity of a sacrament, which not only sanctified the marital relation and its purposes, but also conferred the grace of the divine Spirit on the offspring. Christianity, moreover, laid upon the child the duty of respecting and obeying his parents, not out of servile fear or hard necessity, but through a spirit of reverence and filial love. The ties of home-life were thereby strengthened, and the whole work of education took on a new character because it was consecrated in its very source by religion.

Though its content Christianity opened up to the human mind wide realms of truth which unaided reason could not possibly have attained, and which nevertheless are of far deeper import for life than the most learned speculations of pagan thought. Upon those truths, also, which the philosophers had but vaguely discerned, or about which they had remained in doubt, it shed a new light. There was the further questioning, for the Christian, as to the existence of a personal God, the reality of His providence, the immortality of the soul, the freedom of the will, and the resulting accountability of man to Divine Justice. Above all, the nature of the moral order was set forth in unmistakable terms. Christianity insisted that morality was not mere outward conformity to custom or law, but the inner rectitude of the will, that aesthetic refinement was of far less consequence than purity of heart, and that love of the neighbour as proven in deeds, not personal gain or advantage, was the true norm of human relationships. That such a conception of life, with its emphasis on really spiritual aims, must lead to the formation of educational ideals unknown to the pagan world, is obvious. But on the other hand, there was no wrong in being taught that the world was not all there was in its "otherworldliness", reduces or neglects the values of the present life. What it consistently maintains is, that life here gets its highest value by serving as a preparation for the life to come. The question is not whether one should live now with any regard to the future or look forward to the future with no concern for the present; but rather how one should profit by the opportunity the life here affords as well as procure the other. The problem, then, is one of establishing proportions, i.e., of determining values according to the standard of man's eternal destiny. When education is defined as "preparation for complete living" (Herbert Spencer), the Christian can take no objection to the words as they stand; but he will insist that no living can be "complete" which leaves out of consideration the life here in such wise as to secure the other. The problem, then, is one of establishing proportions, i.e. of determining values according to the standard of man's eternal destiny. When education is defined as "preparation for complete living" (Herbert Spencer), the Christian can take no objection to the words as they stand; but he will insist that no living can be "complete" which leaves out of consideration the life here in such wise as to secure the other. The problem, then, is one of establishing proportions, i.e., of determining values according to the standard of man's eternal destiny. When education is defined as "preparation for complete living" (Herbert Spencer), the Christian can take no objection to the words as they stand; but he will insist that no living can be "complete" which leaves out of consideration the life here in such wise as to secure the other.

EDUCATION

Next in importance to Christ's personal teaching was the establishment of a teaching body whose mission was identical with His own: "As the Father hath sent me, I also send you"(John, xx, 21); and "He that heareth you, heareth me" (Luke, x, 16). He was not content with converting once and for all the truth of the Gospel, nor did He leave it in the hands of the apostles either as an individual enthusiastic or initiate. He founded a Church to carry on His work. The spread of His doctrine was entrusted, not to books, nor to schools of philosophy, nor to the governments of the world, but to an organization that spoke in His name and with His authority. No other body of teachers ever undertook so vast a task, or one in which the part of theology and science were of such high importance, or the demand for education in the highest sense. Apart from the preaching of the Apostles, the earliest form of Christian instruction was that given to the catechumens (q. v.) in preparation for baptism. Its object was twofold: to impart a knowledge of Christian truth, and to train the candidate in the practice of religion. It was conducted by the bishop and, as the number of catechumens increased, by priests, deacons, and other clerics. Until the third century this mode of instruction was an important adjunct to the Apostolate; but in the fifth and sixth centuries it was gradually replaced by private instruction of the converts, who were then less numerous, and by the training given in other schools to those who had been baptized in infancy. The catechumenal schools, however, gave expression to the idea that a Christian education: they were open to every one who accepted the Faith, and they united religious instruction with moral discipline. The "catechetical" schools, also under the bishop's supervision, prepared young clerics for the priesthood. The courses of study included philosophy and theology, and naturally took place in monasteries. The Church, in defense of Christian truth against the attacks of pagan learning. One of the oldest of these schools was at the Lateran in Rome; the most famous was that of Alexandria (see Doc- trine, Christian).

The act itself, in every detail, is full of a symbolism that brings vividly to mind the life and personality of Christ, the work of redemption, and the enduring sacrifice of the Cross. In due proportion, each item of the liturgy conveys a lesson through eye and ear to the soul. Hence, the spiritual, the mental, the body, the soul, are thus aroused, not simply as aesthetic activities, but as a support of intellect and will which thereupon issue in adoration and thanksgiving for the "mystery of faith". On the other hand, the liturgy has always included in its purpose the participation of the faithful, and hence it prescribes the response of the people to the prayers at the highest faculties of the soul. Sense, memory, imagination, and feeling are thus aroused, not simply as aesthetic activities, but as a support of intellect and will which thereupon issue in adoration and thanksgiving for the "mystery of faith". On the other hand, the liturgy has always included in its purpose the participation of the faithful, and hence it prescribes the response of the people to the prayers at the highest faculties of the soul. Sense, memory, imagination, and feeling are thus aroused, not simply as aesthetic activities, but as a support of intellect and will which thereupon issue in adoration and thanksgiving for the "mystery of faith".
adapted to some particular need, and the whole system of sacraments, from baptism to extreme unction, builds up the spiritual life by processes of cleansing, strengthening, nourishing, and healing, which parallel the stages and requirements of organic growth.

In a larger way, also, the liturgical year, as it commemorates the principal events in the life of Christ, brings into Christian worship a variety which affects to some extent both the details of the liturgy itself and the religious feeling of the faithful—from the waiting for Christmas to the triumph of Easter and Pentecost. For the due observance of the greater festivals the Church provides, as in Advent and Lent, by seasons of preparation. The Old Law with its types foreshadowed the New; the Baptist announced the Messiah; Christ himself prepared His disciples beforehand for the coming of the Holy Ghost. The Church, following the same practice, arouses in the mind of the faithful those thoughts and feelings which form an apperceptive preparation for the central mysteries of faith and their proper observance at appointed times. Along with these greater solemnities come year by year the commemorations of the Christian heroes, the men and women who through the footstool of Christ laboured for the spread of His kingdom, or even shed their blood for His sake. These are held up as models to be imitated, as realizations more or less perfect of the sublime ideal which is Christ Himself. And among the saints the foremost place is given to Mary the Mother of Christ, the ideal of Christian womanhood. Though not begun by theology among the early Christians, the cult of the Virgin was fostered by the Fathers of the Church, which gave her a special station in her honour. Each festival in her honour is at once an exhortation to copy her virtues and an evidence of the high station to which woman was raised by Christianity. The liturgy, then, is an application on a large scale of those principles which underlie all real teaching—appeal to the senses, association, apprehension, expression, and imitation. The Church did not begin by theorizing about these, nor did she wait for a psychological analysis to determine their value. Instructed by her Founder, she simply incorporated in her liturgy those elements which were best fitted to teach men the truth and lead them to act in conformity with the Gospel. It is none the less significant that modern education is adopting for its own purposes the principles of composition of the liturgy. In teaching a subject, the psychological principles which the Church first set the beginning has put into practice.

While the Church, in her interior life and in the execution of her mission, gave proof of her vitality and of her ability to teach mankind, she necessarily came into contact with influences and practices which were the legacy of paganism. In point of religious belief there was, of course, a clear breach between the polytheism of Athens and Rome and the doctrines of Christianity. But philosophy and literature were factors which had to be counted with as well as the educational system, which was still largely under pagan control. Schools had been opened by converts who were imbued with the ideas of Greek philosophy—by Justin Martyr, Clement, and Origen—and the study of the classics, from Alexandria, Clement and Origen enjoyed the highest repute. These men regarded philosophy as a means of guiding reason to faith, and of defending that faith against the attacks of paganism. Others again, like Tertullian, condemned philosophy outright as something with which the Christian could have nothing to do. In regard to the pagan classics the conflict of opinion was even sharper. Some of the greatest theologians and Fathers, like St. Basil, St. Gregory Nazianzen, and St. Gregory of Nyssa, had studied the classics under pagan masters and were therefore in favour of sending Christian youths to non-Christian schools on the ground that literary studies would enable them the better to defend their religion. At the same time these Fathers would not permit a Christian to teach in such schools lest he should be obliged to take part in idolatrous practices. Tertullian (de Idololatria, c. x) insists on the same distinction: the teacher, he says, by reason of his authority, becomes in a way the "catechist of demons"; the pupil, imbued with Christian faith, profits by the letter of classical instruction, but rejects its false doctrine and holds aloof from the superstitious practices which the teaching can hardly avoid. Such a distinction was natural in the severest of difficulties and gave rise to much discussion. The situation was not remedied by the edict of Julian the Apostate, forbidding the Christians to teach; though this called forth some protests and suggested the creation of a Christian literature based on classical models of style, nothing decisive resulted. On the other hand, fear of the corrupting influence of pagan literature and the desire to avoid the contamination of Christian authors from such studies; and it is not surprising to find among the opponents of the classics such men as St. John Chrysostom, St. Ambrose, St. Jerome, and St. Augustine. Though they had received a thorough classical education, and though they appreciated fully the worth of the pagan authors, their final attitude was adverse to the study of pagan literature. Apart from many controverted points in this subject, it is clear that the Fathers, at a time when the environment of the Church was still pagan, were far more anxious for the purity of faith and morals than for the cultivation of literature. In later ages, as the danger of contamination grew less, classical studies were revived and encouraged by the Church; but their value has more than once been questioned (see Laflamme, Influence des Pères de l'Église sur l'éducation publique, Paris, 1850).

Meanwhile the work of education was not neglected. If the Empire gave way before barbarian invasion, the Church found a new field of activity among the vigorous races of the North. To these she brought not only Christianity and a full exposition of the elements of classical culture. Through her missionaries she became the teacher of Germany and France, of England and Ireland. The task was a difficult one, and its accomplishment was marked by many vicissitudes of temporary failure and hard-won success. At times, indeed, it would seem that the desire for learning had quite disappeared even among those for whom the acquisition of knowledge was the one passion, but such a situation was rare. Yet these drawbacks only served to stimulate the zeal of ecclesiastical and civil rulers in behalf of a more thorough and systematic education. Thus the salient feature of the Middle Ages is the co-operation of Church and State for the development of schools. Theodoric in Italy, Alfred in England, and Charlemagne in the Frankish Kingdom are illustrious examples of princes who joined their authority with that of bishops and councils to secure adequate instruction for clergy and people. Among churchmen it suffices to mention Chrodegang of Metz, Alcuin, St. Bede, Boethius, and Cassiodorus (see the several articles). As a result of their efforts, education was provided for the clergy in the cathedral schools under the direct supervision of the bishop and for the laity in schools to which all had access. In the curriculum, religion held the first place; other subjects were few and elementary, comprising at best the trivium and quadrivium (see Arts, The Seven Liberal). But the significance of this education lies not so much in its content as in the fact that it was the means of arousing a love of learning among peoples that had emerged from barbarism, and of laying the foundations of Western culture and science. The history of education records no greater undertaking; for the task was not one of improving or perfecting, but of creating, and had not the Church gone vigorously about her work, modern civilization would have been retarded for centuries. (See Schools; Middle Ages.)

One of the chief factors in this progress was monas-
ticism (q. v.). The Benedictine monasteries especially were homes of study and depositories of the ancient learning. Not only sympathetic writers, like Montalembert, but those also who are more critical, acknowledge the service which the monks rendered to education. "In those restless ages of rude culture, of constant warfare, of perpetual lawlessness and the rule of might, monasticism offered the one opportunity for a life of repose, of contemplation, and of that leisure and relief from the ordinary vulgar but necessary duties of life essential to the student... Thus it happened that the monasteries were the schools, teaching; they offered the only professional training; they were the only universities of research; they alone served as publishing houses for the multiplication of books; they were the only libraries for the preservation of learning; they produced the only scholars; they were the sole educational institutions of this period." (Paul Monroe, A Text-Book in the History of Education, New York, 1907, p. 255.) In addition to their prescribed studies, the monks were constantly occupied in copying the classic texts. "While the Greek classics owed their safe preservation to the libraries of Constantinople and to the monasteries of the East, it is primarily to the monasteries of the West that we are indebted for the survival of the Latin classics." (Sandys, A History of Classical Scholarship, 2nd ed., Oxford, 1902, p. 617.) The specific way in which education was carried on in the monastery school and was intended primarily for the novices. In some cases, however, a schola exterior, or outer school, was added for lay students and for aspirants to the secular priesthood. The course of study included, besides the seven liberal arts, the reading of Latin authors and the music of the Church. Finally, through their annals and chronicles, the monks provided a rich store of information concerning medieval life, which is invaluable to the historian of that period. The chief importance, however, of the monastic schools is found in the fact that they were conducted by an organized body of teachers who had withdrawn from the world and devoted their lives, under the guidance of religion, to literary pursuits and educational work. The same Christianity that had sanctified the family now gave to the profession of teacher a sacredness and a dignity which made teaching itself a noble vocation.

Two other movements form the climax of the Church's activity during the Middle Ages. The development of Scholasticism (q. v.) meant the revival of Greek philosophy, and in particular of Aristotle; but more in the Church's teaching than in its criticism. Scholasticism, moreover, was a distinct advance in the work of education; it was an intellectual training in method, in systematic thought, in severe logical reasoning, and in accuracy of statement. But taken as a whole, it furnished a great object-lesson, the purpose of which was that, for the keenest intellect, the findings of reason and the truths of Revelation could be harmonized. Having used the subtilties of Greek thought to sharpen the student's mind, the Church thereby made him incapable of error without the least fear of contradiction. She thus united in a consistent whole whatever was best in pagan science and culture with the doctrine entrusted to her by Christ.

If education be rightly defined as "the transmission of our intellectual and spiritual inheritance" (Butler), this definition is fully exemplified in the work of the Church during the Middle Ages.

The same synthetic spirit took concrete form in the universities (q. v.). In founding these the popes and the secular rulers co-operated; in university teaching all the then known branches of science were represented; the student body comprised all classes, laymen and clergy, seculars and religious; and the diploma conferred was an authorization to teach every branch of the liberal sciences.

The university was thus, in the educational sphere, the highest expression of that completeness which had all along characterized the teaching of the Church; and the spirit of inquiry which animated the medieval university remains, in spite of other modifications, the essential element in the university of modern times. The changes which have since taken place have for the most part resulted in an authorization to teach every branch of that Church which the Church had built into a harmonious unity. As Protestantism by rejecting the principle of authority brought about innumerable divisions in belief, so it led the way to rupture between Church and State in the work of education. The Renaissance in its extreme forms ranked pagan culture above everything else; and the Reformation in its fundamental tenet went beyond the individualism which led to the decline of Greek education. Once the schools were secularized, they fell readily under influences which transformed ideals, systems, and methods. Philosophy detached from theology formulated new theories of life and its values, that moved, at first slowly then more rapidly, away from the positive teachings of the Church. A spirit of secularization and school spirit permeated philosophy and finally proclaimed itself the only sort of knowledge worth seeking. The most serious practical result was the separation of moral and religious from purely intellectual education a result which was due in part to religious differences and political changes, but also in large part to erroneous views concerning the nature and need of moral training. Such views again are in general derived from the denial, explicit or implicit, of the supernatural order, and of its meaning for human life in its relations to God; so that, during three centuries past, the main endeavour outside the Catholic Church has been to establish education on a purely naturalistic basis, whether this be aesthetic culture or scientific knowledge, individual perfection or social service. In its earlier stages Protestantism, which laid so much stress on faith, could not consistently have sanctioned an education from which religious ideals were eliminated. But according as its principles worked out to their legitimate consequences, it became less and less capable of opposing the naturalistic movement. The Catholic Church has thus been obliged to carry on, with little or no help from other Christian bodies, the struggle in behalf of the sacred character of Christianity in feeling and her educational work during the modern period may be described in general terms as the steadfast maintenance of the union between the natural and the supernatural.

From a human point of view the Church was under many disadvantages. The loss of the universities, the confiscation of monastic and other ecclesiastical property, and the opposition of various governments seemed to make her task hopeless. Yet these difficulties only served to call forth new manifestations of her vitality. The Council of Trent gave the impulse by decreeing that a more thorough education of the clergy should be secured through the seminaries (q. v.) and by urging upon bishops and priests the duty of building up the parochial seminaries throughout Italy. But the movement was also accelerated by provincial and diocesan synods throughout Europe. Then came the religious orders founded for the express purpose of educating Catholic youth. (See especially INSTITUTE OF THE BROTHERS OF THE CHRISTIAN SCHOOLS; SOCIETY OF JESUS; ORATORIANS.)

And to these finally must be added the numerous congregations of women who devoted their lives to the Christian training of girls. However different in organization and method, these institutions had for their common purpose the spread of religious truth along with secular knowledge among all classes. Thus
there arose, by force of circumstances, a distinctly Catholic system of education, including parish schools, academies, colleges, and a certain number of universities which had remained under the control of the Church or were founded anew by the Holy See. It is especially the parochial school that has served in recent times as an essential factor in the work of religion. In some countries, e.g., Canada, it has received support from the Government; in others, as in the United States, it is maintained by voluntary contributions. As Catholics have also to pay their share of taxes for the support of the public schools, their efforts have been frequent and successful in gaining recognition of the principles on which Catholic education is based. In fact, the whole parochial school movement during the nineteenth century forms one of the most remarkable chapters in the history of education. It proves on one side that neither loss of the State's co-operation nor lack of material resources can weaken the determination of the Church to carry on her educational work; and on the other side it shows what faith and devotion on the part of parents, clergy, and teachers can accomplish where the interests of religion are at stake. (See Schools.) As this attitude and this action of Catholics place them in a position which is not always rightly understood, it is helpful to make a brief statement of the principles on which the Church has based her course in the past, and to which she adheres unswervingly at the present time when the problems of education are the subject of so much discussion and the cause of agitation in various directions. The Catholic position may be outlined as follows:  

1. Intellectual education must not be separated from moral and religious education. To impart knowledge or to develop mental efficiency without building up moral character is not only contrary to psychological law, which requires that all the faculties should be trained, but is also fatal both to the individual and to society. No amount of intellectual attainment or culture can serve as a substitute for virtue; on the contrary, the more thorough intellectual education becomes, the greater is the need for sound moral training.  

2. Religion should be an essential part of education; it should form not merely an adjunct to instruction in other subjects, but the centre about which these are grouped and the spirit by which they are permeated. The study of nature without any reference to God, or of history without any reference to the will of God, or of human legislation without Divine law is at best a oned-sided education. The fact that religious truth finds no place in the curriculum is, of itself, and apart from any open negation of that truth, sufficient to warp the pupil's mind in such a way and to such an extent that he will feel little concern in his school-days or later for religion in any form; and this result is the more likely to ensue when the curriculum is made to include everything that is worth knowing except the one subject which is of chief importance.  

3. Sound moral instruction is impossible apart from religious education. The child may be drilled in certain desirable habits, such as neatness, courtesy, and punctuality; he may be imbued with a spirit of honour, industry, and truthfulness; but unless the child is so taught that he will feel little concern in his school-days or later for religion in any form; and this result is the more likely to ensue when the curriculum is made to include everything that is worth knowing except the one subject which is of chief importance.  

prayer, attendance at Divine worship, and reception of the sacraments. By these means conscience is purified, the will to do right is strengthened, and the mind is fortified to resist those temptations which, especially in adolescence, threaten the gravest danger to the moral life.  

4. An education which unites the intellectual, moral, and religious elements is the best safeguard for the home, since it places on a secure basis the various relations which the family implies. It also ensures the performance of social duties by inculcating a spirit of fidelity and also a spirit of charity, tempered with a love for the fellow-man. The most effectual preparation for citizenship is that schooling in virtue which habituates a man to decide, to act, to oppose a movement or to further it, not with a view to personal gain nor simply in deference to public opinion, but in accordance with the standards of right that are fixed by the law of God. The welfare of the State, therefore, demands that the child be trained in the practice of virtue and religion no less than in the pursuit of knowledge.  

5. Far from lessening the need of moral and religious training, the advance in educational methods rather emphasizes that need. Many of the so-called improvements in teaching are of passing importance, and remain more or less without effect. Upon their relative worth the Church does not pronounce, nor does she commit herself to any particular method. Provided the essentials of Christian education are secured, the Church welcomes whatever the sciences may contribute toward rendering the work of the school more efficient.  

6. Catholic parents are bound in conscience to provide for the education of their children, either at home or in schools of the right sort. As bodily life of the child must be cared for, so, for still graver reasons, must the mental and moral faculties be developed. Parents, therefore, cannot take an attitude of indifference toward this essential duty nor transfer it wholly to others. They are responsible for those earliest impressions which form the child's mind. Before he exercises any conscious selective imitation; and as the intellectual powers develop, the parents' example is the lesson that sinks most deeply into the child's mind. They are also obliged to instruct the child, according to his capacity, in the truths of religion and in the practice of religious duties, thus co-operating with the work of the Church and the school. The vice of such cooperation lies in the abuse of authority over the conscience, or in the moral impurity, can nowhere be inoculated so thoroughly as in the home; and without such moral education by the parents, the task of forming upright men and women and worthy citizens is difficult, if not impossible.  

That the need of moral and religious education has impressed the minds of non-Catholics also, is evident from the movement inaugurated in 1903 by the Religious Education Association in the United States, which meets annually and publishes its proceedings at Chicago. An international inquiry into the problem of moral training was started in London in 1906, and the report has been edited by Professor Sadler under the title, "Moral Instruction and Training in Schools" (London, 1908).

Educational Association. The Catholic, a voluntary organization composed of Catholic educators and other persons who have an interest in the welfare of Catholic education in the United States of America. It includes several associations established to secure closer union and more active co-operation in special lines of work. The movement for unification began with an effort to establish a conference of seminary presidents and professors. A meeting called by the Right Rev. T. J. Conaty, Rector of the Catholic University of America, was held at St. Joseph's Seminary, New York, in May, 1898. A second meeting was held in Philadelphia, September, 1899, but nothing further was done until April, 1901, when, at the instance of the Right Rev. J. R. Conaty, M. J., President of the Catholic University, the Catholic Educational Association was formed.

The first meeting of the Association of Catholic Colleges and Universities of the United States was called by the Right Rev. T. J. Conaty, and was held in Chicago in April, 1899. Annual meetings have been held since that time. The Paris School Conference was organized in Chicago in July, 1902, and it was then decided to meet at Philadelphia with the Association of Catholic Colleges and Universities in 1903. At the Philadelphia meeting the Paris School Conference passed a resolution empowering a committee on organization to confer with the standing committee of the Association of Catholic Colleges and to draw up a plan of union. These three conferences met in St. Louis 12-14 July, 1904; and a committee including representatives of each proposed a constitution to be tried for one year. The report of the committee was unanimously adopted at a joint meeting of all three and the Catholic Educational Association was formed 14 July, 1904, the Right Rev. D. J. O'Connell being unanimously elected President General of the Association.

The Association met in New York and a leading feature of the meeting was the remarkable public demonstration in Carnegie Hall at the close. The third meeting was held in Cleveland, and the fourth at Milwaukee; both were notable for the increasing attendance and for the cordial approval of the movement given by members of the hierarchy. At the meeting in Milwaukee, July, 1907, the constitution of the Catholic Educational Association as finally adopted, and the executive board was authorized to take steps to incorporate the association. The fifth annual meeting was held at Cincinnati in July, 1908. There was a registration of 769 names at this convention; all sections of the country were represented, and a number of religious communities sent official delegates.

An idea of the general scope of these gatherings may be had from the subjects treated in the papers and the addresses at this meeting. Among the former were contributions on "The Present Condition of Latin Studies in the Catholic Institutions of the United States"; "The Method of Teaching Religion"; "Necessity and Means of Promoting Vocations to Teaching Orders"; "The Villa of His Holiness in the United States"; "The Catholic University Movement in the United States"; "The Catholic University Movement in the United States: to help the cause of Catholic education by the publication and circulation of such matter as shall further these ends."

The convention was the largest and most representative gathering of Catholic educators that had up to that date been held in the country. The usefulness of these meetings is now generally recognized. They give an understanding of the strength and weakness of the Catholic educational position that can be obtained in no other way. A great deal of earnest and serious work is done through them; they foster a spirit of unity and co-operation in all departments of educational work; and they inspire the educators with a greater love and devotion to their calling. The whole system of Catholic educational activity has been strengthened, unified and developed by the annual conventions of the association, and more especially was this the result of the meeting in Cincinnati.

As the understanding of the Catholic educational situation, with its difficulties and possibilities, becomes clearer, the work of the association becomes every year more definite and more practical. The slow and gradual growth of the association has given it a form of organization well suited to the development of the work. Catholic educators have a good understanding of the problems they must solve, and they work in harmony and in close cooperation. Of more importance, even, than the thoroughness of educational work is the defence of the general interests of Catholic education, and the vindication of the principles on which it is based. The secular system of education is based largely on the theory that man is born for the State and that he derives his rights from the State. The socialists would have the State absorb all authority in the domain of learning and of industry, and there are many secular educators who would fain see the monopoly of education lodged in the power of the State. The Catholic system is based on the right of the parent, the right of the child, and a reasonable individualism. The resolutions of the Cincinnati convention insisted on the right of the parent in the matter of education, and the association exists for the purpose of maintaining the right of the parent and the principle of liberty of education. The Catholic Educational Association is an expression of the unity of principle that unites all Catholic educators.

The officers of the association are a president general, several vice-presidents general, a secretary general, treasurer general, and an executive board. The association controls its constitution and by-laws, and the executive board, and the provincial and central boards. The affairs of the association are managed by the executive board. Each department is represented in this board by its president and two other members elected by the department. Each department regulates its own affairs, and each may organize sections for the more special work in which its members are interested. In each department there is a Superintendent's Section and a Deaf Mute Section. A local meeting for the teachers is organized at every convention through the Parish School Department.

In the constitution the aims of the association are stated as follows: "The object of this association shall be to keep in the minds of the people the necessity of religious instruction and the dangers of irreligion; and on the study of social questions and problems in the seminary, the present state of education and the curriculum. At the public meeting the topics were "Religious Instruction, the Basis of Morality"; "The Catholic School and Social Morality"; and "The Necessity of an Enlightened Conscience for the Proper Performance of Civic Duties".

The whole system of Catholic educational activity has been strengthened, unified and developed by the annual conventions of the association, and more especially was this the result of the meeting in Cincinnati.
there were on 1 July, 1908, three hundred and sixty-four members of the Parish School Department, fifty-two in the Residential Department and forty in the Seminaries in the Seminary Department. The association publishes an annual report giving all the papers and discussions of the association and its departments. It also publishes "The Catholic Educational Association Bulletin" quarterly, which contains matters of interest to the members of the association and articles that have an important bearing on Catholic educational work. The association has issued to 1908 five annual reports from the secretary's office, Columbus, Ohio.

FRANCIS W. HOWARD,

Education of the Blind.—Although the education of the blind as a class dates back no further than the year 1784, historians and publicists generally admit that the affliction which it tends to relieve was no less prevalent before than it has been since that date. Indeed, so far from having increased, blindness appears to have in a marked degree decreased during the last hundred years.

GENERAL STATISTICS OF BLINDNESS.—An exact statement of the number of blind persons in all parts of the world cannot be made. The estimates which publicists have formed upon the basis of census returns, as also those derived from the observation of travelers, give the ratio of blind persons to the whole population in Asia 1 to 500; in Africa 1 to 300; in Europe 1 to 1034 (the ratios for seventeen countries of the last-named division being approximately: England, 1235; Sweden, 1293; Ireland, 1 to 870; France, 1 to 1194; Germany, 1 to 1136; European Russia, 1 to 534; Austria, 1 to 1234; Hungary, 1 to 952; Italy, 1 to 1074; Spain, 1 to 835; Denmark, 1 to 1248; Sweden, 1 to 1262; Norway, 1 to 795; Finland, 1 to 689; Belgium, 1 to 1229; Switzerland, 1 to 1325; Bulgaria, 1 to 321). For the other great geographical divisions no data are available for even approximations (Blindness in the United States) Consistently with the foregoing ratios, and with such conjectures as may be hazarded for America, Australasia, etc., it may be estimated that the number of blind persons now living in all parts of the world is not far short of 2,500,000. A careful study of the figures shows that blindness prevails most in the interior of Asia and Africa; next in the Eastern than in the Western Hemisphere. In the temperate climates of the North the blind are comparatively few; nearer the Arctic Circle, the gliding snows, the alternation from the brilliant nights of the Arctic summer to the prolonged darkness of the winter, and other conditions affect the visual organs unfavourably, while in the torrid zones, the glare from desert sands and the intense heat of the sun occasion many diseases, resulting in either total or partial loss of sight.

Blindness in the United States.—In the Western Hemisphere a different ratio seems to obtain. The data, however, for an accurate comparison are wanting, except in the United States (lying between the 24th and 49th parallels of north latitude), where, according to the United States Census of 1900, the ratio of the blind to the entire population is 1 to 1178. In 1890, the ratio was 1 to 1242. The number of blind persons in the United States originally returned by the enumerators of the Federal Census Bureau, 1900, was 101,123; by subsequent correspondence with individuals, this number was reduced to 64,763; but the special report on "The Blind and the Deaf" states that this should be considered only as a minimum, the correct figure being probably 80,000 and possibly over 100,000. Of the minimum 64,763 reported in the Census, 57.2 per cent were males, 42.8 per cent females; about 13 per cent were under, and about 87 per cent over, twenty years of age. Of the juvenile 13 per cent (5300), those entirely or partially blind before the age of two years numbered 8166.

Causes and Effects.—In a careful study of the causes of blindness Cohn of Bruslau estimates that among 1000 blind there are only 220 absolutely unavoidable cases, 419 possibly avoidable, and 326 (or nearly one-third) absolutely avoidable. Blindness may result from accident or from disease. The diseases most often productive of blindness are: ophtalmia neonatorum, or inflammation of the eyes of the new-born; trachoma, often called "granular lids", and glaucoma, and atrophy of the optic nerve. Ophthalmia of the new-born is so widespread that, according to Magnus, out of 2528 cases of total blindness in Germany 10-88 per cent were due to this cause. Among the blind under the age of twenty the proportion is as high as 30 per cent. In the United States, between 6000 and 7000 persons have thus become blind. Thanks to improved medical statistics, it is possible to study the intelligent care on the part of midwives and nurses, and more skillful medical treatment, ophthalmia in certain countries appears as a cause of blindness in only seven per cent of the total number of cases, as against the 11 per cent recorded fifty years ago.

The function of sight can, to a certain extent, be replaced by the use of the other senses. Stimulated by newsmen and medical men, the idea is gaining ground that the small smell can take the place of vision. Having no sight to distract them, moreover, the blind cultivate their remaining senses all the more effectually. As for the exercise of their mental faculties, although wanting some of the means by which various impressions are received, and attention is aroused, the blind are capable of realizing and reproducing objects of imagination, while, owing to their condition, they are more frequently forced to close mental application. That blindness does not necessarily render its subjects intellectually inferior, may also be inferred from the number of famous persons who were blind from childhood or early youth. A list of such examples might with little difficulty be produced, long enough and impressive enough to make the world realize the idea that the physical darkness of the blind is necessarily associated with intellectual darkness.

HISTORY OF EDUCATION OF THE BLIND.—That no attempt was made in ancient times to instruct the blind, or in any way to cultivate their intelligences, was mainly due to the prevalent error as to their mental capacities. Ignorance was also the cause of the production of the unfortunate results in Christian civilization until as late as the end of the eighteenth century. On the other hand, the Church, from the earliest ages, at least made provision for their corporal needs, while here and there attempts were made to teach them various handicrafts. Among the most noted of the hospices for the poor and afflicted which began to appear in all parts of Christendom almost as soon as persecution ceased, was that established in the fourth century by Saint Basil at Cesarea, where special provision was made for the blind, and guides were supplied for them. In the fifth century, Linnæus, a hermit of Syria, received, in cottages especially built for them, the blind of the surrounding country, whom he taught agriculture, and who earned their living by their own labor. Two centuries later, towards the year 630, a refuge exclusively for the blind, such as was called in the Middle Ages a typhlocomium, was founded at Jerusalem.

In the West, the Church was animated with similar charity. Early in the seventh century, St. Bertrand, Bishop of Le Mans, founded a hospice for the blind at Pontieu, in the north-west of France. In the eleventh century, William the Conqueror, in expiation of his sins, founded a number of institutions; among them four hospices for the blind and other infirm persons at Cherbourg, Rouen, Bayeux, and Caen respectively. Towards 1200, St. Louis, King of France, established at Paris the Hospice des Quinze-Vingts, where he housed and instructed three hundred blind
persons. The inmates of the hospice, after the example of the students and the craftsmen of the day, formed among themselves a distinct brotherhood, to which the sibyl king gave special statutes and privileges. It is noteworthy that, in spite of the changes of government, the "Hospice des Quinze-Vingts" has survived to this day. A similar institution, though less extensive, was established and endowed at Chartres by King John the Good in 1350. Provision was made for 120 blind persons. For various reasons, however, the number of inmates dwindled till, in 1537, according to Dufau, there were but ten in a hospital for the blind said to have been erected (1305) at Bruges, in Flanders, by Robert de Béthune, in gratitude for the courage displayed by the inhabitants in repelling (1300) an invasion of Philip the Fair. A similar foundation was made at Ghent by Peter Van der Leyen about 1370. Brotherhoods of the blind were formed, particularly at Chartres, Sens, Châlons, Meaux, Pontoise, Memming, Frankfort, and Hull. That the inmates of these institutions received other suitable instruction besides that in the Catechism and in trades there can be no doubt. So desultory, however, were these attempts to give the blind a modicum of education, and so inadequate were the means employed, that the problem of their special educational requirements seemed as good a subject as any for suggesting the idea of providing a permanent literature for them. As early as the sixteenth century attempts were made to devise special processes, but these attempts, so far as we know, met with very little success.

Among others, Girolamo Cardano (1501-1576), an Italian mathematician, pointed out a way of teaching the blind to read and write by the use of touch. They were to trace with a steel bodkin or stylus the outline of each of the letters of the alphabet, engraved on metal, until they could distinguish the letters by the sense of touch and reproduce them on paper. Cardano, however, failed to suggest how to write on a straight line with uniformity of space between the lines. In 1575 Rampazetto produced at Rome prints in Itaglio from letters carved in wood. His invention was dedicated to St. Charles Borromeo. In 1580, under Philip II, to whom he dedicated his invention, Francesco Lucas, at Madrid, engraved letters in wood for the instruction of the blind; but the letters being sunk in the wood, the outlines could not as readily be followed with the finger-tips. In 1610, Pierre Moreau, a notary at Paris, showed letters cast for the use of the blind but for lack of means was unable to follow up his undertaking. In his work, "Delicije matematic et physice", published at Nuremberg in 1651, George Harsdorffer describes how the blind can recognize, and be taught to name and imitate, letters engraved in wax. Padre Francesco Lana-Terzi, the same Italian Jesuit who anticipated by more than a century the system of lip-reading for deaf mutes, also suggested, as an improvement on Cardano's invention for the blind, a guide consisting of a series of wires and strings arranged in parallel lines at equal distances from one another, to secure straight writing and uniformity of space between the lines. Besides this, Lana-Terzi describes, in his "Prodromo", an invention of his own, by which the blind may be taught to correspond, as follows: (1) to insert one, two, or three dots within a square or parts of a square or right angles turned in four different directions; or (2) to prefix to either a comma, colon, semicolon, period, or interrogation mark any one of the first four numerals; or (3) merely to form these numerals. The letters of the alphabet with the lines enclosing them, Lana-Terzi suggests, should be in relief rather than in taglio, raised letters being far more distinguishable to the sense of touch than letters sunk in a plane surface. The following diagrams will make the matter clear.

First (Lana-Terzi) Method.—Suppose the blind correspondent wishes to send the cipher message, Son prigione (I am a prisoner), he will turn to his tablet,

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>O</td>
<td>G</td>
<td>U</td>
<td>B</td>
</tr>
<tr>
<td>F</td>
<td>I</td>
<td>M</td>
<td>N</td>
<td>E</td>
</tr>
<tr>
<td>C</td>
<td>L</td>
<td>H</td>
<td>A</td>
<td>D</td>
</tr>
</tbody>
</table>

and ascertain by touch that the letter s is the second of those enclosed within the lines forming the figure S. He will trace this figure with a pencil, and, to designate that it is the second letter in the above figure, he will write ¥ either above, or below, or within it, two dots, thus ¥. The message in full is as follows:

![](image)

The position of each letter in its own section is indicated by one of the first four numerals according to the order in the section. Thus, the message, Il re è morto (the king is dead), would be written as follows:

Third Method.—Instead of designating by punctuation marks the different sections into which the letters are distributed, they may be indicated by numerals, thus:

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>b</td>
<td>c</td>
<td>d</td>
<td>e</td>
</tr>
<tr>
<td>f</td>
<td>g</td>
<td>h</td>
<td>i</td>
<td>j</td>
</tr>
<tr>
<td>k</td>
<td>l</td>
<td>m</td>
<td>n</td>
<td>o</td>
</tr>
<tr>
<td>p</td>
<td>q</td>
<td>r</td>
<td>s</td>
<td>t</td>
</tr>
</tbody>
</table>

By this method the blind person would have to learn how to form only the first five numerals. Thus the above message, Il re è morto, according to this method, would be written as follows:

1: 3 2: 3 4: 4 1: 2 1: 2 3: 3 1: 4 4: 4 2: 5 1: 4

The first numeral indicating the position of the letter in the section, and the second numeral the section itself.

To enable the correspondent to make out for himself the answer to his message or communication, Lana-Terzi proposes the following plan: Let each of the correspondents have a table or long strip of wood
on which are engraved or embossed the letters of the alphabet arranged in serial order at equal distances from each other, as in the diagram here given.

Suppose now that a person who is not blind should wish to send to his blind friend this message: Il nemico ti trama insidie (the enemy is trying to ensure you). Let him take a piece of thread or twine, apply the end of it to the extreme point of the tablet, extend the thread over the space from a to the first letter i of the message and make a knot at that point; for the second letter, apply this first knot to point a, extend the thread over the space from a to the letter l, make, as before, a knot at that point, and so on for the rest of the letters. It will readily be understood how the blind person, to whom the roll of knotted thread or twine is sent, can make out the communication by applying the various thread lengths over the distances indicated by the knots, and thus discover each letter of the message. The blind correspondent, in his turn, can easily send by this same method whatever communication he wishes.

A few years after the publication of Lana-Terzi's "Prodrome", Jacques Bernoulli, being at Geneva in 1676, taught Elizabeth Waldkirch to read by a method not unlike that of Cardano. The young lady made such progress that after four years she was able to correspond with her friends in German, French, and Latin, all of which she spoke fluently at the age of fifteen. She knew almost all the Bible by heart, was familiar with philosophy, and was an accomplished musician. In the year 1719, he applied the principle of Lana-Terzi's invention, and made to construct a tactile ciphering-tablet or apparatus by which all the operations of arithmetic might be performed and recorded. This was the work of Nicholas Saunderson, who became blind when one year old. So distinguished was this blind mathematician that he was appointed Lucasian Professor of Mathematics in the University of Cambridge. The Abbé Claude François Desehamps (1745-91), in his treatise on the education of the deaf and dumb, is said to have also sketched the outlines of the art of teaching the blind to read and write. Diderot in his "Lebtre sur les aveugles", which appeared in London in 1749, and for which he was condemned to prison, mentions his interview with Léotre, better known as "The Blind Man of Puisieux". Among those who were most interested in him was the teaching of his son, though not blind, to read by means of raised letters. Between 1772 and 1784 we read of the earliest attempt to make maps in relief for the blind. This invention is ascribed to R. Weissenburg, of Mannheim, who was partially blind at five years of age, and totally at fifteen. Whether any of the credit is due to Weissenburg's teacher, Christian Merck, is not yet determined. Though Diderot was among the first to call special attention to the condition and wants of the blind, and to make them generally known through his famous letter, yet neither he, nor Leibniz, nor Reid, nor Condillac, nor any of the Encyclopedists went beyond abstract psychological speculation. None of them planned anything but the measure of practical utility or relief that was devised any plans for the instruction and training of sightless persons.

The modern era in the history of education of the blind opened in 1784—nearly three centuries after the desultory and apparently ineffectual attempts of Cardano and others—when Valentin Haüy (1745-1822) set himself the task of making the alphabet and the first essays so comprehensible to the blind that the Abbé Claude François Desehamps had done for deaf mutes. It was in June, 1784, that Haüy met, in one of the churches of Paris, a young mendicant named Lesueur, who had been blind from his birth. Having already spent many years in studying the theory, Haüy took this young waif to be the subject of his first practical essays in teaching the blind. Lesueur was promised a regular daily allowance in place of the income which he was supposed to earn by begging. Before long the number of Haüy's pupils increased to twelve, then to double that number, and finally to fifty. His school was at first a day-school, to which children of both sexes were admitted. When Haüy, in 1786, exhibited the attainments of thirty-five of his best pupils at Versailles, Louis XVI and his court were in raptures at the wonderful novelty of children without sight reading, writing, ciphering, doing handicraft work, and playing orchestral music. So great was the interest which this and similar exhibitions aroused, and so generous the patronage of the king and the public which they secured for his school, that Haüy soon had sufficient means to board his pupils. From the very beginning the institution had the triple character of a school, a workshop, and an academy of music; and to this day these departments have been maintained with such a record for efficiency that the institution founded by Haüy has served as the model for most of the many others in both hemispheres. But true intellectual culture for the blind dates only from the day when reading by touch was made possible. To Haüy is due the credit of having provided a system of tactual printing and a permanent literature for the blind. In the light of a century's progress and of better systems of printing and writing invented since his day, the shortcomings of Haüy's print in relief are apparent, and it is evident that, but for his invention, but, in fairness to his memory, it must be remembered that Haüy alone succeeded in making practical for the blind as a class what others before him had merely foreshadowed, or had successfully applied only in individual instances. In spite, therefore, of the derogatory claims made by two or three writers, and notwithstanding that himself admitted having seen a letter printed by Therese von Paradis from type made for her by von Kempelen, the fact remains that no one before Haüy had ever tried seriously to make printing available for the blind; to no one before him had the idea occurred of printing books for the blind, or of establishing libraries of literature printed in relief. The movement originated by Haüy was continued in his establishment in all civilized countries of institutions of learning and industrial training schools for the blind. Before the close of the eighteenth century, a period of only sixteen years, four such institutions had sprung up in Great Britain, viz., in Liverpool (1791), in Edinburgh (1793), in Bristol (1793), and in London (1799). Other countries were not slow in following the example. The following table shows what the leading countries of Europe and America have done for their blind during the nineteenth century:

Contemporary Education of the Blind.—General Aspects.—In nearly all the countries referred to in the foregoing table, most of the schools for the blind maintain three distinct departments: a literary department, a department of music, and an industrial department. The rank of these institutions is higher or lower from an educational point of view according as more or less prominence is given to literature and music as compared with industrial or manual training. In the leading schools the literary department embraces kindergarten, primary, secondary, and, in a few instances, collegiate education; the department of music embraces primary, secondary, and collegiate education; while the industrial department embraces the teaching of handicrafts, various trades, and some kind of agricultural training. The courses of study in the literary department are generally the same as those pursued in the public high schools of the respective countries. The work in the department of music varies from instruction in the mere elements of music to thoroughly organized courses of study and highly specialized instruction in the science and art of music. In the industrial department the chief trades are: in the male department, piano-tuning, wood-carving, the making of baskets, mats, matting, brooms, and mattresses, chair-caning, hammock-work, and upholstery; in the female department, basket-making, knitting, hand- and machine-sewing, crocheting, fancy work of various kinds.

In the experimental stages of education, there was a tendency to confine all the schools for the blind to make the industrial department the most prominent feature. The lack of books, of adequate educational appliances, and of definite methods, the comparative ease in teaching some one or other of the simpler trades, the want of technical experience on the part of instructors, the dependence upon manual occupations and motor training for self-support, the readiness with which it can be employed by the utilitarian principle of training the blind for the active duties and occupations opening the way to self-maintenance and independence—these and other similar considerations were strong arguments in favour of industrial training, to the neglect and detriment of the prime and essential work of education. Of late years, however, a marked change has been wrought in the ideas prevailing in the training of the blind. Owing to the increase of general intelligence, on the one hand, and the steady decrease in value of manual labour, on the other hand, educators of the blind have come to realize that it is not technical skill, or ability to work successfully at one or more of the usual trades, but only a broad and liberal scheme of education that will release the blind from the bondage of dependence, uplift them as a class, and raise them to a level of usefulness and independence. In consequence of the extensive employment of machinery in almost every department of human activity, there has sprung up among educators of the blind a growing conviction that the only field in which the sightless can hope in the future to compete successfully is that of mental and intellectual pursuits; that intelect can have free play and that blindness will be no hindrance to advancement and success. The blind need, therefore, at least as good an education as the seeing. The question as to whether they are capable and entitled to such an education has not been settled in the same manner in all countries. In many of the European institutions the prevailing idea is that, as a class, the blind must necessarily remain on the social scale, forever dependent upon the more fortunate classes, and that what is done for them is rather in the spirit of favour and charity than as of strict obligation. In the United States the education of the blind rests on a different basis. As modern methods of instruction have proved the possibility of imparting to the normal blind child practically the same education as to other children, it is generally acknowledged that the blind, as a class, have an equal right with the seeing to share in all the educational benefits which are provided for every child in the commonwealth; and since this education cannot for obvious reasons be given them in the common schools, special provision should be made for their education in distinct institutions, public or private.

Systems of Embossed Print.—Three centuries and a half elapsed after the invention of printing before any attempt to make printing available for the blind as a class was successful. Whatever information and inspiration may have been drawn by the ingenious inventor from special processes devised before his day, the credit of having first made reading by finger-touch possible must go to Hûyé (see above). The first book embossed by Hûyé for the use of the blind was, according to Guadet, his “Essai sur l’éducation des aveugles” (1786). This book was translated into German by Michel, and into English, in 1795, by the blind poet Blacklock. The style of type adopted by Hûyé was the French script, resembling the legal manuscripts of the time. The capital and small letters were respectively fourteen and seven and a half millimetres high. The book was a quarto of 111 pages, printed on one side only, two pages being gummed together back to back, to preserve the relief. The pages were embossed from metal type by the blind children of Hûyé’s school under the direction of Clousier, the court printer. While this invention won untinted praise for Hûyé, he himself, when he heard the objections complaints of the盲s l’Épée, modestly protested, “I only fit spectacles, while he bestows a soul.” From 1806, the time of Hûyé’s departure for St. Petersburg, to 1854, when line-print was superseded by point-print, the type used at the Institution des Jeunes Aveugles at Paris, varied between the French script, the Italic, and Roman cases.

Embossed Printing in England.—Printing for the blind had been used in France for forty-three years, in Austria for eighteen, in Prussia for twenty-six, before it was used in England; Hûyé’s system of printing, it is claimed, was introduced into England by Sir Charles Lowther, to whom it was suggested by a copy of one of the books printed at the Institution des Jeunes Aveugles at Paris. In the case of the English alphabet, he was himself blind. In 1826, James Gall, of Edinburg, who had seen specimens of books embossed at the Paris institution, set himself to improve the alphabet, by making it more perceptible to the touch. In 1827 he printed a small book in an angular modification of the common English alphabet. It is said to have been the first English book printed for the blind in England, and naturally great interest was excited when it was found that the blind could read it easily with their finger-tips. Between 1828 and 1838 no fewer than 20 styles of embossed printing were brought out in Great Britain. Of these, however, only six obtained recognition: those of Hûyé, Gall, Fry-Alston, Lucas, Fere, and Moon. Hûyé’s script was adopted by Sir Charles Lowther in his publication, in 1834, of the Gospel of St. Matthew and St. Mark. Through the higher characters of the alphabet to make them more easily distinguishable by touch, he did not believe that arbitrary characters would ever be universally adopted, maintaining that these books should be legible to both blind and seeing. Besides two or three booklets previously embossed, Gall printed, in 1832, the Gospel of St. John. The Fry-Alston system of embossed printing is the plain upper-case Roman without curls or the lighter strokes, and was devised by Dr. Edmund Fry and adopted by Alston at the Glasgow Institution for the Blind, of which he was principal. In 1832 the Scottish Society of Arts offered a gold medal for the best system to produce cheapness and legibility in connexion with an alphabet suited alike to the fingers of the blind and to the eyes of the seeing. Nineteen
different alphabets, seventeen of which were of a purely arbitrary character, were submitted to the society between 9 January, 1832, and 24 October, 1833. After much deliberation and a series of rigid tests, the medal was awarded (after Dr. Fry's death) to Alston, 31 May, 1837. From the award made to Dr. Fry's alphabet, the Scottish Society of Arts evidently shared the idea of Hauty and of other advocates of the Roman letter that in the education of the blind everything should be done to establish a bond of vital unity between them and the seeing and to lessen the isolation which arbitrary systems of print would only increase. As Alston's type was rather small and not very legible, his system did not stand the test of time. Lucas invented a stenographic system formed of arbitrary characters and of numerous contractions. In this system the Gospel of St. John and the Acts of the Apostles were printed in 1837 and 1838 respectively. Frere devised a phonetic system which he himself describes as a "scientific representation of speech". It consists of 34 characters indicating each of the simple sounds in speech. Frere was the first to introduce (1839) the "return lines", in which the reading is alternately from left to right and from right to left, and the letters themselves are reversed in the lines from right to left. He also devised an ingenious system of embossing from stereotype plates; which in

vention was, at the time, the greatest improvement in embossing since the days of Hauty. The larger part of the Old and portions of the New Testament were printed in Frere's system. Dr. Moon of Brighton, whose system is used more than any other by the adult blind, at least in England, devised, towards 1845, an alphabet formed of more or less arbitrary characters, which either resemble or suggest a resemblance to the Roman letters which they represent. He also adopted, with a number of slight alterations, Frere's "return lines" and his method of stereotyping. The first book in Moon's system appeared in 1847. The printing of the Bible was begun in 1848 and completed in 1858. Moon's books, though easy to read owing to their large type, are very bulky and expensive; 56 volumes are required for the Protestant edition of the Bible, which omits a number of books contained in the Catholic edition. The chief defects of the Moon system are that it is not a writable system and that it lacks a musical notation. It is useful chiefly for adults whose fingers-touch has been dulled by age or manual labour.

**Embosed Printing in Continental Europe.**—Between 1809, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, pupil of Klein, began the thirteenth at Brussels, the Braille system was brought to Germany, three styles of embossed printing, known as the Stacyel, Press-, and Punktierte Typendruck (the needle-, line-, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These

![Six Principal Systems of Embossed Type]

nominal point of view, it is a matter of regret that, for the lack of concerted action between the principals of the Boston and the Philadelphia schools, two systems of print should have been imposed at the very outset on the country. From 1837 to 1853 the two systems flourished in their respective spheres without any agitation regarding uniformity of type. In 1851 the Boston line-print was given the preference over all other embossed systems at the London exhibition of industries of all nations. This award, made twenty-six years after the appearance of Braille in France and one year after the adoption of the new system by the Paris institution for the blind, shows how deeply rooted was the theory prevailing since Hauty, that the adoption of any system not resembling in form and appearance the letters in common use would be prejudicial to the best interests of the blind by furthering their segregation from the seeing. Among the leading systems of line-letter print which obtained recognition in France, England, and the United States shows that Hauty's system gave 365 letters on 20 square inches of surface; Gall's, 526; Alston's, 891; Friedlander's (from 1833 to 1834), 290, and 826 after 1856; Howe's, 702 and by a further improvement, it is claimed, 1067 letters. A comparison between the leading systems of line-letter print which have been brought as regards compactness, a careful study of the functions and limitations of the sense of touch showed that the Roman systems, which lacked the quality of strong appeal to that sense (known as tangibility), could be of no edu-
sional value. Besides this, they were practically unwritable, and they provided no adequate means of musical notation. Fortunately, when the various line-types were found deficient, and a strong protest by the intelligent blind in Europe and in the United States was raised against them, a new system was discovered, which possessed all the requisites which were lacking in the line-letter prints. This new system is known as Braille. Of these six or seven chief systems, the pupil of the Institution des Jeunes Aveugles of Paris, marked a new epoch in the history of the education of the blind. The original idea of a point-print was derived by Louis Braille from Barbier, who suggested a combination of points arranged in a rectangle—twelve points in two vertical columns of six each. The most conspicuous, though not most radical, defect was the large and unwieldy size of the signs, which could not be covered with the finger. Another drawback was the great waste of space. As the "cell", or rectangle, was of fixed size, if a letter was represented by a point in one corner, all the rest of the space was left blank. This was observed by Braille, who reduced Barbier's rectangle one-half; thus he limited the number of the points to six instead of twelve. The six points in Braille are arranged in two vertical rows of three each. By the omission of one or more of the points sixty-three distinct signs are formed, to represent the entire alphabet, accents, Arabic numerals, marks of punctuation, word- and part-word signs, as well as a system of algebraic and musical notation. These fundamental signs, and base the form of all the rest by the addition of one point in some part or other of the "cell" either to the fundamental signs or to the series formed from them. The chief advantages of the Braille system are: (1) its simplicity and easy acquisition; (2) its "tangibility"; or efficiency in impressing the sense of touch, enabling the blind not only to read but also to write; (3) its adaptability to both the writing and printing of a system of musical notation.

In spite, however, of its evident advantages, many years went by before the new system obtained recognition, even in countries where, for lack of "tangibility" in the existing systems, the use of books in the class-room had been almost unknown. It is quite possible that the slowness and reluctance in the adoption of Braille were due to the fact that institutions for the blind had been so widely separated in dates of origin and in locality that the need of unity of action and community of interest was but slowly realized. In many cases prejudice, petty jealousy, and obstinate attachment to theories long since proved false, account for the unyielding attitude towards improved methods, which has often stood in the way of true and uniform progress in the education of the blind. From the day when the system was finally adopted in the schools of France, England, Germany, the United States, and other countries, the Braille has undergone various modifications; hence a variety of Braille systems, which have caused even greater confusion than the diversity of the earlier Roman styles of embossed literature. As late as 22 April, 1902, in an address made at the conference held with parents on matters relating to the blind, Mr. William H. Illingworth, headmaster of the Royal Blind Asylum and School, West Craigmillar, Edinburgh, spoke as follows regarding the diversity of Braille alphabets and the desirability of a uniform system: "Out of a chaos, born of conflicting opinions and petty jealousies, combined with an almost incredible amount of apathy, indifference and indecision such as exists in the Braille world, it would be impossible by any means short of a miracle to create or to formulate such a scheme. . . We hear often and are treated with examples of 'English as she is spoke', but I venture to think that for variety and specimens of the grotesque, this pales into insignificance before 'Braille as she is wrote'. Though the time may be quite ripe for a serious attempt being made to improve the existing state of matters, it will require years of patient thought and interchange of opinion, absolute singleness of purpose and charitable, sympathetic self-abnegation to devise a perfectly uniform and practical system, and make the Braille—if that system be the very best system—as perfect and simple as possible and as worthy to be the tangible exponent of the most powerful and universally spoken language of modern times."

New York Point (see cut) — The claim to being, in the words of the writer quoted above, a system "as perfect and simple as possible and as worthy to be the tangible exponent" of the English language can justly be made for the punctographic system known as New York Point. In the New York Point, the aim is to create the most perfect form which the idea suggested by Barbier and rescued from oblivion by Louis Braille has as yet attained. This system is a genuine American product, the outcome of years of patient thought, of indefatigable labour, and of absolute singleness of purpose. To Mr. William B. Wait, for upwards of forty-three years at the head of the leading institution for the blind in the United States, is due the credit of the origination, development, construction, and application of the literary, musical, and mathematical codes of the New York Point System. The genius of this new punctographic system is the result of a desire on the part of Mr. Wait to improve the Braille by remodelling it, on principles of compactness and economy of time and space. Careful study, however, of the structure and application of Braille led to the conclusion

**New York Point Alphabet.**

that the vertical position of Braille signs, allotting a fixed and unvarying space to all signs alike, was defective in more than one important respect. Owing to its limited number of only sixty-three possible single signs, it was inadequate to the requirements of music, if not to those of literature and mathematics as well; it was also found to be much more costly, than the Boston-Line, which, in the absence of any other system, was then taken as a standard. To remedy these structural defects, by increasing the number of signs, and reducing the bulk and cost of books to the lowest possible minimum, only one course was left open. A different mode of sign structure was devised, employing two points, instead of the usual three, and the signs are formed by these points horizontally, in three, four, or five points horizontally. By this method the new sign-structure of New York Point yields 120 single, and 20 compound, signs against the 63 single signs to which the Braille is limited, and thus answers all the requirements of literature, music, and mathematics. Besides, even apart from the application of the principle of recurrence in the structure of the New York Point—a principle that was not applied in the original Braille—all the advantages of simplicity, economy of space and (in writing) of time, as well as of cost, are on the side of the Wait or New York Point system, as has been demonstrated by the most rigid tests. Thus, in printing a font of 520 letters in each system on a perfectly uniform scale, the letter-, word-, and paragraph-spaces required by the Braille code (where the alphabet only is used, and no contractions or punctuation marks) requires 51 per cent more space than the New York Point. The space required by punctuation marks in Braille is 20 per cent greater than in the New York Point. The excess of labour in the writing of Braille is twenty-seven per cent greater than in New York Point. In the case of punctuation marks there is a slight excess of labour on the side of New York Point. However, the use of punctuation marks does not materially affect the question, as they form only about 04 of the whole bulk of composition. Another advantage of the New York Point over Braille is its having true capitals. In Braille the practice is to place before words requiring a capital, a dot composed of two points, to the right of which is placed the word with the usual small letter. This requires two full “cells,” or sixty per cent more area than the New York capitals, which are four points wide. Although up to the sixth or seventh century no distinction was made in Europe, and none is made to this day in the Oriental alphabets, between capitals and small letters (the latter, in fact, were evolved from the former), the advantage of possessing true capitals, instead of sham ones, is not inconsiderable. Furthermore, the gliding of the finger over the point-signs in but one direction, the lateral, is, on physiological grounds, an important advantage which the New York Point has over the Braille system, where the finder has to move first in the longitudinal and then in the lateral direction.

Methods of Writing.—The invention of the New York Point marked an epoch in the history of the education of the blind; yet, had facilities not been supplied for writing and printing it, the new system would have failed to make its mark as an educational force. Fortunately, however, such appliances were prepared. In 1854, a writing-air, with a desk-tablet, a pocket-tablet, the kleidograph for paper-writing, and the stereograph for embossing the metal plates used in printing. The kleidograph and stereograph have done wonders in facilitating the education of the blind. The former, designed for the purpose of writing literature, music, and mathematics in tactile form, has not only saved time and effort, and furnished a readymade and efficient, and for the reason that what is written by it can at once be read by the blind writer without removing or reversing the paper, as must be done when the tablet is used. At least eighty per cent of the time required for writing music is saved, and sixty per cent for literary work. The stereograph is a development from the kleidograph, designed to emboss both sides of zinc or brass plates ready for use in printing. By its means a compositor can prepare twice as much matter in a given time as by the movable type besides, the matter comes from the compositor’s hands stereotyped and ready for the press. The cost of the complete plate is reduced by more than one-half. The further application of the interlining process, and of printing on both sides of the sheet at one impression from the plate prepared by Mr. Waid’s stereograph, will reduce the cost of books still further, and effect a saving, in metal, in paper, and in binding, of nearly 50 per cent.

The many appliances devised since the days of Valentin Haüy, particularly in France, England, and Germany, to enable the blind to write, may be grouped under three classes. First, the "hand-guides" are designed merely to help the blind to write in straight lines and at equal distances. For correspondence with the seeing, an ordinary pen or, more generally, a lead pencil is used, and the letters are written from left to right. For correspondence with the blind the ordinary letters have to be formed with a blunt stylus from right to left and reversed on paper which is underlaid with some soft material so as to bring out the written matter in relief on the reverse side of the page and reading from left to right. Valentin Haüy devised a simple method of pencil-writing by placing the paper upon a frame in the interior of which were stretched parallel cords of catgut; between these cords it was an easy matter to write in straight lines and to make the letters of uniform size. Another ingenious device was to write on a sheet of thin paper, which was, at the suggestion and request of Haüy, devised by Adet and Hassenfratz in 1783. It was to trace the letters in a bold hand with a glutinous ink, over which sand was spread, so as to form, when it adhered to the letters, a rough sort of relief, or “tangible,” writing. Various other fluids were devised for embossed writing, and in 1823 by Rev. John Varley, and in 1823, by Friez in 1836, and in 1857, by the Abbé Vitali of Milan, in 1893. The use of these various coloured fluids produces a writing which is at once “tangible” to the blind and visible to the seeing.

Among the more elaborate appliances for writing in straight, parallel, equidistant lines, may be mentioned the typograph of Passard, Dr. Nord’s skotograph, Dr. Woiczekowsky’s amaurograph, Count de Beaufort’s stylograph, Wedgewood’s noetograph, and the writing-frames of the Elliot brothers, of Thursfield, Dooley, and Levitte. The second class of apparatus are those designed not only to enable the blind to write in straight lines, but to correspond with normal size, but also to mechanically assist the hand in the formation of the letters and in tracing them at the same distance from each other. These appliances may be divided into line-cell and point-cell frames, according as the ordinary line-letter alphabet or the point system is used in writing. Of the line-cell frames or tablets, the best known are those devised by the Rev. John Varley, Esq. (1807) and Dr. J. J. B. Jans Gall of Edinburgh, Mercier-Capette, Hebod Dr. Lorenzo of Barcelona, by C. E. Guildberg of Copenhagen (1858), Galimberti of Milan, Marselli of Naples, Moon of Brighten, England, Kems of Grave, Holland, Baltu, Brother Isidore of Woluwe-Saint-Lambert, Belgium, and Mile Mulet of Angers, France. Mile Mulet’s stylographic frame enables the blind to correspond not only with the sightless, but also with the seeing just as readily and satisfactorily. Of the numerous print-cell writing-frames or tablets de-
signed for writing Braille, the best known are those of Louis Braille, Ballu, Laas-D'Aguen, Krüger, Kul, Pablacek, Signora della Casa, T. R. Armitage; and for writing New York Point, Mr. Wait's desk and pocket-tablet already mentioned. Essentially, all point-cell tablets consist of a board bearing a movable metal plate indented with pits and having connected with it, and over it, a metal guide with two rows of either oblong or square holes. The paper is placed between the guide and the metal guide. The writing is done with a blunt awl or bodkin, which forces the paper into pits, thereby producing the dots which represent the letters. When the paper is taken out and turned over, the writing which was from right to left appears in relief and is read from left to right. The metal guide has from four to five rows of openings, and there is a shifting guide for five rows, when these are written the guide is shifted downwards and held fast to the frame by two little pins, when four or five more lines are written, and the operation is repeated until the end of the page is reached. The third class of apparatus are those designed for increase of speed in writing, not by hand, however, but by mechanical means. Among these the principal writing machines for the ordinary line-letter alphabet, are those of Braille-Fonceau (1842), Thurber (1847), Hughes of Manchester (1850), Larivière of Nancy, Saintard (1847), Hirzel of Lausanne, Oehlwein of Weimar, Marchesi, Colard Viennot, Gastaldon of Turin, Ballu (1861), the Hammond, Simples, Yost, Blickensderfer, Caligraph, etc. Without any doubt, the most rapid and most satisfactory way for the blind to correspond with the seeing is by means of typewriters. All methods of writing, however, which are not tangible to the fingers are liable to the objection that the written matter cannot be revised and corrected by the blind writer. Of machines constructed for embossing Braille and New York Point, those chiefly in use in the United States are Hall's writer, for Braille, and Wait's kledograph, for New York Point. In France, England, and Germany, a number of Braille machines have been designed on the lines of Hall's Braille-writer.

Geography.—The blind are fond of the study of geography, and with proper teaching are as capable of forming correct geographical notions as the seeing. Most of the detailed teaching of geography, however, must be left to the visualized maps. In the visualized maps, a coarse, rough maps made by the pupils themselves on cushions by means of pins and string are very helpful. The first maps used by the blind were on embroidered cloth or canvas, the needle-work representing the land and the plain cloth the water; boundaries were marked by coarse corded stitches, and towns and cities by points made with the same coarse material. Various attempts were made to construct maps by relief maps on paper or cardboard, the boundary lines, river courses, lakes, bays, positions of towns and cities, etc., being represented in a variety of ways. The best thus far made are the wooden dissected maps, in which the divisions of a country are represented by a movable section, bodies of water by a depression in the wood, hills and mountains by a slight elevation, towns and cities by raised headed nails. When all the movable sections are fitted together they form a complete map. The main objection to the dissected maps is that they are very expensive and better suited to individual than to class teaching.

The Teaching of Arithmetic.—Records are not wanting to show that, from the very beginning, arithmetic and other branches have had an important place in the education provided by institutions for the blind. It was soon observed that the blind displayed great fondness for arithmetical calculations. While mental arithmetic was particularly encouraged, it became evident that in the more advanced branches of the science, the blind needed special apparatus, and various appliances were devised to meet this want. Among the earliest attempts to construct a tangible device for the more abstruse calculations of arithmetic and algebra is that of the great mathematician, Nicholas Saunderson. Since his day a great many different ciphering boards, or tablets, have been constructed. One of the best is Taylor's octagonal board with square pins and octagonal holes. On one end of the pin one of the edges is raised into a prominent ridge, and on the other end there is a similar ridge divided in the middle by a deep notch. The holes in the board are star-shaped, with eight points. The pin can be placed in eight different positions, and on reversing it, with the notched end uppermost, in eight more; this gives ten signs for the Arabic numerals and six for the ordinary algebraic signs. For pure algebra another pin is needed, differing from that used in arithmetic. This gives sixteen additional signs, which are quite sufficient. It is essential for a good arithmetic board that the same pin should represent every character; otherwise time is lost in selecting the required character and in distributing the type at the end of each operation. In the United States a board is used with square holes, and two kinds of type are required to give even the Arabic numbers.

Music.—Since the days of Häuy, music has always been considered as one of the most potent factors in the education of the blind, offering them advantages which they can derive from no other source. Though a fair percentage of the blind attain to a high degree of musical skill, and find for themselves positions of responsibility and importance, yet, contrary to the general belief, no larger proportion of persons with exceptional musical talent is found among the blind than in any other class. The common idea that the blind are taught music by ear is erroneous; it arises partly from the assumption that those who are sightless must of course possess an abnormally acute sense of hearing, and partly from the fact that so many persons are unaware that a tactile musical notation exists. Since 1784 there have, in fact, been almost as many systems as systematists. Besides the common musical notation in relief, used by Valentin Häuy, by W. Taylor of York, and Alston of Glasgow, special systems were devised by Frere, Lucas, and Moon in England; by Guadet, Rousseau, and the Abbé Goupil, in France; by Klein, Kraußer, Oehlwein, and Warschauer, in Germany; by Petzelt in Austria; by D. Pedro Llorens in Spain; and by M. Marquie in France. All these systems, the common letters in relief were used to express the notes and their values, the octave, finger, repeat, and time signs, etc. All of the above systems, however, with the exception of the common musical notation in relief, have long since been entirely superseded by the Braille and the New York Point systems of musical notation. Soon after Louis Braille had devised the literary code be adapted his punctographic system to musical notation. An outline of the New York Point musical notation was first presented in 1872, and the first edition of the notation was printed in the same year. In 1878 it received the unanimous approbation of the American Association of Instructors of the Blind, and it was adopted a few years later.
in most of the institutions for the blind in the United States. As to the comparative merits of the two systems, it is claimed that the Braille notation is inferior in completeness and clearness of expression. The notation of music requires not less than 140 signs. The New York system, extending to four or five points horizontally, yields 120 single and 20 compound signs, while the Braille system admits of but 63 single signs.

and requires a uniform space for each. Ambiguity is the consequence of this inadequate number of signs, the same sign being made to represent two different things of the same species, as, for example, a whole note and a sixteenth, a half-note and a thirty-second.

Industrial Training.—From the very beginning of systematic education of the blind down to the last decade, industrial training has always occupied a decidedly prominent place in the curriculum. Too often, particularly in the earlier days, the essential work of education was subordinated to conditions created and demands made by the industries. Instead of being used as a means of education, the teaching of trades was made the chief aim and end. The sense of sight, as the first and second uses of the pupil's careers from which they seemed necessarily excluded naturally gave rise to somewhat extravagant hopes of the possibilities of industrial education. Hence, perhaps, arose the prevalent notion and expectation that schools for the blind should graduate young men and women so equipped that each and all would be self-supporting and able to earn as much, or nearly as much, as persons of equal natural ability with the sense of sight. The fact, however, is that only a small proportion of the blind in Europe and America are wholly self-supporting. According to the United States Census of 1900, of 62,456 blind persons, ten years of age and upwards, only 12,506, or about 20 per cent, were reported as regularly engaged in remunerative occupations. The percentage of the general population so employed was upwards of 50. As most institutions for the blind, particularly in the United States, are open to all blind children of average intelligence, the heterogeneous character of the membership of such schools must lower the standard of efficiency. Another factor which has too often been lost sight of is that blindness is a disabling infirmity. Education is much slower and more difficult with only four senses than with five; it would, therefore, be unreasonable to expect the better results of the schools for the blind than are expected of the public schools for normal children, in which schools neither trades nor music are taught. The teaching of skilled trades, it must also be remembered, properly belongs to a stage of education later than the primary, and it should not be allowed to take place upon the beginning work of the school. As soon as adults are admitted to the school with minors, the industrial feature tends to become dominant and unavoidably imparts an element of commercialism to the school. Both adults and younger pupils become disposed to lay more stress on shop work than on mental exercises and discipline. In consequence, the finished pupils lack those general qualifications which are necessary to begin business in the line they have learned, and still more to successfully compete against sight and machinery. The long, trying, and costly expense of the leading schools in the United States has, moreover, proved that the teaching of trades or industries during the school period confers no lasting good upon the pupils and is void of even such results as the sense of self-reliance and the power to become self-supporting which, it was believed, were being promoted. For these reasons the industrial experiment is gradually being abandoned in order to save the institutions for that strictly educational work for which they were established. If trades, then, are to be taught the blind, and industries to be carried on by them, the technical training should, as in the case of seeing pupils, be taken up only after the completion of the primary or secondary course of studies and in a location altogether removed from the school proper.

Manual Training.—Instead of the teaching of the ordinary trades, which, owing to the radical change in industrial conditions, can no longer be carried on by the blind at a financial profit, a system of regular and thorough training of the handicapped has been established, in which, the muscular defects, such as deformities in the muscular system, unsightly movements, natural timidity, awkwardness in walking, etc., must be corrected as far as possible. In view of these facts, physical training forms an integral part of the regular curriculum of the schools for the blind.

Libraries for the Blind.—It is almost impossible for those who enjoy the use of sight to realize what a boon reading is for those who live in perpetual darkness. Outside of their early education, for those who have been blessed with it, there is nothing in the life of the blind so stimulating, so broadening, and so comforting as good books. In no country have more efforts been made to supply the blind with books and to solve the problem of their circulation in the United States. In no country has such a liberal government provision been made for the education of the blind through the
publication of books as was made by the United States Government, when by an act of Congress (3 March, 1879) the sum of $250,000 was set apart as a perpetual fund, the interest of which ($10,000) is expended each year in printing and distributing suitable books among the institutions for the blind in the United States. Mainly as a result of this provision, the number of volumes distributed among the thirty-nine school libraries amounts, according to the Annual Report of the Department of the Interior for 1902, to 105,804 volumes, an average of 2713 volumes per school. In France and in England, it must be admitted, there is far greater individual co-operation and a more gen-
erally as a result of furthering the extension of libraries for the blind than in the United States. Thus the “Association Valentin Haüy” of Paris had, in 1905, on its list of voluntary writers of books for the blind the names of 1550 persons who embossed in Braille and donated in that year to the “Bibliothèque Braille”, for its forty-nine travelling libraries, 1533 volumes. In the same year the British and Foreign Blind Association of London was indebted to 574 generous persons who gave valuable time in writing Braille books for the blind.

Catholic Literature for the Blind in the United States.—Before 1900, with the exception of a small catechism and Cardinal Gibbons’ “Faith of Our Fathers”, there were no Catholic books for the blind to be had in this country. Since the death of Catholic schools for the blind, has resulted in the loss to the Church of thousands among the Catholic blind, the writer of this article founded, in January, 1900, a society whose aim it is to place gratuitously within the reach of the blind throughout the United States Catholic literature embodied in the Wait, or New York Point, print. With the assistance of the British and Foreign Blind Association, who agreed to give all necessary funds, a printing plant was equipped and has been in operation ever since. The society was incorpo-
rated in March, 1904, under the name of “The Xavier Free Publication Society for the Blind of the City of New York”. Although from its inception the society has been dependent for the maintenance of its work upon donations and annual subscriptions, still, with the encouragement and blessing of the Catholic hierarchy, the deep appreciation and gratitude of thousands of Catholic blind throughout the country, and the generous help of its benefactors, it has been enabled to pursue its beneficent object for the moral and intellectual elevation of the blind. Since its foundation, thousands of volumes of Catholic literature, evangelical, and biographical, historical, and geographical works, as well as works of general literature, of fiction, and of poetry, have been placed in upwards of thirty-seven state, city, or institute libraries for general and free circulation among the blind. The publications of the society are also circulated throughout the country from its own central library. The Catholic Transcriber for the Blind, a monthly magazine, is the Xavier Free Publication Society for the Blind since 1900, is so far (1909) the only Catholic periodical embossed in the English language.

Catholic Literature in England.—It is only within the last five years that, through the initiative of the Hon. Mrs. G. M. Fraser, who taught Braille to most of the writers, upwards of four hundred books have been handwritten by twenty members and placed at the disposal of the Catholic Truth Society of London for circulation among the Catholic blind in Great Britain. This work would not have been undertaken had it been possible to get Catholic books at the great English libraries for the blind.

The Blind-Deaf.—According to the special reports of the British and Foreign Blind Association for 1902, 61,763 persons reported as blind, 2772, or nearly 43 per 1000, were found to be also deaf. The age of the occurrence of these two defects cannot be stated exactly, except for those blind and deaf from birth, of whom there are 76. Between birth and five years of age are 61; between five and nine, 54; between ten and fourteen, 57; between fifteen and nineteen, 24. That the public, and even professional educators, entertain incorrect views on the education of this class of sufferers, has been shown by Mr. William Wade in his interesting monograph, “The Blind-Deaf”. For this excellent publication, and still more for his widespread and munificent charity to the blind-deaf, and particularly to the deaf and dumb and blind of this country, Mr. Wade’s name deserves to be forever enshrined in the hearts of this doubly and trebly afflicted class. The knowledge that the work of the blind-deaf is by no means the difficult task commonly believed, and the further knowledge of the number of those who have been educated and of their advanced position in mental attainments, will do much, it is contended by the author of the monograph, to advance the interests and the happiness of the blind-deaf. “In the early education of the blind-deaf”, we are told by Dora Donald, “there are three distinct periods. In the first the pupil receives impressions from the material world. The mind of a blind-deaf child does not differ from that of a normal child; given the same opportunity, it will develop in the same way. Whilst the normal child discovers the world through the five senses, the world must be brought to the blind-deaf child through the senses of sight and touch. During the second period the child is taught to give utterance to his conceptions. This may be done either through the sign language, the manual alphabet of the deaf, or through one of the systems of raised print for the blind, if articulated speech cannot be taught the child. The third and by far the most difficult step is that of procuring mental images from the printed page. The blind-deaf, having been trained in the habit of personal investigation, if he has been taught to express freely the results of such investiga-
tion by means of the manual alphabet and to record them in print, he will eventually be able to reverse the process and to build about him an imagi-

nary existence that will cause the printed page to seem with life and to grow with the charm of actual existence. At this stage of the child’s education, he may enter either a school for the deaf, a school for the blind, or the common school for normal children. Supplied with the necessary apparatus and accompanied by a teacher who will faithfully translate all that he might obtain through sight and hearing, he may be taught by the same methods used for normal children, ever keeping in mind the immense difficulty that he will have to take the place of sight and hearing; the manual alphabet or embossed page being substituted for speech.”

JOSEPH M. STADMAN.

Education of the Deaf and Dumb.—Education essentially includes the process of encouraging, strengthening, and guiding the faculties, whether of mind or body, so as to make them fit and ready instru-
ments for the work they have to do; and, where the
need exists, it must include, moreover, the awakening for the first time into activity and usefulness of some faculty which, but for the awakening, might remain forever dormant. As regards intellectual development, the deaf individual is the most handicapped of the afflicted class. The term "deaf and dumb," so frequently applied to that class of individuals who neither hear nor speak, is becoming obsolete among the educators of the deaf, as it implies a radical defect in both the auditory and the vocal organs. Persons who are born deaf, or who lose their hearing at a very early age, are unable to speak, although their vocal organs may be fully developed and become capable of forming speech. The inability to perceive speech and the inability to form sounds in the brain being deprived of hearing, they are unable to imitate the sounds which constitute speech. To correct the error involved in the term "dumb," it is customary to speak of human beings who do not hear and speak as deaf-mutes, a term which implies that they are silent, but not necessarily incapable of speaking. Brutal animals that are deaf, are deaf and dumb; the little child, before it has learned to speak, is mute, but not dumb. There are found individuals who can hear, but cannot speak. To such may be applied the term "dumb," inasmuch as they are either destitute of the power of speech or are unwilling to speak and are lacking in intelligence. Such children are generally found to be more or less idiotic. On account of the great proportion of deaf-mutes existing in the world, the education of deaf-mutes, by which a large percentage are taught to speak, the term mute is also omitted when speaking of matters pertaining to that class formerly designated as "deaf and dumb." Institutions for them are named preferably "Schools for the Deaf," and in the literature of the subject they are spoken of simply as the "deaf," e.g., "Our Anecdotes of the Deaf," etc. Here it is well to remark, that there is a strong and growing objection among the deaf and their educators to calling their institutions asylums—a term which classifies them with unfortunate needing relief and protection, like the insane. In fact, Webster, under the word "Asylum," classes the deaf and dumb with the insane. Efforts are consequently made to place such institutions under the control of educational rather than of charity boards.

History.—That there were deaf persons in the remote past is evident from the fact that the causes of deafness, such as disease, were as prevalent then as now. Before the Christian era, their condition was deplorable. By many they were considered as under the control of evil spirits, and their deafness was considered as a penalty only to be put to death as soon as their deafness was satisfactorily ascertained. Lucretius voices the received opinion that they could not be educated:

To instruct the deaf, no art can ever reach,
No care improve them, and no wisdom teach,
Greek and Roman poets and philosophers classified them with defectives, and the Justinian Code abridged their civil rights. In the family they were considered a disgrace, or were looked upon as a useless burden and kept in isolation. It is a bright page in the New Testament which narrates the kindness of our Divine Lord, who, doing good to all, did not forget the deaf and dumb. After His example, the Church has extended its charity to this afflicted class, and has led the way in legislation and in the channels of thought in place of the hearing faculty. The statement met with in literature connected with the education of the deaf, that the real history of deaf-mute instruction must be considered as dating from the Reformation, is the old fallacy of post hoc ergo propter hoc. The fact is, that not a few of the more famous educators of the deaf received their first lessons from the way wisdom, and the blind, if not influenced by its errors, but undertook the instruction of deaf-mutes for the sole purpose of imparting religious instruction. No Catholic theologian maintained that the adult deaf and dumb from birth are beyond the pale of salvation, because "Faith cometh by hearing" (Rom., x, 17). The assertion is often made, without references being given, that St. Augustine held such an opinion. Although the great doctor may have held the opinion of his time, that the deaf could not be educated, he certainly did not exclude them from the possibility of salvation any more than he excluded pagans to whom the Gospel had not yet been preached.

That the deaf are very much handicapped, even in our time, as regards religious instruction, so necessary for the preservation of faith and morals, must be admitted. Many deaf and dumb persons have lost the Faith, owing to a lack of Catholic educational facilities. Moreover, they are deprived of the usual Sunday instructions and sermons. There are in the United States few priests engaged in ministering to their spiritual welfare, and such as have taken up this apostolate are not at leisure to devote their whole energy to the work. On the other hand, Protestant ministers travel the country extensively and in their monthly itineraries assemble the deaf for religious services. There can be no doubt that from the dawn of Christianity the deaf enlisted the sympathy and zeal of many priests and missionaries who, by various ingenious devices suited to the occasion, taught them the essential truths of faith and morals so as to lead them to the practice of good works. According to Venerable Bede, St. John of Beverley (721) caused a deaf and dumb youth to speak by making the sign of the cross over him; and Bede himself, in his "De Loquela per gestum digitorum," describes a manual alphabet. Rudolph Agricola, the distinguished humanist (1443-1483), states that he saw a deaf and dumb man who was able to converse with others by the help of signs. The invention of the deaf alphabet is attributed to St. Jerome (1520-1534), a Spanish Benedictine monk, who undertook the education of several deaf-mutes, as is related in the accounts of his work discovered among the archives at Ona. He relates that he taught pupils who were deaf and dumb from birth to speak, to read, to write, and to keep accounts, to repeat prayers and the Offices of the Church. He first taught his pupils to write the names of objects and then to articulate. A contemporary writer, Francesco Valles, says that Ponce de Leon’s method proved that, although we learn first to speak and then to write, the reverse order answers the same purpose for the deaf. It is highly probable that he was led to undertake the instruction of the deaf and dumb by the principle announded by Raimundus Lullius, "Notho possumus nutriri, nisi in ordine oppositio na mensis." The same authority is the opinion of St. Charles Borromeo, that "writing is associated with speech, and speech with thought, but written characters may be connected together without the intervention of sounds. The deaf can hear by reading, and speak by writing." About fifty years later, Juan Pablo Bonet, a Spanish priest, published a treatise entitled, "Reduccion de las Letras y arte para Enseñar a hablar los Mudos." (Madrid, 1620). He made use of a manual alphabet, invented a system of visible signs representing to the sight the sounds of words, and gave a description of the position of the vocal organs in the pronunciation of each letter. His work contains many valuable suggestions useful to modern teachers of articulation and lip-reading.

St. Francis of Assisi, on one of his missionary journeys met a deaf-mute, took him into his service and succeeded in establishing communication with him by signs, and prepared him for confession and Holy Communion. The celebrated Jesuit naturalist and physician, Lana Terzi (1631-1687), in his "Prodromo dell’ Arte Maestra," considers the education of the deaf, which, according to him, consists in their "first learning to perceive the dispositions of the voice in the formation of sounds, and then imitating them; and recognizing speech in others by lip-reading. To that end they should first utter each sound separately, read it on the lips of another, then join them in words;
next they should be taught the meaning of these words by being shown the objects signified, and gradually be made acquainted with the meaning of those which relate to the functions of the senses, the arts, the understanding and the will” (Arnold). Lorenza Hervas y Panduro (1725–1809), a celebrated Spanish philologist and missionary in America, took an active interest in the education of the deaf in Rome and published a learned work in two volumes entitled “Eseuca Es- pañola de Sordo-mudos, o Arte Para Enseñar a Cie- rbir y Hablar el Idioma Español” (Madrid, 1795). The work consists of five parts, “the first dealing with the deaf in the political, physical, philosophical, and theological aspects of the subject and the linguistic questions it gives rise to; the second is a history of their education up to that time, which is the first complete account of the history of the deaf; the third is a method of teaching idiomatic language by writing; the fourth that of teaching speech; and the fifth is on the instruction of the deaf in metaphysical ideas and in moral and religious knowledge” (Arnold).

Among other writers in the interest of the education of the deaf and dumb must be mentioned John Bul- wer (1645); Deusing (d. 1666), who in his writings regarded Thomas Beveridge, and lip-reading as the helpful instruments in the education of the deaf; William Holder (1616–1680), and his contemporary, John Wallis (1616–1703); George Dalgaro (1626–1657), of Aberdeen, Scotland, who published, in 1661, “Ars Signorum” and, in 1680, “Didascaloc- plus” (or “Deaf and Dumb Man’s Tutor”), and de- vises a method of rendering the alphabet and, as far as possible, the whole of the learned languages; a novel of Schaffhausen, Switzerland, who published (1700) “Dissertatio de Loquela”, in which are described the means by which the deaf and dumb from birth may acquire speech.

Although Germany cannot claim originality in the field of the education of the deaf and dumb, several works published in other countries were translated into German, and their teachings put in practice. Among the earliest to take up this work were Keger (1701), Raphael (1673–1740), Lasius (1773), and Arnold (1777). The first public institution for the deaf in Germany was established by Samuel Heiniecke (1729–1790), the great advocate of the oral method of instruction, which has generally been followed in Ger- many. In his “Geschichte der Gehörlosen” (1805–1874), regarded as one of the greatest teachers of the deaf, is due what is distinctively called the “German System”, which has found an able critic in J. Heidsieck, of the Breslau Institution for the Deaf, in a work entitled “Der Taubstumme und seine Sprache”, Jacob Rodrigue Pereire (1715–1780), a Portuguese Jew, gave an exhibition of his skill in teaching the deaf before the Academy of Science in Paris. “His efforts were confined to a privileged few, and, from this circumstance, as well as his keeping his methods secret, his work, unlike de l’Épée’s, had no lasting effect upon the deaf as a class” (Arnold). Abbé Des- champes, of Orleans, devoted his life and fortune to the education of the deaf-mutes and, in his instructions, relied on reading, writing and spelling, and lip-reading.

Up to the middle of the eighteenth century, it was believed that speech was indispensable to thought. The practical utility of pantomime had not been fully shown before the days of Abbé Charles-Michel de l’Épée (1712–1789), the father of the sign-language and founder of the first school for the deaf. The de- plorable condition of the two deaf-mutes whom he chance to meet on one of his missionary errands ex- cited his compassion and awoken in him zeal for their religious instruction. He discovered others of the same class, especially among the poor, and to these he devoted his time and fortune. In his first attempt to teach his silent pupils he tried the method of pic- tures used by Père Vanin before him; but, finding this method unsatisfactory, he tried the articulation method, which he found discouragingly slow. Notic- ing, as every instructor of the deaf has noticed, that deaf-mute children, even before having received instruction from anyone, will, at play and at other times, communicate with each other in pantomime and make use of certain natural gestures indicative of objects, their quality and action, he came upon the idea of adding a sign-language as the means of instruction. Since words are conventional signs of our ideas, why could not conventional gestures be signs of ideas? He concluded that the natural language of signs, which the deaf-mutes themselves invent, would be of great service in their instruction. He accordingly made himself familiar with the few signs already in use and added others. In the first year he opened a school for deaf-mutes in Paris, about 1760, which soon won international fame. De l’Épée died in 1789, leaving as his successor the Abbé Sicard, who made important improvements in the system of de l’Épée. At about the same time a school for the deaf was opened by Samuel Heiniecke at Dresden, which was afterwards removed to Leipzig, and another by Dr. Gréban in Paris, which resulted in the foundation of the first school for deaf-mutes in France, about 1760. The results obtained in these schools prompted other cities and countries to establish similar ones under the direc- tion of persons trained by de l’Épée, Heinieke, or their disciples.

In Italy the first school for the deaf was established in 1784 at Rome, by the Abbate Silvestri, a disciple of Abbé de l’Épée. Among other Italian educators must be mentioned Tommaso Pecorari (1800–1883) and his brilliant associate, Enrico Marchio; Abbate Bales- tra and Abbate Giulio Tarra (1832–1890), who acted as president at the Milan International Congress in 1880 and saw his most cherished ideas regarding oral teaching practically approved by the resolutions that were adopted, and which hastened the progress of oral teaching, especially in France. Francis Green, a native of Boston, 1742, whose son was a deaf-mute, was the earliest advocate of deaf- mute education in America. In his “Vox Oculis Sub- jecta”, published in London, 1783, he describes the method by which the deaf-mute may be taught to speak. In about 1812, John Braidwood, Jr., a grand- son of the founder of the Edinburgh school, attempted to establish schools for deaf-mutes in Maryland and Connecticut, but was most unfavourable, and never more, failed. “The immediate effects”, says the “History of American Schools for the Deaf” (I, 10), “was to hinder and delay the opening of the first permanent school; for the members of his family in Great Britain, who controlled the monopoly of deaf-mute in- struction in America, placed obstacles in the way of Dr. Gallaudet, when he sought to acquire the art of in- struction in the mother country.” An exceptionally large number of deaf-mutes having been found in the State of Connecticut by Dr. M. F. Cogswell, whose daughter was deaf, a corporation of several gentlemen was enlisted for the purpose of establishing a school at Hartford, under the care of Dr. Thomas Hopkins Gallaudet. For the purpose of mastering the art of in- structing the deaf, Dr. Gallaudet sailed for England; but the experiment for establishing schools, which was the project of the Braidwood-Watson family, which held the monop- oly of the art, repelled him. Happening to meet Abbé Sicard, who with his pupils was visiting London, he accepted an invitation to visit the school in Paris. Here he received every assistance. The abbé gave him several hours of instruction every week and generously allowed Laurent Clerc, one of his distinguished pupils and valuable associates, to accompany him on his return to America. In the contract drawn up be- tween Dr. Gallaudet and Laurent Clerc, it is stipulated (article 11): “He [Laurent Clerc] is not to be called upon to teach anything contrary to the Roman Catholic religion”, and in his letter to Bishop Cheve-
The Catholic holy to Laurent College. Dr. since which have Deschamps, mute can tional course Deaf", Professor aimed the superintendency of the Rev. Dr. Gallaudet, which, with two sons, the Rev. T. Gallaudet and E. M. Gallaudet, have been active in the cause of deaf-mute education. The latter was the founder of the Columbia Institution for Deaf-Mutes, which was opened 13 June, 1857. Later on, in 1864, it developed into a school for the higher education of the deaf under the name of the National Deaf-Mute College. Connected with the college is a normal department for the training of teachers for the deaf. A course of studies leading up to entrance into the National Deaf-Mute College may be taken. The opening of which goes through the use of speech and hearing, together with writing. The aim of the method is to graduate its pupils as hard-of-hearing speaking people instead of deaf-mutes.

(5) The Combined System:—Speech and speech-reading are regarded as very important, but mental development and the acquisition of language are regarded as still more important. It is believed that, in many cases, mental development and the acquisition of language may be carried on by the method of language, in which the manual-alphabet method, and so far as circumstances permit, such method is chosen for each pupil as seems best adapted for his individual case. Speech and speech-reading are taught where the measure of success seems likely to justify the labor expended, and, in most of the schools, some of the pupils are taught wholly or chiefly by the oral method or by the auricular method.

Some educators of the deaf employ the method of visible speech, which is a species of phonetic writing symbolizing the movements of the vocal organs in the production of speech. There is also a phonetic manual in which the several positions of the hand not only represent various speech sounds but also indicate mental development. The deaf-mutes are taught in this manner, which is physiologically or mechanically produced (see Lyon, "Phonetic Manual", Rochester, New York, 1891). Whipple, in his "Phonetic Manual", endeavours to depict the positions taken by the visible organs, the teeth, lips, tongue, and palate, in the production of sound.

Beyond the scope of this article to discuss the merits of the various methods in use. A teacher of the deaf cannot lose sight of the fact that in the term deaf, or deaf-mute, there are included at least four subclasses, namely, the semi-mutes, who have lost their hearing after they had acquired more or less perfectly the use of language; the semi-deaf, who retain some power of hearing, but yet cannot attend with profit to schools for hearing children; the congenitally deaf, possessing some ability to perceive sound; and the totally deaf from birth, who are unable to perceive sound. A teacher of hearing children may take for granted, if the class is properly graded, that all his pupils are on the same plane; but a teacher of the deaf, whose pupils may be only four in number, may have before him in one grade three different kinds of deaf children as there are pupils in the class. These he must instruct and educate. Considering that the deaf child is very much handicapped, and that the period of its school-days are limited, it is reasonable to suppose that a good teacher will take advantage of every latent power possessed by the child for educational development. In a word, the teacher will suit the method to the child, and endeavour to adapt the child to the method. It would certainly be a mistake to use the purely oral method for all deaf-mutes without discrimination and without considering the capacity, eyesight, etc., of the pupil.

Aids to Education of the Deaf.—For the purpose of diffusing knowledge relative to the education of the deaf, where this method is employed, the publications of Dr. Alexander Graham Bell, the Volta Bureau, Washington, D. C. Here are collected items of interest in the educational work for the deaf. Under John Hitz, its first superintendent, it received international development. In this way it has been possible to compile and diffuse international statistical information concerning institutions and schools for the deaf throughout the world. Its publications are distributed gratuitously or by exchange. Among the publications of the Volta Bureau is an historical account of all the schools for the deaf in the United States, in three volumes, edited by Dr. E. A. Fay. As an incentive to the educational work for the deaf, and as a means of collating the opinions of those interested, there are about thirty-two periodical publications in
Europe and more than sixty in America dealing with questions concerning the deaf. The oldest among the latter, "The American Annals of the Deaf," edited by Dr. Fay, is notable in its character and as such is the organ of the combined system of instruction. For the diffusion of the oral method there was founded, in 1899, at Philadelphia, a special periodical, "The Association Review," published by the "American Association to Promote the Teaching of Speech to the Deaf." Among the efficient agencies for the promotion of deaf education, the work for the deaf must be numbered the meetings, congresses, and conferences of superintendents and teachers of the deaf, and of the deaf themselves. The oldest organization of the kind is the "Convention of American Instructors of the Deaf," which met for the first time in New York in 1830, and for the sixteenth time in 1901, at the Le Couteulx, St. Mary's Institution for the Improved Instruction of Deaf Mutes, Buffalo, as the guests of the Sisters of St. Joseph.

There are also annual meetings of the "Association to Promote the Teaching of Speech to the Deaf"; meetings of principals and of the Department of Special Education of the National Association of American Teachers. At the invitation of the Right Rev. D. J. O'Connell, Rector of the Catholic University of Washington, Washington, D.C., the educational congress of Catholic deaf-mutes met in July, 1907, at Milwaukee, simultaneously with the Catholic Educational Association, and organized the Catholic Deaf-Mute Conference. The conference is a powerful factor in enlisting the cooperation of bishops, priests, and laymen in ameliorating the educational condition of the Catholic deaf. The deaf themselves, and all those who, in any capacity, have been interested in the educational and social welfare of the deaf, are invited to attend the conference. In making the annual report of the conference, the following paragraph was included:

"We beg to refer to the circular of the American Association of the Deaf, published in 1850, in which it was stated: 'The condition of the deaf is an important part in the educational system of the school. The institutions for the deaf in the United States, during the last decade, show a marked increase in the number of day-schools. This is due to the strong influence of the defenders of the oral method, who, for their purpose, consider such schools superior to boarding-schools. The conscientious duty of the parents to withdraw their afflicted children from State boarding-schools that have proved so dangerous to faith, has also influenced the establishment of day-schools. Until boarding-schools are provided, the day-school, notwithstanding its many inconveniences, is preferable for the Catholic deaf-mute child, so that it may not be deprived of religious home influence.

"In 1870, there were 66 schools for the deaf in the United States were almost entirely boarding-schools.

DEAF-BLIND.—There are some individuals who are not only deaf but also blind, and not a few who are deaf, mute, and blind. Wonderful results have been produced in the education of this afflicted class during the last half-century, as is evidenced in the case of Laura Bridgeman, taught by Dr. Howe; Helen A. Keller, educated by Miss Annie Sullivan; Clarence Elsey, poet and author, taught by Sister Dosithea of the Le Couteulx, St. Mary's Institution, Buffalo, New York, and Lottie Sullivan, educated by Mrs. G. W. Veltz of the Colorado School, and instructed for her first Holy Communion by the Sisters of St. Joseph in St. Louis. About forty more remarkable cases are known in the United States, and Canada, for "The American Annals of the Deaf," June, 1900. It is evident that a teacher of this class must be strong in the power of inventing means for the attaining of results, and of utilizing the unimpaired faculties as indirect ways of communication between the imprisoned soul and the outer world. Usually they are taught the manual alphabet, and made to understand that objects have names, and that by these names, recognized in raised print or by spelling on the fingers, objects can be designated. So delicate is their sense of touch that, like Helen Keller, they can, by feeling the movements of the vocal organs in the production of speech, be taught to speak and even to read the speech of others.
Manual Alphabets.—Venerable Bede (op. cit.) describes finger alphabets. Monks under rigid rules of silence often made use of them. Rosellius, a Florentine monk, in his “Thesaurus Artificiosae Memoriae” (1579), figures three one-hand alphabets which, with minor differences, were used by Bonet and Hervas y Panduro. The first alphabet used in teaching spoken and written language to the deaf was the Spanish one-hand alphabet of Rosellius. “The happy thought of this adaptation”, says J. C. Gordon, “is attributed to the pious and learned monk, Pedro Ponce de Leon” (1520–1584). The two-handed alphabet, used in Great Britain, was in use centuries ago among the school-boys of Spain, France, and England. Manual alphabets have nothing to do with “signs” or the “sign-language”. They constitute a manner of writing language by spelling words on the fingers. As a means of intercourse with the deaf, they are preferable to writing on paper, being more convenient and rapid.

For the sake of promoting the welfare of thousands of deaf persons, it is recommended to hearing persons to master this art, which is easily acquired.

Statistics.—According to the United States Special Census Report for 1900, there are in Continental United States 89,287 persons with seriously impaired powers of hearing. Of these 27,722 are blind-deaf, 37,426 are totally and 51,861 partially deaf; 51,871 became deaf under the age of 20 and 37,416 in adult life; 46,915 are males and 42,372 females; 84,361 are white, and 4926 coloured.

There are on an average 1,175 deaf to the 1,000,000 population in Continental United States. Considering that there are in this territory probably 15,000—

000 Catholics, it follows that, if conditions and causes are uniform, there are 17,625 Catholic deaf—10,272 under the age of 20 and 7353 adults. Since deaf-mutism is common among the poor, it is probable that the number of Catholic deaf is much larger. The statistics for the schools for the deaf throughout the world may be tabulated as follows:—

Reports received from fifty-three State schools in the United States, having an aggregate attendance of 10,124 pupils, show the values of the grounds and buildings to be $15,370,576; expenditure for grounds and buildings, $665,027; expenditure for salaries and other expenses, $2,556,459, making a total expenditure of $3,161,456, or $312 average cost per capita.

Reports from forty-three public day-schools show expenditures for salaries and other expenses to be $96,014 for 788 pupils, or an average cost per capita of $122. Reports from three denominational and private schools show an aggregate expenditure of $20,649 for 135 pupils, that is to say, an average cost per capita
expelled Bailiol, and, though Edward restored him, the quarrel with France prevented Edward from continuing the struggle. Further contests with Scotland took place during the Crécy campaign, when David Bruce, after securing his rightful place as king, took advantage of Edward's absence in France to invade England, only to be defeated and captured at Neville's Cross, October, 1346. David remained a prisoner for eleven years, but the Scottish raids continued. In 1355 the Scots took Berwick; Edward retook it in the following year, but, though he ravaged the Lothians in the campaign known as "Burning Candlemas", he was unable to bring the Scots to terms. When David was released, in 1357, and found himself unable to pay the stipulated ransom, he agreed to make Edward heir to the English throne. But David, instead of disarming Edward in a position which prevented him from prosecuting his claim or interfering with Scotland's independence.

Partly caused by the war with Scotland in 1333 and 1334 was the great war between England and France known as the Hundred Years War. The Scots had been helped by money from Philip VI of France, and Edward's anger at this was increased through the presence at his court of a French exile, Robert of Artois, who did all in his power to stir up enmity between the English and the French kings. Edward and Philip had been rival claimants for the French throne in 1328, and after Philip had been chosen king there was much dispute over the homage owed by Edward for his French fiefs. Philip, however, was driven from his kingdom after the end of France, a claim which involved the annexation of Guienne and Gascony, the parts still held by England. Thus personal and national rivalry combined to cause war. Edward's personal share in the war which lasted from 1338 to 1360 was a distinguished one. The first campaigns, however, were more remarkable for the concessions won by Parliament out of the king's hands than for his own. By the end of 1339 he had agreed not to take a tallage of any kind without the consent of Parliament; and in 1341, to obtain further supplies, he submitted to his accounts being audited by a board chosen in Parliament, and promised not to choose ministers without the consent of his council. But, having received the money, Edward shamefully broke his promises, saying that he had "assembled his prelats and barons and prelates and barons". The campaign of 1340 is noted for Edward's naval victory at Sluys over a fleet of five hundred French ships which attempted to prevent his landing; and this, taken with his victory off Winchelsea, in 1350, over the Spanish fleet, goes some way towards justifying his claim to the sovereignty of the seas.

The next campaign in which Edward took an important part was that of 1346. The Earl of Derby had been appointed to command in Gascony, and in 1346 Edward was about to lead an army to help him, when he was persuaded to attack, instead, the unprotected northern part of France. Landing near Cherbourg, he marched through Normandy, doing as much mischief as he could, and advanced almost to Paris. Then, crossing the Seine, he retreated towards Calais, pursuing closely Philip. By the time he reached Crécy, 24 August, he won a complete victory over the French force. Continuing to Calais, he began a lengthy siege which ended in the surrender of the town, August, 1347. Truces frequently signed after this were as frequently broken till open war broke out again in 1355. Edward himself had small part in the warfare which followed till the campaign of 1359-60, when, after trying to take Reims, he concluded a treaty with the regent of France at Brétigny, 8 May, 1360, by which all the ancient province of Aquitaine with Calais, Guines, and Ponthieu was ceded to him, and he renounced his claim to the French crown and to all French provinces except Brittany. The period between 1347 and 1355 was remarkable for the Black Death, a plague which in

V—21
England swept off about half the people. Decrease in population caused increase in labourers' wages. And in 1350 the king attempted to deal with the difficulty by proclaiming that labourers must work for the same wages as before the plague, under penalty fixed by statute. (See Gasquet, The Black Death, new ed., London, 1908.)

Ecclesiastically, Edward's reign was marked by some legislation directed against the pope. The difficulties were caused partly by the heavy taxation levied by the pope on the clergy, and partly by the appointment of foreigners to English benefices by the pope; while the irritation of Englishmen at these grievances was increased by the pope's residence at Avignon, under the influence of the French king. In 1351 the Statute of Provisors was passed. The king had, in 1344, complained to the pope against reservations and provisions by which English benefices were given to foreigners, and the rights of patrons were defeated; and this proving ineffectual, the statute now made all who procured papal provisions for benefices liable to fine and imprisonment. But the statute can hardly have benefited patrons, for preferments filled by provisions were declared forfeit to the Crown for that turn. In 1353, by the Statute of Praemunire, all subjects of the king were forbidden to plead in a foreign court in matters which the King's Court could decide, and in 1365 the papal courts were expressly excluded under this.

Urban V in 1366 demanded the annual tribute promised by King John, which was then thirty-three years in arrear; but, on Parliament refusing to pay, nothing more was heard of the claim.

The last years of Edward's reign were a time of failure and disappointment. In France he had lost, by 1374, all possessions but Calais, Bordeaux, and Bayonne; at sea the English were badly beaten by the Spaniards in 1372; the king himself after the death of his wife, in 1369, was completely under the influence of Alice Perrers; the court became more extravagant than before, and ministers were suspected of corruption. The Commons, supported by the Prince of Wales and William of Wykeham, attacked some of these evils in the "Good Parliament" of 1376. Lord Latimer, the king's chamberlain, and Richard Lyons, his financial agent, were impeached and imprisoned; and though Edward sent a message begging Parliament to deal gently with Alice Perrers for the sake of his love and his honour, she was banished from court. But the death of the Black Prince immediately afterwards was a great blow to the Commons. John of Gaunt was able, on Parliament's dismissal, to recall the impeached ministers, and by Edward's wish Alice Perrers returned. The struggle between the anti-ecclesiastical party, led by John of Gaunt, in alliance with John Wyclif, and the clergy, led by William of Wykeham, is scarcely connected with Edward personally, except in so far as this and other evils were due to Edward's neglect of the affairs of his kingdom.

Discontent and conflicts at home, and failure abroad brought his reign to a close. He died deserted by all except one priest who attended him out of compassion. He was buried in Westminster Abbey.

**Thomas Williams.**

Edward the Confessor, Saint. King of England, b. in 1003; d. 5 January, 1066. He was the son of Ethelred II and Emma, daughter of Duke Richard of
Normandy, being thus half-brother to King Edmund Ironside, Ethelred's son by his first wife, and to King Hardicanute, Emma's son by her second marriage with Canute. When hardly ten years old he was sent with his brother Alfred into Normandy to be brought up at the court of the duke his uncle, the Danes having gained the mastery in England. Thus he spent the best years of his life in exile, the crown having been settled by Canute, with Emma's consent, upon his own offspring by her. Early misfortune thus taught Edward the folly of ambition, and he grew up in the knowledge of false pleasures, and the court life, almost insensibly corrupted his gentlest qualities, and threatened to raise him to a station which he could not maintain. He was only a tramp amongst the chieftains of England and the church offices, and in association with religious, whilst not disclaiming the pleasures of the chase, or recreations suited to his station. Upon Canute's death in 1035 his illegitimate son, Harold, seized the throne, Hardicanute being then in Denmark, and Edward and his brother Alfred were persuaded to make an attempt to gain the crown, which resulted in the cruel death of Alfred who had fallen into Harold's hands, whilst Edward was obliged to return to Normandy. On Hardicanute's sudden death in 1012, Edward was called by acclamation to the throne at the age of about forty, being welcomed even by the Danish settlers owing to his gentle saintly character. His reign was one of almost unbroken peace, the thorough attempt to banish profane and evil practices on the throne, being averted by the opportunity attack on him of Sweyn of Denmark; and the internal difficulties occasioned by the ambition of Earl Godwin and his sons being settled without bloodshed by Edward's own gentleness and prudence. He undertook no wars except to repel an inroad of the Welsh, and to assist Malcolm III of Scotland against Wedebeth, the usurper of his throne. Being devoid of personal ambition, Edward's one aim was the welfare of his people. He remitted the odious "Dancergelt", which had needlessly continued to be levied; and though profuse in alms to the poor and for religious purposes, he made his own royal patrimony suffice without imposing taxes. Such was the contentment caused by the good St. Edward's laws," that their enactment was repeatedly demanded by later generations, when they felt themselves oppressed.

Yielding to the entreaty of his nobles, he accepted as his consort the virtuous Editha, Earl Godwin's daughter. Having, however, made a vow of chastity, he first required her agreement to live with him only as a sister. As he could not leave his kingdom without, his consent, and the move had been destined for St. Peter's tomb, to which he had bound himself, was committed by the pope into the rebuilding at Westminster of St. Peter's abbey, the dedication of which took place but a week before his death, and in which he also was buried. St. Edward was the first King of England to touch for the "king's evil", many sufferers from which disease were cured by him. He was canonized by Alexander III in 1101. His feast is kept on the 13th of October, his incorrupt body having been solemnly translated on that day in 1163 by St. Thomas of Canterbury in the presence of King Henry II.

G. E. PHILLIPS.

Edward the Martyr, Saint, King of England, son to Edgar the Peaceful, and uncle to St. Edward the Confessor; b. about 962; d. 18 March, 979. His accession to the throne on his father's death, in 975, was opposed by Guthrum and his son, and after a brief reign, Elfrida, who was bent on securing the crown for her own son Ethelred, then aged seven, in which she eventually was successful. Edward's claim, however, was supported by St. Dunstan and the clergy and by most of the nobles; and having been acknowledged by the Witan, he was crowned by St. Dunstan. Though only thirteen, the young king had already given promise of high sanctity, and during his brief reign of thirteen years and a half won the affection of his people by his many virtues. His stepmother, who still cherished her treacherous designs, contrived at last to bring about his death. Whilst hunting in Dorsetshire he happened (18 March, 979) to call at Corfe Castle where she lived. There, whilst drinking on horseback a glass of mead offered him at the castle gate, he was said to have eaten a piece of bread soaked in the drink; but soon fell from his horse, and being dragged by the stirrup was flung into a deep morass, where his body was revealed by a pillar of light. He was buried first at Wareham, then three years later, his body, having been found entire, was translated to Shaftesbury Abbey by St. Dunstan and Earl Aelfere of Mercia, who therefore Edward's lifetime had been one of his chief adornments. Many miracles are said to have been obtained through his intercession. Elfrida, struck with repentance for her crimes, built the two monasteries of Wherwell and Ambresbury, in the first of which she ended her days in penance. The violence of St. Edward's end, joined to the fact that the party opposed to him had been that of the religious, whilst he himself had been devoted to them, made it necessary for Edward to be signed with the title of Martyr, which is given to him in all the old English calendars on 18 March, also in the Roman Martyrology.

G. E. PHILLIPS.
through the island with a babe at her breast without fear of insult". St. Edwin was slain on 12 October, 633, in repelling a attack made on him by Penda, the pagan King of Mercia, who, together with the Welsh princes Cadwallon (a Christian only in name), had invaded his dominion. Perishing thus in conflict with the enemies of the Faith, he was regarded as a martyr and as such was allowed by Gregory XIII to be depicted in the English College church at Rome. His head was taken to St. Peter's church at York, which he had begun. His body was conveyed to Whithby. Churches are said to have been dedicated to him at London and at Breve in Somerset.

G. E. Phillips.

Edwy (or Edw Wig), King of the English, eldest son of Edmund and St. Aelgifu, b. about 940; d. 959. Though but fifteen years old at the death of his father, he was unanimously chosen king, and was crowned at Kingston in January, 956. Too young, almost, to know his own mind, and surrounded by counsellors who pandered to all that was worst in him, his reign was of short duration. Despite the exertions of St. Dunstan and Archbishop Odo, both of whom fell under his displeasure, he put imposition and imposition upon his subjects. His relatives were removed from court, honest thanes were de- spooned of their lands and inheritances, and his grandfather Ethelwe, who, by her piety and dignity, had endeared herself to the entire nation, was deprived of all her possessions.

At length, in 957, the Mercians and Northumbrians, who felt his course most keenly, rose against him. Edwy, Edgar's younger brother, withdrew from the court with Archbishop Odo and put himself at the head of the insurgents. Edwy advanced to meet him but was defeated at Gloucester and obliged to flee for his life. Unwilling to prolong a civil war, the men of Kent and Wessex assented to a general meeting of the thanes from North and South to arrange for peace. It was arranged that the thanes should be divided at the Thames, and that each brother should rule over a part. To Edwy was allotted the southern portion, and to Edgar the northern. Taught prudence by his reverses, Edwy governed his portion from that time forward with commendable justice and moderation, but died, prematurely, in 959.

His relations with St. Dunstan were not the happiest, and constitute the chief interest of Edwy's career. His opposition to the saint dated from the refusal of the latter to countenance his relations with Ethelweig, by some presumed to be his foster mother, and her daughter. Seeing that he was in disavour, Dunstan withdrew for a time to his cloister, but the anger of the king, kept alive by Ethelweig, followed him into the monastery. His monks were invited to revolt, the abbey was plundered. Dunstan fled and, though hotly pursued, managed to escape to the Continent, where he remained until after Edwy's death. Osbern's story to the effect that Edwy engaged in a general persecution of the monks may, however, be safely rejected, as the revolt against him was not concerned with the dispute between the regulars and seculars which began only after Edwy's death. On the other hand, Edwy's dislike for Dunstan may have helped to impede the saint's monastic reforms. Anglo-Saxon Chron.: Aethelweig, Mon. Hist. Brit.; Langrand, Hist. Eng.: England, II, 1244; Memonala, Abbeys, and Memorials of Dunstan (Rolls Soc.); Hallam, Middle Ages (London, 1818), II, 364.

Stanley J. Quinn.

Egan, Michael, first Bishop of Philadelphia, U. S. A., b. in Ireland, most probably in Galway, in 1761; d. at Philadelphia, 22 July, 1814. Entering the St. Francis Oe, he was rapidly advanced to important offices. In his twenty-sixth year he was appointed Guardian of St. Isidore's, the house of the Irish Franciscans, at Rome, and held this position for three years, when he was transferred to Ireland. After labouring for several years as a missionary in his native land, he responded to an earnest appeal of the Cathedral of Lancaster, Peggy Ov, and went to the United States. Though lacking the constitution demanded by the pastoral duties of that pioneer age, and suffering often from sickness, Father Egan's priestly zeal and his eloquence in the pulpit gained universal recognition, and, in April, 1803, he was appointed by Bishop Carroll one of the pastors of St. Mary's church in Philadelphia, which rapidly became a S. A., the church of this city into an episcopal see, with Michael Egan as first bishop. Archbishop Carroll describes him to the Roman authorities as "a man of about fifty who seems endowed with all the qualities to discharge with perfection all the functions of the episcopacy, except that he lacks robust health, greater experience and a greater degree of firmness in his disposition. He is a learned, modest, humble priest who maintains the spirit of his Order in his whole conduct." Owing to the Napoleonic troubles, the papal Bulls did not reach America until the year 1810. On 28 Oct. Bishop Egan was consecrated by Archbishop Carroll in St. Peter's church, Baltimore. His brief episcopate was embittered and his health shattered by the contumacious and landour of the lay tax-takers in which he had chosen for his cathedral. These trustees, who were tainted with the irreligious notions of the times, without any legal right, and contrary to the canons of the Church, claimed the privilege of electing and deposing their pastors and of adjusting their salaries. This un-Catholic contention that the holy owns the churches and the church owns their pastors! disturbed the peace and retarded the progress of the work, and threatened the existence of the Catholic religion in Pennsylvania during two episcopates. Bishop Egan's troubles were aggravated by the insubordination of two Irish priests whom he had admitted to the diocese, James Harold and his better-known nephew, William

Egan, Boettius, Archbishop of Tuam, b. near Tuam, Ireland, 1734; d. near Tuam, 1798. He belonged to a family owning large estates in the County Galway. In the eighteenth century they were reduced in position and rank and reduced to dependence on an Irish Catholic to receive Catholic education at home; nor do we know where young Egan received his early education. Neither is it certain at what age he went to France to be trained for the priesthood. This training he received at the College of Bordeaux, founded by Irish exiles and endowed by Anne of Austria, queen of the. She returned to Ireland and laboured in the ministry for some years till, in 1753, he was appointed Bishop of Achonry. Two years later he became Archbishop of Tuam. Acustomed during his whole life in Ireland to the greatest toleration of his religion, he joyfully welcomed the Catholic Relief Act of 1778, and hastened to express his gratitude to George III. When Maynooth College was founded in 1795, he was named one of its trustees. One of his last public acts was to sign an address to the Irish vicerey, Lord Camden, condemning the revolutionary associations then in Ireland. In this address George III was described as "the best of kings", and the Irish Parliament as "our enlightened legislature". It was strange language to use of such a king and such a government. Burke, Catholic Archbishops of Tuam (Dublin, 1882); Healy, History of Maynooth College (Dublin, 1895).

E. A. D'Alton.
Egbert, Saint, a Northumbrian monk, born of noble parentage c. 639; d. 729. In his youth he went for the sake of study to Ireland, to a monastery, says the Venerable Bede, "called Rathmelsgi", identified by some with Rathmore in County Down, and in the Diocese of Down and Dromore. There, when in danger of death from pestilence, he prayed for time to do penance, vowing among other things to live always in exile from his own country. In consequence he never returned to England, though he lived to the age of ninety, and always fasted rigorously. Having become a priest, he was filled with zeal for the conversion of the still pagan German tribes related to the Angles, and would himself have become their apostle, if God had not shown him that his real calling was to other work. It was he, however, who dispatched to Friesland St. Wigbert, St. Willibrord, and other saintly missionaries. St. Egbert's own mission was made known to him by a monk, who, at Melrose, had been a disciple of St. Boisil. Appearing to this monk, St. Boisil sent him to Egbert to call him to his institute of preaching to the heathen to go to the monasteries of St. Columba, "because their ploughs were not going straight", in consequence of their schismatic practice in the celebration of Easter. Leaving Ireland therefore in 716, Egbert crossed over to Iona, where the last thirteen years of his life were spent. By his sweetness and humility he subdued the Iona monks and rekindled in them the Christian spirit. In 729 they celebrated Easter with the rest of the Church on the 21st April, although their old rule placed it that year upon an earlier day. On the same day, after saying Mass and joining joyfully in their celebration, the aged Egbert died. Though he is now honored simply as a confessor, it is probable that St. Egbert was a bishop. By Aelred he is expressly called "austius and episcopus, and an Irish account of a synod at Birr names him "Egbert Bishop", whilst the term sucueros used by the Venerable Bede, is sometimes applied by him to bishops.

G. E. PHILLIPS.

EGBERT (EGEBERT or EGBERTH), frequently though incorrectly called "First King of England", d. A.D. 839. He styled himself in S82 Rec Anglorum, i.e. "Overlord of East Anglia", a title used by Offa fifty years before; in 830 he described himself as "King of the West Saxons and Kentishmen", and in 833 he is "King of the West Saxons". He came of the royal race descended from Ine of Wessex and, owing to his wise and pious rule, his kingdom was called the "Fortitude of Wessex and Offa of Mercia". The date and duration of his reign are unknown, but he returned in 802 and was chosen King of the West Saxons. In 815 he ravaged Cornwall and conquered the West Welsh who dwelt there. They rebelled in 825, when he again defeated them just in time to repel a Mercian invasion led by the Earl Edwin and the King of Northumbria. He invaded Mercia, East Anglia, and Northumbria, towards Kent, Surrey, Sussex, and Essex accepted him as king and East Anglia submitted to his overlordship. War with Mercia again broke out, and ended in Egbert driving out Wiglaf and receiving the submission of that kingdom. In 829 he attacked Northumbria, but the Northumbrians met him at Dore and recognized him as overlord.
dowed. From all these regenerates centres, likewise from the Abbeys of Echternach and St. Maximin, there sprang a reformation, a beneficent, spiritual, and intellectual influence radiated in all directions through the diocese.

Egbert was an intimate friend of Otto II, and with Willigis of Mainz exerted a wholesome influence over the emperor, whom he accompanied on his journey to Italy in 983. After Otto's death he stood at first for Henry the Wrangler (Zanker), but soon went over to Otto III and his mother Theophano. He was a leader of the religious renaissance in the Diocese of Trier. Among these are several valuable manuscripts: the famous "Codex Egberti", a book of Gospels written at Reichenau and richly adorned with miniatures, now preserved in the library of Trier; the "Psalterium Egberti", written in 981 and now in the chapter library of Cividale (Italy), to which it was donated by St. Elizabeth of Thuringia (also called the "Codex Germanicus"); and the "Codex Epternacensis", after the Roman Emperor Gertrude, who became its possessor in 1053; the "Codex Epternacensis", which contains also the four Gospels and is kept in the Cathedral of Echternach, likewise several other valuable manuscripts, in the "Psalter of the Church Book" (Regestrum) of St. Gregory the Great (596-604), etc. The arts of the goldsmith and of the worker in enamel were particularly well cultivated at Trier. Among valuable specimens still extant are: at Trier a portable altar, at Limburg the golden case or covering with richly adorned head of the so-called St. Peter's Stoup once used in reliquaries; the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, built by him near the cathedral of Trier.

J. P. KIRSCH.

Egbert, Archbishop of York, England, son of Eata, brother of the Northumbrian King Eadbert and cousin of King Ceolwulf, to whom the Venerable Bede dedicated his history; date of birth unknown; d. 19 November, 766. He received his early education in a monastery, and then went to Rome with his brother Egred, where he was ordained a deacon. Egred died in Rome and Egbert immediately returned to Northumbria. On the resignation of the Bishopric of York by Wilfrid II in 752, King Ceolwulf appointed Egbert his successor. Shortly after his accession Bede wrote a long letter to him advising him to give much time to study and prayer, to ordain more priests for the administration of the sacraments, and to translate the Creed and the Lord's Prayer into the Saxon tongue. He also urged him to strive to obtain the subdivision of many of the dioceses of the North in order that episcopal visitations might be more frequently made. He called his attention to many disorders that were prevalent and particularly urged him to secure the pallium for himself. Acting upon this advice Egbert obtained the pallium from Gregory III at Rome in 753, and thus became the second Archbishop of York, that title having been lost to the Church of York ever since St. Patrick went from Ireland to England.

During all those years no one had sought for the restoration of that lost dignity, and this neglect was afterwards used as a strong argument in favour of the precedence of Canterbury, when the well-known controversy arose between the two sees. The restoration of the pallium to Egbert increased his power and authority over the Northern bishops, who thus became his subordinates, and his power was augmented in 738 when his brother Eadbert succeeded to the throne of Northumbria.

Egbert was thus placed in a position which enabled him to carry out many reforms, and in the performance of these he proved himself a strict disciplinarian; but though stern when correction and rebuke were in order he was tactful, and his kindness was shown in the exercise of his power.

His pupil Alcuin frequently speaks of his piety and energy and always refers to him in terms of the deepest affection. "He is said to have been the first prelate who possessed a mint at York. He gave great attention to the services and music of his church, introducing the observance of the Hours. He was also a benefactor to the fabric of the minster, bestowing upon his cathedral the famous School of the goldsmith, and giving it to figured curtains of silk of foreign workmanship. He was, in all probability, the first introducer of the parochial system into the North" (Fasti Ebor.). One of his greatest works, perhaps, was the foundation of the famous School of York and its celebrated library. The renown of its masters spread far and wide, it was a centre of Christian learning, and noble youths from all parts flocked to York to be taught by the great archbishop. Himself taught divinity, whilst his assistant Albert, who afterwards succeeded him as archbishop, gave lessons in grammar and in the arts and sciences. The fact that the illustrious Alcuin was Egbert's pupil, sheds much honour upon the Diocese of York.

The archbishop's daily work has been thus described by Alcuin himself: "As soon as he was at leisure in the morning, he sent for some of the young clerks, and sitting on his couch taught them successively till noon, at which time he retired to his private chapel and celebrated Mass. After dinner, at which he ate sparingly, he amused himself with hearing his pupils discourse. But the subjects discussed in the evening he recited with them the service of complin, and then calling them in order, gave his blessing to each as they knelt in succession at his feet." (Mabillon, Acta SS., Ord. S.B., ad an. 815). Towards the end of his life he left the care of the school to Albert and Alcuin, giving himself more time and opportunity to prepare for his end in peace and tranquillity. In this state of retirement he prayed he joined by his brother King Eadbert, who voluntarily resigned his throne to enter the monastery in 757. Egbert died before his brother, having ruled over the Diocese of York nearly thirty-four years. He was buried in one of the porches of his cathedral at York. His best-known work is the "De Jure Sacreototih", a collection of canonical regulations; Extracts from it were made in the eleventh century, under the title of "Excerptiones e dictis et canonibus SS, patrum" (Mansi, XII, 411-32; Wilkins, I, 101-12), were long current as a work of Egbert. Among the writings attributed to him are a "Pontificale", or series of special offices for the use of a bishop; a "Dialogus Ecclesiasticorum Institutionum"; a "Confessional", and a "Pontificale", both of which were written in the vernacular as well as in Latin. The "Pontificale", an important liturgical text, has been published by the Surtzes Society, and his other works may be found in the second volume of Thorpe's "Ancient Laws and Institutes of England". In its present shape the "Pontificale Egberti" (P. L., LXXXIX, 411 sqq.) contains but little from the hand of Egbert, and is a ninth-century Frankish compila-

ition, put together mostly from Haliagar, Similarly, the "Dialogus Ecclesiastorum Institutionum" (Mansi, XII, 482-88) is said not to be from Egbert in its present form (see YORK: PENTITENTIAL BOOKS; LIBER PONTIFICIALIS).

For the writings of Egbert see P.L., IXXXIX. C. RAYNE, Egbert Eptornacensis (Lond, 1868); J. MARBON, Acta SS. Ord. S.B. (Venice, 1733), sec. III, 543-4, and sec. IV, 185-

Egfrid (also known as Ecgfrid, Ecgofrid, Egferd), King of Northumbria, b. 560; d. 685. He ascended the Northumbrian throne at Oswy's death in 670, and after defeating the Picts who had thought to impose upon his youth by asserting their independence, turned his attention to the Welphure, King of Mercia, and broke for a time the power of the West Saxon kingdom. In 679 new trouble with Mercia arose, and in the course of the subsequent struggle Aelfwine, Egfrid's brother, was slain. Through the intervention of Theodore, Archbishop of Canterbury, peace was at last restored and in lieu of vengeance Egfrid was prevailed upon to accept the legal wergild (fine) for his brother's death.

Egfrid now consolidated his kingdom by diplomacy, annexation, and treaty, bringing Cumberland, Galloway, and North Lancashire under Northumbrian influence. The desire for conquest, however, had entered his veins, and in 684 he dispatched an expedition into Ireland. The invasion was unsuccessful, but nevertheless was productive of much damage and loss to a hospitable, friendly people who had conferred numerous benefits on the Angles and who found violence where they expected gratitude. Disregarding the advice of his counsellors, Egfrid led an expedition against the Picts the next year, and, being decoyed into the mountain passes, was trapped and slain. He was buried by the victors in the cemetery on the Isle of Iona, and his brother succeeded to the Northumbrian throne.

Egloffstein, Friedrich W. von, b. at Aldorf, near Nuremberg, Bavaria, 18 May, 1824; d. in New York, 1885. He served in the Prussian army in his early manhood and then emigrated to the United States. Von Egloffstein has been called "The Father of Half-tone Engraving." The process of engraving by half-tone developed to such an extent that he was the first one to employ ruled glass screens, together with photography, to produce engravings. In 1861 he engaged Samuel Sartain, a steel engraver, to rule with wavy lines numbering 250 to the inch glass plates covered with an opaque varnish, and he was engaged in perfecting his experiments in this direction when war broke out. Abandoning his business, he joined the Union army as a volunteer from New York and was commissioned a colonel. While leading a skirmish in North Carolina, 27 April, 1862, he was severely wounded and retired from the service with the brevet rank of brigadier general. Under the patronage of Archbishop McCluskey he then took upon his new system of engraving again, and one of Murillo's masterpieces in the picture of the façade of St. Francis Xavier's College, New York, were produced by his patented process. Von Egloffstein thought to circumvent counterfeiting, so prevalent at that period, by having bank-notes engraved by his method. Through Baron Gerolt, Prussian Minister at Washington, he was introduced to a number of officials and prominent men, who organized the Heliographic Engraving and Printing Company, with a plant in New York City. There the von Egloffstein process of engraving was carried on in a secret manner. Each group of workmen was taught a part of the work, but no one was permitted to see the whole process. The United States Government refused to adopt von Egloffstein's method of engraving, and the company abandoned the project. The common method of engraving now is by means of ruled glass screens and photography. Glass screens ruled with wavy lines, such as von Egloffstein adopted in 1861, are also being used (1909). Von Egloffstein, as a member of the United States engineering department, later performed valuable services for the Government in the submarine war at Rock Island, Illinois, and in the blasting operations at Hell Gate in New York Harbour.

S. H. Horgan.

Egmont, Lamoral, Count of, Prince of Gâvre, b. at the Château de La Hamade, in Hainault, 18 Nov., 1522; beheaded at Brussels, 5 June, 1568. He was a descendant of one of the oldest families of the Low Countries; his patrimonial castle, near the abode of the same name, was on the coast of the North Sea, about three miles west of Alkmaar, Holland. In 1538 he went to Spain with his elder brother Charles, and both took part in the expedition to Algiers in 1541, in which Charles was injured. Charles died the following year, Lamoral succeeded to the title and estates, which, beside those of Holland, comprised the principality of Gâvre, seven or eight baronies, and a number of seignories. When, in 1541, he married Sabina, Duchess of Bavaria and Countess Palatine of the Rhine, his wife, it was a splendid match, and Lamoral, the son of a prince-bishop, was crowned by the King of the Romans assisted at his wedding. Egmont distinguished himself in various campaigns during the reign of Charles V, who, when he was only twenty-six years of age, invested him with the Order of the Golden Fleece, and appointed him to several confidential missions such as sending him to England to seek the hand of Queen Mary for Philip II. His principal titles to military glory are his battles with the French: the battle of St. Quentin, which was fought through his vehement persuasion (1557), and that of Gravelines, the honour of which is due to him exclusively. As a reward for his services he was nominated by Philip II, in 1559, stadtholder of the province of Flanders, and a member of the Council of State for the Low Countries.

But these services did not satisfy Egmont. Though handsome, brave, rich, generous, and popular, still he viewed with jealousy the prominence given Cardinal Granvelle, who was in the confidence of the king. He entered a vigorous protest against the proceedings of this minister and clamoured for his removal, going so far as to refuse to sit in the Council of State if Granvelle were allowed to remain. His hatred of this favourite led him into the plots of William of Orange against the Spanish Government. Later, when religious troubles broke out in Flanders, it was eviden
that he did not rise to the occasion; he granted the sectarian concessions emphatically disapproved of by the king and assumed a quite equivocal attitude in the matter of the iconoclasts. It is true that he alleged, in excuse, that there were no troops at his disposal and that he was therefore rendered powerless. On the other hand, he refused to take part in the plots against the Government, and when the Duke of Alva arrived in the Netherlands, he would not follow the Prince of Orange into exile, saying that his was a clear conscience. This attitude cost him his life and that of the Council of Hoorn he was arrested by the orders of the duke and condemned to death, despite his appeal to the privilege of the Golden Fleece. Both were declared guilty of high treason by the Conseil des Troubles, a court established by the Duke of Alva, and which was his servile instrument. The two friends were beheaded amid universal grief. Egmont met his death with dignity and Christian resignation; he protested to the last moment his devotion to his religion and his king, who, through the confiscation of his property, was left penniless with the care of eleven children. Egmont had been imprudent, but was guilty of no crime. His death was the last of the principal grievances of the Dutch. The only profit that the pursuers of power could obtain from the burst of indignation and contempt, no man could conscientiously make this—which according to the selfish theory is the only rational and indeed possible motive of action—the deliberate object of all his undertakings without his character becoming despicable and degraded.”

(De Bayv, Proces du compte d’Egmont et pièces justificatives (Brussels, 1583); Devilleur, Le Journal de Nicolas de Lon- des, procureur général du Compte d’Egmont en Bulletin de la Com- mune de Bruxelles, 1864; Le compte d’Egmont y Comte de Horne (Brussels, 1862); Pres- cott, History of Philip II (1855-59).)

C. Godfrey Kurth

Egoism (Lat. ego, I, self), the designation given to those ethical systems which hold self-love to be the source of all rational action and the determinant of moral conduct. In a broad use of the term any system might be called egoistic which makes any good of the ego the end and motive of action. The name, however, has been appropriated by usage to those systems which make happiness, pleasure, or personal advantage the sole end of conduct. In one form or another and with various modifications, the principle pervades the theories of the Cyrenaic, Epicurean, Utilitarian, and Evolutionary Schools; and, slightly disguised, it lurks at the bottom of utilitarian altruism. Its typical expression is to be found in Hobbes and Mandeville, while Jeremy Bentham, combining it with his utilitarian and evolutionary views, in some measure formulates it in its full character as egoistic hedonism. Two of Bentham’s statements, when taken together, set forth concisely the egoistic doctrine. “Pleasure is itself a good, nay, setting aside immunity from pain, the only good. Pain is in itself an evil, and indeed without exception, the only evil, or else the words good and evil, have no meaning.” (Principles of Morals and Legislation, chap. ix.) “The search after motives is one of the prominent causes of man’s bewilderment in the in- vestigation of the question of morals. But this is a pursuit in which every moment employed is a moment wasted. All motives are absolutely good, no man has ever had, can, or could have a motive different from the pursuit of pleasure; and for the pleasure it brings, comes later on, through a confusion of means and end, to be pursued for its own sake. Innumerable analyses have shown that pleasure and pain are not measurable, and still less commensurable. The scheme devised by Bentham for estimating the quantity of different pleasures by considering their various dimensions—intensity, duration, nearness, certainty, purity (freedom from pain), fruitfulness—is commonly regarded as a piece of absurdity.

This fundamental postulate of egoistic hedonism is, therefore, fallacious. But a deeper and more perni- cious vice of the system lies in its primary principle that self-interest is the only motive of human action. This doctrine reduces all virtue to mere selfish calculation, it outrages our liveliest moral feelings by resolv- ing the noblest and the proudest actions of human life in the pursuit of personal pleasure. To say that man is incapable of acting from any motive other than self- interest is to degrade human nature. Mankind at large understands very clearly that self-interest is one thing and virtue quite another; that self-sacrifice and heroic devotion do exist, and are not vice and immoral- ity; that a worthy action challenges our approbation in proportion to the disinterestedness of the agent. Let it become known that the hero of what we at first con- sidered a brilliant act of self-sacrifice had after all no other motive than to obtain some advantage for him- self, and immediately he appears but a vulgar merc- enary. As Lecky says: “No Epicurean could sow before a popular audience that the one end of his life was that he might cultivate a collection of books, and that the end of man’s highest actions is nothing but a burst of indignation and contempt, no man could conscientiously make this—which according to the selfish theory is the only rational and indeed possible motive of action—the deliberate object of all his undertakings without his character becoming despicable and degraded.”

(European Morals, vol. 1, p. 126.) If, however, the egoist, if the egoistic system should have a sole and unconquerable motive of action, it is idle to speak of obligation and duty. Nor can the hedonist, consistently with his theory, claim that he safeguards the pre-eminent value of virtue by recognizing the happiness derivable from it to be the highest form of pleasure. For if one kind of conduct yields this pleasure, while another does not, then evidently there must be some essential difference, accounted for in the egoistic and hedonistic theories, between right and wrong conduct, in virtue of which they produce contrary results of happiness and pain for the agent. But moral judgments are not resolvable into estimates of self-interest; and if we commit ourselves to classifying conduct purely by the advantages, in terms of the pleasure and pain, to be reaped from it, we are not justified in the reasonable judgment of men condemns as immoral; while, on the other hand, we shall be compelled to brand as wrong acts of self-sacrifice such as, in all life and literature, challenge the highest honour and reverence.

At the bottom of the errors of egoistic hedonism there lies a truth which this system misinterprets and perverts. However complete, and no doubt our own, self-love we may be, we can never strip ourselves of self. The constitution of his nature compels man to seek his own, however he may err in the deliberate choice that he makes among the various goods that solicit his efforts. The end constituted for him by God is to reach that highest good which consists in realizing the moral perfection of his nature. This good is, as Aristotle points out, the good man may be said to be a self-lover. “For he gives to himself what is most honourable, and the greatest goods, and gratifies the authoritative part of himself, and obeys it in everything. Therefore, he must be a self-lover, after a dif-
different manner from the person who is reproached for it, and differing in as great a degree as living in obedience to reason differs from living in obedience to passion, and as desiring the honourable differs from desiring what seems to be advantageous.\) (Nich. Ethics., BK. IX, ch. viii, §§ 6, 7.) When Kant declared that duty must be fulfilled exclusively for duty's sake, with disregard of all considerations of happiness or welfare, he ignored the fact that by annexing happiness to the concept of duty, the Creator evidently intends that we may legitimately aim at our own happiness, provided we do not invert the order which makes happiness subordinate to the good. Duty is not the be-all and the end-all. It is a means to reach our supreme end and good.

JAMES J. FOX.

EGWIN, Saint, third Bishop of Worcester; date of birth unknown; d. (according to Mabillon) 20 December, 720, though his death may have occurred three years earlier. His fame as founder of the great Abbey of Evesham no doubt tended to the growth of legends which, though mainly founded on facts, render it difficult to reconcile all the details with those of the ascertained history of the period. It appears that either in 692, or a little later, under Offa, Archbishop of Canterbury, Egwin, a prince of the Mercian blood royal, who had retired from the world and sought only the seclusion of religious life, was forced by popular acclaim to assume the vacant see. His biographers say that king, clergy, and commonalty all united in demanding his elevation; but the popularity which forced on him this reluctant assumption of the episcopal see, was soon wrecked by his apostolic zeal in their discharge.

The Anglo-Saxon population of the then young diocese had had less than a century in which to become habituated to the restraint of Christian morality; they as yet hardly appreciated the sanctity of Christian marriage, and the struggle of the English Bene-dictines for the chastity of the priesthood had already failed. The same land who lived more or less permanently occupied by pagans closely allied in blood to the Anglo-Saxon Christians. Egwin displayed undaunted zeal in his efforts to evangelize the heathen and no less in the enforcement of ecclesiastical discipline. His rigorous policy towards his own flock created a bitter resentment which, as King Ethelred was his friend, could only find vent in accusations addressed to his ecclesiastical superiors. Egwin undertook a pilgrimage to seek vindication from the Roman Pontiff himself. According to a legend, he prepared for his journey by locking shackles on his feet, and throwing the key into the River Avon. While he prayed before the tomb of the Apostles, at Rome, one of his servants brought him this very key. King Ethelred, in a fit of rage, threw the key into the Tiber. Egwin then released himself from his self-imposed bonds and straightway obtained from the pope an authoritative release from the load of obloquy which his enemies had striven to fasten upon him.

It was after Egwin's triumphant return from this pilgrimage that the shepherd Eoves came to him with the tale of a miraculous vision by which the Blessed Virgin had signified her will that a new sanctuary should be dedicated to her. Egwin himself went to the spot pointed out by the shepherd (\textit{Eoves ham}, or "dwelling") and to him also we are told the same vision was vouchsafed. King Ethelred granted him the land thereabouts upon which the famous abbey was founded. As to the precise date of the foundation, although the monastic tradition of later generations set it in 714, recent research points to some year previous to 709. At any rate it was most probably in 709 that Egwin made his second pilgrimage to Rome, this time in the company of Coemared, the successor of Ethelred, and Offa, King of the East Saxons, and it was on this occasion that Pope Constantine granted him the extraordinary privileges by which the Abbey of Evesham was distinguished. The most important acts of his episcopate was his participation in the first great Council of Clovesho.

EGYPT.—This subject will be treated under the following main divisions: I. GENERAL DESCRIPTION; II. ANCIENT EGYPTIAN HISTORY; III. ANCIENT EGYPTIAN RELIGION; IV. LITERARY MONUMENTS OF ANCIENT EGYPT; V. THE Coptic Church; VI. CoPTIC LITERATURE; VII. COPTO-ARABIC LITERATURE.

I. GENERAL DESCRIPTION.—The name Egypt is properly applied only to the rather narrow valley of the Nile from the Mediterranean, 31° 33' N. latitude, to the First Cataract, at Assuan (Syene), 24° 5' 30' N. latitude, a stretch of about 680 miles by rail. However, from remote antiquity, as now, Egypt held sway over Nubia, reaching by degrees as far as Napata (Gebel Barkal), 18° 30' N. latitude, which, under the Haga, just below the second cataract, Sobek became the westernmost point, and then another to the east as far as Assiut (Lycopeolis), Assuan forming its apex, or easternmost point. As far as Edfu (Appollinosis Magna) the valley is rather narrow, rarely as much as two to three miles wide. Indeed "in Lower Nubia the cultivable land area is seldom more than a few hundred yards in width and at not a few points the channel becomes so constricted as to advances clear up to the river brink" (Baederke, Egypt, 1903, p. 376). The general aspect of the Nubian desert is that of a comparatively low table-land, stony in the north, studded with sandy hills in the south. At Assuan the course of the river is broken by the first cataract, where its waters rush between numberless more or less divided islands, the most famous of which is the island of Philae above and Elephantine in front of Assuan. The cataract, however, has lost much of its grandeur since the building of the great dam which now regulates the supply for the irrigation of the country in the time of low water. From Assuan to Edfu (about 48 miles) the banks are so high that even in the annual inundation they are above the level of high water, and consequently it is most difficult to cross. Near Edfu the valley widens out and becomes wider still in the neighbourhood of Esneh (Latopolis). At Luxor (part of Thebes) it again narrows for a few miles, but after that it maintains a respectable breadth, averaging between twelve and fifteen miles. At Assuan the two high ranges of the Libyan and Arabian deserts, between which the valley extends. The range to the left is somewhat farther from the river, so that most of the towns are built on the western bank.

Near Girgeh (Abydos) begins the Bahr-Yusef, Joseph's Canal. It was formerly a branch of the Nile; it runs parallel to the main stream at a distance of from 5 to 6 miles along the left bank, and empties.
into the Fayûm (nome of Arsinoe). One hundred and ten miles above Memphis the Libyan mountains bend to the north-west, and then, facing north-east, they draw nearer again to the Nile, thus surrounding a large extent of territory, which of old was known as Te-She, or Lakeland, from the great inland lake frequently mentioned and described by the Greek travellers and geographers under the name of Lake Meris. It is still called Fayûm, from the Coptic pitom, "the sea". This lake once occupied almost the entire basin of the Fayûm, but within the historical period its circumference does not seem to have exceeded 140 miles. It lay 73 feet above the sea level, Lake Borolos (Lacus Buto or Paralus) east and Lake Edkû west of the Rosetta mouth (Ostium Bolbitinum), and Lake Mariût (Mareotis Lacus) south of the narrow strip of land on which Alexandria stands. Between Lake Menzaleh and the Red Sea, on a line running first south and then south-south-east, are Lake Balah, Lake Timsûh, and the Bitter Lakes (Lacus Amari), now traversed by the Suez Canal. Wâdi Tumilât connects Lake Timsûh with the Delta across the Arabian Desert, and forms the natural entrance to Egypt from the Asiatic side. West of the Delta, in a depression of the Libyan Desert, lies the Wâdi Natrûn (Vallis Nitrin), famous in early Christian times, under the

and was very deep, as shown by its last vestige, the Birket-el-Karûn, which lies 144 feet below the same level (Baeedeker, op. cit., p. 186 sq.).

A little before reaching Cairo, the Nile flows along the rocky and sandy plateau on which the three best-known pyramids stand. There, too, the two ranges of Arabian and Libyan mountains, which above this point run for many miles close to the river, turn sharply aside in the direction of the north-east and north-west, thus forming a triangle with the Mediterranean shore. The immense alluvial plain thus encompassed was called by the Greeks the Delta, owing to its likeness to the fourth letter of their alphabet (Δ). As soon as the river enters this plain its waters divide into several streams which separately wind their way to the sea and make it a garden of incredible fertility. In ancient times there were seven of these branches, five natural and two artificial. Only two are now of importance for navigation, the Damietta (Tamiathis) and the Rosetta branches, both named from the towns near which they discharge into the sea. It is to be remarked that, as a natural result of the incessant struggle between sea and land, the outline of the Delta is even now somewhat indefinite, and was probably much more so in the remote past. The shore is always partly covered with lagoons which move from one place to another. The most extensive of these are now, from east to west, Lake Menzaleh between the ancient Ostium Phatniticum and Ostium Pelusiacum, name of Desert of Scete, for its Coptic monasteries, four of which exist to this day.

Geology.—The low Nubian table-land through which the Nile meanders consists of a red sandstone, belonging to the upper cretaceous formation. It has furnished the Egyptians with an excellent building stone which they have exploited from remote antiquity, especially at Gîbel Sîûlî (Sûsilis), 26 miles south of Edfu, where the sandstone beds, in sharp contrast with their former low level, rise in steep banks overlooking the river, thus offering unusual facilities for quarrying and transporting the stone. Near Edfu the sandstone is replaced by the nummulitic limestones (Eocene) of the Tertiary period, which form the bulk of the Libyan Desert and of a considerable portion of the Arabian Desert as well. The Libyan Desert is a level, or almost level, table-land, averaging 1000 feet above the sea. On the east it is fringed with craggy cliffs overlooking the valley, while its outward border, running aslant to the north-west, offers here and there deep bays in which lie the oases of Khârgeh and Dûkhleh (Great Oasis), Farîfleh (Trümtheos Oasis), and Siwêh (Jupiter Ammon). The oasis of Bahriyeh (Small Oasis), north-east of Farîfleh, lies, on the contrary, in a depression entirely surrounded by the higher plateau. The Fayûm, in fact, is nothing but such an oasis on a larger scale. The plateau itself is waterless and practically without vegetation. Its strata are gently inclined to the
north-west, so that the highest level is in the south, near Luxor, where the oldest (lower Eocene) strata appear, and valleys (Bába-en-EL-Molík) take the place of the cliffs, undoubtedly for the same reason as in the Arabian Desert (see below).

East of the Nile the limestone formation originally presented much the same appearance as in the Libyan counterpart. This appearance, however, was changed by a high (6000 to 7000 feet) range of crystalline rocks (granite, gneiss, diorite, porphyry, etc.) which sprang upward, and valleys ( Bíbbí-en-EL-Molík) take the place of the cliffs, undoubtedly for the same reason as in the Arabian Desert (see below).

East of the Nile the limestone formation originally presented much the same appearance as in the Libyan counterpart. This appearance, however, was changed by a high (6000 to 7000 feet) range of crystalline rocks (granite, gneiss, diorite, porphyry, etc.) which sprang upward, and valleys (Bába-en-EL-Molík) take the place of the cliffs, undoubtedly for the same reason as in the Arabian Desert (see below).
ence between the highest and lowest stages of the river is 21 feet at Khartum, 20 feet at Wadi Halfa, 23 feet at Assuan, 22 feet at Asissi, and 22 feet at Minieh. Below the last-named point controlling works now prevent the normal rise of the river. (Baedeker, Egypt, p. xlvi.) At Cairo to-day the average rise is 16 feet. Some twenty-five years ago it used to be 25 feet at Cairo, 21 feet at Rosetta. When stated generally the height of the inundation must be understood as the height of the kilometre on the island (the case of Assiut). Afterwards the waters are led first to the higher level lands nearer the banks, then to the lower lands, for its general configuration the soil to be submerged, as the subsoil, is convex—not concave, as in the case of ordinary rivers. This is brought about by building earthen dykes across the canals and the fields; the dykes are removed and the canals are not kept in need sufficiently irrigated. The reverse is done when the river begins to fall, and the waters are kept in the remotest parts of the valley as high as possible above the level of the river, and they are let out slowly, so as to secure irrigation for the low-water months, March to June. This process, however, is not always possible, either because the inundation is insufficient or because the inundations are not kept in need. The fallaheen (tillers of the soil) then have to raise the water from the river, the canals, or the numerous wells fed by natural infiltration, so as to water their fields.

Two machines chiefly are used for this purpose: the sâkîyeh and the shâdîal. The sâkîyeh consists of two cylindrical wheels, right angle, with the water to pass through a perpendicular wheel carries an endless chain to which are attached leathern, wooden, or clay buckets. As the wheel turns the buckets are dipped in the water and filled, when they are lifted and emptied into a channel which carries the water to the fields. These machines are worked by asses or buffaloes in Egypt and by camels in Nubia. The shâdîal is a roughly made pair of gigantic scales in which the trays are replaced by a bucket at one end and a stone on the other, the stone being a little more than the weight of the bucket when filled. A man stands on the bank and, pulling on the rope to which the bucket is attached, submerged the latter, then letting go, the weight of the stone lifts the bucket out, when it can be emptied in the channel. When the level is 8 feet, where the level of the water in the canals remains nearly the same, they use a wooden wheel called tâbât, which raises the water by means of numerous compartments in the hollow fellos. Such methods, however, while absorbing all the energies of the population for most of the year, are far from exhausting the irrigation power supplied by the Nile during inundation, nine-twelfths of the annual outpour being contributed during the three months of maximum rise. It allows one crop only for the irrigated lands, and leaves many districts desert-like for lack of water. The pharaohs of the twelfth dynasty, it seems, tried partly to obviate these defects by using the natural lake of the Fayûm as a reservoir where the surplus of the inundation waters were stored during their highest rise, which allowed them to double the crop every two months of low Nile. The immense waterworks necessitated by this undertaking, at the point where the lake was most commonly visited by foreigners, gave the impression that the lake itself was an artificial excavation, as reported by classic geographers and travellers.

This great enterprise was not resumed until the end of the last century, when a series of gigantic dams at different points on the Nile was planned by the Egyptian Government; these, in part at least, have been completed. The Barrage du Nil (about twelve miles below Cairo) was completed in 1890. It extends across the Rosetta and Damietta branches and two of the principal canals of the Delta, thus ensuring constant navigation on the Rosetta branch and perennial irrigation through most of the Delta. The dam of Assiut, constructed 1898–1902, regulates the amount of water in the Iribihin Canal and thus ensures the irrigation of the provinces of Assiut, Minieh, Beni-Suef (10 miles east of Heracleopolis Magna), and, through Bahr-Yusef, of the Fayûm. Finally the dam of Assuan, also completed in 1902, below Egyptian lands, directs the water in the canals of Lower and Middle Egypt that upwards of 500,000 acres have been added to the area of cultivable land in the summer. This dam, the largest structure of the kind in the world, rises 130 feet above the foundation, and dams up the water of the Nile to a height of 53 feet, thus forming a lake of 231,500,000,000 cubic feet. It is 1 mile wide at the bottom, 98 feet at the bottom, and 23 feet at the top. The Egyptian Government has lately decided to raise it 23 feet, which will more than double the huge reservoir’s capacity and will afford irrigation for about 930,000 acres of land now lying waste in Upper Egypt (Baedeker, Egypt, p. 365). In addition to these gigantic waterworks, the number and capacity of the canals have been considerably increased, thus allowing the inundation waters to reach farther on the outskirts of the desert; to this, probably, is due the fact that the average level of high waters is lower than it used to be—25 feet at Assuan instead of 30, although for the region below Minieh this change is also to be explained by the manipulation of the controlling works of the thirteenth century.

In ancient times months had no special names; they were simply designated by ordinal numbers in each season, as "the first month of the inundation" and so on. Each month (as also the decades and hours), however, had as a patron one of the divinities whose feast occurred during that month, and the patrons, it seems, varied according to time and locality. At a rather late period the names of those patrons passed over to the months themselves, hence the name of the month is the same as that of its classical writer (see table below). Each month was divided into three decades (the Egyptians do not seem to have ever used, or even known, the week of seven days); each day into 24 hours, 12 hours of actual day time and 12 hours of actual night time. The hours of day and night, consequently, were not always of the same length. The six hours in which the sun passed over the meridian, along with the sixth hour of day to noon. There were further subdivisions of time, but their relation to the hour is unknown. The day most likely began with the first hour of night.

The year began with the first day of Thoth (Inauguration I) which, of course, was supposed to coincide with the first rise of the river. The first of Thoth was also supposed to coincide with the day of the heliacal rising of Sirius, which was called New Year's Day and celebrated as such each year with a great festival. Isis, typified by Sirius, her star, was believed to bring with the inundation a promise of plenty for the new year; this takes us back into the first centuries of the fifth millennium, when the summer solstice, which preceded it, was only the first day of the Egyptian period. As already alluded to, the heliacal rising of Sirius, We know, besides, from the classical writers that the latter phenomenon occurred on the 19th or 20th of July (according to the Julian Calendar), which points to Memphis as the home of the Egyptian Calendar. The Egyptians, however, must have perceived in course of time that they had not foreseen) that their calendar of 365 days would not, as they evidently believed at first, bring back the seasons every year at their respective natural times. Their year being about one-fourth of a day shorter than the Sirius year, on the fourth anniversary of its adoption, it had retroceded a whole day on the heliacal rising of Sirius; 1460 years later, the retrocession was of about 120 days, so that there is a possibility that the intercalation took place only when in fact the harvest was only beginning; and so on until, after 1461 revolutions of the civil year and 1460 only of Sirius, the first of Thoth fell again on the same day as the heliacal rising of that star. This period of 1460 Sirius years (1461 Egyptian years) received later the name of Sothic period from Soth, a Greek form of Sphynx, the Egyptian name of Sirius. Long before the end of the first Sothic period it was found necessary to consider the first of Thoth as a New Year's Day also, the civil New Year's Day. As early as the Fourth Dynasty we find the two New Year's Days recorded side by side in the tombs.

To the common people, who, as usual, were guided by the appearances, the calendar was steady while Sirius could be observed going round the sun. Consequently Sirius's New Year's Day—which seems to be all they knew or ever cared to know of the Sirius year—was a movable feast, the date of which was to be announced every year. The fact that they estimated its precession on the calendar at six hours exactly, which was not correct except in 3231 B.C. (see E. Meyer, "Aegyptische Chronologie", p. 14), tends to show that the date was not obtained from astronomical observation, but in a mechanical way on the supposition that every four years it would fall one day later, this rule having been ascertained astronomically once for all, and considered as correct (E. Meyer, op. cit., p. 19).

The cycle of the Sothic periods has been established in different ways by various scholars, with slight variations in the years of the beginning of the several periods (see Ginzel, "Handbuch der mathematischen un technischen Chronologie", 187 sqq.). According to E. Meyer (op. cit., 28), a new period began:

19 July, A.D. 140-141
19 July, 1521-20 b. c.
19 July, 2781-80 b. c.
19 July, 4241-40 b. c.

These dates have been adopted by Breasted in his chronology (Ancient Records of Egypt, I, sec. 44), which we shall follow in the chronological arrangement of the Egyptian dynasties (see below).

We have no evidence of the Egyptians having ever become aware of the difference between the Sirius year and the solar year, which accounts for the shifting of the summer solstice, which, of the beginning of the inundation from 25 July, in 4236 B. C., to 21 June, in 139 A. D. (see Ginzel, op. cit., 190). This divergence, however, was too slow, and amounted to so little, even in the course of several centuries, that the Egyptian astronomers might well have overlooked, or at least ignored, it with regard to the calendar. It is still more remarkable that, after noting the retrocession of their vague year, they should not have ventured to even it up with the Sirius year. The astronomers were also priests and, as such, custodians of the religious side of the calendar, which in their eyes could not have been the less important. The simple insertion of an intercalary day would have been sufficient when the two years agreed, but that happened rarely; and the need of a reform was not often felt by the contemporary generation. When that need was most acute, as in the middle of a Sothic period, the intercalation was not enough; the reform, to be satisfactory, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not be done without passing over several months to a year behind. There were accordingly two ways: one, frequently almost as many feasts or popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing politico-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomene day every four years. This fixed year, known as the Canopic or Tanitic year, began on 22 October, 258 B. C. (Juli), the first day of Thoth. The vizier, who had the privilege of intercalating them, met with but scant favour and was abandoned under Ptolemy IV (Philopator) in honour of whose predecessor, Ptolemy III, the decree had been issued. A second attempt on the same limited scale, and probably in the same spirit of flattery, was made in the early years of Augustus, in connexion with the establishment of the era of Alexandria. The Egyptian year was then brought into harmony with the fixed Julian year, inasmuch as it received every four years an intercalary day. That day was inserted after the fifth epagomene, preceding the Julian intercalary year. The first of Thoth, however, remained, where it was when the reform overtook it, viz., on 29 August, except after an intercalary year, when it fell on 30 August. The first and last days of the one-yearly day, it seems, was 23 B. C. (see Ginzel, op. cit., I, 224-25). This fixed year, which is still in use in the Coptic Church, was first adopted by the Greek and Roman portions of the population, while the Egyptians proper for several centuries clung still to the old vague year.

As we have seen in the beginning of this section, the whole arrangement of the Egyptian year and its relation to the astronomical and climatic phenomena of chief importance to the ancient Egyptians indicate that it must have been established at a time when one of the heliacal risings of Sirius coincided with the beginning of the inundation, which takes place shortly (according to the Coptic Calendar three days) after the summer solstice. This points clearly to the beginning of the inundation...

Although the Egyptians kept track of the Sirius year, in so far as its beginning was the official New Year's day, they do not seem to have made use of it for chronological purposes. The same must be said of other methods of reckoning the year which may have been in use among some classes of the population, as, for instance, the natural year based on the recurrence of the natural seasons. It is not uncommonly taken for granted or advanced that the Egyptian vague year of 365 days was preceded by a round year of 360 days, and that the former was obtained by adding 5 days to the latter. Arguments in favour of this view are few and not convincing. A year of 360 days is neither large nor small, but hardly imaginable (cf. Ginzel, op. cit., 69; E. Meyer, op. cit., 16). It is more likely that, even before the arrangement of 360 plus 5 days, the Egyptian year (originally a lunar year) had become lunisolar, and increased to 365 days, either as a fixed number for every year by means of intercalary days distributed over the whole year (as in the Julian year), or as an average number in a series of years (the process of approximation being called in the Hebrew year). Finally it was decided to adopt the far simpler and more rational arrangement of 12 more than followed by 5 intercalary days; the distribution of the days was changed, not their number. This recast of the calendar found expression at a very early period, if not at the time when it took place, in the following tables preserved by Plutarch (De Iside et Osiride, xii), but undoubtedly very ancient, as we may judge from the fact that the divinities mentioned in it belonged to the earliest stages of the Egyptian Pantheon. The Egyptian Nôth having had secret intercourse with Kronos (Geb), Hélios (Re) cast a spell upon her to prevent her from bringing her children forth during any month of the year. But Hermes (Thoth), who had heard her complaint spread abroad, went from her the 73d part (not 60th as Maspéro, "Histoire ancienne", p. 57; nor 70th as E. Meyer, op. cit. p. 9; nor 72d, as Ginzel, op. cit., p. 171) of her courses (literally light, φως, which he added to the (remaining) 360 days. During these five days Nôth brought forth her children (Osiris, Horus, Set, Isis, and Nephthys). The ancient Egyptians never had eras in the usual sense of this word, i.e. epochs from which all successive years are counted regardless of political or other changes in the life of the nation. Instead of eras, during the first five dynasties, they used to name each civil year from some great political or religious event which had its parallel in Babylonia, as "the Year of the Smiting of the Trachytes", "the Year of the Conquest of Nubia", "the Year of the Defeat of Lower Egypt", "the Year of the Worship of Horus"; or from some fiscal process recurring periodically, as "the Year of [or after] the Second Occurrence of the Census of all Cattle, Gold", etc. which was often abbreviated to "the Year of the Second Occurrence of the Census", or even "the Year of the Second Occurrence of the Census and of the Census". The census having become annual, each year of any given reign came to be identified as the year of the first (or whatever might be the proper ordinal) census of that reign, a new series thus beginning with each reign. From the Eleventh Dynasty on, the years were always numbered from the first of the current reign, and the second year of the reign was supposed to begin with the first day of Thoth next following the date of the king's accession, no matter how recent that date might be. The absence of eras in ancient Egypt is all the more remarkable as there were several periods which could easily have been utilized for that purpose, the Sothic period especially. (On other periods—Phoönix, Apis, Erythis—mention is made earlier, but they have yet found on Egyptian monuments, as also on the so-called Great and Small Years and the supposed Nubti Era, see Ginzel, op. cit., i, sec. 38 and 45.)

In later times several eras were created or adopted in Egypt, the principal of which was the Era of Alexandriah. Its epoch, or starting-point, has been conventionally fixed at 21 August of the first year of Augustus (Julian, 30 n.c.), although, as we have seen, it did not acquire its intercalary character until 26 or even 23, b.c., so that its first years were ordinary Egyptian vague years (for further details see Ginzel, op. cit., i, pp. 224-28). The Philippic, or Macedonian, Era (more generally known as the Era of Alexander) was introduced into Egypt in the third century b.c.
after the death of Alexander the Great (323 B.C.). Up to Ptolemy Philadelphus (285-47 B.C.), Egyptian monuments were dated according to the old Egyptian system, but after that time the Macedonian dates are generally found together with the Egyptian. Macedonian dating was gradually superseded by the use of the fixed eras, yet it is found, sporadically at least, as late as the second century after Christ (Ginzell, op. cit., I, p. 232). The Philippic Era begins on I Thoth, 425 (12 Nov., 324 B.C., Julian style) of the Era of Nabonassar; like the latter it is based on a vague year on the same pattern, months' names included, as the old Egyptian year. The Era of Nabonassar begins at noon, 26 February, 747 B.C. (Julian style). It is used in Egypt especially for astronomical purposes, and it met with great favour with the chronographers on account of the certainty of its starting-point and its well established accuracy. The reduction of Nabonassar's years into the corresponding usual Christian reckoning is rather complicated and requires the use of special tables (see Ginzell, op. cit., I, p. 143 sqq.).

Only a very small portion of the colossal mass of inscriptions, papyri, etc. so far discovered in Egypt has any bearing on, or can be of any assistance in, chronological questions. The astronomical knowledge of the ancient Egyptians does not seem to have gone very far, and, as every one knows, accurate astronomical observations rightly recorded in connection with historical events are more reliable in chronology than any other chronological method. It is remarkable that the Egyptian Claudius Ptolemy (second century after Christ) took from the Babylonians and the Greeks all the observations of eclipses he ever used and started his canon (see above) with Babylonian, not with Egyptian, kings. Evidently he held no records of sun observations made in Egypt. Yet, for religious reasons, the Egyptians registered with the greatest care the observed rising of Sirius on the various dates of their movable calendar. A few have reached us, and have been of no small assistance in astronomically determining, within four years at least, some of the most important epochs of Egyptian history. The Egyptians also recorded the coincidence of new moons with the days of their calendar. Such data in themselves have no chronological value, but the places of the new moons corresponded to the same positions on the calendar every nineteen years; taken, however, in conjunction with other data, they can help us to determine more precisely the chronology of some events (Breasted, op. cit., I, sec. 46). Moreover, ancient Egypt has bequeathed to us a number of monuments of a more or less chronological character: (1) The calendars of religious feasts (Calendars of Dendera (Tentyris), Edfu, Esneh, all three of which belong to the late period, Calendar of Papyrus Sallier IV) are especially interesting because they illustrate the nature of the Egyptian year (see Ginzell, op. cit., p. 200 sqq.). (2) The lists of selected royal names comprise: the so-called Tables of Sukkara, Nineteenth Dynasty, forty-seven names beginning with the sixth of the reign of Amenemhat III (2000 B.C.), Nineteenth Dynasty, sixty-one names, unfortunately not chronologically arranged; Abydos, Nineteenth Dynasty, seventy-six names beginning with Menes. (3) Two chronological compilations known as the Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. Unfortunately, the first of these two monuments is broken into fragments and otherwise mutilated, while the second is but a fragment of a much larger stone. These two documents (cf. E Meyer, op. cit., pp. 105-205, and Breasted, op. cit., I, pp. 51 sqq.) are, though fragmentary, of the greatest importance, in particular for the early dynasties and the predynastic times. The Turin Papyrus contains, besides the names of the kings chronologically arranged in groups or dynasties, the durations of both the individual reigns and of the various dynasties or groups of dynasties, in years, months, and days. On the Palermo Stone each year of a reign is entered separately and is often accompanied with short historical notices.—All these documents combined furnish the chronological frame for the vast amount of historical matter contained in thousands of mural inscriptions and steles collected and worked out with almost incredible patience by several generations of Egyptologists during the last hundred years.

Of secondary importance are the data furnished by the Greek and Latin writers. Still we must mention here the Fragmata Hierotheou (Greek version, Mace- donnian System) and the Historia Eusebii Chronicon (Latin version, Donian System) used by Eusebius in his "Preparatio Evangelica" and the first book of his "Chronicon"; (b) an epitome which has reached us in two recensions: one of these recensions (the better of the two) was used by Julius Africanus, and the other by Eusebius in their respective chronicles; both have been preserved by Georgius Syncellus (eighth-ninth century) in his Canon Chronographias. We have also a Latin translation by St. Jerome and an Armenian version of the Eusebian recension, while fragments of the recension of Julius Africanus are to be found in the so-called "Excerpta Barbarae". Judging from that epitome, the work of Manetho was divided into three parts, the first of which contained the reigns of the kings and the lands (omitted in the African recension) and eleven dynasties of human kings; the second, eight dynasties of such kings; the third, twelve (the last one added after Manetho's death). Besides a few short notices, the epitome contains nothing but names and figures showing the duration of each reign and each dynasty. These figures fluctuate a great deal. In the shape it has reached us Manetho's work is of comparatively little assistance, on account of its chronology, which seems to be hopelessly mixed up, besides being grossly exaggerated; and it must be used with the greatest caution. (For further details on Manetho and his work see the preface of C. Müller in the Didot edition of the second volume of Fragmata Hierotheou, p. 17.) Finally, Herodotus' "Istorya" (fifth century B.C.) and Diodorus Siculus' Bibliotheca (first century B.C.) deserves at least a passing mention. Although their interest lies chiefly in another direction, yet we may glean from them occasional chronological data for the times during which these two writers lived.

We cannot enter here upon even a cursory analysis, much less a discussion, of the various systems of Egyptian chronology. The older systems of Cham- pignolle, Lepsius, Lesueur, Brugsch, Mariette were, to a considerable extent, based on theories which have since been proved false, or on an imperfect study and an erroneous interpretation of the chronological material. These scholars, however, paved the way for the present generation of Egyptologists at the universities, especially who have at last succeeded in placing the chronology of ancient Egypt on a firm basis. The following chronological table up to the Twenty-sixth Dynasty is condensed from the excellent work of Professor J. H. Breasted, "Ancient Records of Egypt", I, pp. 40-47. The other dynasties up to the Thirtieth are taken from Professor G. Steindorff's "Outline of the History of Egypt" in Baedeker's
EGYPT

"Egypt" (6th ed., 1908), with the exception of the year 408, the last of the Twenty-seventh Dynasty and first of the Twenty-eighth, which we copy from Maspéro, "Guide to the Cairo Museum" (Cairo, 1903), p. 341:

4241* B.C.

Twenty-ninth Dynasty
378-341 B.C. 
Thirtieth Dynasty

Dates marked with an asterisk in the above table are astronomically computed and correct for the first three years, while the date 525 is attested by the Canon of Ptolemy. Several dates besides, within the period of the Eighteenth Dynasty and the initial date of Shebatake, second king of the Twenty-fifth Dynasty, are also astronomically determined. The dagger sign (†) indicates that the numerical difference between the two following dates is the minimum of duration allowed by the monuments for the corresponding dynasties. The reverse dagger (‡) indicates the maximum of duration. This is the case only for the period from the Thirteenth to the Seventeenth Dynasties. What this period may lose some day will be the gain of the nine following dynasties, but the extreme dates, 1788 and 663, will not be affected. The duration of 285 years for the Ninth and Tenth Dynasties, indicated by the two extreme dates 2475-2145, is an estimate, in round numbers, based on an average of 16 years for each of their 18 kings. The uncertainty which attaches to that period affects the dates of all the preceding dynasties, which, consequently, may some day have to be shifted as much as a century either way.

Ethnology.—Scholars are at variance as to the origin of the Egyptians. Some, chiefly philologists, suppose that the Egyptians of historical times had come from Western Asia either directly, through the Isthmus of Suez, or, as most will have it, through the Straits of Bab-el-Mandeb and Ethiopia. Others, principally naturalists, think they came from, or at least through, Libya, while others still place the original home of the Egyptians in Central Africa. The first hypothesis is now the most commonly received. Several considerations tend to make it plausible: the fact, for instance, that wheat and barley, which have been found in the most ancient tombs dating from before the First Dynasty, are originally indigenous to Asia, as well as linen, wine, and the produce of other cultivated plants we are represented among the funeral offerings in the tombs of the earliest pharaohs. And the theory can be said of the two sacred trees of the Egyptian pantheon, the sycamore and the pereia. Finally, the fact that the ancestor of the domesticated Egyptian ass had its home in the wildernesses south of Egypt would show that the Asiatic invaders or settlers came through Ethiopia. This theory tallies with the Biblical narrative, Gen. xi, 6, which makes the ancestor of the Egyptians, under the ethnic name of Misraim, the brother of Cush the Ethiopian, of Phut (e. g. Pουνιτ, the Paniti or the Latins), and Canaan, all three of whom certainly had their original homes in Asia. What seems more certain is that the Egyptians of historical times belong to the same stock as the Libyans and other races, some of which were absorbed, while others were either totally or partially dispersed. Five at least of these are given in the Bible (Gen., x. 13, 14) under ethnic names as sons of Misraim, i. e. Ludim (according to Maspéro, "Histoire Ancienne des peuples de l'Orient", Paris, 1903, p. 16, the Rodu or Romitri of the hieroglyphics, i. e. the Egyptians proper), Laubitschim (the inhabitants of No-Phat, or Memphite), Patrissim (the inhabitants of the To-res, i. e. the Phoenicians), the Anaks, who, in prehistory times, founded On of the North, or Heliopolis, and On of the South, or Hermopolis).

Predynastic History.—At all events, in the predynastic times, when the light of history begins to dawn on Egypt, various races which at different periods had settled in Egypt, had been blended under the moulding influence of the climate of their new home, and turned into a new race, well characterized and easily distinguishable from any other race, Asiatic, European, or African—the Egyptian race. Naturally, a difference of occupation created a certain variety of types within that race. While the tiller of the soil was short and thick-set, the men of the higher classes were tall and broad-shouldered. It is true that these races were not in the same degree marked by the traditional differences of the Semitic and Hamitic races, but all were broad-shouldered, erect, spare, flat-footed. The head is rather large, the forehead square and rather low, the nose short and flabby, the lips thick, but not turned up, the mouth rather large, with an undeniable expression of instinctive sadness. This type perpetuated itself through thirty or forty centuries of revolutions, invasions, or pacific immigration of foreign races into the Egyptian fields. As matters stood when the Hyksos were expelled, the Egyptians were a race that had not changed for three hundred years, and which, for that reason, was ready to be overthrown by some incalculable chance. The fellaheen, who form the bulk of the population and the sinews of the national strength. All agree that, even before the Egyptian race had attained that remarkable degree of ethnological permanence, Egypt, from a merely pastoral region, had become an agricultural country, as a result of the immigration (or invasion) of Asiatic tribes, for, before the dawn of history times, they had learned to raise wheat and barley, using the plough in their cultivation. Next came the political organization of the country. It was subdivided into a number of small independent States, which became the nomes of pharaonic times, each with its own laws and religion. In course of time some of these States were merged in one another until they formed two large principalities, the Northern Kingdom (To-Meï) and the Southern Kingdom (To-Rês), an arrangement which must have lasted some time, for when the final degree of centralization was
reached, and the two countries united under one rule, the king took the title of "Lord of Both Lands", or "King of Upper and Lower Egypt" (never "King of Künīt", i.e. of Egypt), and often wore a double crown consisting of the white crown of the South and the red crown of the North; the arms of the United Kingdom were formed by the union of the lotus and the papyrus, the emblems of the two countries.

The capital of the Northern Kingdom was Buto, under the protection of the serpent goddess of the same name (now Tell-el-Ferā'īn, 20 miles south-west from Rosetta). Nebhepet (the modern el-Kāb, a few miles north of Edfu) was the capital of the Southern Kingdom; the vulture-goddess, Nepheket, was its protector. On the death of the latter god, Horus, was worshipped as the distinctive patron deity of both kings. That ancient population of Egypt, referred to in later texts as the "Horus-worshippers", have recently emerged from the mythical obscurity to which their kings had been relegated before the days of Manetho, who knows them as the "Egyptians", i.e. the deified ancestors. The Palermo Stone has revealed to us the names of six or seven rulers of the Northern Kingdom; and in Upper Egypt, thousands of seal-impressions (none of the kings, unfortunately) have recently been excavated. The bodies, unembalmed, lie side by side, in what is called the "embryonic" posture, surrounded by pottery or stone jars, where remains of food, drink, and ointment can still be discerned. Bones and sinews, footprints and clay models of various objects which the deceased might need in the life hereafter—boats especially, to cross the waters that surround the Elysian Fields. From those early times date, as to the essentials of concept and expression, the Pyramid Texts alluded to in a former section of this article. We have seen, under "Horus", how, in the inscriptions, the calendar dates from predynastic times (121 H. c.), and that its original home was in the Northern Kingdom, probably at Memphis or at On (Heliopolis). The computations necessary for that calendar show clearly that we must trace to predynastic times the hieroglyphic system of writing which we find fully developed in the royal tombs of the first two dynasties (Breasted, "Ancient History of the Egyptians", pp. 35-30).

**Dynastic History.**—Since Manetho of Sebennytus (see above) it has been customary to arrange the long series of kings who ruled over ancient Egypt, from the beginning of history until the conquest of Alexander the Great, in thirty dynasties, each of which corresponds, or as a rule, seems to correspond, to a break in the succession of legitimate rulers, resulting from internal causes. Of the two latter, almost invariably leading to an invasion and, eventually, the establishment of a foreign dynasty. Manetho's claim, that his history was compiled from lists of royal ancestry and original documents, is fairly borne out by the monuments—the so-called Tables (royal lists) of Sakkara, Abydos, Karnak, and especially the famous Collection of Royal Titles in the Papyrus and Palermo Stone, as well as annals of individual kings recorded on the walls of temples, tombs, etc.

These thirty dynasties are very unevenly known to us; of a good many we know next to nothing. This is in particular the case for the Seventh and Eighth dynasties (Memphites), the Ninth and Tenth (Heracleopolites), the Eleventh (Theban contemporary with the Thinite), the Twelfth (Theban), the Fourteenth (Xoïte—in part simultaneous), the Fifteenth, and Sixteenth (Ihykos), and the Seventeenth Dynasty (Theban—partly contemporary with the Sixteenth). Other dynasties are known to us by their monuments, especially their tombs, which are often extremely rich in information as to the institutions, arts, mannerisms and customs of Egypt during the lifetime of their occupants, but almost totally devoid of historical evidence proper. Such is the case, for instance, for the first five dynasties, of which all we can say is that they must have ruled successively over the whole land of Egypt and that their kings must have been conquerors as well as builders. We know little or nothing of the peoples they battled with, nor can we detect the political reasons which brought about the rise and fall of the several dynasties. Evidently, in some cases the lack of information on some periods, which must have been very momentous ones in the political life of ancient Egypt, should be attributed to the disappearance of monuments of an historical character, or to the fact that such monuments have not yet been discovered; it is very likely, however, that in many cases not well informed, and, hand engraved on贫穷. In Egypt, in Assyria and Babylonia, it was not customary for kings to place their defeats on record, nor did the chieftain or the soldier of fortune who after a period of internal discontents succeeded in establishing himself as the founder of a new dynasty, care to take posteroity into his confidence as to his origin and previous political career. Manetho, who, as a rule, does not seem to have been much better informed than we are, resorts in such cases to traditions, strongly tinted with legend, which were in the keeping of the priests and belonged, very likely, to the same stock as most of those related by Herodotus on matters that could not fall under his personal observation. Such traditions, until confirmed by the monuments, or at any rate purified of the legendary elements, are of little weight; they must of course be kept in abeyance. For the present the royal names are almost all that we can regard as certain for several of the dynasties. Such is the case for the first two dynasties, which until about A. D. 1888 were considered by most scholars as entirely mythical. Their tombs, however, have since been discovered; the Great Pyramid at Giza, the pyramid of the ancient This (Thinis), and the names of Menes, Zer, Usapha, and Miebis have already been found. A good many other kings of Manetho's list cannot be identified with the owners of the tombs discovered, owing to the fact that, while Manetho gives only the proper names of the kings, the monuments contained, as a rule, nothing but their Horus names (Maspéro, "Histoire Ancienne", 56 sqq.). Monuments of these kings have been discovered in Upper Egypt and at Sakkara, which shows that they must have ruled over the whole land of Egypt. The various articles found in these early royal tombs point to a high degree of civilization by no means inferior to that of the immediately following dynasties. Religion in general, and the funerary ritual in particular, were already fixed, and the hieroglyphic system of writing had reached its last stage of alphabetic development (Maspéro, loc. cit.; Breasted, "History of Ancient Egyptians", 40 sqq.).

The history of Egypt can be divided into two large periods, the first of which comprises the first seventeen and the second the other thirteen dynasties. In current Egyptian Terminology, the Old Kingdom (ancien empire), Dynasties Twelve to Seventeen as the Middle Kingdom (moyen empire), Dynasties Eighteen to Twenty as the Empire (nouvel empire). The simpler division which we propose here seems to us more rational.

**First Period: First to Seventeenth Dynasty.**—During this period Egypt and the Asiatic empires never, so far as we know, came into contact, except possibly in a pacific and commercial way; their armies never met in battle. Some of the ancient Babylonian and Chaldean kings, like Sargon I (third millennium b. c.), may have occasionally extended their raids as far as the Mediterranean Sea, but it does not appear that they were deterred of whatever was permanent way. They were fully occupied with the war waged among themselves, or with the Elamites.
who for centuries contended with Babylonia and Chaldea for supremacy in Western Asia. On their side the kings of Egypt had to secure their own borders (principally the southern) against the neighbouring tribes, a necessity which led them, after many centuries of warfare, to the conquest of Nubia. As early as the reign of Pepi I (Sixth Dynasty) Nubia had been brought under control so far as to receive Egyptian colonies. Under the kings of the Twelfth Dynasty, chiefly under Userkara (the Sesostris of the Greeks), the conquest was achieved, and the valley of the Upper Nile as far as the Second Cataract was organized into an Egyptian province. The Libyans, also, and the tribes settled between the Nile and the Red Sea had to be repeatedly repelled or conquered. The brief records of such punitive expeditions, which appear on the Palermo Stone, attribute them to dates as early as the first two dynasties. Extensive commercial relations were maintained with the Syrian coast (whither King Snefru, of the Third Dynasty, sent a fleet to procure cedar logs from Mount Lebanon), with the Upper Nile districts, with Arabia to the south, and with the Somali coast (Punt, where, the distance of the roads being great, the coast was probably the most easily accessible part of the continent). The trade of the country was conducted by means of a fleet which, as we learn from the earliest sources, was already considerable in the Fourth Dynasty.

This radical change had the advantage of bringing Nubia within closer range, and it may have contributed substantially to the conquest of that province; but it weakened the northern border, which was now too far from the centre of political life.

The pharaohs of the Thirteenth Dynasty (most of whom were called Sekhem-hotep or Nofir-hotep), without abandoning Thebes, seem to have paid more attention than their predecessors to the cities of the Delta, where—at Tanis in particular—they occasionally resided, and it was from Xois (Sakha), a city of Lower Egypt, that the next following (Fourteenth) dynasty arose. It seems that the kings of that dynasty never succeeded in establishing a firm and lasting government. Their rapid succession on the throne and the famous invasion of the Hyksos which Manetho registers at that time, point to internal dissensions and a condition of affairs verging on anarchy.

At this time there came to us a king Tiharo by name. Under this king, God, why I do not know, sent an adverse wind to us, and against all likelihood from the parts of the East people of ignoble race, coming unexpectedly, invaded the country and conquered it easily and without battle. This testimony contains contradictory elements. It is difficult to imagine how an invasion could result in a conquest unless it took place gradually and consequently not unexpectedly. The most probable interpretation of Manetho’s words seems to be: that the invaders came in peaceful quest of new homes, and not in one body, as usually supposed, and that after a short time; that they first settled, with their flocks, in the rich pasture lands of the Delta, then, little by little, adapted themselves to the political life of the country, some succeeding in occupying important situations in the army or in the administration; that finally one of them, favoured by the rivalries of competitors for the vacant throne, seized the reins of government and was recognized as king not only by the men of his own race, but also by quite a considerable party of the natives.

The identity of the Hyksos has been the subject of long discussions. Some, with De Cara, think they were the same as the Hittites, others (Baedeker, ‘Egypt’; p. lxxix) see in them simple Syrian bedouins. The opinion which seems most probable and best agrees with the tradition preserved by Manetho, identifies them with the large Canaanite family once settled in Lower Chaldea, along the Persian Gulf and the Arabian coast. According to Professor Maspéro (op. cit., 194 sqq.), it was the invasion of the lower Euphrates by the Elamites under Kudurrakhunte (2255 B.C.) that forced this family to migrate to the West in search of a new home. The seafaring tribes settled along the eastern shore of the Mediterranean...
Sea to which they gave their name (Phoenicians, Punic; Egyptian Punt; Punt: Bible, Phut). Others settled in the mountainous districts of Palestine (Canaan proper), where they presumed their nomadic life, and gradually developed into an agricultural race. Others, finally, shepherds also, probably prevented from taking a northern direction by the powerful and well-organized nation of the Hittites, turned to Egypt, where they settled as explained above. Manetho assigns to them three dynasties, the Fifteenth, Sixteenth, and Seventeenth, of which only the Sixteenth held sway over all Egypt. During the Fifteenth Dynasty the princes of the southern houses, for a time at least, managed to retain a certain independence. They regained it under the Thirteenth Dynasty, which they in some way always preserved the honour of being recognized as the Seventeenth Dy

asty. The last of them, Amosis, after a war of six years, finally succeeded in driving the intruders out of Egypt, pursuing the remnant of their army as far as Sharhuna (perhaps Shuraken, Jos., xix, 6) in Southern Syria, where the last battle was fought and won by the Egyptians. From the monuments we know the names of at least four of the Hyksos kings, three of the name of Apophi and one Khian. An alabaster vase bearing the names of the last has been found under a wall of the palace of Chossos in Crete, and a lion in Bagdad. Their capital seems to have been Avaris on the north-eastern border of the Delta. Some think that their rule extended over Palestine and Southern Syria to the north of which it is the history of the Hyksos. The usage of carrying on official correspondence with the local princes of Syria and Palestine in the Babylonian language and script possibly dates from the period of the Hyksos. Few of the monuments of the Hyksos have been preserved, enough of them, however, to show us that as a rule the Shepherd kings conformed to their Desert customs, and that Egypt, adopting it, preserved, as it were, to herself, its religion (cf. however, Maspero, op. cit., 203), and political institutions. But they oppressed their Egyptian subjects, and posterity held them in abomination.

It is in the Hyksos period that we must place the arrival of the Israelites in Egypt. The migration of the Terachites from Ur in Chaldea may have coincided with the migration of the great Canaanite family. Although of different stock, the two families had long been thrown together in their former common home and spoke the same language; and this may partly explain the favour which the children of Israel found at the hands of an Egyptian ruler, himself of Canaanite, or possibly of Semitic, origin. The scarabs of a Pharaoh who evidently belonged to the Hyksos time give his name as Jacob-her or possibly Jacob-El, and it is not impossible', remarks Professor Breasted, 'that some chief of the Jacob-tribes of Israel for a time gained the leadership in this obscure age' (Hist. of Anc. Egypt, 181).

Second Period: Eighteenth to Thirtieth Dynasty. — The second period is chiefly characterized by the Asiatic victories of the pharaohs with which it opens, and by the repeated invasions of Egyptian territory by Asiatic powers, which was the reaction of those victories. During the first period Egypt could be great at home, within her natural borders along the Nile valley; every page of her history is her own. During the second period her greatness is in proportion to the power she acquires abroad on another continent; almost every page of her history belongs to the history of the world.

The first ambition of the kings of the Eighteenth Dynasty, inaugurated by Ahmosis (1550-1537 B.C.), was to secure their own borders against the Libyans, who had encroached upon the Delta during the period of confusion preceding the expulsion of the Hyksos, and, against the Nubians, who had availed themselves of the same opportunity to shake off the yoke of Egyptian domination. The first point was achieved by Amenhotep I, who, by the second by Thothmes I, whose two successive reigns lasted from 1537 to 1501 B.C. Not satisfied with recovering and reorganizing the ancient province of Nubia, Thothmes I pushed further than 400 miles farther south to Napata, below the Fourth Cataract, where the eastern frontier of Egypt remained fixed for the next eight hundred years or so. Both Amenhotep I and Thothmes I, and perhaps Ahmosis, too, had already undertaken the conquest of Syria. But it was reserved for Thothmes III (1501-1447 B.C.) to complete it and to organize the conquered territory as a permanent dependency of Egypt. Circumstances were favourable. Both Assyria and Babylon were restricted within their own borders by the Cilician Gates in Asia Minor. Nevertheless, the great confederation of the Canaanitic cities (perhaps to be identified with the Hyksos), backed by the Phoenician cities, the State, or States, of Naharin (from the Mediterranean to the bend of the Euphrates), and the Arvun kingdom of Mitanni (between the Euphrates and the Bek), was not an enemy to be despised, and it cost the army and fleet of the pharaoh no less than seventeen campaigns to achieve a permanent victory. The kings of Assyria and Babylonia, and even the Hittites, sent presents which Thothmes took for tribute; but he does not seem to have invaded their territories; he probably never crossed the Belik nor the Cilician Gates, and his expeditions remain the only instance of Egyptian control in Asia. The whole region conquered was organized as a simple tributary territory under the supervision of a governor general backed by Egyptian garrisons in the chief cities. The local rulers were otherwise left unmolested except in case of rebellion, when the punishment was prompt and severe in the extreme. Their sons were educated in Egypt, and their daughters married to the sons of the pharaohs, to the end that they might die in the pharaoh's service.

The administration of this territory, which included also the island of Cyprus, and was, like Nubia, the source of immense wealth to Egypt, gave rise to a considerable correspondence between suzerain and vassals. On the part of the latter it was written on clay tablets in the Babylonian language and characters and is of great interest, that is to say, for Egypt, the history of Western Asia. From that correspondence (so-called Tell-Amarna tablets) we learn that under Amenhotep IV (1375-1358 B.C.) the vigilance of the Egyptian court had considerably relaxed; the local dynasties were constantly and vainly asking for Egyptian troops against the encroachments of the Hittites and the Khabiri. This led, towards the end of the dynasty, to a complete loss of the Asiatic territory conquered by Thothmes III.

The Eighteenth Dynasty was an era of great international prosperity. With the single exception of Amenhotep IV, who allowed himself to be drawn into a scheme to reform the Egyptian religion, all its kings were wise and just rulers. They were also great builders, and devoted their capital to works of art, both war in gold, and silver, derived from tribute, to the erection of magnificent temples and temple-like mortuary chapels, all of which they richly endowed. The reform attempted by Amenhotep IV consisted in proclaiming Aton (an old form of Re, or Ra, the sun-god of Heliopolis) the sole god, and in enforcing his worship at the expense of others, in particular that of Amen for which the priesthood of Thebes claimed precedence over the others. He ordered the word god, as applied to the other deities, to be chiselled out wherever it could be found on the temples and other monuments. He changed his own name to Ikhnaton, "Spirit of Aton", in honour of the new god, to whom he erected a temple at Thebes called Jem-Aton. Lastly, he changed his residence from Thebes to Akhetaton, "Horizon of Aton" (now
El 'Amarna), a city which he founded in a like spirit, and he also founded two other cities of the same name, each with a Gem-Aton temple, one in Nubia, at the foot of the Third Cataract (where it was discovered in 1907 by Professor Breasted), and another in Syria, the site of which is still unknown. This reform was violently opposed by the established priesthood, and the land was soon thrown into a state of general confusion, verging on anarchy. The temples and cities dedicated to Aton were destroyed and abandoned soon after the royal reformer's death.

Harmhab (1350-1315 B.C.), the founder of the Nineteenth Dynasty, was principally engaged in bringing the land out of the confusion into which it had fallen during the last years of the preceding dynasty, and restoring the temples of the ancient gods to their former splendour. Seti I (1313-1292) attempted to recover the Asiatic provinces lost by Ramses. Thirteen years later the Hittite king visited Egypt on the occasion of the marriage of his eldest daughter with the pharaoh. Diplomatic unions of that kind had already taken place during the preceding dynasty. The treaty was faithfully observed by both parties, at least until the second year of Merneptah (1225-1215), the son and successor of Ramses II, while the Hittites seem to have taken part in the invasion of the Delta by the Libyans and various peoples of the northern Mediterranean, their allies.

Neither this, however, nor the dissatisfaction which at the same time was rampant among his Asiatic vassals spurred Merneptah to new conquests. The Hittite war of Ramses II, it seems, had completely exhausted the military enterprise of Egypt. Her armies from that time kept to the defensive. Merneptah was satisfied to bring back Palestine to submission and defeat and drive out the Libyans—among whom the Tehenu tribe was prominent apparently because they were settled on the Egyptian border—and their allies, the Sherden (Sardinians), the Shekelesh (Sicilians?), the Ekresh (Achæans?), and the Lycians. But even these were considered great achievements, and the people sang:

"The Kings are overthrown, saying: "Salātī!"
Not one holds up his head among the nine nations of the bow.
Wasted is Tehenu,
The Hittite land is pacified,
Pharaoh's land is Cuman, with every evil,
Carried off is Askalon,
Seized upon is Gezer,
Yenoam is made as a thing not existing,
Israel is desolated, her seed is not,
Palestine has become a [defenceless] widow for Egypt.
All lands are united, they are pacified,
Every one that is turbulent is bound by King Merneptah."

(Breasted, op. cit., 330; "Ancient Records of Egypt", III, 603 sqq.) The situation at home was no brighter, and it became worse under Merneptah's successors, Amenmeses, Memepthah-Siptah, and Seti II, until complete anarchy prevailed. Thrusting aside a host of less daring pretenders, a Syrian named Iršu (or Aseren, the 
Yessen), was held as the proper successor of the eldest of the nemes, seized the power and for five years ruled the land in tyranny and violence. (Breasted, "Ancient Records of Egypt", IV, § 398.) Thus ended the Nineteenth Dynasty.

Of Setnakht (1200-1198 B.C.), the founder of the following dynasty, we know little except that he was a man of great success in restoring the border. His son, Ramses III (1198-1167), was confronted by very much the same situation as Merneptah some twenty-five years before, only a great deal more serious. The allies of the Libyans defeated by Merneptah were only the vanguard of a far more dreadful army of invasion. This was now approaching. It was followed at close range by motley hordes of immigrants from the islands and the northern shores of the desert, the "peoples of the sea", as the Egyptians called them. Besides those already mentioned we find now the Peleset (Philistines) and the Denyen (Danaoi). Some of the invaders were coming by sea, along the coast, others by land. Ramses III showed himself equal to the occasion. Having defeated a first contingent who had already landed in the Delta and joined the Libyans, he sent a strong fleet to check the advance of the main body of the invaders' ships and hastened by land, with his army, to Syria, where he expected to find the enemy. Both the land and the naval battles were fought in about the same region, for Ramses, having routed the land forces of the enemy, was in time to co-operate with the Egyptian fleet in defeating that of the invaders. This brilliant campaign stayed the advance of the immigrants who now came straggling along, settling here and there as vassals of...
Egypt, in Syria and in Palestine, where, later, one of their tribes, the Peleset, or Philistines, offered a stubborn resistance to the invasion of the Hebrews. On the other hand the great Hittite confederation had been very much weakened, if not entirely disintegrated, as a result of the invasion. Ramses III had to repel another invasion of the Libyans, impelled this time by the Meshwesh (the Maxyes of Herodotus), and shortly after he found it necessary to appear again with his army in Northern Palestine, where rebellion had broken out among some of his vassals. The boundary remained, probably, where it was under the Nineteenth Dynasty, including the whole course of the River Leontes (or Litany) and possibly a small portion of the upper Orontes, excluding Kadesh. Ramses III had no further trouble with his Asiatic vassals.

With the successors of Ramses III, nine weak pharaohs of the same name (Ramses IV-XII), national decay sets in. Egypt entirely loses her prestige abroad, particularly in Asia, where Assyria is expanding under Tiglath-Pileser I; at home everything is confusion. Priests, officials, and mercenaries, whose wealth and prerogatives have been steadily growing at the expense of both pharaoh and his people, now fight among themselves for the controlling political influence, the pharaoh being reduced to a mere puppet. Such a state of disorganization prevails everywhere that, in the necropolis of Thebes, in sight of the temple of Amon, where the high-priest is so powerful, the tombs of the pharaohs are desecrated and plundered by a gang of robbers, and the royal mummies despoiled of all their most costly ornaments.

At some period during the Nineteenth Dynasty the pharaohs had their capital at Tanis (Sín-el-Hagar) in the Delta, Thebes remaining the religious capital of the empire. There Ramses XII resided when a local noble, Nesubenebed, seized the power (1113 B.C.) and established himself as king over the Delta. The weak pharaoh retired to Thebes, where he was soon overshadowed by Hrihor, the high-priest of Amon, who, when Ramses XII died as ingloriously as he had lived, was finally proclaimed supreme ruler of Egypt by an oracle of Khonsu followed by the approval of Amenhotep III (1090). Hrihor's rule, in fact, never extended over Lower Egypt, and his independence was not even suspected by Manetho who, after Ramses XII, introduces the Twenty-first Dynasty, with Nesubenebed as its founder. The division between the two countries was to continue, save for short intervals, for about four hundred and fifty years. Thebes, however, rarely during that time enjoyed complete independence, and still more rarely ruled over the whole country. Her relations to the Delta were usually those of a vassal to a suzerain. Her influence was particularly felt in Nubia, whither descendants of Hrihor seem to have retired at an early period, eventually founding an independent kingdom at Napata. Confusion and disorder still prevailed all over the land. To save them from further desecration, the royal mummies had to be concealed in an old, and probably unused, tomb of Amenhotep I, near the temple of Deir el-Bahri, where they remained hidden until they were rifled some thirty-five years ago by the Arabs. Most of them are now at the Museum of Cairo. The capital of this dynasty was at Tanis. Its last king, Psikkenno II, may be the Pharaoh mentioned in III Kings, xi, 15, 16 (see below). Assyria was then on the decline and we can best represent to ourselves David and Solomon as at least nominal vassals of Egypt.

Sheshonk (915-921), founder of the Twenty-second Dynasty, was a powerful mercenary prince, or chief of hired troops, of Hermopolis, where his ancestors, of Libyan origin, had settled early in the Twenty-first Dynasty. In 945 B.C., he proclaimed himself king, establishing his residence at Bubastis, in the Delta. Sheshonk seems to have been an ambitious and energetic ruler. He certainly led a successful campaign in Palestine, perhaps the same mentioned in III Kings, xiv, 25 (cf. II Paralip., xii, 2 sqq.), where it is said that he came to Jerusalem in the fifth year of Roboam, and took away the treasures of the house of the Lord, although Jerusalem is not among the one hundred and fifty-six Palestinian cities recorded in his inscription. In Solomon's time Sheshonk had given hospitality to Jeroboam (III Kings, xi, 10). According to Professor Breasted (Ancient Egypt, ii, 362), Sheshonk is also to be identified with the pharaoh who gave his daughter as a wife to Solomon (III Kings, iii, 1) and later on conquered Gezer and turned it over to his daughter, Solomon's wife, as a dowry (III Kings, ix, 16) while Professor Maspero (Hist. Anc, i, 145) refers to these episodes and that of Haddad (III Kings, xi, 14 sqq.) to Psikkenno II, the last king of the Twenty-second Dynasty. During the following reigns of this dynasty history records nothing but endless civil wars between the two principalities of Thebes and Hermopolis, and feuds between the mercenary lords of the Delta. On the other hand, Assyria was more powerful than ever. Shalmaneser defeated, at Karkar on the Orontes, a Syrian
coalition to which one of Sheshonk's successors—probably Taharqa II—had contributed one thousand men (584 B.C.). Under such circumstances Egypt's influence in Palestine must have dwindled to nothing.

One of the Delta lords, Pedibast, at the death of Sheshonk IV, the last king of the Twenty-second Dynasty, succeeded in establishing a new dynasty, which at least for a period of time was identified with Nubia. Whether the name of Osorkon comes from a native or Egyptianised name of Osorkon is evident. His reign was a period of renewed power and prosperity. But neither he himself nor his successors could control the situation. Under his successor, Osorkon III, a dynasty of Sais, Tefnakhte undertook to supplant him and the many other dynasties, several of whom were claiming the title and inheriting the prerogatives of royalty. He had partly succeeded in this, as he probably did not have the heart to make much use of the army, which, besides, was more interested in plunder. The Twenty-sixth Dynasty, which he introduces, was, as a whole, a period of rest and great internal prosperity. It was also a period of renaissance in art, religion, and literature, marked by a return to archaic traditions. Industrial art flourished as never before. The army was reorganized and strengthened with large contingents of Greek mercenaries, the Libyans having lost their efficiency in becoming Egyptianized. The influence of Persia, which had not yet been forced to make much use of the army, was felt in the Orient, and the Assyrians and Libyans were not yet able to interfere with the affairs of Asia. The temptation was great. During the long reign of Psamtek I Assyria had been constantly declining. In 609 he was succeeded by his son Necho, and three years later Nineveh was finally captured, and Assyria had come to an end forever. Necho thought this a favourable chance to recover the old Asiatic possessions of Egypt, and marched on Carchemish (cf. II Paralip., xxxv, 20: Jerem., xvi, 7–9). At Magdiba the king of Judea, Josias, who foolishly persisted in disputing his passage, was routed and mortally wounded (II Paralip., xxxv, 22). This incident brought Necho to Jerusalem, where he deposed Josiah, the successor of Josias, and put in his place his brother Eliakim, changing his name to Jehoiakim. Of Necho we know that he began the extermination of the last remnants of the Assyrians, who, therefore, were forced to flee to Babylonia. Necho therefore, in order to maintain the balance of power in the East, undertook to aid the Libyan princes of Egypt (II Paralip., xxxvi, 1–4; cf. IV Kings, xxiii, 29–34). Hearing of Necho's conquest, Nabopolassar, to whom that country had fallen in the division of Assyria's possessions, sent his son Nebuchadnezzar (Nabuchodonosor) to check his advance. Necho was so completely defeated at Carchemish (605 B.C.) that he did not dare to make another stand, and retreated to Egypt. Of Necho's second successor, Psamtek II of Egypt, we know nothing at all beyond that he was more out of his own country: for the king of Babylon had taken all that had belonged to the king of Egypt, from the river of Egypt, unto the river Euphrates" (IV Kings, xxiv, 7). Apries (588–569 B.C.), Necho's second successor, was not more fortunate in a similar attempt. Zedekiah had sent to him for assistance (cf. Nebuchadnezzar, II Kings, xvi, 1). When Psamtek II of Egypt either retired without fighting (Jerem., xxxv, 15), or was defeated (Josephus, Antiq. Jud., X, vii, §3), and Jerusalem was captured, and her temple destroyed (587 B.C.). When, however, the remnant of the Jews fled to Egypt, taking Jeremiah with them, Apries received them and allowed them to settle in different cities of the Delta, at Memphis, and in Upper Egypt (Jer., xii, 17–18; xlv, 1).—Such, very likely, was the origin of the Jewish colony established in the island of Elephantine "before Cambyses", as related in the Judaeo-Aramaic papyri recently discovered there (see below, under Twenty-seventh Dynasty). Later, probably after Tyre had finally surrendered to the Chaldeans (574), Apries successfully carried out a naval expedition against Phoenicia (Masp., Hist. anec., 62). He was attacked by the Greeks in the June, 499, placing that expedition in 587 B.C.).

The reverses of Necho and Apries in Asia did not affect the prosperity of Egypt during the reign of these two pharaohs, any more than did the rivalry of one of his officials, Amasis, whom Apries had sent to repress a mutiny of the Egyptian native troops, and who was subsequently named king by Apries himself, and remained together for some time, and when, a conflict having arisen between the two, Apries was defeated and slain, Amasis gave him an honourable burial. Strange to say, Amasis, who had been the champion of the native element as against the Greeks, now favoured the latter far more than any of his predecessors. He founded for them the city of Naukratis, in the Delta, as a home and market, and they soon made it the most impor-
tant commercial centre of Egypt. The foreign policy of Amasis, as a rule, was one of prudence; his only conquest was Cyprus, over which, since the days of Thothmes III, Egypt had often exercised suzerainty. He made, however, one fatal mistake: he joined the abortive league formed by Creusus, King of Lydia, against Cyrus, and, although he afterwards carefully avoided crossing the path of the Persian conqueror, the latter’s son, Cambyses, taking the will for the deed, did not fail to resent his past inclusions.

Cambyses invaded Egypt in 525 B.C., shortly after Psammit III had succeeded his father. The pharaoh was put to death under cruel circumstances, the tomb of Amasis was violated, his mummy burnt to ashes, and a Persian governor was appointed. Otherwise Cambyses did all he could to conciliate his Egyptian subjects. He assumed the traditional pharaonic titles and ceremonial, and caused himself to be initiated in the mysteries of the goddess Neith. He made good the damages sustained by the temples during the conquest, led an unsuccessful expedition against the oasis of the Libyan desert, and was not much happier in a campaign against the independent Kingdom of Napatia. Embittered by these reverses, he departed, in later years, to form a new satrapy in the Persian empire, and committed sacrilegious acts which exasperated the people against him. Darius I (521-486) completed the canal begun by Necho between the Nile and the Red Sea. He reopened the road from Keft (Coptos) to the Red Sea, garrisoned the oases, and otherwise furthered the prosperity and security of Egypt. In his reorganization of the Persian Empire, which he divided into satrapies under a central administration, Egypt, with Cyrene, Barca, and Lower Nubia, formed the sixth government, or satrapy. This, however, affected only the garrisoned cities and their respective territories. Elsewhere the old feudal organization was left untouched, and from time to time the local princes availed themselves of their semi-independence to rebel.

After the battle of Marathon (490 B.C.) the Egyptians revolted and expelled the Persians. But in the following year Achemen, who had just been appointed satrap by his brother Xerxes I (486-465), brought them back to submission. Of a far more serious character was the insurrection which broke out in 465 under Artaxerxes I (465-425), and which was not quelled until its leader, Inaros (of the house of Psamtik), fled into the desert with the remnant of his Persian armies (454). Under Darius II the power of the Persians began to decline. The weakness of their administration at that time is attested by the Judeo-Aramaic papyri recently discovered at Elephantine. From these documents we learn that, while the provincial governor was absent, the commander of the garrison of Syene had been bribed by the Egyptian priests of Chnum (Khnum) to plunder and destroy the temple of the Jewish colony of Elephantine. The culprits, it seems, were put to death by the Persian authorities, yet, when the victims applied for a permission to rebuild their temple, their request was granted only on the condition that they should not in future offer up bloody sacrifices—a concession, evidently, to the priests of Chnum, who probably objected to the practice as unclean and an affront to their god. The little colony, we may well suppose, did not long enjoy its curtailed privileges; it very probably succumbed to Egyptian fanaticism during the two following dynasties (Stähelin, "Israel in Ägypten nach neugefundenen Urkunden", 14 sqq.).

Finally, in 404 B.C., the last year of Darius II (424-404) and first year of Artaxerxes II, Antiochus, Saitic birth succeeded in proclaiming Egypt’s independence. His six years of reign constitute the Twenty-eighth Dynasty. The Twenty-ninth Dynasty (Mendesian), comprising the reigns of Nephertites, Achoris, and Psammathis, who took an active part in the wars of Greece against Artaxerxes II, lasted twenty years. The Thirtieth Dynasty (Sebennytic) began with Nectanebo I (378-361), who successfully repelled the Persians. Tachos (360-359), his successor, attempted to invade the Syrian territory, but, as a result of rivalries and dissensions between himself and his namesake Tachos, whom he had appointed as regent, he was supplanted by Nectanebo II (358-341 B.C.). He fled to Ptolemaic Egypt. Artaxerxes II, at whose court he died. Nectanebo II was at first successful in repelling the attack of Artaxerxes III (Ochus—362-338); later, however, he was defeated, and the Persians once more became masters of Egypt (341). The king fled to Ethiopia, and the temples were plundered. It was then that Egypt lost forever the right of being governed by rulers of her own.

III. Ancient Egyptian Religion. God-man; and both two essential terms of every religion, are but imperfectly reflected in the Egyptian religious monuments. A book similar in scope to our Bible certainly never existed in Egypt, and if their different theological schools, or the priests of some particular theological school, ever agreed on certain truths about God and man, which they consigned to official didactic writings, such documents, when published, are lost to us. And yet the body of religious monuments bequeathed to us by ancient Egypt of such a nature as to compensate for this lack of positive and systematic information. The figured and inscribed monuments discovered in the temples, and especially in the tombs, acquaint us with the names and external aspects of numerous deities, with the material side of the funerary rites, from which we may safely conclude that they limited the dependency of man on superior beings, and a certain survival of man after death. But as to the essence of those gods, their relation to the world and man as expressed by the worship of which they were the objects, the significance and symbolism of the rites of the dead, the nature of the surviving principle in man, the nature and modes of the survival itself as depending on earthly life, and the like, the monuments are either silent about or offer us such contradictory and incongruous notions that we are forced to conclude that the Egyptians never evolved a clear and complete system of religious views. What light can be brought out of this chaos we shall concentrate on two chief points: (a) The Pantheon, corresponding to the term God; and (b) The Future Life, as best representing the term Man.

(a) The Egyptian Pantheon. By this word we understand such gods as were officially worshipped in one or more of the various nomes, or in the country at large. We exclude, therefore, the multitude of
demons or spirits which animated almost everything man came in contact with—stones, plants, animals—and the lesser deities which presided over every stage of human life—birth, naming, etc. The worship they received was of an entirely local and private nature, and we know almost nothing of it.

Each nome had its own chief deity or divine lord, male or female, apparently inherited from the ancient tribes. With each deity an animal, as a rule, but sometimes also a tree or mineral, was associated. Thus Osiris of Busiris was associated with a pillar, or the trunk of a tree; Hathor of Denderah, with a sycamore; Osiris of Mendes, with a goat; Set of Tanis, with an ass; Buto of the city of the same name, with a serpent; Bast of Bubastis, with an ass; Atum, or Tōn, of Heliopolis, with a serpent, a lion, or possibly, later the bull Mnevis; Ptah of Memphis, with the bull Apis; Sovek, in the Fayum and at Ombos (Kom Ombo), with a crocodile; Anubis of Assiut, with a jackal; and Chous, in Memphis the group of Ptah, Sekhmet, and Neferetem; etc. Sometimes the triad consisted of one god and two goddesses, as at Elephantine, or even of three male deities. Those groups were probably first obtained by the fusion of several religious centres into one, the number three being suggested by the human family, or possibly by the family triad Osiris, Isis, and Horus, of the Osiride cycle. In some cases the second element was a mere grammatical duplicate of the first, as Ament, wife of Amen (Amon), and was considered as one with it; it was then natural to identify the son with his parents, and so arose the concept of one god in three forms. There was in this a germ of pantheism, which would ever have developed beyond the limits of henotheism but for the solar religion which seems to have sprung into existence towards the dawn of the dynastic times, very likely under the influence of the school of Heliopolis. But before we turn to this new phase of the Egyptian religion, we must consider another aspect of the ancient gods which may have furnished a first basis of unification of the various local worship.

The Gods of the Dead.—Gods, being fancied like men, were, like them, subject to death, the great leveller. Each community had the mummy of its god. But in the case of gods, as in that of men, death was not the cessation of all life. With the assistance of magical devices his dead god was transmitted to another world, where he was still the god of the departed who had been his devotees on earth. Hence two forms of the same god, frequently under different names which eventually led to the conception of distinct gods of the dead. Such were Chent-Ament, the first of the Westerners (the dead) at Abydos, Sokar (or Seker), probably a form of Ptah, at Memphis; Sopdu, sometimes god of the dead, who had before, as Anubis at Assiut, Khonyu at Thebes, and Osiris, wherever he began to be known as such.

Legend of Osiris.—Each of those gods had his own legend. Osiris was the last god who reigned upon the earth, and he was a wise and good king. But his brother Set was a wicked god and killed Osiris, cutting his body into fragments, which he scattered all over the land. Isis, sister and wife of Osiris, collected the fragments, put them together, and embalmed them, with the assistance of her son Horus, Anubis (here, perhaps, a substitute for Set, who does not seem to have been originally conceived as his brother’s slayer), and Nephthys, Set’s wife. Isis then, through her magical art, revives her husband who becomes king of the dead, while Horus defeats Set and reigns on the earth in his father’s place. According to another version, Qeb, father of Osiris, and Set put an end to the strife by dividing the land between the two competitors, giving the South to Horus and the North to Set.

Sideral and Elemental Gods.—It is generally conceded that some of the local gods had a character. Horus, of Edfu and el-Kab (Elephaspolis), and Anhert, of this, represented one or other aspect of the sun. Thoth of Hermopolis and Khonsu of Thebes were lunar gods. Min, of Akhmim (Chemmis) and Copos, represented the cultivable land and Set, of Ombos (near Nakadeh), the desert. Hapi was the Nile, Hathor the vault of heaven. In some cases, this sideral or elemental aspect of the god may be primitive, especially among the tribes of Asiatic origin; but in other cases it may be of later date and due to the influence of the solar religion of Re, which, as we have already said, came into prominence, if not into existence, during the early dynastic times.

The Other Gods, Re or Ra.—That Re was such a local god representing the sun, is generally taken for granted although by no means proven. We cannot assign him to any locality not furnished with another
god of its own. We never find him, like the vast majority of the local gods, associated with a sacred animal, nor is he ever represented with a human figure, except as a substitute for Atum, or as identified with Horus or some other god. His only representative among men is the pharaoh, who in the earliest dynastic monuments appears as his son. Finally, it is difficult to understand how the kings of the southern kingdom, after having extended their rule to the north, should have given up their own patron god, Horus, for a local deity of the conquered land. It looks as if the worship of Re had been inaugurated some time after the reunification of the two lands, and possibly for political reasons. At all events, the solar religion soon became very popular, and may be said to have retained the status of the state religion of Egypt. Re, like the other gods, had his legend—or rather myth—excogitated by the theological school of Heliopolis in connexion with the cosmogonic system of the same school. He had created the world and was king over the earth. In course of time the mortals rebelled against him because he was too old, whereupon he ordered their destruction by the goddess of war, but on the presentation of 7000 jars of human blood he was satisfied and decided to spare men. Tired of living among them, he took his flight to heaven, where, standing in his sacred bark, he sails on the celestial ocean. The fixed stars and the planets are so many gods who play the parts of pilot, steersman, and carsemen. Re rises in the east and sails from the old to the new world; light, life, wealth, and joy on all sides, and receives everywhere the applause of gods and men; but now he comes to the western horizon, where, behind Abydos, through a narrow crevice, the celestial waters rush down to the lower hemisphere. The sacred bark follows the eternal river and, unretarded, the god proceeds slowly through the kingdom of night, carrying his sun through the ocean of darkness. A book was written only, however, to renew his course over the upper hemisphere, as bright, as vivifying, as beautiful as ever. Soon each phase of the sun's course received a special name and gradually developed into a distinct god; thus we find Harpochra (Horus's Child) representing morning sun; Atum, the evening sun; Re, the noon sun; Harmakhuti (Horus on the two horizons—Harmachis, supposed to be represented by the great Sphinx) is both the rising and the setting sun.

Cosmogony and Enneads.—Different cosmogonic systems were excogitated at a very early date (some of them, possibly, before the dynastic times) by the various theological schools, principally by the school of Heliopolis. Unfortunately, none of these systems seem to have been accepted generally throughout Egypt. According to one of the versions of the Heliopolitan cosmogony, the principle of all things is the god Nûn, the primordial ocean, in which Atûm, the god of light, lay hidden and alone until he decided to create the world. He begat all by himself Shu, the atmosphere, and Tefnut, the dew. In their turn Shu and Tefnut begat Qeb, the earth, and Nût, the vault of heaven. The two slept, dishevelled, and in Nûn, when Shu, stealing between them, raised Nût on high. The world was formed, and the sun could begin its daily course across the heavens. Qeb and Nût beget Osiris, the cultivable land and the Nile united in one concept. Set the desert, and the two sisters Isis and Nephthys. To this first ennead, of which Tûm (cosmos) and Re (sun) are the heads, a number of others were added, the first of which began with Horus, as son of Osiris and Isis. The three enneads constituted as many dynasties of gods, or demi-gods, who reigned on the earth in dynastic times. We have seen above that the third of these dynasties, called the "shades" (dever) by Manetho, represents the predynastic kings mentioned on the Palermo Stone. The Heliopolitan Ennead became very popular, and every religious centre was now ambitious to have a similar one, the same gods and order being generally retained, except that the local deity invariably appeared at the head of the combination.

It has long been customary to assert that in Egypt human life was compared to the course of the sun, and that Osiris was nothing but the sun considered as dead. It is far more correct, however, to say, with Professor Maspero [Revue de l'histoire des religions (1887), XV, 307 sqq.], that the course of the sun was compared to that of human life. Osiris is not a sun that has set, but the sun that has set is an Osiris; this is so true that when the sun reappears on the eastern horizon, he is represented as the youth, Horus, son of Osiris.

The great prominence given to Re and Osiris by the Heliopolitan school is no doubt due to the influence of an Egyptian belief to a higher plane, but brought about through the Seleucid dynasty, which became a consolidation, so to speak, of the local worship. Naturally, the local gods retained their original external appearance, but they were now clothed with the attributes of the new Heliopolitan deity, Re, and were slowly identified with him. Every god became now a sun-god under some aspect; and in some cases the name of the Heliopolitan god was added to the name of the local god, as Sobek-Re, Chnum-Re, Ammon-Re. It was a step towards monothecism, or at any rate towards a national heathenism. This tendency must have been encouraged by the pharaohs in their capacity rather of political than of religious rulers of the nation. The god of the new faith, the power and source of political unity as long as the various nations retained their individual gods.

It is significant that in the only two periods when the pharaohs seem to have had absolute political control of Egypt—viz, from the Fourth to the Fifth and from the Eighteenth to the Twentieth Dynasty—the systems of Re, in the former period, and his Thoth equivalent in the latter, were ardently fostered, and the worship of Re and his complex—when the local religious systems fall into the background. These, however, though they were no more than tolerated, seemed to constitute a menace to political unity. The effort of Amenophet IV to introduce the cult of his only god, Aton (see above, in *Dynastic History; Second Period*), was perhaps not prompted exclusively by a religious idea, as is generally believed. A similar attempt on the part of the Heliopolitan ennead was perhaps made by the Memphite kings. From Khafre, second king of the fourth dynasty, to the end of the sixth dynasty, the word Re is a part of the name of almost every one of those kings, and the monuments show that during that period numerous temples were erected to the chief of the Heliopolitan trinity in the neighboring nome, and that the attributions of the official religion on the local form of worship may have caused the disturbances which marked the passage from the fifth to the sixth dynasty and the end of the latter. That such disturbances were not of a merely political nature is clear in the light of the well-known facts that the royal tombs and the temples of that period were violated and plundered by the robbers if inhabited, and their treasures dispersed among several kings, those of Khafre in particular, were found, shattered into fragments, at the bottom of a pit near these pyramids. Evidently, those devout "sons of Re" were not in the odour of sanctity with some of the Egyptian priests, and the imputation of impiety brought against them, as recorded by Herodotus, (II, 27, 128; cf. Diodorus Siculus, I, 14), may not have been quite as baseless as is assumed by some modern scholars (Maspero, *Histoire Ancienne*, pp. 76 sqq.).

If the foregoing sketch of the Egyptian religion is somewhat obscure, or even produces a self-contradictory effect, this may perhaps be attributed to the fact that the extremely remote periods considered (mostly, in fact, prehistoric) are known to us from monuments of later date, where they are reflected in
superimposed outlines, comparable to a series of pictures of one person at different stages of life, and in different attitudes and garbs, taken successively on the same photographic plate. The Egyptians were a most conservative people; like other peoples, they were open to new religious concepts, and accepted them, but they never got rid of the older ones, no matter how much the older might conflict with the newer. However, if the writer is not mistaken, two prominent features of their religion are sufficiently clear: first, animal fetishism from beginning to end in a more or less mitigated form; secondly, superposition, during the early Memphite dynasties, of the sun-worship, the sun being considered not as creator, but as organizer of the world, from an eternally pre-exist-

ing matter, perhaps the forerunner of the demiurge of the Alexandrine School.

(b) The Future Life.—As early as the predynastic times the Egyptians believed that man was survived in death by a certain principle of life corresponding to our soul. The nature of this principle, and the conditions on which its survival depended, are illustrated by the monuments of the early dynasties. It was called the ka of the departed, and was imagined as a counterpart of the body it had animated, being of the same sex, remaining throughout its existence of the same age as at the time of death, and having the same needs and wants as the departed had in his lifetime. It endured as long as the body, hence the paramount importance the Egyptians attached to the preservation of the bodies of their dead. They generally buried them in ordinary graves, but always in the dry sand of the desert, where moisture could not affect them; among the higher classes, to whom the privilege of being embalmed was at first restricted, the mummy was sealed in a stone coffin and deposited in a carefully concealed rock-excavation over which a tomb was built. Hence, also, the presence in the tombs of lifelike statues of the deceased to which the ka might cling, should the mummy happen to meet destruction. But the ka could also die of hunger or thirst, and for this reason food and drink were left with the body at the time of the burial, fresh supplies being deposited from time to time on the top of the grave, or at the entrance of the tomb. The ka, or “double”, as this word is generally interpreted, is confined to the grave or tomb, often called “the house of the ka”. There near the body, it now lives alone in darkness as once, in union with the body, it lived in the sunny world.

Toilet articles, weapons against possible enemies, amulets against serpents, are also left in the tomb, together with magic texts and a magic wand which enable it to make use of these necessaries.

Along with the ka, the earliest texts mention other surviving principles of a less material nature, the ba and the khou. Like the ka, the ba resides in the body during man’s life, but after death it is free to wander where it pleases, conceived as a rolling cloud, was often represented as such, with a human head. The khou is luminous; it is a spark of the divine intelligence. According to some Egyptologists, it is a mere transformation which the ba undergoes when, in the hereafter, it is found to have been pure and just during lifetime; it is then admitted to the society of the gods; according to others, it is a distinct element residing in the ba. Simultaneously with the concepts of the ba and the khou, the Egyptians developed the concept of a common abode for the departed souls, not unlike the Hades of the Greeks. But their views varied very much, both as to the location of that Hades and as to its nature. It is very likely that, originally, every god of the dead had a Hades of his own, but as the gods were gradually identified with Osiris or brought into his cycle as secondary infernal deities, the various local concepts of the region of the dead were ultimately merged into the Osirian concept. According to Professor Maspéro, the kingdom of Osiris was first thought to be located in one of the islands of the Northern Delta whither cultivation had not yet extended the sun rises through the night had become identified with Osiris, the realm of the dead was shifted to the region traversed by the sun during the night, wherever that region might be, whether under the earth, as more commonly accepted, or in the far west, in the desert, on the same plane with the world of the living, or in the north-eastern heavens beyond the great sea that surrounds the earth.

As the location, so does the nature of the Osiria Hades seem to have varied with the different schools; and here, unfortunately, as in the case of the Egyptian pantheon, the monuments exhibit different views superimposed on one another. We seem, however, to discern two traditions which we might call the pure Osirian and the Heracleopolitan; the former tradition the aspiration of all the departed is to be identified with Osiris, and live with him in his kingdom of the Faru, or Yalu, fields—such a paradise as the Egyptian peasant could fancy. There ploughing and reaping are carried on as upon the earth, but with hardly any labour, and the land is so well irrigated by the many branches of another Nile that wheat grows seven仑. All men can come and go to answer the call for work without distinction of former rank. Kings and grandees, however, can be spared that light burden by having ushebtis (respondents) placed with them in their tombs. These ushebtis were small statuettes with a magic text which enabled them to impersonate the deceased and answer the call for him.

To procure the admission of the deceased into this realm of happiness his family and friends had to perform over him the same rites as were performed over Osiris by Isis, Nephthys, Horus, and Anubis. Those rites consisted mostly of magical formulae and incantations. The mumification of the body was considered an important condition, as Osiris was supposed to have been mumified. It seems, also, that in the beginning at least, the Osirian doctrine demanded a certain dismemberment of the body previous to all further rites, as the body of Osiris had been dismem-
bered by Set. Possibly, also, this took place in the predynastic times, when the bodies of the dead appear to have been intentionally dismembered and then put together again for burial (Chantepie de la Sausseraye, op. cit., i, 214). At all events Diodorus narrates that the surgeon who made the first incision on the body previous to the removal of the viscera had to take to flight immediately after having accomplished his duty, while the mob pretended to drive him away with stones (Diodorus Siculus, i, 91), as though he impersonated Set. This custom, however, of dismembering bodies may be older than the Osiran doctrine, and may explain it rather than be explained from it (Chantepie de la Sausseraye, op. cit., i, 220). When all the rites had been duly performed, the deceased was weighed; if he had been found to be in accordance with the ideals of Osiris, a god so—so—he had been identified with the god Osiris. He could now proceed to the edge of the great river beyond which are the Earu fields. Turn-face, the ferryman, would carry him across, unless the four sons of Horus would bring him a craft to float over, or the hawk of Horus, or the ibis of Thoth, would condescend to transport him on its pinions to his destination. Such were, during the Memphite dynasties, the conditions on which the departed soul obtained eternal felicity; they were based on ritual rather than on moral purity. It seems, however, that already at that time some texts show the deceased declaring himself, or being pronounced, free of certain sins. In any case, under the twelfth dynasty the deceased was regularly tried before being allowed to pass over the water of the west. He is represented appearing before Osiris, surrounded by forty-two judges. His heart is weighed on scales by Horus and Anubis, over against a feather, a symbol of justice, while Thoth registers the result of the operation. In the meantime the deceased recites a catalogue of forty-two sins (so-called "negative confession") of which he is innocent. Between the scales and Osiris they tend to fall, to be taken up again. The heart appearing ready to devour the guilty souls; but there was no great danger of falling into her jaws, as the embalmers had been careful to remove the heart and replace it by a stone scarab inscribed with a magical spell which prevented the heart from testifying against the deceased. The concept of retribution implied by the judgment very likely originated with the School of Ani (see Maspéro, "Revue de l'histoire des religions" (1887), XV, 308 sqq.).

According to another tradition, which is represented along with the foregoing in the Pyramid Texts, the deceased is ultimately identified not with Osiris himself, but with Re identified with Osiris and his son Horus. His destination is the bark of Re on the eastern horizon, whether he is transported by the same ferryman Turn-face. Once on the sacred bark, the deceased may bid defiance to all dangers and enemies, he enjoys absolute and perfect felicity, leaves the kingdom of Re-Osiris, and follows Re-Horus across the heavens into the region of the living gods. The same concept was resumed by the Theban School. An important variant of this Re-Osiris tradition is to be found among the scribe Thutmose of the School of theology, the "Book of what there is in the Duat" (Hades) and the "Book of the Gates". In both compositions the course of Re in the region of darkness is divided into twelve sections corresponding to the twelve hours of night, but in the latter book each section is separated by a gate guarded by gigantic serpents. The first six sections are described by the old gods of the dead, Sokar and Osiris, with their faithful subjects. The principal features of these two books is the concept of a retribution which we now meet clearly expressed for the first time. While the innocent soul, after a series of transformations, reaches at last, on the extreme limit of the lower world, the bark of Re, where it joins the happy crowd of the gods, the criminal one is submitted to various tortures and finally annihilated (see, however, below under IV).

IV. LITERARY MONUMENTS OF ANCIENT EGYPT.—The earliest specimens of Egyptian literature are the so-called Pyramid Texts engraved on the walls of the halls and rooms of the pyramids of Unis (Fifth Dynasty) and Teti II, Pepi I, Memnere, and Pepi II (Sixth Dynasty). They represent two ancient rituals of the dead, the older of which, as is generally conceded, antedates the dynastic times. The texts corresponding to this one are mostly incantations and magic prayers supposed to protect the deceased against serpents and scorpions, hunger and thirst, and old age. The gods are made to transmit to the deceased the offerings deposited in the tomb; consequently these offerings are represented as positively cats and digests them, thus assimilating their strength and other desirable qualities. In these last two features Professor Maspéro sees an indication that although the concept of the ba had already been superposed on that of the ka, when that ritual first came into existence, yet anthropomorphical sacrifices, if no longer in use, were still fresh in the memory of the Egyptians. This high, probably predynastic, antiquity is confirmed by peculiarities of language and orthography, which in more than one case seem to have puzzled the copyists of the Fifth and Sixth Dynasties [Maspéro, in "Revue de l'histoire des religions", XII (1885), pp. 125 sqq.]. The other ritual represented in the Pyramid Texts is the Book of the Dead, which, according to Maspéro, was first composed and published by Professor E. Schiaparelli (Il libro de' funerari degli Antichi Egiziani, Rome, 1881-2). It is supposed to be the repetition of the rites by which Isis and Horus had animated the mummy of Osiris with the life he had as god of the dead. The principal ceremony consisted in the opening of the mouth and eyes of the mummy, so that the deceased, in his second life, could enjoy all the qualities he had possessed in his former existence and express himself in the next world. For the details of this exceedingly interesting ritual we refer the reader to the excellent analysis of Professor Maspéro in the "Revue de l'Histoire des Religions" [XV (1887), 158 sqq.]. These two books were very popular with the Egyptians down to the end of the Ptolemaic times, especially the second one which is profusely illustrated in the Tomb of Ibi. The Book of the Dead.—Next in antiquity comes the Book of the Dead, the most widely known monument of Egyptian literature. Numerous copies of it are to be found in all the principal museums of Europe. It may be best described as a general illustrated guide-book of the departed soul in Amenti (the Region of the West). There, whatever his belief as to the survival of man in the hereafter, or the location and nature of the region of the dead, the deceased found what he had to do to be admitted, what ordeals he would have to undergo before reaching his destination, what spirits and genii he would have to propitiate, and how to come out of all this victorious. Broadly speaking, the book can be divided into three sections: (1) "Book of the Coming-forth By Day" (Amenti) generally, though wrongly, extended to the whole book; (2) Chapters xxvii-xxiv: fitting the deceased for admission (xxvii-xxi) to the kingdom of Osiris, his itinerary thereto, whether by water or overland (xxiii-ix, xxii-xix), and his settlement therein (ix-xi), without further formality than concluding the ferryman or the guardian genii with certain incantations and magical prayers recited with the right intonation; in case the deceased believed in retribution, before gaining admission he had to repair to the Hall of Justice, there to be tried by Osiris (xxiii-xxiv); (3) Chapter xxv to the end: practically another guide-book for the special profit of the followers of the School of Abydos. It begins with the trial, after which it goes over pretty much the same ground as the com-
mon guide, with variations peculiar to the doctrine of the school. For further details see the masterly review by Maspéro of Naville's edition of the Book of the Dead during the Eighteenth to Twentieth Dynasties, in "Revue de l'histoire des religions", XV (1887), pp. 283-315. The most important chapters, from a theological viewpoint, are perhaps the seventeenth, a compendious summary of what the deceased was supposed to know on the nature of the gods with whom he was to identify himself, and the one hundred and twenty-fifth, where, along with the disclaimer of forty-two offences, we find also an enumeration of several good works, as feeding the hungry, clothing the naked, making offerings to the dead, and sacrificing to go to the Deads. We have also received many additions in the course of centuries, as new concepts evolved from the older ones. It would not be correct, however, to conclude that all the chapters are not to be found in the older copies are of recent date. Comparison between various copies of known dates shows that, as a rule, they were mere abstractions from the standard copies preserved by the corporations of embalmers, or undertakers, the deceased individual having, as a rule, ordered during his lifetime a copy to be prepared according to his own belief and means. The fact that certain chapters, like lxxvi, were assigned by the manuscripts to what seem to us remote dates, such as the reigns of King Khufu (Cheops), of the fourth, or King Caphirs, of the first, dynasty, does not prevent their being older than the others; the reverse is more likely to be the correct view. The bulk of the chapters were believed by the Egyptians to anticipate the human dynastic times, and, as Professor Maspéro remarks, the discovery of the Pyramid Texts, to which the Book of the Dead is closely related, shows that this idea was not altogether a fiction. The Book of the Dead contains several passages in common with the ritual of the dead represented by the Pyramid Texts, and its first fifteen chapters were likewise read at burials, but otherwise it constitutes a distinct type. The Book of the Dead occurs in two recensions: the Theban (Eighteenth to Twentieth Dynasty) and the Saite (Twenty-sixth Dynasty). The latter, which, neglecting all limits, so that he may remain on the horizon with his father Re, and his soul may rise to the heavens in the disk of the moon, and his body shine in the stars of Orion on the bosom of Nôt; in order that this may also happen to the Osiris N." This book has so far been found only with the mummies of the priests and priestesses of Ammon-Re. It not only makes all the necessary rules and stipulates that the resurrection is effected, but also treats of the life after death (tr. by P. J. Horræk in "Records of the Past", IV, 119 sqq.). A variation of this book under the title of "Another Chapter of Coming Forth by Day, in order not to let him [the deceased] absorb impurities in the necropolis, but to let him drink truth, eat truth, accomplish all transformations he may please, to restore a new life" etc., (as above) was published by Wiedemann, 'Religions Texte aus den Museen zu Berlin u. Paris' (Leipzig, 1879). (2) "The Lamentations of Isis and Nephthys" (tr. by Horræk, op. cit., II, 117 sqq.). (3) "The Book of the Glorification of Osiris", a variation of the preceding, published by Pierret from a Louvre papyrus. (4) The "Book of the Wandering of Eternity", published by Bergmann, "Das Buch vom Durchwandel der Ewigkeit", in "Ztschr. f. d. k. Ak. d. Wiss. in Wien", 1877.

Mythological Compositions. A different group of funeral books is represented by certain mythological compositions. They consist principally of figures relating to the various diurnal and nocturnal phases of the sun, accompanied with explanatory legends. The oldest of such compositions can be assigned to the Eighteenth Dynasty, and refers to both the daily and nightly courses of the sun, the two being often combined in one picture in two sections. In later times the nocturnal aspect of the sun prevails, and the composition becomes more and more funereal in character and scope, until the diurnal solar symbols disappear almost entirely (see Devéria, "Catalogue" etc., pp. 15-18). Several of the figures are borrowed from the Book of the Dead.

Book of the Duat.—Closely related to these mythological compositions is the "Book of what there is in the Duat" (or Lower Hemisphere, as commonly, though perhaps wrongly, understood. See below, under Astronomy). It consists of a hieroglyphic text with numerous mythological or symbolical illustrations, predominantly pastoral, and is the oldest of the Book of the Dead (represented as the ram-headed god Chnûm) on the river Uernes (cf. the Ṣepârûs of the Greeks) during the twelve hours of night, through as many halls. To each hall corresponds one of the successive modifications through which every being was supposed to be brought back from death to a new life. Such modifications are effected by the deities in charge of the Duat, and sometimes by the deceased himself, either by walking or in some other mysterious way, to the progress of the solar bark on the Uernes, typifying that of the regeneration. However, this process of regeneration is not accomplished in Chnûm himself but in the god Sokari, who plays the part of the dead sun. The deceased, who is never mentioned by his name, appears only as the bark, or rather an ordinary bark, which those who take part in the action seem to be permanently settled in the Duat, with no other apparent purpose than to play their own parts on the passage of the solar bark. This is the case even with the damned, who, when the time of retribution comes at the end of the tenth, and during the eleventh, hour, impersonate the enemies of Osiris, and for the time being accomplish some deeds to avenge them and expiate their offenses. Whether one is justified, as generally granted, in seeing in this last point a proof that the Egyptians, as a people believed in eternal retribution, does not appear quite certain if we consider the highly mystical character of that book, the understanding of which was the privilege of a few initiated. For further details we must turn to the text, for a survey of that book by Devéria ("Catalogue" etc., pp. 15-39. See also Jéquier, "Livre de ce qu'il y a dans l'Hâdès", Paris, 1894).

Ritual of the Embalming.—To close the above remarks on the funeral literature we must mention the Ritual of Embalming, published by Professor Moreau de Maubeuge in "Extraits des Manuscrits etc., t. XXIV, Paris, 1882".

Liturgies.—The religion of the living, if we may so express ourselves, is far from being as largely repre-

resented in Egyptian literature as that of the dead. Yet we have a few important works such as the ritual, or rather the liturgy, of Osiris in his temple at Abydos, of which an illustrated edition has been preserved on the walls of that temple (published by Moret, "Le Rituel du culte divin journalier en Egypte", 1902), and the liturgy of the Amon-worship contained in a Berlin papyrus (O. v. Lemm, Ritualbuch des Amon-dienstes, 1882). The Litany of the Sun has been translated by Naville, in "Records of the Past", VII, 17 and 18. Also, there are a number of inscriptions, to which we have already alluded (op. cit., VI, 103 sq.) and several hymns to Osiris (op. cit., New Series, IV, 17 sq.), the Nile (op. cit., New Series, III, 46 sq.), and Amon-Re (in Maspero, "Histoire ancienne", pp. 329 sqq.; Grebaut, "Hymne à Ammon-Ra", Paris, 1873; cf. Stern in "Zeitschrift für ägyptische Sprache", 1877, and Brugsch, "Religion u. Mythologie der alten Aegypter", Leipzig, 1885, pp. 690 sqq.). From the point of view of composition and style these hymns are the most remarkable literary products of ancient Egypt, as they are the most striking specimens of the monotheistic tendencies which developed under the Eighteenth-Twentieth Dynasties as a result of the political supremacy of Thebes. Osiris, Maspero says, is the syncretistic figure composed by Amenophis IV in honour of his sole god Aton (see the specimen published by Breasted, "History of the Ancient Egyptians", pp. 273 sqq.).

Moral.—Several Egyptian literary compositions of a moral nature have reached us. The two oldest are attributed to Kagemen, vizier of King Snefru, and Ptahhotep, vizier and chief judge under King Iesi, last but one of the Nineteenth Dynasty. Both compositions, preserved in a manuscript of the Twelfth Dynasty, consist of aphorisms and proverbs of a rather positive and practical nature, as "A slight failure is enough to make vile a great man" (Kagemen), or "A docile son shall be happy on account of his obedience; he shall grow old and get favour out of it. If you are a wise man, fix your house pleasantly, your wife, your daughter, your wife, give her food and jewels, because this makes her comely, give her perfumes and pleasures during your life. She is a treasure which must be worthy of its owner" (Ptahhotep). Under the Twelfth Dynasty we have the teaching of Amenemhet I, where the old king warns his son and successor, Usertesen, against placing too much confidence in a vizier, the future vizier, Ptah-hotep, exemplifying his teaching from his own experience (translated in "Records of the Past", II, p. 9 sqq.). Of a much higher order and wider scope are the counsels that Ani, a scribe of the Nineteenth Dynasty, gives to his son Khons-Hotep: "Let thin eye observe the deeds of God; it is he that strikes whatsoever is stricken. Fidelity to the gods is the highest virtue"; "It is I who gave thee to thy mother, but it is she that bore thee and while she was carrying thee she suffered many pains. When the time of her delivery arrived thou wert born and she carried thee like the virest yoke, her pap in thy mouth, for three years. Thou didst grow, and thy filthiness never so far disgusted her as to make her cry out: 'Oh! what am I doing?' Thou wert sent to school. She loved and worried about thee every day, bringing thee meat and drink from home. Thou didst take a house and wife of thine own, but never forget the pains of childbed thou didst cost to thy mother; give her not cause to complain of thee, lest perchance she lift up her hands to the divinity, and he give ear to her will"; "Keep this in mind whenever thou hast to make a decision: Heaven will not answer a wrong. Folly is like a chemical salt, which shall lie down among them. There is no exception; even for him whose life is without blame, the same lot awaits him as well. Thy death-messenger will come to thee too, to carry thee away. Discourts will avail thee nothing, for he is coming, yea, he is ready even now. Do not begin to say: 'I am still but a child, I whom thou takest off.' Thou knowest not how thou shalt die. Death comes to the sucking balsea; yea, to him it is yet in the womb, as well as to the old, old man. See, I tell thee things for thy good, which thou shalt ponder in thy heart before acting. In them thou shalt find happiness and all evil shall be put far from thee" (tr. of Chabas, "L’Égyptologie", Paris, 1876-8).

History.—Egyptian historical literature is somewhat what illustrated from what we have said of the sources of Egyptian history (op. cit., chapter on "Monarchial Chronology"). In sharp contrast with the aridity which generally characterizes such documents, the so-called prose-poem of Pentaur stands alone so far. Pentaur is the name of the copyist, not of the author, as was long believed. Its subject is an episode of the famous campaign of Ramses II against the Hittites. When taken by surprise he, with only the household troops and a few officers who happened to be there, bravely charged the van of the enemy who were in pursuit of his defeated army, and so brilliantly successful was he that the rout was turned into a victory. The work displays a good deal of literary skill and is the nearest approach to an epic to be found in Egyptian literature (Breasted, "Hist. of the Anc. Egyptians", 329; op. cit., "L’Egyptologie", 273 sq.). It is possible, perhaps, although less pretentious in point of style are: (1) the long autobiography of Uni, under three successive kings (Teti II, Pepi I, and Menere) of the sixth dynasty, the longest funerary inscription and the most important historical document of that time (Breasted, "Anc. Rec. of Egypt", I, 134 sq.); (2) the famous tale of Phankh (see above, II, under "Provincial History, Southern Period") which Professor Breasted calls the clearest and most rational account of a military expedition which has survived from ancient Egypt (Hist. of the Anc. Egyptians, 370); (3) the great Papyrus Harris, a huge roll one hundred and thirty feet long, the longest document from the Early Orient. It contains an enormous inventory of the gifts of Ramses III to the chief divinities of Egypt, a statement of his achievements abroad, and his benefactions to his people at home (op. cit., 317).

Fiction.—If history proper is not more largely represented in Egyptian literature, it is because its naturally positive and dry character, which the structure of the Egyptian language made it difficult to disguise, was not in harmony with the highly imaginative and reflective spirit of the ancient Egyptians. The fiction of their kings; but from one end of the country to the other the waters of the Nile reflected temples and mortuary chapels without number, on the walls of which the achievements of the pharaohs were spread in gorgeous inscriptions and reliefs. That was all the history they needed. It furnished them with historical outlines which their fertile imaginations filled out with stories or tales after their own taste, tales in the style of the "Arabian Nights", where animals and mam- mals spoke like ordinary folks, as for instance in the tale of "The Two Brothers", from the Nineteenth Dynasty (Records of the Past, II, 157 sq.), and the story of Satni-Khâmois from Ptolemaic times (op. cit., IV, 131 sq.). In "The Doomed Prince", Twentieth Dynasty (op. cit., IV, 153 sq.), men fly like birds; in "The Shipwrecked", Twenty-First Dynasty (op. cit., 3d ed., Paris, 1905), the hero is shipwrecked on the Island of the Ka (one of the popular concepts of the Land of the Dead), where a gigantic serpent addresses him with a human voice and treats him with the utmost kindness. In "The Shipwrecked", after crossing the Island of the Dead, the prince’s younger daughter is delivered from a demon or spirit by the statue of the god Khonsu for which he had sent to Thebes. Sometimes, however, the action remains within the limits of the natural order, and the interest consists in some extraordinary
change of fortune, as in the case of Sinuhet, Twelfth Dynasty, or in some clever stratagem, as in "How Thutiy captured Joppa," Twentieth Dynasty, and in the story of Rampsinitos (Herod., II, 121), Saite times.

The dramatis personae of such tales and stories are often persons of royal blood, the pharaoh himself not infrequently playing the principal part; and the names which they bear, as a rule, are real historic names, so that in some cases it is not easy to fractionate who has to deal with history or with fiction. More frequently, however, the names have been selected at random, sometimes from proper names, sometimes from the prænomen, or even from popular nicknames. Moreover, chronology, as is usual in popular fiction, is grossly disregarded. In the story of "Satni-Khâminos," for instance, Menephtah, instead of appearing as the brother of the hero, is allied to as a remote predecessor of Ramses II (Usirmari of the tale, the prænomen of Ramses II in his youth). This literature of historical fiction was evidently very popular in Egypt at all times and in all classes of society. That it was chiefly from this source that Herodotus collected most of his notices concerning the ancient kings of Egypt is evident from the chronological correctness of the names introdult; prænomen, and nicknames which prevail in his writings. See on this all-important point the very interesting introduction of Prof. Maspero to his "Contes populaires de l'ancienne Egypte" (3d ed., Paris, 1905).

Astronomy.—We have no special treatise on astronomy written by ancient Egyptians in book form. The most that we have, however, is the popular tomb-spellings which give us a fair idea of their astronomical knowledge. On the whole, their notions were rather elementary. They knew the zodiac and the principal constellations, and had special names for Orion (Sokhu) and Sirius (Sopdet), the former being sacred to Osiris and the latter to Isis, and for the thirty-six dekans which presided over the thirty-six decades of the year. They knew also the names of the stars of a great many, if not all, of the stars visible to the naked eye. They knew the difference between fixed stars and planets, and the apparently retrograde motion of Mars at certain periods of the year had not escaped their attention. Beyond this they knew probably little or nothing (see Ginzel, "Handbuch der mathemat. und physikal. Wissensch. in altertümlichen Ländern," 1862; Maspero, "Les inscriptions des pyramides de Saqqarah," Paris, 1894;—reprint from Revue de trav. égypt. et orient. 111-V, VII-XIV; Naville, "Das ägyptische Todtenbuch der 18-20. Dynastie" (Berlin, 1856); Budge, "The Book of the Dead" (3 vols., London, 1898; London and Leipzig, 1901); Lepsius, "Das Todtenbuch der Ägypter nach dem hieroglyphischen Papyr. in Paris" (Leipzig, 1842); Lefebvre, "Hypogées royaux in Mem. de la Mission archéol. française," 1, 1896; Maspero, "Mesdames, les dieux égyptiens" (Paris, 1894); Egeria, "A Handbook of Egyptian Religion," tr. by Griffith (London, 1907); Steindorff, "Die Religion der alten Ägypter" (Berlin, 1909); Wiedemann, "Die Religion der alten Ägypter" (Munster, 1890)—also to be had in English; Maspero, "Etudes de Mythologie et d'archéologie égyptiennes" (3 vols., Paris, 1895-98); Lane, "Die Ägypter in de Saecsaet, Lehrbuch der Religionsgeschichte" (Tubingen, 1903), I, 172-245; Egerman, tr. Thade, "Life in Ancient Egypt" (London, 1909; London, 1912; and, of Egyptian literature proper); Maspero, "Les contes populaires de l'Egypte ancienne" (3d ed., Paris, 1905); Griffith, "Mythology of the Hebrews" (London, 1899); Lane, "Egyptian Tales" (London—after Griffith and Maspero)."

We have seen above (II, subsection Chronology) how the Egyptians used what they knew of astronomy for the division of time and its computation. They fancied the earth round and flat, surrounded with mountains beyond which flowed a large river which they called Euphrates (cf. the Ægea of the Greeks). At the four cardinal points the mountains rose higher and surmounted the celestial vault which they imagined as solid, although transparent. Over this vault flowed the celestial waters on which the sun, and the moon, and the stars floated in barks. The sun at the end of every day went out through the western mountains, and sailed on the Euphrates first northward, then southward to the mountain of the east, where he entered purposely a certain vault in tombs or on the inner sides of the lids of sarcophagi are purely mythological (op. cit., 1, 151).

Mathematics.—Our earliest Egyptian treatise on mathematics is the Rhind Papyrus of the British Museum [ed. Eisenlohr, Ein mathematisches Handbuch der alten Aegypten, 1877; L. Rodet in Journ. de la Soc. Math. de France, VI (1878), 139 sq.]; it dates back to the Nineteenth Dynasty. It contains: (a) several theorems of plane geometry with rules for measuring solids; (b) a manual of the calculator on a purely arithmetical basis, not algebraic. [Rodet in Journ. Asiatique (1881), XVII, 184 sq., 390 sq.]. The numerical system was decimal, and contained figures for one and for each power of ten; these figures were repeated as many times as contained in the number to be expressed. With the exception of two-thirds, the fractions were written without any denominator; those having 1 as numerator.

Astronomy.—Among the documents belonging to this science the most important is a fragmentary astrological calendar (British Museum) written during the Nineteenth Dynasty. It contains a list of the things which it is proper to do or to avoid on each day of the year. The reason why such a day was fās or nefēs was ordinarily taken from some mythological tradition.

Drink.—The Greeks and Romans were not ignorant of this science, but the name "Egyptian days" (dīes Ægyptiaci), by which they designated it, shows clearly that they borrowed it from Egypt.

Medicine.—The Museum of Berlin preserves a copy of an Egyptian treatise on medicine, said to have been captured by them at least under the Pharaoh Ramses II in the Second Dynasty. There is besides, in the University Library of Leipzig, a papyrus commonly known as the Ebers Papyrus containing a copy (Eighteenth Dynasty) of another treatise attributed to King Cheops of the Fourth Dynasty. From these two documents and others of less importance we may infer that the Egyptians knew little about theoretical medicine, as far as we can judge from what is found in the tomb-spellings, to study anatomy. Practical medicine on the other hand, was so far developed among them that the Egyptian physicians were those most highly esteemed by the Greeks and Romans. The names given to diseases are not always clear, but the description of symptoms is often sufficiently detailed to enable a physician to identify them. Remedies were still more inadequate. Four kinds of remedies are to be found in the recipes: ointments, potions, plasters, elysiers; they were usually taken from vegetables, sometimes from minerals (as sulphate of copper, salt, nitre, mephitic stone); the raw flesh, blood (fresh or dried up), hair, and horn of animals were also used, especially to reduce inflammations. The elements of the vegetable kingdom were mostly boiled, then diluted in water, beer, infusions of oats, milk, oil, and even human urine. But the Egyptians believed that not all diseases were of natural origin; some were caused by evil spirits who oppressed the patients.

For Egyptian Art see Temple.

V. THE COPTIC CHURCH

The Coptic Church, the Church of the Copts or Egyptians, the usual modern name for the Church of Alexandria, though very often arbitrarily restricted to the period beginning with its secession (451) from the Catholic Church under its patriarch Dioscorus (q. v.) when it became a distinctly national church, the word Copt is an adaptation of the Arabic Qibt or Qabi.
(a corruption of Gr. Ἀλεξάντρια). The Arab conquerors thus designated the old inhabitants of Egypt (in vast majority followers of Diodorus) in contradistinction both to themselves and to the Melchites of Greek origin and language who were still in communion with the Catholic Church, but have since drifted within the orbit of the so-called Orthodox, i.e., schismatic Greek Church. A general article on the Coptic Church will be found under ALEXANDRIA, THE CHURCH OF. Special features of importance are treated under the titles ALEXANDRIA, COUNCILS OF; Gnosticism; Monasticism; Persecution; Sacrarium; Versions of the Bible. See also Athanasius; Cyril of Alexandria; Dionysius the Syrian; Paphnoutius of Alexandria; Clement of Alexandria; Origen; Dioscorus; Melchites; Missions. In the present article we shall treat in particular of the origins and constitution of the Coptic Church, especially the question of its episcopate, to the Council of Nicaea (325). We shall close with a short sketch of the present condition of both the Jacobite and the Uniat branches of the Coptic Church, chiefly from the point of view of their organization.

1. Early Christianity in Egypt.—We have no direct evidence of Christianity having existed in Egypt until Clement of Alexandria (A.D. 150-220) when it had already spread over the land. What we know of the Church of Egypt before that time is exclusively through inferred or unconfirmed statements prefabricated by Eusebius (see below). Thus we may infer the existence of Christianity in Egypt during the second century from the fact that under Trajan a Greek version of the "Gospel according to the Hebrews" was being circulated there (Duchesne, Histoire Ancienne de l’Eglise, 1, 126). We know that this Gospel was the book of the Judeo-Christians. Its very name shows the existence of another Christian community, recruited from among the Gentiles. This, presumably, followed another Gospel which Clement of Alexandria calls "the Gospel according to the Egyptians". (On the Gospel of the Egyptians, see Harnack, Chronologie der altchristlichen Litteratur, 1, I, pp. 612-22; on the Gospel of the Hebrews, ibid., pp. 631-49.). This writer quotes it along with the "Gospel according to the Hebrews". However, he clearly distinguishes both from the canonical Gospels, which shows that those two apocrypha were then mere relics of the past, or at least were old enough to be entitled to some consideration in spite of their uncanonical character. Some writers, as Bardenhewer (Geschichte der altchristlichen Litteratur, I, 387), think that the Gospel according to the Egyptians was a different version of the Gospels of the Egyptians throughout the land, in contradistinction to some other Gospel, canonical or uncanonical, in use in Alexandria. In this case we might conclude further to the existence of a third Christian community, consisting of native Egyptians, as it is difficult to suppose that two Hellenic communities worked independently of each other, without no evidence of a native Church having existed at as early a period as suggested by the elimination of the Gospel of the Egyptians from the canon at the time of Clement of Alexandria.

Again, organized Christianity at an early date in Egypt is, indirectly at least, attested by the activity of the Gnostic schools in that country in the third and fourth centuries. The second century had its own authority that "Basilides the heresiarch", founder of one of these schools, came into prominence in the year 134. Other Egyptian founders of such schools, Valentinus and Carpoeratus, belong to the same period. Valentinus had already moved to Rome in 140, under the pontificate of Pope Hyginus (Ireneus, Adv. Haer., III, iv, 5), after having preached his doctrine in Egypt, his native country. As Duchesne (op. cit., I, 331) well remarks, one cannot believe that these heretical manifestations represent all the Alexandrine Christianity. These schools, precisely because they are nothing but schools, suppose a Church, "the Great Church", as Celsus calls it; such aberrations, precisely because labelled with their authors’ names, testify to the existence of an orthodox tradition in the country where they originated. This tradition, from which heresies of such a power of diffusion could separate themselves without putting its very existence in jeopardy, must have been endowed with a vitality which cannot be accounted for without at least half a century of normal growth and an organization under the guidance of strong and vigilant bishops. We may therefore, safely conclude that the middle decades of the first century there were in Alexandria, and probably in the neighbouring nomes, or provinces, Christian communities consisting principally of Hellenistic Jews and of those pious men (φιλμανδεις τον θεον) who had embraced the tenets and practices of Judaism without becoming regular proselytes. These communities must have had some numerical importance, for on the one hand the Jews were exceedingly numerous (over one million) in Egypt, and particularly in Alexandria, where they constituted two-fifths of the whole population; and on the other hand the philosophical eclecticism that generally prevailed in Alexandria at that time co-operated in favour of Christian ideas with the great demand for tolerance and tradition. As a matter of fact, to the extent, indeed, as Duchesne tersely puts it, that one might think like Philo or like Akiba, believe in the resurrection of the flesh or its final annihilation, expect the Messiah or ridicule that hope, philosophize like Ecclesiastes or like the Wisdom of Solomon (op. cit., I, 122). Along with this Judaizing Church, whose hopes and expectations were centred in Jerusalem and the Temple, there were also Christians who continued to observe the Law, there was another Church, decidedly Gentile—we might say, Christian—in its character and aspirations, as well as in its practices. It is difficult to surmise what the relations of those two Churches to one another were in their details. It is very probable that the destruction of Jerusalem and the Temple by Titus, by putting an end to the hopes of many among the Judaizing Church, brought them over to the Great Church, which henceforth gained rapidly in numbers and prestige and soon became the only orthodox Christian Church.

2. Chronology of Early Episcopate.—Eusebius, both in his "Chronicle" and his "Ecclesiastical History" (cf. Harnack, "Chronologie der altchristlichen Litteratur", I, 1, pp. 70-208), registers the names and years of patriarchs of the Great Church, and in succession the See of Alexandria prior to the accession of Demetrius (188-9). Those names he took from the now lost "Chronography" of Julius Africanus, who visited Egypt in the early portion of the third century. They are as follows: Anianus, 22 years; Abilus, 13; Cerdo, 11; Primus, 12; Justus, 11; Gumenus, 8. But we have no evidence of a native Church having existed at as early a period as suggested by the elimination of the Gospel of the Egyptians from the canon at the time of Clement of Alexandria. Thus Anianus is entered under the eighth year of Nero (A.D. 62-3). It seems certain, however, that these synchronistic indications do not belong to the list as found by Julius Africanus, but were computed by himself, from Demetrius. Eusebius circumstances of the several bishops. The same writer (Harnack, "Chronologie", I, 1, p. 706) is authority for another tradition preserved also by Eusebius, to the effect that Christianity was first introduced in Egypt by St. Mark the Evangelist in the third year of Claudius (A.D. 43), only one year after St. Peter established his see in Rome, and one year before Evedus had been raised to the See of Antioch. He preached there his Gospel and founded Churches in Alexandria. Little is added by
Eusebius, viz. that, according to Clement of Alexandria, Mark had come to Rome with St. Peter (probably after Agrippa's death in 44), and that, according to Papias, after Peter's death (probably 64), Mark had written there the Gospel that bears his name (see Har- naack, "Chronologie", I, I, pp. 652-3). This latter point is confirmed by Irenaeus, op. cit., III, i, 2: "Post vero horum [Petri et Pauli] excessum, Marcus, discipulus et interpretes Petri, et ipse qua Petro nutiuntae erant per scripta nobis tradidit."

Other chronological traditions, often mere variations of two garments concerning the pontificate and line of St. Mark, have been handed down mostly by the Oriental compilers of chronicles. They are strongly legendary and often conflict with one another and with the Eusebian traditions. In more than one instance they seem to have originated from a misunderstanding of Eusebius's text, of which we know there was a Coptic translation, or from an effort to harmonize or supplement the traditions reported (but not confirmed) by that writer. Until these Oriental sources have been critically edited and their chronology brought out of its chaotic state, it is impossible to make use of them to any considerable extent. It seems, however, certain (1) that St. Mark died a martyr, though the constant tradition that his martyrdom was on Easter Day and that it was seen by many has little to be believed that from the year 45 to the end of the first century Easter never fell on either of those dates; (2) that, having temporarily left Egypt to go (or to return) to the Pentapolis, St. Mark had appointed Anianus his successor several years prior to his own death. Severus of Nesterawel, a bishop of the ninth century, says that it was seven years before his martyrdom. It is remiss of Eusebius, while stating that Anianus succeeded St. Mark in the eighth year of Nero (A.D. 62-3), does not mention Mark's death (as in the case of St. Peter). Probably he had found no tradition on that point. The fact, however, that he gives Anianus as the first Bishop of Alexandria shows that, in his mind, the two events were not contemporaneous. For if Anianus had taken possession of the see on St. Mark's death he would have been the second, and not the first, bishop. There is some reason to suspect the correctness of the traditions transmitted by Julius Africanus through Eusebius. The round number of ten bishops for a period of which we otherwise know nothing, the fact that in every case the pontificate consisted of complete years, the fact that the list consists of ten, and the further fact that we find in that short list two pontificates of ten years, two of eleven, two of twelve, two of thirteen, which seems to indicate that the other two originally were fourteen years each—all this might suggest that the list of Julius Africanus is to some extent at least artificial, and based on a uniform number of twelve years for each pontificate, giving a sum total of one hundred and twenty years for the list. One might surmise that the list was originally supposed to start from St. Mark's death, and that later on the enthronement of Anianus was taken as its beginning, his pontificate being, as a consequence, increased by from four to eight years. Nor is it, perhaps, entirely fortuitous that the different recensions of the "Chronicon" of Eusebius (the Armenian version, for instance) contain some forty years (12×12) from St. Mark's arrival in Egypt to Demetrius. It would not be difficult to find other instances of chronologies of proleomyntic times thus artificially round out on the basis of the numbers ten and twelve.

We have, perhaps, a relic of an entirely different tradition in a remark to be found in "Chronicon" (Charles Peem in Butler, "Labiatur History of Paladus") that certain heretics came to Pemien and began to scoff at the Archbishop of Alexandria, saying "Martyrdom (nepoeraia) from priests. The old man did not answer, but he said to the brothers: "Prepare the table, make them eat, and dismiss them in peace." It is generally supposed that the heretics in question were Arians and really intended to make Pemien believe that the then Archbishop of Alexandria had been

ordained by priests, and St. Athanasius is supposed to have been that archbishop. Now, as it is a well-known fact that St. Athanasius was consecrated by bishops, that accusation is considered one of the many calumnies the Arians used to spread against him. If this interpretation be true, the Lausiac text proves nothing for the nature of the early Alexandrian episcopate. But it seems highly improbable that the Arians should have dared to assert what ever is in Egypt; in the least familiar with contemporary events, must have known to be false. In fact the Lausiac text is susceptible of a more plausible interpretation, to wit, that the episcopal character of the Archbishop of Alexandria was to be traced to simple presbyters, while in other Churches the Apostolic succession had been transmitted from the very beginning through an unbroken line of bishops. Eutychian would be the oldest witness of the tradition transmitted by Jerome, Severus, and Eutychian, for Pontius flourished in the first half of the fifth century (Dict. Christ. Biogr., s. v.), or even as early as the latter half of the fourth century, if Charles Gore is right in his argument that Ruinus visited that holy hermit in 375 (Journal of Theological Studies, III, 284), while a bishop of Alexandria was called Pontius; originally not only elected, but also appointed, by presbyters is, indirectly at least, confirmed by another tradition for which Eutychian is authority, to wit, that, till Demetrius there was no other bishop in Egypt than the Bishop of Alexandria. This was denied by Sollerius (Hist. Chron. Patr. Alex., 8 = 109) and others, but we shall consider the following section that their reasons are not conclusive (cf. Harnack, "Miss. u. Ausbreitung", 2d ed., II, 133, n. 3). The tradition that the early Bishops of Alexandria were elected and appointed by a college of presbyters, is therefore, if not certain, at least highly probable. On the other hand it seems almost certain that that custom came to an end much earlier than Eutychian, or even Jerome, would have it, as the text that they disagree on the terminus ad quem; still more significant that Severus of Antioch is silent on that point. Besides, several passages of the works of Orig- en and Clement of Alexandria can hardly be understood without supposing that the mode of episcopal election and ordination was then the same as throughout the rest of the Christian world (see Cabrol in his "Dictionnaire de theologie chret.", s. v. Alexandria: Electio

We may not dismiss the question without recalling the use which Presbyters, since Selden, have made of that tradition to uphold their views on the early organization of the Church. It suffices to say that their theory rests, after all, on the gratuitous assumption (to put it as mildly as possible) that the presbyters who used to elect the Bishop of Alexandria, were priests as understood in the now current meaning of this word. Such is not the tradition; according to Eutychian himself, Selden's chief authority, the privilege of patriarchal election was vested not in the priests in general, but in a college of twelve priests on whom that power had been conferred by St. Mark. They were in this case an episcopal college, in the sense that, when it became necessary to establish resident bishops in the provinces, the appointees may have been selected from the college of presbyters, while still retaining their former quality of members of the episcopal college. So that, little by little, the power of patriarchal election passed into the hands of regular bishops. The transfer would have been gradual and natural; which would explain the incoherence of the witnesses of the tradition as to the time when the old order of things disappeared. Eutychian may have been influenced in his statement by the fourth Nicene canon. As for St. Jerome, he may have meant Demetrius and Heraclas, instead of Heraclas and Dionysius, for he may have been aware of the other tradition handed down by Eutychian, to the effect that those two patriarchs were the first to ordain bishops since St. Mark (see below).

4. The Episcopate in the Provinces.—Delegated Bishops or Itinerant Bishops.—We have said that according to an ancient tradition handed down by Eutychian, the Bishop of Alexandria was for a long time the only bishop in Egypt. Eutychian's words are always followed by a statement of the twenty bishops of Alexandria by Mark the Evangelist, until Demetrius, Patriarch of Alexandria (and he was the eleventh patriarch of Alexandria), there was no bishop in the province [sic—read provinces—see below] of Egypt [Arabic, Misir], and the patriarchs his predecessors had appointed no bishop. And when Demetrius became patriarch he appointed thenceforward the Patriarch of Alexandria who set the bishops over provinces. And when he died Heraclas was made Patriarch of Alexandria, and he appointed twenty bishops" (translated from the edition of L. Cheikho, in "Corpus Scriptorum Christianorum Orientis: Scripta Arabiæ", s. 111, to. VI, I, p. 96). It has been objected against this tradition that the Emperor Hanno, writing to Severus on the religious conditions of Egypt (Vopiscus, "Vita Saturninus", 8), speaks of Christian bishops; but this letter is now generally considered as a forgery of the third century (cf. Harnack, "Mission u. Ausbreitung des Christentums", 2d ed., II, 133, n. 3), and even if it were genuine it would be necessary to know exactly what Hanno meant by the word bishop. we shall see that it could be used in a sense of "bishops" acting in virtue of a special and temporary, not an ordinary and permanent, delegation of powers as ordinary bishops (see below); for in that case delegation being a method of ordination the word bishop might not be the only denomination. They were not bishops in the ordinary canonical sense of the word. In Cedren's case the text says: "The bishops who were in Alexandria in those days"—i. e., probably, who were stationed there, resided there, which certainly cannot be understood of ordinary bishops, whose residence would have been in their respective dioceses. There was room for but one such bishop in Alexandria. Still clearer is the passage concerning Julian: "A party of bishops from the synod assembled with the people of Alexandria", etc. What was that synod? Evidently not a council which happened to be in session, for in that case all certainly would have taken part in the election. Besides, if Cedren's predecessor had a synod, he would have appointed a bishop of whom he borrowed that meagre biography, would not have failed to swell it with this important event. There seems to be no other solution than to see in that synod a body of presbyters or delegated bishops who were habitually in residence in Alexandria, but some of whom, being on the mission, were not able to take part in the election. There was, therefore, under the early Bishops of Alexandria, a body of men who could be called bishops, and yet had no ordinary jurisdiction, as is evidenced, first, by the express statement in Cedro's case and, secondly, by the fact that they usually resided in Alexandria, as stated or implied in the other two cases. Such a body of men the twelve presbyters of Eutychian must have been; so that
those three passages, far from contradicting Eutychius’s testimony, rather confirm it. We find, however, a more direct confirmation of Eutychius’s statement in another, so far equally misinterpreted, passage of Severus. In the biography of Julian, the immediate predecessor of Demetrius, we read: “After this patriarch, the Bishop of Alexandria did not remain always there, but he used to go out secretly and organize the hierarchy [yayusim kahanat, literally, ‘ordaining bishops’]”. The same remark is to be found in the “Chronicon Orientale” of Peter Ibn Râhib, with the variation, “No bishop always remained in Alexandria” and the omission of the last words “as St. Mark” etc. We know that the words yayusim kahanat have been so far rendered “ordinationes sacerdotii faciebant” (Renaudot, Hist. Patr. Alexandr., p. 18), “ordained priests” (Evettts, “Hist. of the Patriarchs of the Cop- tic Church of Alexandria” in Grafin-Nau’s “Patro- logia Orientalis”, I, 154). There is no doubt, however, that the word kahanat (plur. of khhin) as a rule stands for bishops and deacons as well as for priests. That it really is so in this case is made clear from a comparison among three versions of the same episode of the life of St. Mark. The author of the biography in Severus’s work says that the Evangelist, seeing that the people of Alexandria were plotting against his life, went out from their city (secretly, adds Severus of Nesteraweh, Burgès, op. cit., p. 56) and returned to the Pentapolis, where he remained two years, appointing bishops, priests, and deacons in all its provinces. The Mark is the same episode of St. Mark under 25 April, says that St. Mark went from Alex- dria to Barca (Pentapolis) and beautified the churches of Christ, “instituting bishops and the rest of the clergy [kahanat] of that country”. It is evident that in the mind of the author of the latter passage kahanat, on the one hand, and “bishops, priests, and deacons”, on the other, are interchangeable. Finally, in the “Chronicon Orientale”, wherein the same episode of St. Mark’s life is related, we find simply: “appointing clergy (kahanat) for them”, without special mention of the bishops. And the argument will appear all the more convincing if we notice that the remark of Ju- lian’s biography must have had in view the labours of St. Mark in the Pentapolis, when he added “as St. Mark the Evangelist had done”, for neither the Ori- ental nor the Western historians mention the ordinations performed by St. Mark outside of Alexan- dria.

Before we dismiss this interesting passage of Juli- an’s biography, let us call attention to another detail of it. The patriarch is styled simply the Bishop of Alexandria, which shows that the source from which the remark was borrowed did not belong to a time when the expressions archbishop and patriarch had not yet come into use. It may, therefore, be considered as absolutely certain that, according to all the Oriental sources, there was from the times of St. Mark to Julian’s death only one diocese in the whole territory of Egypt proper, namely, the Diocese of Alexandria, and only one bishop, the Bishop of Alexandria. That bishop was assisted by a college of presbyters. These were bishops to all intents and purposes, excepting jurisdiction, which they had by delegation only. If Eutychius calls them presbyters, it is because he found that word in the source he was using, possibly the very same in which the author of Julian’s biography found the word bishop used to designate the patriarch. In the “Lives of the Patriarchs” by Severus of Asmunein, they are called bishops. In agreement with the current use of the time when those biographies were first written down. On so much the Oriental sources agree, and substantially they confirm the traditions preserved by St. Jerome and Severus of Antioch. They disagree as to the number of presbyters created by St. Mark; Makrïâz, who probably copied Eutychius, gives the same number (twelve) and does not speak of deacons. Severus’s second biography of St. Mark, Al-Makin, and the “Chronicon Orientale” say there were were but seven deacons. According to Severus of Nesteraweh, St. Mark ordained priests the sons of Anianus, who were but few, and eleven deacons”. It is impossible to reconcile these data. If Eutychius’s figure, as is very likely, has no historical foundation, it might be based on Mark, iii, 14. The number three in the other witness is probably a confusion of the figures of St. Mark and of Nicaea. Although we have no means of determining, even approximately, to what extent Christianity had spread over Egyptian territory during the first two centuries of our era, there is hardly any doubt that the number of communities, as well as the area over which they were scattered, very much exceeded the proportions of an ordinary diocese of the primitive Church. Christianity, says Clement of Alexandria (Strum, VI, xviii, 167), has spread kata thros kai kóymen kai twóv pánoes, i.e. whole houses and families have embraced the faith, which has found adherents in all classes of society. And this statement is borne out by Eusebius (Hist. Eccl., VI, i), who says that in the year 202, during the Severian persecution, Christians were dragged from their homes, and persecuted, for the name of árhoys. It would seem that under ordinary circumstances there must have been a call for an ordinary resident bishop at least in each of the three great provinces of Heptanomis (Middle Egypt), Thébaïs (Upper Egypt), and Arsinoe (the Fayûm).

But in Egypt, as elsewhere, the Church in its in- formal nature grew under the influence of political organization of the country, and Egypt, in that it was unlike anything different from the rest of the Roman Empire. Rome, or rather Augustus, in taking possession of Egypt as his personal spoil, took in almost bodily the old political organization created by the Pharaohs and developed and strengthened by the Ptolemies, simply replacing the king by a prefect in whom, as his representative, all authority, judicial and military, was vested. That organization was characterized by the total absence of municipal institutions; no organized cities, as in the rest of the Roman Empire, no magistrates elected by a senate and governing in its name. The country was divided, as of old, into nomes, each of which was administered by a strategos (formerly, nomarch) under the prefect, though occasionally two nomes were temporarily united under the same governor. The district was divided between two strategoi. The strategoi were appointed by the subdivision officials throughout the nome, subject to approval from the prefect, and transmitted to him their orders. In judicial matters they could initiate proceedings, but could deliver judgment only when specially empowered as delegates by the prefect. In each village there was a council of elders who acted as intermediaries for the payment of taxes, and were held responsible to the authorities of the nome for the good order of their fellow villagers; they had, however, no authority except by way of delegation. Alexandria was no exception to that rule; it was not until the reign of Septimius Severus that the city was granted a senate, and even then the citizens were not permitted to elect their own magistrates. The general organization was probably the same in other cities which at a still later period secured the privilege of a senate. For convenience sake the Ptolemies had grouped the nomes of Upper Egypt into one province governed by an epistrategos; the Romans at first did the same for the nomes of Middle Egypt (including the Arisnoite the modern Fayûm) and the Delta, or Lower Egypt. But this and other later arrangements of the nomes into provinces never affected the political organization of the country. The epistrategoi were the usual delegates for many of the powers nominally exercised by the prefect. They appointed the strategoi and other local officials, subject to confirmation by the prefect. In a general way they acted as intermedi-
aries for the transmission to the authorities of the name of the orders issued by the prefect (Milne, p. 4–6). In each nome there was a metropolis which was the residence of the strategos and, as such, the political centre of the nome. It was a religious centre as well, as it contained the chief sanctuary of the special god of the whole nome. The chief priest in charge of that sanctuary naturally ruled in religious matters over all the secondary temples scattered throughout the territory of the nome. These were in Alexandria: the High-Priest of Alexandria and all Egypt’), appointed by the emperor, and probably a Roman, like the prefect upon whom he depended and whose substitute he was in religious matters. He had supreme authority over the priests and control of the temple treasures all over Egypt. In course of time, particularly under Dio-letian, some of the strategoi also became bishops, people, intermediaries who transmit his orders, but these changes affected in no way the workings of the administration of the country, which, through a chain extending from the prefect to the last and least subaltern of the smallest village, brought every inhabitant under the control of the imperial prefect.

A more striking example of centralized power can hardly be imagined: one master, supreme in all branches of the Egyptian state—state, military; church, school; people, intermediaries who transmit his orders, but these changes affected in no way the workings of the administration of the country, which, through a chain extending from the prefect to the last and least subaltern of the smallest village, brought every inhabitant under the control of the imperial prefect. The presbyters who elect the Bishop of Alexandria, also have the fullness of the priesthood, but they have no jurisdiction of their own. We found them temporarily in charge of the provinces, but they were acting in behalf of the bishop; and for that reason, in the older sources, they are not called bishops. With Demetrius (188–232) a new era opens. The bishops of Alexandria, we have seen, began to leave the city secretly, and ordained bishops, priests, and deacons everywhere, as St. Mark himself had done when he went to the Pentapolis. The word secretly is suggestive of times of persecution (cf. Abraham Eichelhuis, “Eutychius vindicatus”, 126; Renaudot. “Bishop” Pape, “Les Églises d’Egypte”, p. 56). It seems that this new departure of Demetrius took place in the very first years of the third century, when the Severian persecution broke out. The dangers then threatening the Christian communities—which by this time had greatly increased in all parts of Egypt—may have been the chief consideration that prompted the bishop to come to the assistance of his flock by giving it permanent pastors (see, however, Harnack, “Mission”, II, 137, note 2, quoting Schwartz). According to the tradition of Eutychius, Demetrius created three bishops; Heraclus (232–48), as many as twenty. The number of bishops so increased, under Dionysius (218–63), Maximus (265–62), Theonas (252–300), Peter Martyr (300–11), Achillas (312), and Alex- andros (324), that in the last years of this last archbishop, nearly one hundred bishops against Arius, (Soerates, Hist. Eel., I, vi), from Egypt, Libya, and the Pentapolis. The Egyptian hierarchy was then fully organized (cf. Harnack, op. cit., II, 142), a fact which explains, and is explained by, the wholesale Christianization of Egypt during the third century. In spite, however, of that astonishing development of the hierarchy, the old institution of itinerant bishops had not yet entirely disappeared. It happened often during the persecutions that bishops were incarcerated pending trial, and therefore were unable to hold ordinations. Their places were then filled by προσχευτης, or itinerant bishops ordained for that purpose, and resident in Alexandria when not actively engaged in their sacred functions. It was for having presumed to usurp the functions of such προσχευτης, that Mel- eitus, Bishop of Lyceopolis (in Upper Egypt) was cen- sured by the Patriarch Alexander, and finally con- demned and deprived of his jurisdiction by the Council of Nicaea (see Hefele-Leclercq, Hist. des Conciles, Paris, 1907, 1, 488–503, where all the sources are indicated).

The existence of metropolitans (in the canonical sense of the word) in the Church of Egypt is a matter of considerable doubt (see Harnack, op. cit., II, 150, note 3, where reference is made to Schwartz, “Athanasi- ana”, I, in “Nachricht. d. K. Gesellschaft d. Wiss. zu Göttingen”, 1904, p. 150, and Lubeck, “Reichseinheitl. v. kirchliche Hierarchy”, pp. 109 sq., 116 sqq.). If some bishops (which is very likely), see Hefele, “Conciliengeschichte, op. cit., p. 391, 392), to that title, they could not have differed from the ordinary Egyptian bishops in their relations to the Bishop of Alexandria. It is a well-known fact that the Bishop of Alexandria was wont to ordain not only his metropolitans, as did the other patriarchs, but also their suffragans, with the sole proviso that their election should have been sanctioned by their respective churches. The archives of Alexandria, however, have given us a long list of metropolitans (Hist. Eel., I, 23–1, 300), but it is not clear to what extent the metropolitans described in these lists were genuine metropolitans in the sense of a governor of a diocese. Alex- andros, writing of Melicus, when he calls ἀποστροφο- κρατός (Harres, Lix., c. iii), by which he means really metropoliten (Hefele, ibid.), says: “Ile quidem easter Ἑγυπτίως episcopos antecellens, secundum unum Petro [Alexandrinum] dignitas locum obtebat, ut potius illius adiutor sed edem tamen subjectus et ad ipsum de rebus ecclesiasticis referens” (He indeed, being pre- eminent over all the other patriarchs, was in the position next in dignity to that of Peter (of Alexandria), as his bishop, yet subject to him and de- pendent on him in ecclesiastical affairs). In what concerns Melitianism St. Epiphanius is not to be in- implicitly trusted. In this case, however, his testimony is probably correct; his words depict just such a con- dition of affairs as we should naturally expect from the general analogy of the church's organization with the civil government. The existence of the epistategov and the nature of their relations to the prefect of Egypt might well have suggested the appointment of metropolitans with just as limited an independence of the Bishop of Alexandria as St. Epiphanius at- tribute to Meletus.

THE PRESENT Structure OF THE COPTIC CHURCH. — The Jacobite Church has thirteen dioceses in Egypt: Cairo under the Patriarch of Alexandria, with 23 churches and 35 priests; Alexandria, with a metropolitan, having charge also of the Provinces of Bohaireh and Menofiyeh, 48 churches, 60 priests; the three provinces of Dakalah, Sharkieh, and Gharbieh, 70 churches, 93 priests; Gizeh and the Fayum, 25 churches, 40 priests; Beni-Suef, 24 churches, 70 priests; Minieh, 40 churches, 90 priests; Sanabá, 32 churches, 65 priests; Manfalút, 28 churches, 55 priests; Assáit (metropolitan see), 25 churches, 66 priests; Abûtig (metropolitan see), 45 churches, 105 priests; Akhmin and Girgeh (metropolitan see), 50 churches, 101 priests; Keneh, 24 churches, 48 priests; Luxor and Esneh (metropolitan see), 24 churches, 48 priests. By way of addition, it may be said that the Jacobite Coptic Church has 1 patriarch, 6 metropolitans, 6 bishops, 565 priests, 449 churches, and about 600,000 souls. There are in addition, outside of Egypt, a metropolitan in Jerusalem, a bishop for Nubia and Khartoum, a metropolitan and two bishops in Abyssinia. Some ten years ago the abbots of the monasteries of St. Mark (province of Assiût), St. Anthony, St. Paul (both in the Arabian Desert), and Baramos (in the desert of Nitria) were raised to the dignity of bishops.

There are three categories of schools. (a) Church schools, under the patriarch (conservative): 1 ecclesiastical college, 50 pupils; 6 boys' schools, 1100 pupils;
EGYPT

2 girls' schools, 350 pupils. (b) Tewilk schools, under the society of the same name (rather liberal and in opposition to the Below-mentioned clergy and institutions, there are several houses of Latin religious (both men and women) whose services are available to the Catholic Copt."

The New Testament class is of course much more largely represented. Several apocryphal writings of the Gospel class have been published by P. Robert, "Coptische Apocryphal Gospels, Translations together with the texts of some of them" etc., Cambridge, 1896 (Texts and Studies, IV, 2). The chief documents reproduced in this work are the "Life of the Virgin" (Sahidic), the "Falling Asleep of Mary" (Bohairian and Sahidic), and the "Death of St. Joseph" (Bohairian and Sahidic). The collection is known as the "Protevangelium Jacobi". The "Falling Asleep of Mary" exists also in Greek, Latin, Syriac, and Arabic, and the Coptic texts may serve to throw light on the relations of these various recensions and on the origin of the tradition. The only other text of the "Death of St. Joseph" is an Arabic one, more closely related to the Bohairian than to the Sahidic. The Coptic manuscripts of the papyri preserved at Turin a Sahidic version of the "Acta Pilati" published by Fr. Rossi, "I Papiri Copti del Museo Egeeio di Torino" (2 vols., Turin, 1887-92), I, fasc. 1, "Il Vangelo di Nicodemo". Some Sahidic fragments published by Jacoby ("Ein neues Evangelium fragment", Strasburg, 1900), and assigned by him to the Gospel of the Egyptians, are thought by Zahn to belong to the Gospel of the Twelve (Zeitschrift, XI (1900), pp. 361-70). To the Gospel of the Twelve Revillout assigns not only the Strasburg fragments and several of those published both by himself ("Apocryphes coputes du Nouveau Testament, Textes", Paris, 1876) and Guidi (see below), but also a good many more Paris fragments which he publishes and translates. Other Paris fragments Revillout thinks belong to the Apocalypse of the Sahidic Apocryphes coputes; I, Les Evangiles des douze Apôtres et de S. Barthélemy" in Grafin-Nau, "Patriologica Orientalis", I, 1, Paris, 1907). However, before the publication of Revillout appeared, the Paris texts had been published by Lecouf, who found them to belong to five different codices corresponding to as many different writings all referring to the ministry of Passion and Resurrection of Christ. One would be the Gospel of Bartholomew and another the Apocalypse of the same Apostle ("Fragments d'Apocryphes de la Bibliothèque Nationale" in "Mémoires de la Mission française d'archéologie orientale", Cairo, 1904). According to Leipoldt we have the first evidence of a Coptic recension of the "Protevangelium Jacobi" in a sahidi folio published by him (Zeitschrift für neustamentliche Wissenschaft, VI (1905), pp. 106, 107).

The apocryphal legends of the Apostles are still more numerous in the Coptic literature, where they constitute a group quite distinct and proper to Egypt, which seems to be their original home, although in vast majority translated from Greek originals into the Sahidic dialect. They were always popular, and long before Coptic ceased to be universally understood, some time between the eleventh and fourteenth centuries, they were translated into Arabic and then into Arabic into Ethiopic. Among the principal are the Preachings of St. James, son of Zebedee, St. Andrew, St. Philip, Sts. Andrew and Paul, and Sts. Andrew and

(Arab. Essa'īd, "the high"); the Akhmimic, originally in use in the province of Akhmim, afterwards superseded by Sahidic; the Fayumic, or dialect of the Fayum; the Middle Egyptian; and the Bohairic (formerly Memphitic), i.e. the dialect of Bohairic or the Region of the Lake (Mariôt), a name now applied to the north-western province of the Delta, of which Damahôr is the seat of government. From the beginning of the Christian era both Bohairic and Sahidic are by far the most important, although, as we shall see, the most ancient, and in some respects most valuable, Coptic manuscripts are in the Akhmimic dialect. The question of priority between these dialects—if understood of the greater or lesser similarity which they bear to the respective dialects of the ancient Egyptian from which they are derived, or of the time when they first came into use as Christian dialects—cannot, in the opinion of the present writer, be safely decided. All we can say is that we have no Bohairic manuscript or literary monument as old as some Sahidic manuscripts or literary monuments. The Coptic alphabet, some letters of which are peculiar to the one or the other of the dialects, is the Greek alphabet increased by six or seven signs borrowed from the Demotic and other Egyptian dialects, or of unknown to the Greeks. On the other hand, some of the Greek letters, ε and Ψ, never occur except in Greek words. In all Coptic dialects Greek words are of frequent occurrence. Some of these undoubtedly had crept into the popular language even before the introduction of Christianity, but a good many must have been prefixes, as, e.g., "agath", goodness, kindness. Frequently a Greek word is used along with its Coptic equivalent. Greek words which had, so to speak, acquired a right of citizenship, were often used to translate other Greek words such as κως for μως, παλ for ἐδομ. The relation of Coptic to Greek, from that point of view, is about as the same that of French or English to Latin, although in lesser proportion.

Among the Sahidic Apocalypse of the Old Testament we must mention, first, the "Testament of Ahikar", Sahidic. The Sahidic Apocalypse of Jesus, published by Prof. I. Guidi in the "Rendiconta della Reale Accademia dei Lincei", 18 March, 1900: "Il testo copito del Testamento di Abramo"; and 22 April, 1900: "II Testamento d’Isaeo e il Testamento di Giaocobbe (testo Copto)"; then three Apocalypses of late Jewish origin: one anonymous (in Akhmimic and the other two attributed to Elias (Akhmimic and Sahidic) and Sophonias (Sahidic). They have been published by G. Steinendorf in Gebhardt and Harnack's "Texte u. Untersuchungen zur Geschichte der altchristlichen Literatur", N. S. 11, "Die Apokalypse des Elias: Eine unbekannte Apokalypse und Bruchstücke der Sophonias-Apokalypse" (text and translation, Leipzig, 1899). Part of the same texts had
Bartholomew; the Martyrdoms of St. James, son of Zebedee, St. James the Less, St. Peter, St. Paul; also the life by the Pseudo-Prochoros and the parts of St. John and a Martyrdom of St. Simon (different from the documents generally known under the names of "Preaching" and "Martyrdom" of that Apostle, and of which short fragments only have been preserved in Coptic). The texts of all these have been published by Professor I. Guidi in his "Fragmenti (opti") (Rendiconti della Reale Accademia dei Lincei, III and IV, 1885, 1886). (Rendiconti della R. Acc. dei Lincei, Classe di Scienze morali, storiche e filologiche, II, fasc. 7, 1893), and the translations in the same author's "Gli atti apocrifi degli Apostoli" (Giornale della Società Asiatica Italiana, vol. II, pp. 1–66, 1888), and in his "Di alcune Pergamene", just mentioned. The same documents have been to no small extent supplemented from St. Petersburg manuscripts by Oscar v. Lemm, in his "Koptische apocryphe Apostelacten" in "Mélanges Asiatiques tirés du Bulletin de l'Académie impériale de St Petersburg", X, 1 and 2 [Bulletin, N. S., I and III (XXXIII and XXXIV), 1890–92].

We close this section with the mention of two documents of more than usual interest: first, seven leaves of a "Pseudo-historia di laeta Matrona" containing a considerable portion of the Acta Paulii (Heidelberg Copt. Pap. Papyrus I), in their original form (i. e. including the so-called "Acta Pauli et Thecle"). Both of these documents have been published, translated into German, and thoroughly discussed by C. Schmidt ("Die alten Petrusakten", etc. in "Texte u. Unters." N. S., IX, 1901). We have, however, two fragments of the letters of Ignatius of Antioch, published by Pitra (Anal. saecra, 255 sqq.) and Lightfoot (Apost. Fathers, II, III, London, 1889, 277 sqq.) and several of the "Shepherd" of Hermas, published by Leipoldt (Sitzungsberichte der K. Gesellschaft d. Wissenschaft. in Berlin, 1903, pp. 261–68), and Delaporte [Revue de l'orient chrétien, 1905, pp. 31–41], and, what is more, two papyrus codices in Akhmimic dialect, one (Berlin) of the fourth, and the other (Strasburg) of the seventh or eighth century, both containing the first epistle of Clement to the Corinthians under its primitive title (Epistle to the Romans). The Berlin codex, which is almost complete, has just been published, with a German translation and an exhaustive commentary, by C. Schmidt (Der I. Clemensbrief in altkoptischer Überlieferung untersucht u. herausgegeben, Leipzig, 1908).

Extracts from the commentaries of Hippolytus of Rome, Ireneaus, and Clement of Alexandria are to be found in the famous Bohairic catena (dated a. d. 885) of Lord Zouche's collection (Parham, 102; published by Leipoldt, Memoires de l'Académie Imperiale des Sciences, 1850–59; and, in the "Nouv. dict. de Théol.", (IV, 1883). But it is very likely that this manuscript was translated from a Greek catena, and consequently it does not show that the writings of those Fathers existed independently in the Coptic literature. Clement of Alexandria, in any case, and also Origen, were considered as heretics, which would explain their absence from the repertory of the Coptic Church.

Post-Nicene Fathers.—The homilies, sermons, etc., of the Greek Fathers from the Council of Nicaea to that of Chalcedon were well represented in the Coptic literature, as we may judge from what has come down to us in the various dialects. In Bohairic we have over forty complete homilies or sermons of St. John Chrysostom, several of St. Cyril of Alexandria, St. Gregory Nazianzen, Theophilus of Alexandria, and St. Ephraem the Syrian, while in Sahidic we find a few complete writings and a very large number of fragments, some of considerable importance, of the homiletical works of the same Fathers and of many others, like St. Athanasius, St. Basil, Proclus of Cyzicus, Theodotus of Ancyra, Epiphanius of Cyprus, Amphiloehus of Iconium, Severianus of Gabala, Cyril of Jerusalem, Eusebius of Caesarea, and the pseudo-Dionysius the Areopagite. Liberius of Rome and St. Ephraem are also represented by several fragments. But St. Jerome, with whom these writings are not infrequently spurious, and that they can in no case be held up as models of translation.

The Bohairic part of this great mass of literature is still almost entirely unexploited, we might say unexplored. Two sermons of St. Ephraem have been published, one, on the adulterous woman of the Gospel, by Guidi (Bessarione, Ann. XII, vol. IV, Rome, 1903), the other (fragment) on the Transfiguration by Budge (Proceedings of the Soc. of Bibl. Archeology, IX, 1887, pp. 317 sqq.). Budge published also a large fragment of an encomium on Elijah the Tishbite attributed to St. John Chrysostom (Transactions of the Soc. Bibl. Arch., IX, 1893, pp. 355 ff.), and Amelinoeus, a sermon of St. Cyril of Alexandria on death ("Monuments pour servir à l'histoire du christianisme dans l'Orient des Sept siècles—Mémoires publiés par les Membres de la Mission Archéologique Française au Caire, IV, 1888).

As for the Sahidic portion, two homilies of St. John Chrysostom, of doubtful genuineness if not altogether spurious, and all the homiletical fragments of the Turin museum, were published and translated into Latin by P. Pitra, in his "Leipsic Fragments of the Syrian and Egyptian Papyri" (2 vols., Turin, 1887–92), and quite a number of fragments, often unidentified, were published in the catalogues of the various collections of Coptic manuscripts, principally in the catalogue of the Borgian collection by Zoega, ("Catalogus codicum copto-ceramicorum manuscriptorum", etc., Rome, 1810; Latin translations generally accompany the texts). Among the Syriac collections and manuscripts of this class and period we must mention, in view of their importance, first, a fragment of the "Physicorum" of St. Epiphanius (J. Leipoldt, "Epiphanios" von Salamin 'Ancoratus", in Saidischuer Úbersetzung" in "Berichte d. philol.-hist. Klasse d. Gesellschaft d. Wiss. zu Leipzig", 1902); secondly, several fragments of the lost "Leytal Levan" in the "Bibliotheca Egyptiavus vom Jahre 367" in "Nachrichten d. K. Gesellschaft d. Wiss. zu Göttingen, Philol.-Hist. Kl.", 1898; "Ein Neues Fragment des Orientaliaus des Jahres 367", Göttingen, 1901; O. v. Lemm, "Zwei koptische Fragmente aus den Festschriften des heiligen Athanasius" in "Reuelen des O trails rödigen en memoire d. jubel. scientifique de M. Daniel Cruvosier", Berlin, 1898).

The Church of Egypt from the Catholic world was complete after the deposition of her patriarch Dioscorus (451), and, in spite of the efforts of the Byzantine Court to bring back Egypt to unity by force, orthodoxy and heresies were distinguished by the native Egyptians stubbornly refused their allegiance to the "intruders", and from that time on would have nothing to do with the Greek world, the very name of which became an abomination to them. The chief exception was in favour of the works of Severus, the expelled Monophysite Patriarch of Antioch, who had taken refuge and died in Egypt. We have a complete encomium of his on St. Michael, in Bohairic, published by E. A. Wallis Budge ("St. Michael the Archangel: Three Encomiums", etc., London, 1894), several fragments of homilies in Sahidic, and a letter in Bohairic to the Deacon Anastasia (cf. Wright, "Catalogue of Syriac manuscripts in the British Museum", No. DCCCCL, 10). We may
also mention here a panegyric of St. George, Martyr, by Theodosius, Monophysite Bishop of Jerusalem (d. after 453), published and translated into English by E. A. Wallis Budge, "The Martyrdom and Miracles of St. George of Cappadocia" (Oriental Text Series, 1, London, 1888). The constant political agitation in which the Monophysite successors of Dioscorus were involved accounts probably for the almost complete absence of their works from Coptic literature in general and in particular from this section. The only homilies or sermons we can record are, first, a sermon on the Assumption of the Virgin (already mentioned among the Apocrypha) and an encomium on St. Michael by Theodosius (the latter published by Budge, "Three Homilies", mentioned above), both in Bohairic and translated into a Sahidic fragment of a discourse pronounced by the same on the 11th of Thoth; secondly, a sermon on the Marriage at Cana, by Benjamin, in Bohairic; thirdly, the first sermon of Mark II on Christ's Burial, also in Bohairic. Rarer still are the sermons or homilies by other bishops of Egypt. The only two names worthy of mention are those of John, Bishop of Paralou (Burles), and Rufinus, Bishop of Arta, whose fragments of the former we have one short Sahidic fragment of a discourse on "St. Michael and the blasphemous book of the heretics that are read in the orthodox churches"; of the latter, several important fragments of homilies on the Gospels of St. Matthew and St. Luke, also in Sahidic. (See Martires; Monasticism.)

The Coptic Church.—The Copts incorporate among their early collections of Apostolic prologems and church regulations which the Copts incorporated from the Greek into their native literature, we shall mention:

(1) The Didache.—It is true that up to the present this document is not known to be extant in Coptic except in so far as chapters iv—xv of the Apostolic Church Ordinance (see below) are but a paraphrase of the first four chapters of the Didache revealed by Bryennios. Towards the end of the last century, however, the first part of the Didache (chapters i—x, the so-called "Duce Vix") was discovered imbedded in Shenute's Arabic Life published by Amchene (Monuments pour servir à l'histoire de l'Égypte chrétienne aux IVe et VVe siècles. Vie de Schnoudi", pp. 259 sqq., in "Mémoires publiés par les membres de la Mission archéologique française en Égypte", Paris 1905). We must, however, add that the fact is true, although that insertion is in Arabic, like the rest of the Life, its grammar is so thoroughly Coptic that there can be no doubt that it also, was translated from a Coptic original. For further detail see Iselin and Heusler, who were first to make the discovery ("Eine bisher unbekannte Version des ersten Teiles der Apostellehre" in "Texte u. Untersuchungen", XIII, i, 1895), and U. Beugnies, who, three years later, quite independently from Iselin and Heusler, had reached the same conclusions (Didache Coptica: "Duorum viarum" recension Coptica monastica per arabicam versionem superest, 2d ed., Rome, 1899 (Reprint from "Bessariane", 1883)).

(2) The so-called Apostolic Church Ordinance consists of chapters vii—xiii, and extant both in Bohairic and in Sahidic. The former text was published and translated into English by H. Tattam (The Apostolical Constitutions or Canons of the Apostles, London, 1848, pp. 1—30), and re-translated into Greek by P. Bötticher (later P. de Lagarde) in Chr. C. Bunsen's "Analecta Ante-Nicena" (London, 1864, II, 451—460); the latter text was edited, without translation, both by P. de Lagarde, in his "Egypthica" (Göttingen, 1883, pp. 230—248, Canons 0—30), and U. Bouriant, in "Les Canons Apostoliques de Clément de Rome; traduction en dialecte thébain d'après un manuscrit de la bibliothèque du Patriarcale Jacobite du Caire" in "Revue des travaux relatifs à la philologie et à l'archéologie égyptienne et syrienne", V (1884), pp. 202—206.

(3) The Egyptian Church Ordinance, consisting of thirty-two canons and extant, likewise, both in Bohairic and in Sahidic. The Bohairic was published and translated into English by H. Tattam (op. cit., pp. 31—92), and re-translated into Greek by P. Bötticher (in Bunsen's "Analecta", pp. 161—177). The Sahidic was published by de Lagarde, "Egyptiaca" (pp. 245—266, can. 31—62) and Bouriant (op. et loc. cit., pp. 206—216). A translation into German by G. Stein- dorff, from the edition of de Lagarde, in "Achsels, Die Canones Hippolyti" (Leipzig, 1891, in "Texte u. Untersuchungen", VI, 4, pp. 39 sqq.).

(4) An epitomized recension of sections i—iv of the Eighth Book of the Apostolic Constitutions; also both in Bohairic (published and translated into English by H. Tattam, op. cit., pp. 93—172) and in Sahidic (published by de Lagarde, "Egyptiaca", pp. 266—291, canons 63—78, and Bouriant, op. cit., VI, pp. 60—68) examined and translated into German from the Lagarde edition, by Leipoldt, "Sahidische Auszüge", etc., in "Texte u. Untersuchungen", new series, 1, b, Leipzig, 1891). According to Leipoldt (op. cit., pp. 6—9), this abridgment, in which the liturgical sections are either curtailed or entirely omitted, has much in common with the "Lexicon succitanum per Hipplolyton" not only in the choice of the selection, but also already in Sahidic, but also in point of style; the Coptic document is beyond doubt of Egyptian origin. Besides the above Bohairic and Sahidic texts, there is a fragment (de Lagarde, can. 72—78, 24) of another Sahidic text which, according to Leipoldt (who first published it and translated it into German, op. cit.), belongs to an older recension. The text published by de Lagarde and Bouriant is derived from an older recension, with corrections from the Greek Apostolic Constitutions as they were when the "Constitutiones per Hippolyton" were taken from them. On this theory of Leipoldt's, however, see Funk, "Das achte Buch der apostolischen Konstitutionen in der Koptischen Übersetzung" in "Theologische Querquartalschrift", 1901, pp. 429—417.

The above three documents, (2), (3), (4), form one collection of 78 canons, under the following title: "These are the Canons of our holy Fathers the Apostles of Our Lord Jesus Christ, which they established in the Churches". As a whole they are known, since de Lagarde's edition, as "Canones Ecclesiastici". The Bohairic and Sahidic versions are very different, and although that insertion is in Arabic, like the rest of the Life, its grammar is so thoroughly Coptic that there can be no doubt that it also, was translated from a Coptic original. For further detail see Iselin and Heusler, who were first to make the discovery ("Eine bisher unbekannte Version des ersten Teiles der Apostellehre" in "Texte u. Untersuchungen", XIII, i, 1895) and U. Beugnies, who, three years later, quite independently from Iselin and Heusler, had reached the same conclusions (Didache Coptica: "Duorum viarum" recension Coptica monastica per arabicam versionem superest, 2d ed., Rome, 1899 (Reprint from "Bessariane", 1883)).

(5) Canones Apostolorum.—A recension of Book V, 47, of the Apostolic Constitutions entitled: "The Canons of the Apostles, which the Apostles gave through Clemens [Clement]". These canons are usually called Canones Apostolorum, with de Lagarde, by whom a Sahidic recension was first published (op. cit., pp. 201—238; published also by Bouriant, op. cit., VI, pp. 108—115). This recension contains 71 canons. A Bohairic recension of 85 canons, as in the Greek, was published and translated into English by H. Tattam (op. cit., pp. 173—214); published also by de Lagarde along with the Sahidic text (op. et loc. cit.).

(6) Canones Hippolyti.—A Sahidic fragment of the Paris collection (B. N. Copte 129 14 ff. 71—78) contains a series of canons under the title of "Canons of the Church which Hippolytus, Bishop of Rome, wrote". So far as the present writer knows, these
canons have not yet been the object of a critical study; nor does it seem that they were ever published.

(7) The Canons of Athanasius, or rather the Coptic writing which underlies the Copto-Arabic collection of 107 canons bearing that name, are undoubtedly one of the oldest collections of church regulations and very likely rightly attributed by the tradition to St. Athanasius of Alexandria, and, in that case, perhaps to be identified with the "Commandments of Christ" which the Chronicle of John of Nikou attributes to this Father. The "Catena patrum priorum" mentioned in the catalogue of the library of a Theban monastery, which catalogue dates from about A.D. 600. The Sahidic text, unfortunately not complete, was published and translated (along with the Arabic text by Riedel) by Curch from a British Museum papyrus (sixth or seventh century) and two fragments of a manuscript on parchment (tenth century) preserved in the Borgia Collection (Naples) and the Rainer collection (Vienna), in Riedel and Crum's "Canons of Athanasius of Alexandria", London, 1901. To this work we are indebted for the information contained in this brief notice. Although this interesting document is a pure Egyptian production, there is but little doubt that it was originally written in Greek.

(8) The fragments of a Coptic liturgical papyrus broken into many hopelessly disconnected fragments, which Fr. Rossi published and translated although he could not determine to what writing they belonged (I Papi Crpti del Museo Egizio di Torino, II, fasc. 1IV). Of late those fragments were identified by Crum, who, de-parrying of establishing their original order, was able, for the convenience according to the Arabic recension published by Riedel (Die Kirchenrechtsquellen des Patriarchats Alexandrië, Leipzig, 1900, p. 231) and translated them into English ["Coptic Version of the Canons of St. Basil" in "Proceedings of the Society of Biblical Archaeology", XXVI (1901), pp. 81-92].

History.—Among the historical productions of Coptic literature some of which can be highly commended, we shall mention:

(1) An Ecclesiastical History in twelve books, extending from a period we cannot determine, to the re-establishment of Timothy Àlrus as patriarch of Egypt. If we suppose that in this, as in similar works, the author continued his narrative until his own time, we find that he certainly must have known it in Greek. At all events the prominence given to the affairs of the Church of Alexandria shows him an Egyptian, as from his tone it is clear that he professed Monophysism. Like so many other Coptic literary productions, the Ecclesiastical History reached us in the shape of fragments only. They are all in Sahidic, and once belonged to two different parts of the work, and are now to two collections of two works very similar in scope and method. Both copies (or works) contain a number of passages translated (more frequently paraphrased, sometimes abridged) from the "Ecclesiastical History" of Eusebius. On the other side the Coptic work was heavily laid under contribution by Severus of Asmunein in his "Historia patriarchum Alexiandrië". Some of the fragments were published by Curch in "Catalogus Codicrum Coptorium", with a Latin translation, some by O. V. Lemm, "Koptische Fragmente zur Patriarchengeschichte Alexandriës" ("Memoires de l'Acad. Imp. de S. Pétersb.," VII sér., XXXVI, 11, St. Petersburg, 1888; and "Bulletin de l'Acad. Imp. de S. Pétersb.," 1896, IV, p. 257, in both cases with German translation; the others by Curch in "Palaeographia Coptica Church Histories" in "Proceedings of the Soc. of Bibl. Archaeology", XXIV, 1902, with English translation).

(2) The Acts and Canons of the Council of Nicæa, preserved in Sahidic fragments in the Turin and Bogharian collections. They have been published, translated into French, and discussed at length by E. Revallo, "Le Concile de Nicée d'après les textes copistes et des diverses collections canonicques I, textes, traduction et dissertations critiques", Paris, 1881 (Journ. Asiatique, 1873-75); vol. II, "Dissertation critique (suite et fin)" Paris, 1899. The author believes in the genuineness of this collection; see, however, the two excellent reviews of Vol. II by Batifol (Revue de l'histoire des religions, XII, 1900, pp. 248-252) and Duchesne (Bulletin critique, 1900, I, pp. 330-335).

(3) By the Council of Ephesus, of which we have considerable fragments of a Sahidic text in the Borgia and Paris collections. The fragments of the former collection were published by Zoega, "Catalogus", pp. 272-280, with a Latin translation; those of the latter collection by Bouriant, "Actes du concile d'Éphese: texte Copte publié et traduit" ("Mémoires publiés par la Mission archéol. française au Caire", VII, Paris, 1892). The Paris fragments have also been translated into German and thoroughly discussed by Kraz, with the help of C. Schmidt, "Koptische Acten zum Ephesischen Konzil vom Jahre 451" (Texte u. Untersuchungen, new series, XI, 2, Leipzig, 1904). Kraz thinks that this recension is the work of an Egyptian and, in substance, a good representation of the Egyptian decrees of the Council. These fragments contain, however, additional information not entirely devoid of historical value.

(4) The so-called "Memoirs of Diocletian", a Monophysitical counterpart of the Acts of the Council of Chalcedon. It is in the shape of a Bohairic panegyric of Macarius, Bishop of Tkhoun, delivered by Diocletian during his exile at Gangres in presence of the Egyptian Bishops who had come to announce to him the version of Macarius. The publication of that curious document with French translation and commentary was begun by Revallo under the title of "Récits de Diocletian exilé à Gangres sur le concile de Chaldéisme" (Revue Egyptologique, I, pp. 187-189, and II, pp. 21-25, Paris, 1880, 1882), published and translated into French by E. Amélineau ("Mémoires de Diocletian en exil servir" Mémoires publiés, etc., IV, Paris, 1888), pp. 92-164. As against Revallo, Amélineau asserts the spuriousness of these Acts. Almost immediately after the latter's publication, Krull published and translated some Sahidic fragments which exhibited a better recension of the same document, and show that in this, as in other cases, the Bohairic text was translated from the Sahidic. In favour of the view of Amélineau, Krull thinks it more probable than the Memoirs of Diocletian were originally written in Greek, and sees no reason to doubt their genuineness ("Koptische Beiträge zur ägyptischen Kirchengeschichte" in "Mittheilungen aus der Sammlung der Papyrus Erzerherzog Rainer", IV, p. 67, Vienna, 1888). In 1903 Crum published copies by A. Rivieres of ten leaves of a papyrus codex, once a part of the Harris collection, now lost. Three of those leaves belonged to the panegyric of Macarius, while the others were part of a life of Diocletian, of which a Syriac recension was published by Nau ("Histoire de Diocles, patriarche d'Alexandrie écrit par son disciple Théophile") in "Journal Asiatique", Série X, I, pp. 5-108, 241-311, Nau then published in the same periodical the remaining six leaves of the same codex, with Latin translation, which Zeno issued at the suggestion of Acacius. It was published in a French translation by E. Revallo, "Le premier schisme de Constantinople" [Revue des questions historiques, XXII (1877), Paris, pp. 83-114], and by Amélineau, "Lettres de Pierre Monge et
The Euchologium was edited by Raphael Tuki in three books under both Coptic and Arabic titles, which we translate as follows: (1) "Book of the three Anaphoras, namely, those of St. Basil, St. Gregory the Theologian, and St. Cyril, with the other holy prayers", Rome, Propaganda, 1736, pp. 282, 380—Contents: Evening Incense, and Morning Incense with the preceding prayers of the three Anaphoras; Prayers Before and After Meals, Blessing of the Water, and the Ordo Renovations Calicii. (2) "Book containing all the holy prayers", ibid., 1761-2, 2 vols.—Contents: I, Ordinances, Blessing of Religious Habit, Enthronization of Bishops, Consecration of myron (Holy Chrim), and Churches; II, A Cairen prayer for the Blessing of Church Vestments, Sacred Pictures, Relics, Consecration of Churches (if rebuilt) and Baptismal Fonts; Blessing of the Boards used for the Heikel (Holy of holies); Reconciliation of the same if replaced because decayed or if desecrated; Special Services for the Epiphany, Maundy Thursday, Pentecost, the Feast of St. Peter and St. Paul; Reconciliation of persons guilty of apostasy and other special services; Blessing of Oil, Water, and Loaf for one bitten by a mad dog, etc., etc. (515 pages). (3) "Book of the Service of the Holy Mysteries, Funerals of the Dead, Catechisms, and one month of the Katameros" (this last item, a reduction of the work of the same name described hereunder, is printed here for convenience). The two books just described are generally known as the Coptic "Anaphora", "Pontificale Coptico-Aрабие", and "Rituale Coptico-Arabiae", although these designations do not appear on the title pages nor elsewhere in the books. Neither does the name of the editor (Tuki) appear.

The Missale has been edited anew with a slightly different arrangement, both in Coptic and Arabic, under the title: "Euchologium of the Alexandrine Church", Caire, Monastry Vespers, 1614 (A. D. 1608). Another Egyptian edition (Jacobite?) of the Missale (Caire, 1857) is mentioned by Brightman (Liturgics Eastern and Western, 1. p. lvii), and a Jacobite "genuine" edition of the "Euchologium [complete?] from manuscript sources" (Caire, 1902), by Cruus (Realencyklopadie fur protestantisehe Theologie, 3. p. 1461), of the same date. The volume does not differ from the oldest manuscript of the Vatican Library (thirteenth cent.), except that the names of Dioscurus, Severus of Antioch, and Jacobus Baradnus have been expunged from the dipthongs, and that of the pope added to them, the mention of Chaledon introduced after that of Ephesus, and the Faciopic inserted in the Creed. For his Pontifical and Ritual, they certainly contain essential things that is essential and common to the majority of good codices. Naturally the latter vary both in the arrangement of the prayers according to their origin and date of compilation. Tuki’s Ordo Communis, and St. Basil’s Anaphora, with rubrics in Latin only, were reprinted by J. A. Assemani, "Missale Alexandrinum" (Paris, 1758), and by G. X. Legnanius’ "Ordo Liturgici" (1735). John, Marquess of Bute, published also an edition of the Morning Incense, Ordo Communis (from Tuki’s text with some additions), and St. Basil’s Anaphora (from Tuki’s?): "The Coptic Morning Service for the Lord’s Day" (London, 1882), pp. 35 sqq. (See Brightman, op. et loc. cit.)

There has been no complete translation. The Ordo Communis and the three Anaphoras have been translated into (1) Latin, (2) from an Arabic (Vienna?) manuscript by Victor Sciasla, "Liturgiae Basilii Magni, Gregorii Theologi, Cyrilli Alexandrini ex Arabico conversae" (Vienna, 1604—reprinted in "Magna Bibliotheca Patrum", Paris, 1634, t. VI); (b) from a Paris Coptic manuscript by Renan, "Liturgiarum Orientalium Collectio" (2 vols., Paris; Frankfort, 1847); (2) English, (a) from "an old manuscript", by Malan, "Original Documents of the Coptic Church"; V, the
Divine Εὐχαρίστια" (London, 1875); (b) from a manuscript now in the library of Lord Crawford, by Rodwell, "The Liturgies of St. Basil, St. Gregory and St. Cyril from a Coptic manuscript of the thirteenth century" (London, 1870). The Ordo Communis and St. Basil's Anaphora in Latin, by Assemani, from Tuki's Arabic (op. cit.), in English from Renaudot's Latin, edited by Neale, "History of the Eastern Church" (London, 1850), introduction, pp. 351 sqq., 592 sqq. The Ordo Communis and St. Cyril's Anaphora (from Bodleian manuscripts of the thirteenth and fourteenth centuries), by Brightman (op. cit., pp. 144–188).

Morning Incense, Ordo Communis, and St. Basil's Anaphora, by John, Marquess of Bute (op. cit.).

Horarium (Arab. Ḥdiscard, Ḥḍib, Ḥḍib). Corresponding to Christian horaria, the Horarium of the Copts (III) from the beginning of Lent to Pentecost inclusive; (III) from Pachon to the Epagoge days which the Copts called the "little month," or in Arabic, the "forgotten days." The Katameros for the two weeks from Palm Sunday to Easter Sunday has been published under the Coptic and Arabic title of "Book of the Holy Week" (Revue de l'Orient Chrétien" (1904), IX, pp. 17–31.

The Antiphonary (Arab. Andifnāt, Dīnart), a collection of antiphons in honour of the saints. The composition or the arrangement of this book is attributed to Gabriel Ibn Tureik. (See Mosaicism.)

Of the Sahidic recension (or recensions) of the Egyptian Liturgy we have fragments from the various books, which books seem to have been the same as in the Bohairic recension. The most interesting of those relics belong to the Liturgy proper or Mass, to the Anaphoras principally. Of these the Churches of Upper Egypt apparently had a large number, for we have portions of those of St. Cyril, St. Gregory, St. Matthew, St. James, St. John of Bosra, and of several others not yet identified. Some have been translated by Giorgi (Lat. tr.), Krall (Gee. tr.), and Hyvernat (Lat. tr. only). The only titles of the publications and further information on nature of fragments published, see Brightman, "Liturgies Eastern and Western" (Oxford, 1896), I, pp. lviii–lxxix. There are also important relics of the Diaconom, probably enough to reconstruct that book entirely (one fragment published by Giorgi), "Fragmentum Diaconomi," "De reliquis" (1903), by Giorgi (Lat. tr.). It is a large number of fragments of the Katameros, lectionaries, and not a few hymns (some of them popular rather than liturgical) which of late have aroused the interest of students of Coptic poetry [see Junker, "Koptische Poesie des 10. Jahrhunderts" in "Orientes Christianus" (1900), VI, pp. 319–410; with literature on the subject complete and up-to-date]. The fragments in British Museum and Leiden Collections have been published in full in the catalogues of Crum (pp. 114–161, 969–978) and Pleyte-Boeser. A complete edition and translation of the Sahidic liturgy is being prepared (1909) by the writer of this article for the Corpus Scriptorum Christianorum Orientalium.

II. Coptic-Arabic Literature.—Long before the Coptic became extinct as a living language, it was used to be a literary language. The change seems to have taken place about the tenth century. The old Coptic literature continued for some centuries to be copied for the benefit of a few, but at the same time the work of translating it into Arabic was being carried on in a large scale and must have been completed early in the sixteenth century. The texts of which we know, who about 1240 composed a Coptic lexicon of the liturgical language, is highly praised by one of his successors, Abū ʿIshaq Ibn al-ʿAssāl, for having realized the uselessness of composing, as used to be done before, dictionaries extending to the whole literature. This remark would hardly be intelligible if the translating of the non-liturgical part of Coptic literature had not then been already begun. Those early translations include not only the works already reviewed in the preceding section of this article, but a good many more now lost in the Coptic version or translated anew from the Greek or the Syriac originals. Among the latter are a number of Nestorian writers, expurgated when necessary, but the glory of the Copto-Arabic literature lies in its original writings. We have already mentioned (see above, V) the three historians of the Coptic Church, Severus of Ashmunein, Eutychius, and Al-Maḵn. The authors of new Canons are: Christodulos, sixty-sixth patriarch, 1047–77; Cyrilus II, sixty-seventh patriarch, 1078–92; Macarius, sixty-ninth patriarch, 1103–29; Gabriel Ibn Tureik, seventh patriarch, 1176–1183. Cyrilus III, bishop, seventy-fifth patriarch, 1253–5, and Michael, Metropolitan of Damietta, twelfth century.—Collectors of Canons: Abū Soḥ Ibn Bānād, eleventh cent., Macarius, fourteenth cent. (if not to be identified with the Simeon Ibn Maqār, mentioned by Abū l-Barakāt).—Compilers of Nono-Canons: Michael of Damietta, twelfth cent., Abū ʿIshaq Ibn al-ʿAssāl, thirteenth cent., etc. (see Riedel, "Die christlichen festen des Patriarchats Alexandrinis", Leipzig, 1900). Hagiographers are represented by Peter, Bishop of Melig, twelfth and thirteenth cent., credited by Abū l-Barakāt with the composition of the Sinaikāri or martyrlogy, and Michael, also Bishop of Melig, fifteenth cent., to whom the same book is also attributed (probably because he revised and completed the work of his predecessor).—Severus of Ashmunein, Peter of Melig,
Abu 'Isâq Ibn al-'Assâl and his brother Abu âbâ T-Fâdâl Ibn al-'Assâl are the chief representatives of theology, as Severus of Ashmûnein and Abu 'Abârâfâr Ibn al-'Assâl, thirteenth cent., are of Scriptural studies, and John Abu Zakariyâh Ibn Saba and Gabriel V, eightieth patriarch (fifteenth century), of liturgy; John's treatise Gauhatâr an-nâfisâh (Precious Gem) has been translated into Latin by R. D'Anastase. Two, the grammarians and lexicographers, several of whom have already been mentioned in one connexion or another, see the excellent study of A. Mallon, S.J., “Une école de savants Egyptiens au moyen âge” in “Mélanges de la faculté orientale de l'université Saint Joseph”, I, pp. 109–131, II, pp. 231–264. There remains to mention the great ecclesiastical encyclopaedia of the ancients of the Egyptian Church, the “Illumination of the Church Service” of Shams al-Ri'sâsh Abu âbâ T-Barâkat Ibn Kibr (1273–1363). This stupendous work sums up, so to speak, the four centuries of literary activity we have just reviewed. (See Riedl, op. cit., pp. 15–50.)

Egypt in General.—Among the older works on Egypt the following still possess value: BRUSSEW, Egypt’s Place in Universal History (London, 1848–67); WILKINSON, Monuments and Customs of the Ancient Egyptians (Boston, 1884). For further bibliographical information see the bibliographies in Breasted, History of the Ancient Egyptians, 445 sqq, and BAEREKER, Egypt, cxxxi sqq. The most complete bibliography of Egypt is HULMY, The Literature of Egypt and the Soudan (London, 1898).

II. Hyvernat.

Egyptian Church Ordinance, an early Christian collection of thirty-one canons regulating ordinations, the liturgy, and other main features of church life. It is called Egyptian because it first became known to the Western world in languages connected with Egypt. In 1677 the Dominican Wansleben first gave a brief account of these canons, which were found in the “Synodos”, or what may be called the Ethiopic “Corpus Juris”. In 1691 Laud published a fragment of this Ethiopic collection and added a Latin translation. In 1835 a further fragment, i. e. to the end of the eighth canon, or to the prayer for the dead, was published in German by Franz Xaver von Funk. In 1848 H. Tattam published all the canons in Bohairic (Lower Egyptian) with English translation. In 1838 Lagarde published the same canons in Sahidic (Upper Egyptian) from an excellent manuscript of a. d. 1006. This text was translated into German by G. Steindorff and the translation was published for A. Achelis (Harnaek, “Texte und Untersuchungen”, VI, 1), and Hauler discovered a very ancient Latin translation in a manuscript of the fifth or sixth century. This translation is of great value because it apparently is slavishly literal, and it contains the liturgical prayers, which are omitted in the Bohairic and Sahidic. The original text, though not yet found, was doubtlessly Greek.

The Egyptian Church Order is never found by itself, but is part of the Pseudo-Clementine Legal Hexa-or Octateuch in the form in which it was current in Egypt. In Hauler’s Latin “Fragmenta Veronensis” (Leipzig, 1900) the order is: Didascalia, Apostolic Church Order, Egyptian Church Order, Book VIII of the Apost. Constit.; in the Syrian Octateuch, “The Testament of the Lord”, Apostolic Church Order, “On Ordinations” (by Hippolytus), Book VIII of the Apostolic Constitutions, Academic Canons; in the Egyptian Heptateuch, Apostolic Church Order, Egyptian Church Order (or ordinance), Book VIII Apost. Constit., Apostolic Canons. The Egyptian Church Order is one of a chain of parallel and interdependent documents, viz. (1) the Canons of Hippolytus, (2) the “Canones per Hippolytum”, (3) “The Testament of the Lord”, (4) Book VIII of the Apostolic Constitutions, Scholarly dependent have been sought between two eminent men as to the relation between these documents. Document No. 3, “The Testament of the Lord” only came into consideration after its discovery and publication by Rahmani in 1899. H. Achelis strenuously maintained that the “Canones Hippolyti” are the oldest in the series and were written early in the third century; on the other hand, Funk held that the Eighth Book of the Apostolic Constitutions being the latest development. Von Funk maintained the same order of documents as Achelis, only inverting their sequence, beginning with Book VIII of the Apostolic Constitutions, and ending with the “Canones of Hippolytus”. Gradually, however, Funk’s thesis seems to have been winning almost universal acceptance, namely that Book VIII of the Apostolic Constitutions was written about 400, and the other documents are modifications and developments of the same, the Egyptian Church Order in particular having arisen in Monophysite Egyptian circles between the years 400 and 500.

COOPER and MACLEAN, The Testament of the Lord (Edinburgh, 1906) has a Word-for-Word English rendering of the text of Funk, with the order of Funk, Das Testament unseres Herrn und die verwandten Schriften (Mainz, 1901); BAUMSTARE, Nieghöch. Paralleltexte zu E. VIII, Buchde, von Constanze von Osenburg (Rome, 1901); RABENHURK, IE. SHAHM, Patrology (Freiburg in the Br., 1908).

Eichendorff, JOSEF KARL BENEDIKT, Freiherr von, "the last champion of romantism", b. 10 March, 1788, in the Upper-Silesian castle of Lubowitz, near Ratibor; d. at Neisse, 26 Nov., 1857. Till his thirteenth year he remained on the parental estate under a clerical tutor; then he was sent with his brother William to Breslau where he attended the Maria-Magdalenen gymnasium, at that time still Catholic. During those student years (1804) were written the first of Eichendorff’s extant poems; no doubt his poetical talent had already been awakened in his romantic home. In the spring of 1805 he matriculated at the University of Halle. Here, under the influence of Professor Steffens, he became a follower of the romantic movement, and at the same time became acquainted with Carlotta von Peltz, some plays were performed by the ducal company of Weimar in the neighbouring town of Lauenstädt. In later years he translated several auta sacramento in truly poetical language. Eichendorff’s development was even more strongly influenced by his sojourn in Heidelberg (1807), where the triumvirate of romanticists, Götter, Abbe, and Schlegel, in the “Ein-und-Eisfeld Zeitung”, took the field against pedantry and philistinism. With the two last-named the young poet did not then cultivate a closer acquaintance—he certainly did so in 1809 at Berlin—but the lectures of the great Götter made a deep impression on him. Recommended by Count Loebn, Eichendorff’s first poems were printed in Ast’s periodical, among them the famous song “In einem kleinen Grunde”. The
first of his larger works, the novel "Ahnung und Gegenwart", was written partly at home, in Lubowitz, where he spent several years after the completion of his studies, partly in Vienna, where he had gone to qualify himself for the Austrian civil service; his friendly relations with Fr. Schlegel and his adopted son, the painter Veit, kept awake the poet's romantic enthusiasm.

In 1813, when Prussia and Austria were preparing for the War of Liberation, Eichendorff abandoned his poetry, his professional studies, and his preparation for the civil service, and joined the famous volunteers of Lützow at Breslau. Again, in 1815, when Napoleon had returned from Elba, he followed the call to arms, although he had just married (Oct., 1814) Luise von Larisch, and entered Paris with the conquerors. It was only in 1816 that the chivalric baron left the army and entered the Prussian civil service as a lawyer at Breslau. The next three years passed in quiet seclusion; their principal literary production is the story "Das Marmorbild", in which he received his first appointment in 1820 on the Catholic board of education at Danzig; there he took a lively interest in the restoration of the Church; but he also met with difficulties under a government which did not shrink from imprisoning the Archbishop of Cologne, Clemens August. When Eichendorff, who was a staunch Catholic, was asked to defend the measures of the Government in public, he asked for his dismissal, which, however, was not granted till 1814. The succeeding years were passed mostly in Berlin, where the poet was occupied more with literary and historical than with poetical work; after the death of his wife (1855) he lived with his family at Neisse. Two years later, having finished his "swan-song, the epic "Lucius", he died.

What has established the fame of Eichendorff as a poet and has given him a place not only in literature, but also in the heart of the people, are his simple but heartfelt songs. Many of them have become Volkslieder (popular songs) in the truest sense of the word; almost all are fitted for singing owing to their spirit and their melodious language. There is hardly another German poet who has found so many composers for his songs. The great lyrical talent which made Eichendorff the master of the short story ("Aus dem Leben eines Taugenichts", "Das Marmorbild", "Schloss Durande"), was prejudicial to the novel "Ahnung und Gegenwart", and to the longer story "Dichter und ihre Gesellen", inasmuch as the action is neglected for discursive discussions. Lack of compression and action has also been censured in the two dramas, "Ezelin von Romano" and "Der letzte Held von Marienburg". Still, "Ezelin", the tragedy of a consuming pride ruined through the very abuse of its gigantic strength, no less than "Der letzte Held", in which Plauen fails on account of his exceeding magnanimity and bravery, amply testify to the dramatic talent of the poet. His best comedy "Die Freier" has been found very well adapted to the stage. In these later years Eichendorff devoted his genius more to the history of literature. His history of the poetical literature of Germany (Kempten, 1907), especially the description of romanticism, outlined as it is by one of its best representatives, is of lasting value, also the sketch of the German novel in the eighteenth century. His solid character and his strong religious faith raise the "champion of romanticism" far above his fellow-poets. Not only did his genius never lead him away from the duties which religion and custom imposed upon him, but he also knew how to distinguish between poetical ideal and reality, and to avoid the underlying want of truth to which the earlier romanticism had succumbed.

Eichendorff (Gotze), Grundzüge zur Gesch. der deutschen Dichtung, VIII, 170-196, where everything pertaining to his bibliography up to 1905 can be found. Important publications after 1905 are:—

Godeke, Lobovits (Eichendorff), 2 vols. 1907, critical edition of Eichendorff's complete works has been begun.

N. Scheid.

Eichstätt (Eystadium), Diocese of (Eystettensis or Eystetttensis), in Bavaria, lies north of the Danube, and is suffragan to Bamberg. The diocese was founded by St. Boniface, and was vacant of its bishop, and the see was mired in charges of immorality and of simony, and was found in a condition of anarchy and of disorder, during the eleventh, twelfth, and thirteenth centuries. It was then united with Regensburg, and was held by filial bishops, who were either secular or regular canons. The see was vacant in 1699, when Joseph I appointed Abbot Joseph von Reichenbach as bishop, who died in 1705. After this there was a long interval till 1735, when the see was united with the bishopric of Bamberg.

The diocese, which was mired in charges of immorality and of simony, and was found in a condition of anarchy and of disorder, during the eleventh, twelfth, and thirteenth centuries, was vacant in 1699, when Joseph I appointed Abbot Joseph von Reichenbach as bishop, who died in 1705. After this there was a long interval till 1735, when the see was united with the bishopric of Bamberg.
1057 he was friendly to reforms, an extremely energetic man, and saintly in his life. He lived longer he would have taken rank among the greatest of the popes; he died in 1057 at the age of thirty-nine. Bishops Eberhard I (1099–1112), Ulrich II (1112–1125), Gebhard II (1125–1149), and Otto (1152–1195) vigorously inaugurated reforms that were perfected and confirmed in the diocesan synod of 1180. A similar synod, the Fourth Council of Freiburg (1246–1259), Reimboldo (1270–1297), and Philipp von Rathsamhausen (1306–1322). The last-named was a prolific writer, patron of the cathedral school, and by synods tried to raise clergy and people to a higher level. Berthold (1354–1365), a Hohenzoller by birth, built the Willibaldsburg, provided for the material welfare of the clergy, and protected them against the attacks of laity, nobility, and princes (Constitutio Bertholdiana). On all sides we meet with evidence of his regulating and stimulating zeal (Synodal statutes of 1354).

The Western Schism left its traces on the diocese. Bishop Johann III von Eich (1446–1461), a saintly man, did all in his power to efface them. He reformed the monasteries, organized the instruction of the clergy, and did not hesitate to alienate the property of the Church, and attracted to Eichstätt a number of scholars (among them the Humanist Albert of Eyb). Having been, before his election, chancellor of the emperor and his representative at the Council of Basle, he continued as bishop to serve the State on diplomatic missions of great importance. He has left much in the diocese in memorials. The greatest of princes which Pius II called at Mantua. His friend and successor, Wilhelm von Reichenan (1464–1496), the tutor of Maximilian I, was a statesman, diplomat, and patron of the arts, but also a bishop who walked in the footsteps of his predecessor and left after him the memory of a brilliant administration. In 1490 he made a visitation of the whole diocese. The original records of this visitation, the oldest thus far known, are still extant, and give us an interesting picture of religious life in the Middle Ages, in which, however, there are not lacking deep shadows. His successors, the cultured Gabriel von Eyb (1496–1533) and the noble Moritz von Hutten (1539–1552), were men who fully understood the critical situation and set themselves against the pernicious innovations of their times. The defeat of the Catholic cause was already a fact by the time of Nuremberg and Weissenburg, the margraves of Ansbach and the palgraves of the Rhine, from annexing a large part of the territory of the diocese in order to restore their finances by means of church property, and from the people to apostatize. Bishop Moritz gathered about him men of ability (Vitus von Ammer- bach, Coelhaus), and convoked (1548) a diocesan synod whose records exhibit the spreading spiritual desolation.

Bishop Martin von Schaumberg (1560–1590) founded the first Tridentine seminary (1561) one year after the close of the council, and secured for it excellent teachers (Robert Turner, Peter Stewart, Frederick Stapylus). Bishop Konrad von Gemmingen- Starnberg (1593–1612) rebuilt the Willibaldsburg, founded the Hortus Eystettensis, a garden well known to all European botanists, ordered frequent visitations of the diocese, and embellished the cathedral with precious jewels. Bishop Christoph Johann von Westerstetten (1612–1636) invited the Jesuits to Eichstätt, built a magnificent (Renaissance) church for them, and committed the episcopal seminary to their care. In 1634 the Smyr was reduced almost the whole episcopal city to ashes, but it soon rose to new splendour under the long and prosperous reign of Bishop Marquart II (1636–1655), a scion of the family of Schenk von Castell. He reorganized the ecclesiastical and secular administration of the diocese, won part of its territory (in the Upper Palatinate) back to Catholicism, and was for years imperial plenipotentiary at the diets and eminent as a diplomat.

The eighteenth century brought peace and prosperity, and many a magnificent structure in city and diocese rose under the gifted prince-bishops of those days (residence and garden, the fountains called Marienbrunnen and Willibaldbrunnen, castle of Hirschberg, monastery of Notre-Dame). Bishop Raymond Anton, Count of Scheiberg (1754–1777), preceded his exiled and well-known "Instructio Pastoralis", a book of pastoral direction, which in its latest (fifth) edition (Freiburg im Breisgau, 1902) is even yet much admired. The "secularization" (1803) robbed the Bishop of Eichstätt of his ancient secular authority, but the diocese remained and was reorganized by the Bull of circumscription of 1821. Cardinal Karl August von Reisach (Bishop of Eichstätt, 1835–1846) renewed its ecclesiastical and religious life, opened the seminary for boys (1838) and the lyceum (1844), with a philosophical and a theological faculty, and in union with Joseph Ernst (d. 1869), president (Rogatus) of the latter institution, breathed into it the true spirit of the Church, a spirit which since then has never failed. Bishop Georg von Ottil (1847–1870) and his successor, Georg von Reihl (1867–1893), faithfully continued and completed the work begun by Reisach. The conditions of the diocese are as well regulated as is possible; its people are solidly grounded in the Faith, while the learning, life, and labours of the clergy are considered exemplary throughout Germany.

The diocese is rich in monuments of ecclesiastical architecture and art. The Gothic cathedral exhibits many excellent works of art from the fourteenth to the eighteenth century; especially noteworthy is its mortuarium. The Gothic church of Our Lady in Ingolstadt and the conventual churches of Kaste (Romanesque) and Freystadt (Renaissance) are important monuments. Among ecclesiastical artists may be mentioned: Hans Pabst, Franz Schleimer (fifteenth century), Hans Feld- schnitzer (fifteenth century), Loy Hering (sixteenth century), Gabriel de Gabrieli (seventeenth-eighteenth century), Ignaz Breitenauer (eighteenth century). In the Middle Ages Eichstätt possessed a flourishing cathedral school dating from the time of St. Willibald. Mostly with ecclesiastical funds and through the zeal of Wilhelm von Reichenan, the University of Ingolstadt, founded (1472), was established and became famous. Among its theologians are Johann Eck, P. Canisius, Gregory of Valencia, Salmeron, Jacob Greter; among its canonists: Reifenstuhl, Piringh, Schmalzgreuber; among its jurists, Wiguleus Kreitmayr, Ad. Ickstatt; among its philosophers, scientists, and mathematicians: Johann Reuehrich, Conrad Celtes, Christoph Nebeler, Caspar Scioppius, Philipp and Petro Apian, Fuchs Leonhard, and others. Early in the nineteenth century the university was transferred to Landshut, thence to Munich.

The most important monastery of the diocese in olden times was the Benedictine abbey founded by St. Willibald in 740 and out of which grew the diocese. At the end of the tenth century it became the cathedral chapter with secular canons. The first double monastery, founded by St. Willibald; it was changed (800) to a chapter of canons; later it became again a Benedictine monastery. Before the change the monks moved to Hrerruden and erected there, under Abbot Dietker and through the benevolence of Charlemagne, a new monastery, which was changed to a chapter of canons in 888 and secularized in 1504. The monks moved from Heidenheim to Monheim, taking with them some of the relics of St. Walburga, which were lost in the "secularization" of the sixteenth century. St. Walburg (Benedictine nuns in Eichstätt (founded 870) was endowed in 1035 by Count Leodegar and reorganized by Bishop Heilbert. It is yet flourishing despite its temporary seculariza-
EIMHN 366 EINHARD

EINHARD (1082–1385), and possesses some relics of St. Walburga. Kastel in the Upper Palatinate, founded 1098 (Benedictines from the Cluniae congregation), took a prominent part in the reforms of the twelfth century; it survived the Counter-Reformation, its domains were transferred to the Jesuit college in Amberg, and after the suppression of the Jesuits (1773) to the Knights of Malta; in 1806 it was secularized once more. Plankstetten (Benedictines, founded 1129) was also secularized in 1802. Heilsbronn (Cistercians, founded 1152), also zealous for ecclesiastical reform, was the seat of the famous Abbatia Anabach, Rebeldorf (Augustinian canons, founded 1159 through the powerful help of Frederick Barbarossa) was the home of Prior Kilian Leib (1471–1532), linguist and historian; the abbey was secularized in 1802. Bergen (Benedictine nuns, founded 976) was suppressed in 1552 by the Protestant princes of Neuburg; its estates passed in 1597 to the hands of the Jesuits, who used them to found the seminary and gymnasium in Neuburg on the Danube (1664). The "Schoffenkloster zum heiligen Kreuz" (The Irish Monastery of the Holy Cross), an Irish foundation of 1140 in Eichstätt, passed over to the Capuchins in 1623, lived through the "secularization" of the early nineteenth century, and is still flourishing. In the thirteenth century, female monasteries were founded in 1225, the last of which was suppressed in 1550 by the people of Nuremberg; Seligenporten (Cistercian nuns), secularized in 1556, after the re-Catholicizing of the Upper Palatinate given to the Salesian nuns of Amberg and Munich, and again secularized in 1802; Gnadenthal in Ingolstadt (Franciscan nuns, founded 1276), still flourishing. In the fifteenth century were founded: Gnadenberg (Brigitines), Marbach near Altenberg, Erlangen near Abenberg, all of which disappeared during the last secularization (1802–1806). Eichstätt had still other monasteries in the Middle Ages: thus the Dominicans had a monastery in the city (founded 1279, secularized in 1802); the Carmelites in Weissenburg, the Francisans in Ingolstadt (1275). From the sixteenth century the monasteries had flourishing colleges in Eichstätt and Ingolstadt, the Capuchins in Eichstätt and Wemding (1669). The Teutonic Knights had a flourishing commandery in Ellingen which was secularized in 1802. At present (1906) the diocesan numbers one monastery of the Benedictines (Plankstetten), four of the Franciscans (Ingolstadt, Dietfurt, Berching, Freystadt), two of the Hermits (Klosterleuchtenberg, Weilheim), two of the nuns (St. Walburg and Gnadenthal), and about forty-six houses of female congregations, among them the flourishing institute of the English Ladies in Eichstätt. The seminary, restored by Reisach, was enlarged in 1844 by the addition of a philosophico-theological academy (lyceum), and under eminent scholars has attained a high degree of proficiency. (Professors: Johann Pruner, d. 1907; G. Sutter, d. 1888; Franz Morgott, d. 1900; Valentin Thalhoffer, d. 1891; Alb. Stöckl, d. 1895; Math. Schneid, d. 1893; Phil. Hergenröther, d. 1890; Mich. Lefflad, d. 1900.) Since about 1898 bishops of the United States have been sending students to the Lyceum for training in philosophy and theology. The four last cardinal bishops of Eichstätt also contributed several prominent men to the Church in the United States, among them Archbishop Michael Heiss of Milwaukee. Foundations of Benedictine nuns were also made in the United States from the convent of St. Walburg. In 1908 the diocese had about 135,000 Catholics, 206 parishes, 63 benefices, 79 assistants, 373 secular and 93 regular priests.

The sources of the documen history were compiled by SUTTNER, Bibliotheca Episcop. dioecesana Eichstätt, (1866–67); original records may be found in LEFFLAD, Regesta der Bischöfe von Eichstätt (Eichstätt, 1875–76), which goes as far as 1306 and is being continued. Much material is published in the

Pastoraltalbott, the organ of the diocese (Eichstätt, 1854—).

Eimhin, Saint, Abbots and Bishop of Ros-mic-Truin (Ireland), probably in the sixth century. He came of the royal race of Munster, and was brother of two other saints, Culain and Dairmd. Of the early part of his religious life little is known. When he became abbot of the monastery of Ros-mic-Truin, in succession to its founder, St. Abbán, he had been apparently connected with one of the religious houses of the south of Ireland, since it is recorded that a number of monks "followed the man of God from his own country of Munster". Ros-mic-Truin lies in South Leinster on the bank of the River Barrow, and is distant only eight miles, by water, from the confines of Munster, at the point where the Suir and Barrow meet, and in consequence enter the Atlantic. Although the Abbey of Ros-mic-Truin was founded by St. Abbán, it is said to have been colonized by St. Eimhin, and from the number of religious and students belonging to the south of Ireland which dwelt there the place came to be called "Ros-glas of the Munstermen". St. Eimhin is said by some to have been the author of the life of St. Patrick, called the "Vita Tripartita" (ed. Whitley Stokes in R. S.), originally published by Father John Colgan, O.S.F. It contains a greater variety of details concerning the mission of the Apostle of Ireland than any other of the lives extant. St. Eimhin was famous for many and great miracles. The date of his death has not been recorded; however competent authorities assign it to the early half of the sixth century. After St. Eimhin's death, it is said, his consort, Abbán, was buried near him and an altar was used as a swearing relic down to the fourteenth century, oaths and promises made upon it being deemed inviolable. Among the MSS. of the library of the Royal Irish Academy, Dublin, is a prose tract entitled "Cáine Einne" (i.e. the tribute or rule of Eimhin), also a poem of several stanzas relating to the saint's bell. St. Eimhin is given in the Irish calendar on 22 December.

COLGAN, Acta SS. Hiberm. (Louvain, 1645); Book of Ballymote: Vita Sii Abbanii; LANGAN, Ecclesiastical History of Ireland, Dublin, 1860; Life and Works of St. Eimhin. LECTURES ON THE MS. MATERIALS OF ANCIENT IRISH HISTORY (Dublin, 1860).

J. B. CULLEN.

Einhard (less correctly EIGNHARD), historian, born c. 770 in the district watered by the River Main in the eastern part of the Frankish Empire; d. 14 March, 840, at Seligenstadt. His earliest training he received at the monastery of Fulda, where he showed such unusual mental powers that Abbot Baugulf sent him to the court of Charlemagne. His education was completed at the Palace School, where he was fortunate enough to count among his masters the great Alcuin, who bears witness to his remarkable talent in mathematics and architecture, and also to the fact that, in spite of his unattractive person, he was among the emperor's most trusted advisers. Charlemagne gave

JOSEF HOLLYVECK.
Einhard, charge of his great public buildings, e. g. the construction of the Aachen cathedral and the palaces of Aachen and Ingelheim, for which reason he was known in court circles as Besele, after the builder of the tabernacle (Ex., xxi.). Charlemagne also availed himself of Einhard's tact and prudence to send him on various diplomatic missions. Thus, in 802 he placed in his hands the negotiations for the exchange of distinguished Saxon hostages, and in 806 he was dispatched at once to obtain papal approbation for the partition of the empire, which the emperor had just decided upon.

During the reign of Louis the Pious he retained his position of trust, and proved a faithful counsellor to Louis's son, Lothair. Unsuccessful, however, in his attempts to settle the contests for the crown which had been stirred up by Empress Judith, and unable to bring about a lasting reconciliation between Louis and his sons, Einhard, in 830, withdrew to Mulheim (Mühlheim) on the Main, where he had been granted as early as 815, together with other estates, as a mark of imperial favour. He transferred thither the relics of Sts. Marcellinus and Peter, and called the place Seligenstadt. Moreover, between 831 and 834 he established here a Benedictine abbey, where, after the death of his life, Emma the lady of Lothair or the Empress, a daughter of Charlemagne, he spent the rest of his life as abbot. It is not certain whether he was ordained priest. His epitaph was written by Rabanus Maurus.

The most important of Einhard's works is the "Vita Caroli Magni" (in "Mon. Germ. Hist.: Script.," printed separately, 4th ed., Hanover, 1839; also in Jaffé, "Bibliotheca rerum germanicarum," IV; Germ. tr. by Abel, 3rd ed., Berlin, 1863, in "Geschichtsschreiber der deutschen Vorzeit"). This, the best biography of the whole period of the Middle Ages, written in close imitation of Suetonius, particularly his "Vita Augusti", shows the emperor from the standpoint of the most intimate personal acquaintance with all sides of his character, and with a genuine attempt at truth of portrayal. The diction is in general elegant, though not polished. The annals of the Carlovingian Empire, which have been handed down as Einhard's (ed. Kurze, 1895), are, in their present form, older materials worked over. Those for the years between 796 and 820 may date back to Einhard. In addition, we have from his hand the "Translatio martyrum Marcellini et Petri," (Mon. Germ. Hist.: Script., XV), containing data which are important for the history of culture. The seventy-one letters, written by Einhard between 825 and 830 (ed. Jaffé, "Bibliotheca," Berlin, 1867, IV) in a clear, simple style, constitute an important source for the history of Louis the Pious. A collective edition of Einhard's works was published by Teulet (Paris, 1840-43), with French translation.

KURZE, Einhard (Berlin, 1899); WATENBACH, Deutschlands Geschichtsquellen, i. s. v.; GLAISTER, tr., Life of Charlemagne (London, 1877).

PATRICK SCHLAGER.

EINSIEDELN, ABBEY OF, a Benedictine monastery in the Canton of Schwyz, Switzerland, dedicated to Our Lady of this name. Being derived from the circumstances of its foundation, from which the name EINSIEDELN is also said to have originated. St. Meinrad, of the family of the Counts of Hohenzollern, was educated at the abbey school of Reichenau, an island in Lake Constance, under his kinsmen Abbots Hatto and Erlebah, where he became a monk and was ordained. After some years at Reichenau, and the dependent priory of Bellingen, on Lake Zurich, he embraced an eremitical life and established his hermitage on the slopes of Mt. Etzel, taking with him a wonder-working statue of Our Lady which had been given him by the Abbess Hildegard of Zürich. He died in 861 at the hands of robbers who coveted the treasures offered at the shrine by devout pilgrims, but during the next eighty years the place was never without one or more hermits emulating St. Meinrad's example. One of them, named Eberhard, previously Provost of Strasburg, erected a monastery and church there, of which he became first abbot. The church was miraculously consecrated, so the legend runs, in 948, by Christ Himself assisted by the Four Evangelists, St. Peter, and St. Gregory the Great. This event was investigated and confirmed by Pope Leo VIII and subsequently ratified by many of his successors, the last ratification being by Pius VI in 1793, who confirmed the acts of all his predecessors. In 965 Gregory, the third Abbot of Einsiedeln, was made a prince of the empire by Otto I, and his successors continued to enjoy the same dignity up to the cessation of the empire in the beginning of the nineteenth century. In 1274 the abbey, with its dependencies, was created an independent principality by Rudolf of Hapsburg, over which the abbey exercised temporal as well as spiritual jurisdiction. It continued independent until the French Revolution. The abbey is now what is termed nullius diocesis, the abbots having quasi-episcopal authority over ten parishes served by the monks and comprising nearly twenty thousand souls. For the learning and piety of its monks Einsiedeln has been famous for a thousand years, and many saints and scholars have lived within its walls. The study of letters, printing, and music have greatly flourished there, and the abbey has contributed largely to the glory of the Benedictine Order. It is true that discipline declined somewhat in the fifteenth century and the rule became relaxed, but Ludovicus II, a monk of St. Gall who was Abbot of Einsiedeln 1520-44, succeeded in restoring the stricter observance. In the sixteenth century the religious disturbances caused by the spread of the Protestant Reformation in Switzerland were a source of trouble for some time. Zwingli himself was at Einsiedeln for a while, and used the opportunity for protesting against the famous pilgrimages, but the storm passed over and the abbey was left in peace. Abbot Augustine I (1600-29) was the leader of the party which resulted in the erection of the Swiss Congregation of the Order of St. Benedict in 1602, and he also did much for the establishment of unrelaxed observance in the abbey and for the promotion of a high standard of scholarship and learning amongst his monks.

The pilgrimages, just mentioned, which have never ceased since the days of St. Meinrad, have tended to make Einsiedeln the rival even of Rome, Loreto, and Compostela, and constitute one of the features for which the abbey is chiefly celebrated. The pilgrims number from 150,000 to 200,000 annually, from all parts of Catholic Europe. The miraculous statue of Our Lady, originally set up by St. Meinrad, and later

ABBEY OF EINSIEDELN

[Image]
enthroned in the little chapel erected by Eberhard, is the object of their devotion. This chapel stands within the great abbey church, in much the same way as the Holy House at Loreto, encased in marbles and precious woodwork, elaborately decorated, though it has been so often restored, rebuilt, and adorned with the offerings of pilgrims, that it may be doubted whether much of the original sanctuary still remains. The fourteenth of September and the thirteenth of October are the chief pilgrimage days, the former being the anniversary of the miraculous consecration of Eberhard's basilica, and the latter that of the translation of St. Meinrad's relics from Reichenny to Einsiedeln in 1039. The millenary of St. Meinrad was kept there with great splendour in 1861. The great church has been many times rebuilt, the last time by Abbot Maurus between the years 1704 and 1719, and one of its chief treasures now is a magnificent corona presented by Napoleon III when he made a pilgrimage there in 1865. The library, which dates from 946, contains nearly fifty thousand volumes and many priceless MSS. The work of the monks is divided chiefly between prayer, the confessional, and study. At pilgrimage times the number of confessions heard is very large. The community numbers about one hundred priests and forty lay brothers, and attached to the abbey are a seminary and a college for about two hundred and sixty boys, both of which are taught by the monks, who also direct six convents of nuns. In 1854 a colony was sent to America from Einsiedeln to work amongst the native Indian tribes. From St. Meinrad's Abbey, Indiana, which was the first settlement, daughter-houses were founded, and these in 1881 were formed into the Swiss-American Congregation, which comprised (in 1900) seven monasteries and nearly four hundred religious, Dom Thomas Bossart, the fifty-third Abbot of Einsiedeln and formerly dean of the monastery, was elected in 1905.

EITHENE

November, 1563, he began to teach it in January, 1564. Duke Albert V of Bavaria chose him as councillor, appointed him provost of the collegiate church of Moosburg, and shortly afterwards of the collegiate church of Altötting and the cathedral church of Passau. In 1563 and 1564 he took part in the political-religious conferences at the imperial court of Vienna; in 1566 Duke Albert sent him to Pope Pius V to advocate the appointment of Prince Ernest as Prince-Bishop of Freising, and in 1568–9 he was imperial court chaplain at Vienna. In 1570 he was appointed superintendent of the University of Ingolstadt and henceforth he turned his whole attention to the advancement of the university.

Just at this time the friction between the lay professors and the Jesuits, which dated from the time when the latter began to hold professorial chairs at the university in 1556, threatened to become serious. In 1568 Eisengrein and Peter Canisius had peacefully settled certain differences between the two factions, but when in 1571 Duke Albert decided to put the pedagogium and the philosophical course into the hands of the Jesuits, the other professors loudly protested. By his tact Eisengrein succeeded in temporarily reconciling the non-Jesuit professors to the new arrangement. Soon, however, hostilities began anew, and in order to put an end to these quarrels, the Jesuits were transferred to the regular course. The pedagogium and philosophical course to Munich in 1573. It seems that the Jesuits were indispensable to the University of Ingolstadt, for two years later they were urgently requested by the university to return, and in 1576 they again went to Ingolstadt. In the settlement of the differences between the Jesuit and non-Jesuit professors, Eisengrein always had the welfare of the university at heart. He publicly acknowledged the great efficiency of the Jesuits as educators in an oration which he delivered before the professors and students of the university on 19 February, 1571, and he was pleased to see their influence gradually increase at Ingolstadt. There were indeed, some differences between Eisengrein and the Jesuits in 1572, but the estrangement was only temporary, as is apparent from the fact that he bequeathed 100 florins to the Jesuit library.

The greatest service which Eisengrein rendered the University of Ingolstadt was his organization of its library. It was owing to his efforts that the valuable private libraries of John Egdolph, Bishop of Augsburg, Thadeus Ech, chancellor of Duke Albert, and Rudolph Cleek, professor of theology at Ingolstadt, were incorporated into the university library. Eisengrein's activities were not confined to the university. By numerous controversial sermons, some of which are masterpieces of oratory, he contributed not a little to the suppression of Lutheranism in Bavaria. Many of his sermons were published separately and collectively in German and Latin during his lifetime. Some have been edited by Brisch in "Die kath. Kantredner Deutschlands" (Schaffhausen, 1867–70), I, 434–545. He is also the author of a frequently reprinted history of the shrine of the Blessed Virgin at Altötting (Ingolstadt, 1571) and a few other works of minor importance.

Michael Ott.

Eithne, Saint, styled "of the golden hair", is commemorated in the Irish martyrologies under the 11th of January. She was daughter of Leoghaire, Ard-Righ, or Hy-Sovereign of Ireland at the time of St. Patrick's first visit, as a missionary, to the kingdom of Tara, in the year 433. Some Irish custom of those days the children of kings and princes were frequently placed, at an early age, in charge of the family of some of the chieftains who coveted the honour of guardianship of the royal offspring. Hence it is assumed that Eithne and her younger sister were fostered close to Cruachan Magh Al, the dwelling-place, or royal residence, of the Gaelic kings of Connaught. However the brief story of the saint's life centres in the one scene, which took place beside the brook of Clebach, County Roscommon, and is described in the "Acts" of the national apostle of Ireland.

On his way to the royal abode, during his mission to the western province, it is told that St. Patrick and his disciples camped one evening close to the Well of Clebach. On the following day the elwes rose at dawn to chant the Divine Office, and prepare for the mystic sacrifice. It would appear that the two royal princesses were accustomed to visit the same fountain in the early morn, and on this occasion were surprised at the appearance of the strange company who were in possession of the place. They asked not, therefore, the name of the strangers, or brothers of the daughters, accosted Patrick and his companions, asking who they were and whence they came. Whereupon the apostle said—"It was better for you to confess your faith in our true God than ask about our race." Then, at their request, St. Patrick unfolded to them the doctrines of Christianity, which, under the influence of Divine grace, they accepted with heart and soul. Having baptized them, the saint placed on their brows the veil of virginity.

Then, it is related, Eithne and her sister asked "to see the face of Christ, the Son of the true God", but Patrick said: "You cannot see the face of Christ unless you taste death, and receive the Sacrament". Whereupon they besought him to give them the Sacrament that they might see their Spouse, the Son of God. So, by the brink of the fountain, the Sacrament was offered, and having received their First Communion, Eithne and her sister, in an ecstasy of rapture, swooned away and died. When the days of mourning were ended both were laid side by side, close by the scene of their death, where afterwards a church was raised over their bodies.

J. B. Cullen.
EKEHEARD

Ekehard, name of five monks of the (Swiss) Abbey of St. Gall from the tenth to the thirteenth century. (1) Ekehard I (Major, "the Elder"), d. 14 Jan., 973. He was of noble birth, of the Jonschaff family in Toggenburg, and was educated in the monastery of St. Gall; after joining the Benedictine Order, he was appointed director of the inner school there. Later, under Abbot Krolo, who trusted him implicitly, he was elected dean of the monastery, and for a while directed all the affairs of the abbey. Ekehard made a pilgrimage to Rome, where he was retained for a time by Pope John XII, who presented him with various gifts. For this reason Ekehard acquired a profound knowledge of the Latin and Greek classics; he also studied mathematics, astronomy, and music, and was acknowledged while living as a scholar of note even outside the monastery. After the death of Notker Labeo (1022) Ekehard was called to Mainz by Archbishop Arbro, where he became director and taught in the school of the cathedral. After Krolo's death Ekehard refused the abbatial succession, because of lameness resulting from a fractured leg. However, he directed the choice of Burkard, son of Count Ulrich of Buchhorn, who governed St. Gall with the advice and co-operation of Ekehard. The latter created a hospice in front of the monastery for the sick and strangers, and was in many other ways a model of charity. He was also distinguished as a poet, and wrote a Latin epic "Waltharius", basing his version on an original German text. He dedicated this poem to Bishop Erkanhald of Strasburg (965-991). It describes the eploement of Aquitaine with the Burgundian princess Hildegundis, from the land of the Huns, followed by the battle of Wartenbach, and concludes with the life of Gunther and Hagen (ed. Peiper, Berlin, 1573). He also composed various ecclesiastical hymns and sequences, e. g. in honour of the Blessed Trinity, St. John the Baptist, St. Benedict, St. Columbanus, St. Stephen (Meyer, "Philologische Bemerkungen zum Waltharius" in "Abhandl. der bayer. Akad. d. Wissenschaften", Munich, 1873; Streecker, "Ekehard und Vinzenz im Handschrift f. deutschen Altitum", 1888, XII. 338-366). (2) Ekehard II (Palatinus, "the Courtier"), d. 23 April, 990. He and Ekehard III were nephews of the preceding, who educated also at St. Gall his other nephews, Notker the physician and Burkard, later abbot of the monastery. Ekehard II was taught by his uncle the monk and became later a teacher in the monastery school. A number of his pupils joined the order; others became bishops. According to the "Casus Sancti Galli" he was called later to Hohentwiel, the seat of the Duchess Radzig of Swabia, widow of Burkard II. The Duchess was wont occasionally to visit St. Gall, and eventually (973) asked for and obtained the services of Ekehard as her tutor. Later, when the Duchess died, and she was able to provide him with the means of living, he continued to render great services to his monastery, especially on the occasion of the differences between St. Gall and Reicheneau (Abbot Rudolmann); in many other ways also he proved himself useful to the monks by the influence he had obtained as tutor of the duchess. Ekehard was also prominent at the imperial court, and in 982, after the death of Notker, was offered the see of Mainz, where he died 23 April, 990. He was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius. (3) Ekehard III, also a nephew of Ekehard I and a cousin of the preceding. He shared the educational advantages of his predecessor, and after he became provost of the cathedral of Mainz, where he died 23 April, 990, he was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius. (4) Ekehard IV.—According to the testimony in his "Chronicle" (see below), he made the following statement that he had heard from eyewitnesses of the great flagration at St. Gall in 937), the date of his birth is usually placed about 980; he died 21 Oct., but the year of his death is unknown (1036?-1060?). The same "Chronicle" indicates Alsace as his birthplace, though we do not know with certainty either the place of his birth, or his family origin. His boyhood was spent at St. Gall where he had for tutor Notker Labeo the German, one of the most learned scholars of his time. From him Ekehard acquired a profound knowledge of the Latin and Greek classics; he also studied mathematics, astronomy, and music, and was acknowledged while living as a scholar of note even outside the monastery. After the death of Notker Labeo (1022) Ekehard was called to Mainz by Archbishop Arbro, where he became director and taught in the school of the cathedral. After Krolo's death Ekehard refused the abbatial succession, because of lameness resulting from a fractured leg. However, he directed the choice of Burkard, son of Count Ulrich of Buchhorn, who governed St. Gall with the advice and co-operation of Ekehard. The latter created a hospice in front of the monastery for the sick and strangers, and was in many other ways a model of charity. He was also distinguished as a poet, and wrote a Latin epic "Waltharius", basing his version on an original German text. He dedicated this poem to Bishop Erkanhald of Strasburg (965-991). It describes the eploement of Aquitaine with the Burgundian princess Hildegundis, from the land of the Huns, followed by the battle of Wartenbach, and concludes with the life of Gunther and Hagen (ed. Peiper, Berlin, 1573). He also composed various ecclesiastical hymns and sequences, e. g. in honour of the Blessed Trinity, St. John the Baptist, St. Benedict, St. Columbanus, St. Stephen (Meyer, "Philologische Bemerkungen zum Waltharius" in "Abhandl. der bayer. Akad. d. Wissenschaften", Munich, 1873; Streecker, "Ekehard und Vinzenz im Handschrift f. deutschen Altitum", 1888, XII. 338-366). (2) Ekehard II (Palatinus, "the Courtier"), d. 23 April, 990. He and Ekehard III were nephews of the preceding, who educated also at St. Gall his other nephews, Notker the physician and Burkard, later abbot of the monastery. Ekehard II was taught by his uncle the monk and became later a teacher in the monastery school. A number of his pupils joined the order; others became bishops. According to the "Casus Sancti Galli" he was called later to Hohentwiel, the seat of the Duchess Radzig of Swabia, widow of Burkard II. The Duchess was wont occasionally to visit St. Gall, and eventually (973) asked for and obtained the services of Ekehard as her tutor. Later, when the Duchess died, and she was able to provide him with the means of living, he continued to render great services to his monastery, especially on the occasion of the differences between St. Gall and Reicheneau (Abbot Rudolmann); in many other ways also he proved himself useful to the monks by the influence he had obtained as tutor of the duchess. Ekehard was also prominent at the imperial court, and in 982, after the death of Notker, was offered the see of Mainz, where he died 23 April, 990. He was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius. (3) Ekehard III, also a nephew of Ekehard I and a cousin of the preceding. He shared the educational advantages of his predecessor, and after he became provost of the cathedral of Mainz, where he died 23 April, 990, he was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius. (4) Ekehard IV.—According to the testimony in his "Chronicle" (see below), he made the following statement that he had heard from eyewitnesses of the great flagration at St. Gall in 937), the date of his birth is usually placed about 980; he died 21 Oct., but the year of his death is unknown (1036?-1060?). The
Ekkehard of Aura (Uraugensis), Benedictine monk and chronicler, b. about 1050; d. after 1125. Very little is known of his life. About 1101 he went on a pilgrimage to the Holy Land, and in 1106 took part in the Council of Guastalla. Apparently he belonged at first to the monastery of St. Michael at Bamberg, and later (1108 or 1113) was abbot of the monastery of Aura, founded by Bishop Otto of Bamberg, on the Franconian Saale, near Kissingen, Bavaria; this monastery followed the Rule of Hirsau. The "Chronicon universalis," called after Ekkehard, is the chief source for the history of Germany during the years 1080–1125. In its present form it is divided into five books: the first contains ancient history from the Creation to the building of the city of Rome; the second extends to the birth of Christ; the third reaches the time of Charlemagne; the fourth goes to the opening of the reign of Emperor Henry V; the fifth contains an account of the reign of this ruler. No other medieval general chronicle covers so much ground; in the manuscripts now extant it is evidently not the work of one man but represents rather a fusion of various revisions and continuations. Breslau, in his acute investigation of the subject (Neues Archiv für ältere deutsche Geschichtskunde, VII), traces these changes, for the most part, to Prüfling, prior of St. Michael's (d. 17 Feb., 1108). It is now believed that Ekkehard simply rewrote the greater part of the chronicle, and that his original contribution is the account of the reign of Emperor Henry V. The chronicle, taken as a whole, is a very skillful compilation, and shows in the selection and arrangement of the matter a sound understanding and mastery of the material at hand. The language is good and simple, and the presentation clear and well summarized. Continuations were written by various chroniclers, among whom may be mentioned Conrad of Liechtenau and Albert of Stade. Ekkehard's chronicle has been published several times (Mon. Germ. Hist., Script., VI, 13–265; Migne, P. L., CLIV, 499–690). A German translation was issued by Pfliiger (Leipzig, 1893), as vol. X of the series "Geschichtsschreiber der deutschen Vorzeit".

Patricius Schlager.

Elba, the largest island of the Tuscan Archipelago, is today a part of the Italian province of Livorno and is separated from the mainland by the Channel of Piombino. The island is traversed throughout by treeless mountain ranges, the highest peak being Monte Capanne (about 3343 feet); its area is 86 square miles; according to the census of 1901 it had 25,536 inhabitants, mostly Cathars. Politically the island forms the district of Porto Ferro; the chief town is Porto Ferroio on the north coast, a place with 3910 inhabitants; the commune contains 6701 inhabitants. Outside of Porto Ferroio the principal towns of the island are Orte Rio, with 2478 inhabitants, and the strongly fortified Porto Longone, which has a good harbour and a population of 4761. Ecclesiastically Elba belongs to the Archdiocese of Massa Marittima and contains eleven parishes: Porto Ferroio, Porto Longone, Mareiana, Mareiana Marina, Poggio, Capoliveri, Rio, Rio Marina, Marina Campo, Sant' Hilario in Campo, and San Pietro in Campo. The Sisters of Mercy of St. Vincent de Paul have a house at Porto Longone, and the Sisters of St. Vincent, or Ladies of Christian Love, founded by the Venerable Cayenne, have one at Porto Ferroio. These are the only houses of religious on the island. The chief industry of Elba is the mining of the rich iron ore which was famous even in antiquity, but which, on account of lack of fuel, is generally smelted on the opposite coast of the mainland (the Maremma). The agricultural products are wheat, maize, wine, and semi-tropical fruits and there are valuable fisheries. The commerce is carried on through five ports, which were visited in 1900 by 2549 merchant vessels with a total of 492,118 tons burden. The smaller surrounding islands of Capraia, Pianosa, Palmadola, and Monte Cristo are connected in government with the island of Elba. Concerning the famous monastery of San Mamiliano, now in ruins, on the island of Monte Cristo, see Angelli, "L'Abbazia e l'Isola di Montecristo" (Florence, 1903), and for other information Kehr, "Regesta Pontificum Romanorum; Italia Pontificia" (Berlin, 1908), III, 276–78.

In the tenth century Elba came into the power of Pisa, from which it was wrested in 1290 by the city of Genoa. In 1399 Gian Galeazzo Visconti gave the island and the principality of Elba to the Grand Duke of Tuscany, who had the title of Cosimo I, lord of the principality of Florence. After that the island belonged as a Spanish fief to the Dukes of Sora and the Princes of Piombino. The Emperor Charles V gave a part of Elba to the Grand Duke Cosimo I of Tuscany, who built the citadel of Cosmopolis and thus laid the foundation of the later Porto Ferroio, the chief town of the island; another district including Porto Longone was one came into the power of the Kingdom of the Two Sicilies. In 1736 the whole of Elba with the principality of Piombino passed under the jurisdiction of the Kingdom of Naples; in 1801 the Peace of Lunéville gave it to the Kingdom of Etruria, and in the following year, by the Peace of Amiens, it was transferred to France. After the first abdication of Napoleon Elba was made over to him as a sovereign principality. He

ELCESAITES

landed on the island, 4 May, 1814, but left it on 26 February, 1815; during his short administration Napoleon did much for the benefit of the island and

its improvement of the roads. The Congress of Vienna, in 1815, restored the island to Tuscany, with which it was finally incorporated into the united Kingdom of Italy.

Elcesaites (or HELCESAITES), a sect of Gnostic Ebionites, whose religion was a wild medley of heathen superstitions and Christian doctrines with Judaism. Hippolytus (Philosophumenon, IX, 13–17) tells us that under Calistus (217–222) a cunning indi

dividual called Alcibiades, a native of Apumea in Syria, came to Rome, bringing a book which he had been received from Parthia by a just man named Elchasai (Ḥorasai; but Epiphanius has Ḥaza and Ḥezezai; Methodius, Ḥezezai, and Origen, Ḥezezai). The contents of the book consisted of twenty miles high, sixteen miles broad, and twenty-four across the shoulders, whose footprints were fourteen miles long and four miles wide by two miles deep. This was the Son of God, and He was accompanied by His Sister, the Holy Ghost, of the same dimensions. Alcibiades an

nounced that a new remission of sins had been pro

claimed in the third year of Trajan (A. D. 100) by the God which should import this forgive

ness even to the grossest sinners. Harnack makes him say “was proclaimed” instead of “has been pro

claimed” (as if Ṣaγγαγελοθεα and not Ṣoγγαγελοθα), and thus infers that a special year of remission is spoken of as past once for all—that Alcibiades had no reason for inventing this, so that Harnack was right in supposing the really historical under Trajan, as Epiphanius supposed. If we put aside this blunder of Harnack’s (and also his earlier odd conjecture that the remission in the third year of Trajan meant that the two first books of the Pastor of Hermas were published in that year), we see that the remis

sion offered is by the new baptism. Hippolytus represents this doctrine as fully based on the axi of the lxx teaching of his enemy Cal

listus. He does not perhaps expect us to take this seriously—it is most likely ironical—but he seems to regard Alcibiades as the author of the book. Origen, writing somewhat later (c. 246–9), says the heresy was quite new; he seems to have met with Alcibi

ades, though he does not give his name. There is no reason why we should dissent from these contempor

aneous witnesses, and we must place the first appearance of the book of Elchasai c. 220. A century and a half later, St. Epiphanius found it in use among the Sam

ceans, descendants of the earlier Elcesaites, and also among the Osseans, and many of the other Ebionite communities. En-hedin, an Arabic writer, c. 957, found a sect of Sabawans in Egypt called Chwris, as also counted founder (Chwolsohn, Die Sabieer, 1856, I, 112; II, 543, cited by Salmon).

According to Hippolytus the teaching of Alcibi

ades was borrowed from various heresies. He taught circumcision, that Christ was a man like others, that he had many times been born on earth of a virgin, that he devoted himself to astrology, magic, and incantations. For all sins of impurity, even against nature, a second baptism is enjoined “in the name of the great and most high God and in the name of His Son the great King”, with an adjuration of the seven witnesses written in the book, sky, water, the holy spirits, the Angels of prayer, oil, salt, and earth. One who has been bitten by a mad dog is to run to the nearest water and jump in with all his clothes on, using the foregoing formula, and promising the seven witnesses that he will abstain from sin. The same treat

ment—forty days consecutively of baptism in cold water—is recommended for consumption and for the possessed. Other Ebionites in Epiphanius’s time practised this treatment. That saint tells us that mention was made in the book of Echasia’s brother, lexai, and that the heresarch was a Jew of the time of Trajan. Two of his bishop were Marthias and Marthina, lived till the days of Epiphanius. They were revered as goddesses and the dust of their feet and their spit were used to cure diseases. This suggests that Echasia was not a fictitious per

sonage. He was presumably a primitive leader of an Ebionite community, to whom Alcibiades ascribed his own book. We learn further from Epiphanius that the book condemned virginity and continence, and made marriage obligatory. It permitted the worship of idols to escape persecution, provided the act was merely an external one, disowned in the heart. Prayer was to be made not to the East, but towards Jerusalem. Yet all sacrifice was condemned, with a denial that it had been offered by the saints who as well as the Apostles were rejected, and of course St. Paul and all his writings. It has been customary to find Elcesaites doctrine in the Clementine “Homilies” and “Recognitions”, especially in the former. On the groundless-

ness of this see Clementines.

PEBCOLOPIL, IX, 13–17; X, 29; ORIGEN in CHERM. H., VI, 38; METHODES, CONG., VIII, 10; EPIPHANUS, Hirt., XIX and LIII, also XXX, 3, 17, 18. Theo

ologists have sometimes interpreted this lxx docu

ment wrongly as a simple remission of sins, but closer reading of the text makes it evident that the exegete was writing under the influence of a Jesus who was to appear in the remission, as the Jesus of the lxx version of Jupiter. Cf. also L. HILGENFELD, “Judentum und Christentum” (Leipzig, 1896), and the various writers on the Pseudepigrapha, esp. Cullmann. A good ar

ticle by SALMON is in Dict. Christ. Biog., s. v. Eclesaites; more re

cent is HARNACK, Gesch. der altchristl. Lit., I, 267; II, 267; II, 9. BARDENHOWER, “Die Elenchi” (356); ISCH. SHALAN, Die Kieselsilikate (Freiburg im Br., 1908), 81.

JOHN CHAPMAN.

Elder, George, educator, b. 11 August, 1793, in Kentucky, U. S. A.; d. 28 Sept., 1838, at Bardstown. His parents, James Elder and Ann Richards (a con

vert), natives of Maryland, emigrated shortly after their marriage to Hardin’s Creek, in the present Marion County, Kentucky, where George, the second of their seven children, was born. He was educated at a military academy and was full of zeal for their Catholic Faith. George’s early education devolved mainly upon his father, who was well versed in the Scriptures and thoroughly acquainted with the teaching of the Church, which he frequently defended in discussion and explained to converts who were preparing for baptism. George Elder imbued a love for serious study, and in his sixteenth year he entered Mount St. Mary’s College, Emmitsburg, Maryland, to pursue classical studies. Here he became the friend of William Byrne (q. v.), afterwards founder of St. Mary’s College, Kentucky. Both studied theology in St. Mary’s Seminary, Baltimore, and were ordained priests at Bardstown by Bishop David, 18 Sept., 1819. In addition to the duties of an assistant at that diocesan, Elder was appointed by Bishop Flaget with the founding of a high-grade school or college for lay students. This was, at first, a day school and was taught in the basement of the theological seminary (erected in 1818). A separate build-

ing was erected in 1820–23. The college was then one of the largest and best appointed educational insti

tutions in the Southern States, notably Louisiana and Mississippi, and which continued down to the Civil War. In 1827 the Rev. Ignatius A. Reynolds (afterwards Bishop of Charleston) was appointed president and Father Elder was given charge of the congregation of St. Pius, in Scott
County. Dr. Reynolds was transferred in 1830 to pastoral work, and Father Elder again became president, a position which he held until his death. He frequently did duty in the cathedral and was one of the editors of the Louisville "Catholic Advocate" newspaper (founded in 1830), to which he contributed a series of well-written articles on the education of children and the obligations of parents with much success in the "Letters to Brother Jonathan", half satirical, half controversial, were also the product of his pen. His sense of justice forced him, in spite of his characteristic amiability, to prosecute a bigoted preacher, Nathan L. Rice, for libelling, after the manner of "Maria Monk", a worthy Kentucky priest, then absent in Europe. Father Elder's last illness was brought on by over-exertion and fatigue at the burning down (25 Jan., 1838) of the main college building.

Elder, William Henry, third Bishop of Natchez, Mississippi, U. S. A., and second Archbishop of Cincinnati, b. in Baltimore, Maryland, 22 March, 1819; d. in Cincinnati, 31 Oct., 1904. His father, Basil Elder, was a descendant of William Elder, who had emigrated from England to America, in colonial times, such mother, Elizabeth Miles (Snowden) Elder. In 1831 he entered Mt. St. Mary's College, Emmitsburg, Maryland, then presided over by the Rev. John Baptist Purcell, who afterwards became the second Bishop, and later the first Archbishop of Cincinnati. In 1842 he went to Rome, to complete his theological studies at the College of the Propaganda, where he received the degree of Doctor of Divinity. He was ordained priest in Rome, 29 March, 1846. Returning to Maryland, he became professor at Emmitsburg, which position he held until he was appointed Bishop of Natchez, for which he was consecrated in the cathedral of Baltimore, by Archbishop Kenrick, 3 May, 1857. In 1861 he was brought into prominence by his efforts to obey the order of the Federal troops at Natchez, to have certain prayers for the President of the United States recited publicly in the churches of his diocese. He was arrested, tried, and convicted; but the decision of the military court was reversed at Washington. His devotion to his people during the yellow-fever epidemic of 1857 won universal commendation. On 23 July, 1858, he was made titular Bishop of Avara and transferred to Cincinnati, as coadjutor with the right of succession to Archbishop Purcell, whom he succeeded 4 July, 1883. Great financial difficulties clouded the last years of Archbishop Purcell's life and made the task of his successor a trying one. But the reopening of the theological seminary, Mt. St. Mary's of the West, the founding of St. Gregory's Preparatory Seminary, the enlarging of St. Joseph's Orphan Asyl-

lum, besides the building of numerous other religious institutions, show how well Archbishop Elder over-

TIMOTHY J. DEASY.

Eleazar (Heb. אֱלֶאָזוֹר, God's help).—I. Elizabeth, daughter of Aminadab and sister of Nahash, born to Aaron four sons, Nadab, Abin, Eleazar, and Ithamar (Ex., vi, 25), all of whom, with their father, "were anointed . . . and consecrated, to do the functions of the priestly ministry" (Num., vi, 19-23). At Nadab and Abin died without children, punished for offering strange fire before the Lord (Lev., x, 1-7; I Par., xxiv, 1-2), "Eleazar and Ithamar performed the priestly office in the presence of Aaron" (Num., iii, 4). Thus entitled to succeed his father in the office of high-

Eleazar. . . . took a wife of the daughters of Phatted", and so became the father of Phinees (Ex., vi, 25). Prince of the princes of the Levites "that watch for the guard of the sanctuary" (Num., iii, 32), directing the sons of Caath when wrapping up "the sanctuary and the vessels thereof at the removing of the camp" (Num., iv, 13-16), Eleazar was selected as the suitable official, "to whose charge pertaineth the oil to dress the lamps, and the sweet incense, and the sacrifice . . . and the oil of unction, and whatsoever pertaineth to the service of the tabernacle and all of the vessels that are in the sanctuary" (Num., iv, 16). At the very moment when his brothers were punished "by fire coming out from the Lord", Eleazar, though deeply affected by mental anguish, obeyed the order of Moses, and completed their unfinished sacrifice (Lev., x, 1-20). After the terrible punishment inflicted on his mother, he married Abin, and Abiram, as if to make more evident his right to become the high-priest, Eleazar, complying with orders, beat into plates the still smoking censers used by these unfortunate rebels, and for a sign and a memorial, fastened this metal to the altar (Num., xvi, 1-40). Appointed to preside over the immolation of the red cow (Num., xix, 1-10), Eleazar next appears, clothed with the vestures of Aaron, and as high-priest (Num., xx, 22-29). Hence it is that we find Eleazar associated with Moses, in numbering the chil-

Eleazar, Hosue, the successor of Moses, is presented by the Jewish law-

If we except the period from Heli to Solomon, during which the descendants of Ithamar exercised the office of high-priest (1 Kings, ii, 30-36; 111 Kings, ii, 26-27), those holding this most sacred calling down to the time of the Maccabees, belonged to the family of Eleazar (Ex., vi, 25).}

Abraham, the fourth son of Mathathias (1 Mach., ii, 1-5). With some probability, he is identified with the Esdras who before the battle with Nennor read the Holy Book to the Jewish warriors (11 Mach., viii, 22-24). In the engagement at Bethzachoram, he displayed marvellous courage in attacking and killing the elephant, on which "it seemed to him that the king [Antiochus Eupator] was", crushed to death beneath the dying elephant, Eleazar "exposed himself to deliver his people
and to set him an everlasting name." (I Mach., vii, 17-46.)

III. Eleazar, a scribe and doctor of the law, though ninety years of age, bravely preferred to die a most glorious death than to purchase a hateful life by violating the law which forbade to the Israelite the use of swine’s flesh. His friends, “moved with wicked pity,” were willing to substitute lawful flesh, that Eleazar, feigning to have eaten the forbidden meat, might be delivered from death. But he refused to consent to the “dignity of his age,” and the bribed honour of his grey head”, Eleazar spurned this well-meant proposal, which if accepted, though securing his deliverance from punishment, might scandalize many young persons, and could not deliver from the hand of the Almighty. Having thus changed into rage the rejected sympathy of his friends, the holy man bravely endured his cruel torture, probably at Antioch, during the reign of Antiochus IV Epiphanes. (II Mach., vi, 18-31; I Mach., i, 57-63.)

D. P. DUFFY.

Elect denotes in general one chosen or taken by preference from among two or more; as a theological term it is equivalent to "chosen as the object of mercy or Divine favour, as set apart for eternal life". In order to determine the meaning of the word more accurately, we shall have to study its usage both in the Old Testament and in the New.

In the Old Testament the term elect, or chosen, only to the Israelites in as far as they are called to be the people of God, or are faithful to their Divine call. The idea of such an election is common in the Book of Deuteronomy and in Is., xl-lxvi. In Ps. civ, 6 and 43, and cv, 5, the chosen ones are the Hebrew people in as far as it is the recipient of God’s temporal and spiritual blessings; in Is., lxv, 9, 18, and 23, they are the repentant Israelites, as few in number “as if a grain be found in a cluster” (ibid., 8); in Tob., xiii, 10, they are the Israelites remaining faithful during their captivity; in Wisd., iii, 9, and iv, 15, they are God’s true servants; in Eccles., xxiv, 4, 13, and xlv, 2, these servants of God belong to the chosen people.

II. The New Testament transfers (excepting perhaps the persons of Christ) the connexion with the people of Israel to the members of the Church of Christ, either militant on earth or triumphant in heaven. Thus I Pet., i, 1, speaks of the elect among the “strangers dispersed” through the various parts of the world; I Pet., ii, 9, represents them as “a chosen generation, a kingly priesthood, a holy nation, a purchased people”, called from darkness into God’s marvellous light. St. Paul, too, speaks of the elect (Rom., viii, 33) and describes the five degrees of their election: they are foreknown, predestined, called, justified, and glorified (loc. cit., 29, 30). He returns to the idea again and again: 11 Thess., ii, 12 sq.; Col., iii, 12; Tit., i, 1, 2; II Tim., ii, 10. St. John gives the title of elect to those who fight on the side of the Lamb and overcome the Adversary. They are the congregation and the patron may be a layman, whereas the electors to ecclesiastical dignities must be clergers. In both cases the right of the candidate is the same (jus od rem); but while an election calls for canonical confirmation, presentation by a patron leads to canonical institution by a competent prelate. Moreover, when the right of patronage belongs to a moral body, e. g. a chapter or an entire corporation, the electors may have to follow along the lines of election. Though frequently called nomination, the designation of bishops and beneficed clergy by the civil authority in virtue of concordats is in reality presentation, and results in canonical institution. (c) Correctly speaking, nomination is the canonical act by which the electors propose several fit persons to the free choice of the superior. The rôle of electors in nomination is

Election (Lat. electio, from eligere, to choose from).—This subject will be treated under the following heads: I. Juridical Concept. II. Electors. III. Persons Eligible; IV. The Act of Electing: Forms and Methods; V. After Election; VI. Elections Now in Use.

I. Juridical Concept.—In its broadest sense election means a choice among many persons, things, or sides to be taken. In the stricter juridical sense it means the making of one person or order of persons to a definite charge or function. If we confine ourselves to ecclesiastical law, canonical election, in a broad sense, would be any designation of a person to an ecclesiastical charge or function; thus under it includes various modes: postulation, presentation, nomination, recommendation, request or petition, and, finally, free collation. In a narrower sense, election is the canonical appointment, by legitimate electors, of one person to an ecclesiastical office. Its effect is to confer on the person thus elected an actual right to the benefice or charge, independently of the confirmation or collation ulteriorly necessary. Hence it is easily distinguished from the aforesaid modes that only in a broad sense can be termed election.

Postulation is a term more or less canonically from election, not as regards the electors, but as regards the person elected, the latter being juridically ineligible on account of an impediment from which the superior is asked to dispense him. For instance, if in an episcopal election the canons designate the bishop of another see, or a priest under thirty years of age, or one of illegitimate birth, etc., no actual right would be conferred on such a person, and the ecclesiastical superior would be in no wise bound to recognize such action; hence the electors are then said to postulate their candidate, this postulation being a matter of favour (gratis), not of justice. (b) Presentation, on the contrary, differs from election not in respect to the person elected but to the electors; it is the exercise of the right of patronage, which the patron may be a layman, whereas as the electors to ecclesiastical dignities must be clergers. In both cases the right of the candidate is the same (jus od rem); but while an election calls for canonical confirmation, presentation by a patron leads to canonical institution by a competent prelate. Moreover, when the right of patronage belongs to a moral body, e. g. a chapter or an entire corporation, the electors may have to follow along the lines of election. Though frequently called nomination, the designation of bishops and beneficed clergy by the civil authority in virtue of concordats is in reality presentation, and results in canonical institution. (c) Correctly speaking, nomination is the canonical act by which the electors propose several fit persons to the free choice of the superior.
the same as in election properly so called; as election, however, can fall only on one person, so nomination cannot confer on several a real right to a benefice—rather, their right is real inasmuch as it excludes third parties, though none of them possesses the ius ad rem (c. Quod sicut, xxviii, De elect., lib. I, tit. vi). (d) Recommendation is the name applied to the designation of one or several fit persons made to the superior by certain members of the episcopate or clergy, chiefly in view of sees to be filled (see Bishop). It differs from election and nomination in that the bishop or the person by whom the clergy do not name the persons designated do not acquire any real right to the Holy See remaining perfectly free to make a choice outside of the list proposed. (e) Still further removed from election is simple request, or petition, by which the clergy or people of a diocese beg the pope to grant them the prelate they desire. The authors of this petition, not being properly qualified, as in the case of recommendation, to make known their appreciation of the candidate, it is needless to say the latter acquires no right whatever from the fact of this request. (f) Finally, free collation is the choice of the person by the superior who confers canonical institution; it is the method most in use for appointment to inferior benefices, and the practical rule for the filling of episcopal sees. It has a double character, dedicatedly, where free collation obtains, election, properly so called, is excluded.

II. Electors.—Electors are those who are called by ecclesiastical law or statute to constitute an electoral college, i.e. to designate the person of their choice, and who have the qualifications required for the exercise of their right to vote. The law appoints competent electors for each kind of election: cardinals for the election of a pope; the cathedral chapter for the election of a bishop or a vicar capitular; and the various chapters of their order, etc., for the election of regular prelates. In general, election belongs, strictly speaking, to the college, i.e. the body, of which the person elected will become the superior or prelate; if this college has a legal existence, like a cathedral chapter, it can exercise its right as long as it exists, even if reduced to a single member, though, of course, such a one could not elect himself. Electors called upon to give a prelate to the Church must be ecclesiastics. Hence laymen are excluded from all participation in a canonical election; it would be invalid, not only if made by them exclusively (c. iii, h. t.), but even if authorized to vote with ecclesiastics, every custom to the contrary notwithstanding. Ecclesiastics alone, and those only who compose the college or community to be provided with a head, can be electors. This is well exemplified in the cathedral chapter, all of whose canons, and they alone, are episcopal electors. Other ecclesiastics have no right to associate with the chapter in the election of a bishop, unless (a) they are in full possession of this right and it is proved by long prescription; (b) hold a pontifical privilege, or (c) can show a right resultant from the foundation of the chapter or the church in question. To exercise their right, the electors, whoever they may be, must be full members of the body to which they belong, and must, moreover, be in a condition to perform a juridical, human act. Hence, a natural child, the illegitimate, and those who have not reached the age of puberty, ecclesiastical law debar (1) canons who have not attained full membership in the chapter, i.e. who are not yet deacones (Council of Trent, Sess. XXII, c. iv, De ref.), and (2) religious who have not made their profession. Moreover, in punishment of certain offences, some electors may have forfeited their right to elect, either by the judgment of the Holy See or by condemnation by name, those suspended, or those placed under interdict. The Constitution of Martin V, "Ad evitanda scandala," permits the excommunicated known as tollerati (tolerated) to take part in an election, but exception may be taken to them, and their exclusion must follow; if, after such exception, they cast a vote, it must be considered null. Apart from offenses proper in their nature and the punishment of an active share in elections occurs frequently in the ecclesiastical law affecting regulars; in common law and for the secular clergy, it exists in only three cases: Electors lose the right to elect, for that reason, first, when they have elected or postulated an unworthy person (c. vii, h. t.); second, when the election has been held in consequence of an abusive intervention of the civil authority (c. xliil, h. t.); finally, when the election has been made by a body, already deprived of its right to elect, within the time prescribed by law. In all these cases the election devolves upon the superior (c. xii, h. t.).

III. Persons Eligible.—Those persons are eligible who meet the requirements of common ecclesiastical law, or special statutes, for the charge or function in question; hence, for each election it is necessary to ascertain who is required of the candidate. In general, for all kinds of elections, the necessary qualifications are mature age, moral integrity, and adequate knowledge (c. vii, h. t.); for each charge or function dependent on an election these conditions are defined with more precision and fullness. Thus, neither a layman nor an ecclesiastic who is not yet a subdeacon can be elected bishop; and no regular can be elected superior, etc. unless he has been long an ecclesiastic and all of the aforesaid requirements are easily verified, e.g. the proper age, adequate knowledge, the latter being presumable when the law formally exacts an academic degree (Council of Trent, Sess. XXII, c. ii, De ref.); others, especially an upright life, must usually depend on negative evidence, i.e. on the absence of proof to the contrary, such proof being positive offenses, particularly when they have seriously impaired the reputation of the person in question or called for canonical punishment. It is principally candidates of censurable morality who are termed unworthy; the sacred canons constantly repeat that the unworthy must be set aside. Such unworthy persons are: (1) all outside the Church, viz. infidels, heretics, and schismatics; (2) all who have been guilty of great crimes (crimina majora), viz. the sacrilegious, forgers, perjurers, sodomites, and simoniae; (3) all whom law or fact, for whatever reason, has branded as infamous (infamia juris et facti); (4) all under censure (excommunication, suspension, interdict), unless said censure be occult; (5) all whom an irregularity, particularly a penal one (ex crimine), debar from receiving any exercising Holy orders. Those also are excluded who, though the time for election has been expired, have incompatible benefices or dignities without dispensation (l. iv, h. t.); or who, at a preceding election, have already been rejected as unworthy (c. xii, h. t.), and all who have consented to be elected through the abusive intervention of lay authority (c. xliii, h. t.). There are other cases in which regulars cease to be eligible. Hence, the Holy See declared that it was meant for the episcopal elections of the thirteenth century and aims at abuses now impossible.

IV. The Act of Election: Forms and Methods. In this matter, even more than in the preceding paragraphs, we must consider special laws and statutes. Strictly speaking, the common ecclesiastical law, which dates from the thirteenth-century Decretals, considers one lepition here described was meant for the episcopal elections of the thirteenth century and aims at abuses now impossible.
place is ordinarily the vacant church or, if it be question of an election in a chapter, wherever the deliberations of the chapter are usually held. The time-limit set by common ecclesiastical law is three months, after the lapse of which the election devolves upon the immediate superior (c. xli, h. t.). In an electoral college, the duty of convoking the members belongs to the superior or president; in a chapter this would be the highest dignitary. He must issue an electron summons, for which no special form is required, inviting each elector, whether present in the locality or absent, unless, however, they be too far away. The distance considered as constituting a legitimate excuse for absence (see c. xviii, h. t.) should be more narrowly interpreted to-day than in the thirteenth century. It is unnecessary to convoke electors publicly known to be incompetent to exercise their electoral right, e.g. canons excommunicated by name or not yet subdeans. So binding is this convention that if even one elector be not summoned he can, in all justice, enter a complaint against the election, though the latter is not ipso facto null by reason of such absence. Such an election will stand provided the unsummoned elector abides by the choice of his colleague, or abandons his voting right, and does not in any way prevent an elector from attending the assembly and taking part in the voting; the absent are not taken into consideration. As a general rule the absent cannot be represented or vote by proxy unless, according to the chapter "Qua propter" (xiii, h. t., Lateran Council, 1215), they are at a great distance and can prove a legitimate hindrance. An absent elector may be represented by only a member of the assembly, but they can commission him to vote either for a particular person or for whomsoever he himself may deem most worthy.

On the appointed day the president opens the electoral assembly. Though the common law requires no preliminary solemnities, such as are frequently imposed by special statute, e.g. the solemn opening of the Parliament, which must be attended by all the assembled electors and those not prevented from assisting; also the recital of certain prayers. Moreover, the electors are often obliged previously to promise under oath that they will conscientiously vote for the most worthy. However, apart from such oath, their obligation is none the less absolute and serious. These preliminary solemnities are only pro forma necessary, to verify the credentials of certain electors, e.g. those who act as delegates, as happens in the general chapters of religious congregations. Then follows the discussion of the merits (tituli) of the candidates. The latter need not have previously made known their candidacy, though they may do so. The electors, nevertheless, have all freedom to propose and sustain the candidates of their choice. Frank and fair discussion of the merits of candidates, far from being forbidden, is perfectly consonable to the law, because it tends to enlighten the electors; indeed, some maintain that an election made without such a discussion would be null or could be annulled (Mattheuci, in Ferraris, Bibliotheca, s. a. Eclec. XX, art. 52). However, only those are elected to say that the election would be vitiated if the presiding officer were to oppose this discussion for the purpose of influencing votes. However, though the law strictly prohibits cabals and secret negotiations in the interest of certain candidates, the line between illicit manipulating and permissible negotiating is in practice not always easily recognizable. [See the Constitution "Election of Innocent XII" (22 Sept., 1693), on the elections of regulars (in Ferraris, art. iii, no. 26), also the regulations that govern a conclave (q.v.].]

The discussion concluded, voting begins. Actually there is only one customary method, i.e. secret voting (secretium secretum) by written ballots. The common ecclesiastical law (c. Qua propter, xlii, h. t., Lateran Council, 1215) admits only three modes of election: the normal or regular method by ballot, and two exceptional methods, namely quasi-inspiration. Recourse to lots is especially prohibited; nevertheless, the Sacred Congregation of the Council (Romana, Electionis, 2 May, 1857) ratiﬁed an election where the chapter, equally divided between two candidates in other respects ﬁt, had drawn lots; just about as was done for the Apostolic Constitution of St. Gregory the Great (titulus Constitutionis). As to the exceptional methods: (1) Election by quasi-inspiration takes place when the electors greet the name of a candidate with enthusiasm and acclamation, in which event the ballot is omitted as useless since its result is known in advance; and the candidate in question is proclaimed elected. However, modern custom in this matter differs from ancient habits, and it is wisely open in the case of such apparent unanimity, to proceed by ballot. (2) Compromise occurs when all the electors confide the election to one or several speciﬁed persons, either members of the electoral college or strangers, and ratify in advance the choice made by such arbitrator or scrutineers. Formerly this exceptional method was often resorted to, either to terminate long fruitless elections or to avoid the act information concerning the candidates; it is minutely regulated by the law of the Decretals. The compromise must be agreed to by all the electors without exception, and can be conﬁded to ecclesiastics only. It may be absolute, i.e. leaving the arbitrators quite free, or conditional, i.e. accompanied by certain reservations such as the conveners of the election, the persons to be elected, the time-limit within which the election should be held, and so on.

The normal or regular method by ballot, according to the law of the Decretals was necessarily neither secret nor written. The law "Qua propter" (see above) merely calls for the choice of three trustworthy scrutineers from among the electors. These scrutineers are charged with ascertaining who voted for whom, and in succession the votes of all; the result was then drawn up in writing and made public. The candidate who had obtained the votes of the more numerous or sounder party (major vel sanior pars) of the chapter was declared elected. However, this appreciation, not only of the number but also of the value of the votes required for the election, did not always lead to the same results; and in the case of general elections a comparison not only of the number of votes obtained, but also the merits of the electors and their zeal, i.e. the honesty of their intentions. It was presumed, of course, that the majority was also the sounder party, but proof to the contrary was admitted (c. lvii, h. t.).

The use of the secret and written ballot has long since remedied these difﬁculties. If the Council of Trent did not modify on this point the existing law, at least it exacted the secret ballot for the elections of regulares (Sess. XXV, c. vi, De regul.). According to this method the scrutineers silently collect the ballots of the electors present; when occasion requires it, certain members are delegated to collect the votes of sick electors beneath the same roof (e.g. at a conclave or a chapter of the Lateran or at a metropolitan chapter). When the scrutineers have delivered the ballots, the scrutineers proceed to count the number of ballots collected, and, if as should be, they tally with the number of electors, the same ofﬁcers proceed to declare the result. Each ballot is in turn opened, and one of the scrutineers proclaims the name inscribed thereon, then proceeds to count for registration, while the third, or secretary, adds up the total number of votes obtained by each candidate. As a general rule, election is assured to the candidate who obtains the majority of votes, i.e. an absolute, not merely a relative, majority; however, certain statutes require, e.g. in a conclave, a majority of two-thirds. When the electors are odd in number, a gain of one vote ensures the majority; if the number be
even, it requires two votes. In calculating the majority, neither absent electors nor blank ballots are taken into account; whoever casts a blank vote is held to have forfeited his electoral right for that ballot. If no candidate obtains an absolute majority, balloting is recommenced, and so on until a definitive vote is reached. However, not to prolong useless balloting, special statutes can prescribe, and in fact, have provided, various solutions, e.g., that after three rounds of fruitless balloting the election shall devolve upon the superior; or again, that in the third round the election is decided between the two most qualified candidates; or, finally, that in the fourth round a relative majority shall suffice (Rules of the Sacred Congregation of Bishops and Regulars for congregations of women under simple vows, art. cxxxiii sq.). Other special regulations provide for the case of two candidates receiving the same number of votes (the voters being of even number), in which event the election is decided in favour of the senior (by age, ordination, or religious profession); sometimes the deciding vote is assigned to the presiding officer. For all these details it is necessary to know and observe the special legislation that covers them.

When the final vote is obtained, whatever its character, it should be made public, i.e., officially communicated. The decree of election is then drawn up; in other words, the document which verifies the voting and the election. The role of the electoral college thus fulfilled, the election is closed.

The principal duty of an elector is to vote according to his conscience, without allowing himself to be actuated by human or selfish motives, i.e., he must vote for whoever wins him over in the methods with the best qualified among the persons fit for the office in question. External law can scarcely go farther, but moralists rightly declare guilty of mortal sin the elector who, against his conscience, casts his vote for one who is unworthy. In order, however, to fulfil his duty, the elector has a right to be entirely free and uninfluenced by the dread of any unjust penal consequence (nullification, etc.) which might affect his vote, whether such annoyance be in its source civil or ecclesiastical (ccxiv and clxii, h. t.).

V. After Election.—We are confronted here by two hypotheses: either an election is or is not disputed.

An election may be disputed by whoever is interested in it, in which case the question of its validity becomes the subject of judicial procedures as for judicial appeals. Now, an election may be defective in three ways, i.e., as to the electors, the person elected, or the mode of election. The defect concerns the electors if, through culpable neglect, one or more of those who have a right to participate in the election are not summoned; or if laymen, excommunicated vitand, or unauthorized ecclesiastics are admitted, in which methods of its imperfection is judged canonically by the proper ecclesiastical superior. If the alleged defect is not proven, the election is sustained; if it be proven, the judge declares it, whereupon the law provides the following sanctions: An election made by laymen, with their assistance, is invalid (e. xvi, h. t.); the one at which an excommunicated person has been admitted to vote, as also that to which an elector has not been invited, must be closely investigated, but is not to be annulled unless the absence of the excommunicated person, or the presence of the unsummoned elector might have given a different turn to the vote. The election of a person who is not unworthy, but simply the victim of an impediment, may be treated indulgently; that of an unworthy person is to be annulled, while the electors who, knowing him to be such, nevertheless elected him, are deprived for that time of the right to vote and are suspended for three years from the benefices they hold in the vacant church in question. Finally, the election wherein the prescribed form has not been observed must be annulled. In all of these cases the right to elect (bishops) devolves upon the Holy see (Boniface VIII, c. xvii, h. t., in VI5); the only case in which it devolves directly on the presiding officer is when the election has not been made within the prescribed time-limit.

If, on the contrary, the election meets with no opposition the first duty of the presiding officer of the electoral college is to notify the person elected that choice is made of his person. If he be present, e.g., in the elections of the regulars, the notification takes place indistinctly: if he be absent, the decree of election must be forwarded to him within eight days, barring legitimate hindrance. On his side, the person elected is allowed a month within which to make known his acceptance or refusal, the month dating from the time of receiving the decree of election or the permission of the superior when such is obligatory. If the person elected refuses the permission of the superior, the electoral college is summoned to proceed with a new election, under the same conditions as the first time and within a month. If he accepts, it is his right as well as his duty to demand from the superior the confirmation of his election within the peremptory limit of three months (e. vii, h. t., in VI9); but if, without legitimate hindrance, he allows this time to pass unexpired, the election is deemed null. From the moment of his acceptance, the person elected acquires a real, though still incomplete, right to the benefice or charge, the jus ad rem to be completed and transformed into full right (jus in re) by the confirmation of the election; it is his privilege to exact this confirmation from the superior, just as it is the latter's duty to give it, except in the event of unworthiness, of which fact the superior remains judge. However, until the person elected has received this confirmation, he cannot take advantage of his still incomplete right to interfere in any way whatever in the administration of his benefice, the punishment being the invalidity of all administrative acts thus accomplished and privation of the benefice itself. The ecclesiastical legislation on this point is by several decree, since the time of Boniface III (1198-1216), which elections an ordinary episcopal see had to seek the confirmation of their election from the metropolitan only. Bishops outside of Italy who had to obtain from Rome the confirmation of their election (metropolitans, or bishops immediately subject to the Holy see) were authorized (c. xlv, h. t.), in cases of necessity, to enter at once on the administration of their clergy, provided their election had aroused no opposition; meanwhile the confirmation proceedings went their ordinary course at Rome.

At the Second Council of Lyons, in 1274 (c. Avardier, v. h. t., in VI9), elected persons were forbidden, under penalty of deprivation of their dignity, to meddle in the administration of their benefice by assuming the title of administrator, procurator, or the like. A little later, Boniface VIII (Extrav., Injuncte, i. h. t.) established the rule still in force for entering on possession of major benefices and episcopal sees, according to which the person elected must not be received unless he present to the provincial administrators the Apostolical Letters of his election, promotion, and confirmation. The Council of Trent having published the vicar capitular as provisional administrator of the dioce during the vacancy of the see, it became necessary to prohibit elected persons from entering on the administration of their future dioceses in the ca-
pacity of vicars capitular. This was done by Pius IX in the Constitution "Romanus Pontifex" (28 August, 1873), which recalls and renews the measure taken by Boniface VIII. In this Constitution the pope declares that the law "Avaritia", of the aforesaid Council of Lyons applies not only to bishops elected by chapters, but also to candidates named and presented by heads of states in virtue of concordats. He rules that chapters can neither appoint temporarily vicars capitular nor revoke their appointment. He also forbids them to use such persons to support the civil power, or otherwise elected to a vacant church. Offences against this law are severely punished, by excommunication specially reserved to the pope and by privation of the revenues of their benefices for those dignitaries and canons who turn over the administration of their church to a person elected or nominated. The same penalties are pronounced against said elected or nominated persons, and against all who give them aid, counsel, or countenance. Moreover, the person elected or nominated forfeits all acquired right to the benefice, while all acts performed during his illegitimate administration are declared invalid.

We may now return to the confirmation of the election according to the law of the Decretals. It belonged to the immediate superior. It was his duty to extinguish all opposition by summoning the elected person to defend himself. Even if there were no opposition the superior was bound to summon, by a general edict posted on the door of the vacant church, all who might possibly dispute the election to appear within a fixed time. The law did not ordain the nullity of subsequent confirmation (c. xlvii, 1, t., in VLP). The superior had to examine carefully both the election and the person of the one elected, in order to satisfy himself that everything was conformable to law; if his investigation proved favourable he gave the requisite confirmation whereby the elected person became definitively prelate of his church and received full jurisdiction. The law did not ordain the superior to any strict time-limit for the granting of confirmation, it authorized the elected person to complain if the delay were excessive. All this legislation, especially elaborated for episcopal elections, is now no longer applicable to them; however, it is still in force for inferior benefices, e.g. canonries, when they are conferred by way of election.

VI. ELECTIONS NOW IN USE.—Election, considered as the choice made by a college of its future prelate, is verified first of all in the designation of a pope by the cardinals (see CONCLAVE). The election of bishops by chapters is still, theoretically, the common rule, but the general reservation formulated in the second rule of the Apostolic Constitution has suppressed in practice the application of this law; episcopal elections, in the strict sense of the word, occur now in only a small number of sees (see BISHOP). Finally, the prelates of regulars are normally appointed by election; the same is true of abbesses. (See the Council of Trent, Sess. XXV, c. vi, De regul.) The common ecclesiastical law provides for no other elections. There are, however, other elections that do not depend upon real prelates. Religious communities of men and women under simple vows proceed by election in the choice of superiors, superiors general, assistants general, and usually the members of the general councils. In cathedral churches it is by election that, on occasion of the vacancy of a see, the chapter appoints the vicar capitular (Council of Trent, Sess. XXV, c. vi, De regul). It is also according to the canonical form of election that colleges, especially chapters, proceed in appointing persons, e.g., to dignities and canonnies, when such appointment belongs to the chapter; to inferior benefices to which the chapter has a right to nominate or present; again in the appointment of delegates on seminary commissions (Council of Trent, Sess. XXIII, c. xviii, De ref.), or in bestowing on some of its members various capitulary offices, or making other such distribution of benefices. The ecclesiastical groups, e.g. the chapters of collegiate churches, etc., also of confraternities and other associations recognized by ecclesiastical authority. In the latter cases, however, there is no election in the strict canonical sense of the term.

See Commentaries on the Corpus Juris Canonici at the title De electione et electis connoecat, Lib. 1, tit. vi; and in VLP; Santi-Lietin, Pref. Jur. Can. (Ratisbon, 1898); Ferrabos, Prompfa Bibliotheca, s. v. Electione, Passerini, De electione canonico (Cologne, 1661).

Eleutherus (Eleutherios), SAINT, POPE (c. 174—180). The Liber Pontificalis says that he was a native of Nicopolis, Greece. From his contemporary Hegesippus we learn that he was a deacon of the Roman Church under Pope Anicetus (c. 154—164), and evidently remained so until he succeeded the latter pope, whom he succeeded about 174. While the condition of Christians under Marcus Aurelius was distressing in various parts of the empire, the persecution in Rome itself does not seem to have been violent. Of St. Felix, it is true, dates the martyrdom of St. Cecilia towards the end of this emperor's reign; this date, however, is by no means certain. During the reign of St. Eleutherius, St. Valerian, who appears to have enjoyed a practically unbroken peace, although the martyrdom of St. Appollonius at Rome took place at this time (180—185). The Montanist movement, that originated in Asia Minor, made its way to Rome and Gaul in the second half of the second century, more particularly about the reign of Eleutherius; its peculiar nature made it difficult to take from the outset a decisive stand against it (see MONTANISM). During the violent persecution at Lyons, in 177, local confessors wrote from their prison concerning the new movement to the Asiatic and Phrygian brethren; also to Pope Eleutherus. The bearer of their letter to the pope was the presbyter Irenaeus, soon afterwards Bishop of Lyons. It appears from statements of Eusebius concerning the way of life of the faithful at Lyons, though opposed to the Montanist movement, advocated forbearance and pleaded for the preservation of ecclesiastical unity.

Just when the Roman Church took its definite stand against Montanism is not certainly known. It would seem from Tertullian's account (Adv. Praxeam, 1) that a Roman bishop did at one time address to the Montanists some conciliatory letters, but these letters, says Tertullian, were recalled. He probably refers to Pope Eleutherus, who long hesitated, but, after a conscientious and thorough study of the situation, is supposed to have declared against the Montanists. At Rome heretical Gnostics and Marcionites continued to propagate their false teachings. Pope Eleutherus, it is said, "ascribed to Pope Eleutherus a decree that no kind of food should be despised by Christians (Et hoc iterum firmavit ut nulla esca a Christianis repudiaretur, maxime fidelibus, quod Deus creavit, quae tamen rationalis et humana est). Possibly he did issue such an edict against the Gnostics and Montanists; it is also possible that on his own responsibility he issued the edict. "Liber Pontificalis" contains no other statement equally remarkable.

Pope Eleutherus, says this writer, received from Lucius, a British king, a letter in which the latter declared that by his behest he wishes to become a Chris-
Eleutherius (Fr. Eleuthère), Saint, Bishop of Tournai at the beginning of the sixth century. Historically there is very little known about St. Eleutherius, but he was without doubt the first Christian bishop of Tournai. The historian Harnack, whose immediate predecessor, was either a bishop of Tours, whose name was placed by mistake on the episcopal list of Tournai, or simply a missionary who ministered to the Christians scattered throughout the small Frankish Kingdom of Tournai. Before he became bishop, Eleutherius lived at court with his friend Medardus, who predicted that he would attain the dignity of a bishop and also be elevated to the episcopate. After Clovis, King of the Franks, had been converted to Christianity, in 496, with more than 3000 of his subjects, bishops took part in the royal councils. St. Remigius, Bishop of Reims, organized the Catholic hierarchy in Northern Gaul, and it is more than likely that St. Eleutherius was named Bishop of Tournai at this time.

The saint's biography in its present form was really an invention of Henri of Tournai in the twelfth century. According to this, Eleutherius was born at Tournai towards the end of the reign of Childeric, the father of Clovis, of a Christian family descended from Irenaus, who had been baptized by St. Piatus. His father's name was Terenus, and his mother's Blanda. He was at the court of the Scheldt and the Christians to flee from Tournai and take refuge in the village of Blandinium. The conversion of Clovis, however, enabled the small community to reassemble and build at Blandinium a church, which was dedicated to St. Peter. Theodore was made Bishop of Tournai, and Eleutherius succeeded him. Consulted by Pope Hormisdas as to the correct title of the church, he named it Saint-Remi. Of the threatened nascent Christianity, Eleutherius convened a synod and publicly confounded the heretics. They vowed vengeance, and as he was on his way to the church, one day, they fell on him and, after beating himmercifully, left him for dead. He recovered, however, but his days were numbered. On his death-bed (529) he confessed his flock to his life's friend, St. Medardus. The motive underlying this biography invented by Canon Henri (1141), was to prove the antiquity of the Church of Tournai, which from the end of the eleventh century had been trying to free itself from the jurisdiction of the bishops of Noyon. The sermons on the Trinity, Nativity, and the feast of the Annunciation (Bibliotheca Patrum, vol. X V), sometimes attributed to St. Eleutherius, are of great doctrinal and historical importance. His cult, however, is well established; there is record of a recovery of his relics during the episcopate of Hedilo in 897 or 898, and a translation of them by Bishop Baudoin in 1054 or 1055, and another in 1217. Relics of this saint were also preserved in the monastery of St. Martin at Tournai, and in the cathedral at Bruges. His feast is celebrated on St. Eleutherius, 8 May, but is usually celebrated on the former date. The translation of his relics is commemorated 25 August.

Acta SS., May, III, 363-364; Liber Pontificalis, ed. Duchesne, I, 136 and Introduction, cit-eiv; Harnack, Ge-
ELEUTHEROPOLIS, a titular see in Palestine Prima. The former name of this city seems to have been Beth Gabra, "the house of the strong men", which later became Beit Djibrin, "the house of Gabriel". Vespasian slaughtered almost all its inhabitants, according to Josephus, De Bell.,Jud., IV., viii, i, where its commentator, Lactantius, De Syris, footnotes that Severus, on his Syrian journey changed its name to Eleutheropolis, and it soon became one of the most important cities of Judea. Its special era, which figures on its coins and in many inscriptions, began 1 Jan., A.D. 200. (See Echos d'Orient, 1903, 310 sq.; 1904, 215 sq.) Its first known bishop is Macrinus (325); five others are mentioned in the fourth century and in the sixth century (Lequnien, On, Christ., III, 631). In 303, during the episcopate of Zebennus, the relics of the Prophets Habakuk and Mieah were found at Celia and Tell Za'kiriya near Eleutheropolis (Sozom., H. VII, xxix). At Eleutheropolis was born St. Epiphanius, the celebrated bishop of Salamis in Cyprus; at Ad in the neighbourhood he established a monastery which is often mentioned by ecclesiastics, etc., with Rufinus and John, Bishop of Jerusalem. The city was, moreover, an important monastic centre, at least till the coming of the Arabs. The latter beheaded (638) at Eleutheropolis fifty soldiers of the garrison of Gaza who had refused to apostatize. They were buried in a church built in their honour. (See Anal. Bolland., 1904, 289 sq., and Echos d'Orient, 1905, 40 sq.) The city was destroyed by the Mussulmans in 762, in the civil wars. The Crusaders erected there a fortress, in 1134, under Fulco of Anjou; the Knights of St. John, to whom it was committed, restored at this time the beautiful Byzantine church at Sandahanna. The citadel was taken in 1157 by Saladin, conquered in 1191 by Richard Lion Heart, destroyed in 1264 by Sultan Bibars, and rebuilt in 1551 by the Turks. Today Beit Djibrin is a village with about 1000 Mussulman inhabitants, on the road from Jerusalem to Gaza, in a fertile and very healthy region. The medieval fortress still stands, about 180 feet square; there are also remains of the walls, ruins of a cloister, and of a medieval church. In the neighbourhood are remarkable grottos, which filled St. Jerome with wonderment. Some of these grottos were used in early Christian times as places of worship; others bear Arabic inscriptions.

Elevation, The.—What we now know as par excellence the Elevation of the Mass is a rite of comparatively recent introduction. The Oriental liturgies, and notably the Byzantine, have indeed a showing of the consecrated Host to the people, with the words "Holy things to the holy", but this rite cannot rather be regarded as the counterpart of our "Ecce Agnus Dei" and as a preliminary to the Communion. Again, in the West, a lifting of the Host at the words "omnis honor et gloria", immediately before the Pater Noster, has taken place ever since the ninth century or earlier. This may very probably be looked upon as originally an invitation to the people to bless themselves, the canon extending from the Preface to the Pater Noster (see Cabrol in "Dict. d'Archéologie", I, 1558) had been brought to a conclusion. But the showing of the Sacred Host (and still more of the Chalice) to the people after the utterance of the words of Institution, "Hoc est corpus meum", is not known to have existed earlier than the close of the twelfth century. Eudes de Sully, Bishop of Paris from 1196 to 1208, seems to have been the first to direct in his episcopal statutes that after the consecratory words the Host should be "elevated so that it can be seen by all". There has, however, been a good deal of confusion upon this point in the minds of some early liturgists, owing to the practice which prevailed of lifting the bread from the altar and holding it in the hands above the chalice while consecrating it. Some degree of lifting, at the words "accepti panem in sancta ac venerabile manus suas", was unavoidable, and many priests carried it so far that liturgical commentators spoke of their act as "elevare hostiam" (cf. Migne, P. L., CLXXVII, 370; and CLXXXI, 1186), but a careful examination of the evidence proves that this was quite a different raising of the Host to the people. Moreover, the motive of this latter showing has generally been misconceived. It has often been held to be a protest against the heresy of Berengarius; but Berengarius died a century before, and the statements of writers at the beginning of the thirteenth century make the whole development plain. The great centre of intellectual life at that period was Paris, and we learn that at Paris a curious theological view was then being defended by such eminent scholars as the chancellor Peter Manducator and the professor Peter Cantor, that transubstantiation of the bread only took place when the priest at Mass had pronounced the words of consecration over both bread and wine (see, e.g., Giralduus Cambrensis, Works, II, 17; Caspari, De Eucharistia, I, 237; xxvii, and "Libri Miraculorum", ed. Meister, pp. 16-17). To quote the words of Peter of Poitiers, "dintuat quidam ... quod non facta est transubstantiatio panis in corpore donec prolata sint hae verba 'Hic est sanguis'" (Migne, P. L., CCXI, 1245; Pope Innocent III, "Des sacri altaris mysterio"; IV. 22, uses very similar language). This view, as may readily be understood, aroused considerable objection, and the Pope, as part of Bishop Eudes de Sully and Stephen Langton, afterwards Archbishop of Canterbury and cardinal. It seems clear that the theologians of this party, by way of protest against the teaching of Peter Cantor, adopted the custom of adoring the Host immediately after the words "Hoc est enim corpus meum" were spoken, and by a natural transition they encouraged the practice of showing it after the Elevation. The developments can be easily followed in the synodal decrees of France, England, and other countries during the thirteenth century. We find mention of a little bell of warning in the early years of that century, and before the end of the same century it was enjoined in many dioceses of the Continent and in England that one of the great bells of the church should ring at the moment of the Elevation, in order that those at work in the fields might knell down and adore.

It will be readily understood from the above explanation that there was not the same motive at first for insisting on the elevation of the Chalice as well as the Host. No one at that period doubted that by the time the words of Institution had been spoken over the whole Mass had passed in this particular species. We find accordingly that the elevation of the Chalice was introduced much more slowly. It was not adopted at St. Alban's Abbey until 1429, and we may say that it is not practised by the Carthusians even to this day. The elevation of the Host at Mass seems to have brought in its train a great idea of the special merit and veneration attaching to the consecrated species of the Chalice. From one of an extravagant kind circulated freely among the people describing the privileges of him who had seen his Maker at Mass. Sudden death could not befall him. He was secure from hunger, infection, the danger of fire, etc. As a result, an extraordinary desire developed to see the Host when elevated at Mass, and this led to a variety of abuses which were rebuked by preachers and satirists. On the other hand, the same devout instinct undoubtably fostered the introduction of processions of the Blessed Sacrament and
ELEVEN

Elias

Elias (Ieb. 'Eliahu, "Ya'uh is God"); A.V., Elijah, the loftiest and most wonderful prophet of the O. T. What we know of his public life is sketched in a few popular narratives enshrined, for the most part, in the Third (Heb., First) Book of Kings. These narratives, which bear the stamp of an almost contemporary character, are likely to be seized and utilized by the later prophetic writers, as they are of the most graphic and interesting details. Every part of the prophet's life therein narrated bears out the description of the writer of Ecclesiasticus: He was "as a fire, and his word burnt like a torch" (xlvii, 1). The times called for such a prophet. Under the baneful influence of his Tyrian wife Jezebel, Ahab, though perhaps not intending to forsake altogether Yahveh's worship, had nevertheless determined in his heart to erect a temple to the Tyrian Baal (III K., xvi, 32) and introduced a multitude of foreign priests (xvii 10); doubtless he had occasionally offered sacrifices to the pagan deity, and, most of all, had allowed a bloody persecution of the prophets of Yahveh.

Of Elias's origin nothing is known, except that he was a Thebite; whether from Thibes of Nophital (Tob., i, 2, Gr.) or from Thesbon of Galaad, as our texts have it, is not absolutely certain, although most scholars, on the authority of the Septuagint and of Josephus, prefer the latter opinion. Some Jewish legends, echoed in a few Christian writings, assert moreover that Elias was of priestly descent; but there is no other warrant for the statement than the fact that he offered the sacrifices. His whole manner of life resembles somewhat that of the Nazarites and is a loud protest against his corrupt age. His skin garment and leather girdle (IV K., 1, 8), his swift foot (III K., xvi, 36), his habit of dwelling in the deftis of the torrents (xvii, 3) or in the caves of the mountains (xix, 9), of sleeping under a scanty shelter (xix, 5), betray the true son of the desert. He appears actually, on the scene of earth, to announce to Ahab that Yahveh had determined to avenge the apostasy of Israel and her king by bringing a long drought on the land. His message delivered, the prophet vanished as suddenly as he had appeared, and, guided by the spirit of Yahveh, betook himself by the brook Carith, to the east of the Jordan, and the ravens (some critics would transfer, however improbably) the rendering, "Arabs" or "merchants") "brought him bread and flesh in the morning, and bread and flesh in the evening, and he drank of the torrent" (xvii, 6).

After the brook had dried up, Elias, under Divine direction, crossed over to Sarepta, within the Tyrian dominion. There he was hospitably received by a poor widow, who shared her store of meal and oil with him (xvii, 12); her charity he rewarded by increasing her store of meal and oil all the while the drought and famine prevailed, and later on by restoring her child to life (14-24). For three years there fell no rain or dew in Israel, and the land was utterly barren. Meanwhile Ahab had made fruitless efforts and scoured the country in search of Elias. At length the latter resolved to take flight, and was actually appearing before Ahab, bade him summon his master (xvii, 7 sq.). When they met, Ahab bitterly upbraided the prophet as the cause of the misfortune of Israel. But the prophet flung back the charge: "I have not troubled Israel, but thou and thy father's house, who have forsaken the commandments of the Lord, and have followed Baalim " (xviii, 18). Taking advantage of the discomfiture of the king, Eliasbias him to summon the prophets of Baal to Mount Carmel, for a decisive contest between their god and Yahveh. The ordeal took place before a great concourse of people (see Carmel, Mount) whom Elias, in the most forcible terms, presses to choose: "How long do you halt between two sides? If Yahveh be God, follow him; but if Baal, then follow him" (xviii, 21). Elias then commanded the prophets to invoke their deity; he himself would "call on the name of his Lord", and the God who would answer by fire, "let him be God" (24). An altar had been erected by the Baal-worshippers and the victim laid upon it; but their cries, their wild dances and mad self-invidtations all the day long availed nothing: "there was no voice heard, nor did any one answer, nor was there any sound" (29). Elias then repaired the ruined altar of Yahveh which stood there, prepared thereon his sacrifice; then, when it was time to offer the evening oblation, as he was praying earnestly, "the fire of the Lord fell, and consumed the holocaust, and the wood, and the stones, and the dust, and licked up the water that was in the trench" (38). The issue was finally determined, the Lord's altar was fall at Elias's command on the pagan prophets, and they were struck at the brook Cison. That same evening the drought ceased with a heavy downpour of rain, in the midst of which the strange prophet ran before Ahab to the entrance of Jezirol.

Elias's triumph was short. The anger of Jezebel, who had sworn to take his life (xix, 2), compelled him to flee without delay, and take his refuge beyond the desert of Juda, in the sanctuary of Mount Horeb. There, in the wilds of the sacred mountain, broken-
spirited, he poured out his complaint before the Lord, who strengthened him by a revelation and restored his faith. Three commands are laid upon him: to anoint Hazael to be King of Syria, Jehu to be King of Israel, and Elisha to be his own successor. At once Elisha sets out to accomplish this new burden. On his way to Damascus, he meets Elisha at the plough, and throwing his mantle over him, makes him his faithful disciple and inseparable companion, to whom the completion of his task will be entrusted. The treacherous murder of Naboth was the occasion for a new reappearance of Elisha at Jezreel, as a champion of the people's rights and of social order, and to announce to Achab how his cruel expediency to Hiel at Abel-Beer as his father's home, and the place where the dogs licked the blood of Naboth will lick the king's blood; they shall eat Jezebel in Jezreel; their whole posterity shall perish and their bodies be given to the fowls of the air (xxi. 20—26).

Conscience-stricken, Achab quailed before the man of God, and, in view of his penance the threatened ruin of his house was delayed. The next time we hear of Elisha, it is in connection with his Achab's son and successor. Having received severe injuries in a fall, this prince sent messengers to the shrine of Beelzebub, god of Accaron, to inquire whether he should recover. They were intercepted by the prophet, who sent them back to their master with the intimation that his injuries would prove fatal. Several bands of men set out to search for Elisha in Upper Egypt, but he escaped the dogs and lions, and by fire from heaven; finally the man of God appeared in person before Ochozias to confirm his threatening message. Another episode recorded by the chronicler (II Par., xxi, 12) relates how Joram, King of Juda, who had indulged in Baal-worship, received from Elisha a letter warning him that all his house would be smitten by a plague, and that he himself was doomed to die (II Kings, xvi. 1).

According to IV K., iii, Elisha's career ended before the death of Josaphat. This statement is difficult—but not impossible—to harmonize with the preceding narrative. However this may be, Elisha vanished still more mysteriously than he had appeared. Like Enoch, he was "translated", so that he should not taste death. As he walked conversing with his spiritual son Hosea on the hills of Moab, "a fiery chariot, and fiery horses parted them both asunder, and Elisha went up by a whirlwind into heaven" (IV K., ii, 11), and all the efforts to find him made by the septic sons of the prophets disbelieving Elisha's recital, availed nothing. The memory of Elisha has ever remained alive in the minds both of Jews and Christians. According to Macarius the Abbot, in the fourth century, the chasms of Hades opened for him, at the end of time, with a glorious mission (iv, 5—6): at the New Testament period, this mission was believed to precede immediately the Messianic Advent (Matt., xviii, 10, 12; Mark, ix, 11), according to some Christian commentators, it would consist in converting the Jews (St. Jer., in Mal., iv, 5—6); the rabbi, finally, affirm that its object will be to give the exiles back to the land of their fathers (Gen., I Mch., ii, 58, exalts Elias's zeal for the Law, and Ben Sira entwines in a beautiful page the narration of his actions and the description of his future mission (Eccles., xviii, 1—12). Elisha is still in the N. T. the personification of the servant of God (Matt., xvi, 14; Luke, i, 17; ix, 8; John, i, 21). No wonder, therefore, that with Moses he appeared at Jesus' side on the day of the Transfiguration.

Nor do we find only in the sacred literature and the commentaries thereof evidences of the conspicuous place Elisha won for himself in the minds of after-gens. To this day the name of Jabel Mar Elias, usually given by modern Arabs to Mount Carmel, perpetuates the memory of the man of God. Various places on the mountain: Elisha's grotto; El-Khad, the supposed school of the prophets; El-Muhraka, the traditional spot of Elisha's sacrifice; Tell el-Kassis, or Mound of the priests—where he is said to have slain the priests of Baal—are still in great veneration both among the Christians of all denominations and among the Moslems. Every year the Druses assemble at El-Muhraka to hold a festival and offer a sacrifice in honour of Elisha. All Mussulmans have the prophet in great reverence; no Druse, in particular, would dare break an oath made in the name of Elisha. Not only among them, but to some extent also among the Jews and Christians, many legendary tales are associated with the prophet's memory. The Carmelite monks long cherished the belief that their order could be traced back in unbroken succession to Elisha whom they considered their founder, as also Elisha's father and successor, by the Bollandists, especially by Papenbroeck, their claim was no less vigorously upheld by the Carmelites of Flanders, until Pope Innocent XII, in 1698, deemed it advisable to silence both contending parties. Elisha is honoured by both the Greek and Latin Churches on 20 July.

The old stichometric lists and ancient ecclesiastical writers (Const. Apost., VI, 10; Origen, Comm. in Matth., xxvii, 9; Euthalius; Epiph., Her., xliii) mention an apocryphal "Apocalypse of Elias", citations from which are said to be found in I Cor., ii, 9, and Eph., v, 14. Lost to view since the early Christian centuries, this work was partly recovered in a Coptic translation found (1893) by Maspéro in a monastery of the district of Biskra in the Kabyle country. It is related to the Apocalypse, and is often remarkably similar to it. The Apocalypse of Elias, says the traditional legend (found in the apocryphal work "Elias in the Deserts", ed. by Casaubon, Med. Rerum Orient, 1655), having ended his career in some exile in the land of the Arabs, went off to the upper and lower regions of Syria, and spent the last years in the desert of Syria. He laboured in that desert for a long period, and was there a centre of devotion to the Master of hosts and of the Trinity, until his death, when he was conveyed to heaven to be united with the Saviour. The Apocalypse of Elias is divided into four books: the first a vision of Elias in heaven; the second a vision of the Last Judgment; the third, concerning the coming of the Lord; the fourth, containing the prophecy of the kingdom of the Messiah.

CHARLES L. SOUVAY.

Elias, Apocalypse of. See Elias; Egypt, VI, Coptic Literature.

Elias of Cortona, Minister General of the Friars Minor, b., it is said, at Bevilia near Assisi, c. 1180; d. at Cortona, 22 April, 1253. In the writings of Elias that have come down to us he styles himself "Brother Elias, Sinner", and his contemporaries without exception call him simply "Brother Elias". The name of a town was first added to his name in the fourteenth century.

The life of Elias de Assisi, or Elias, is described as Eilias de Assisi, whereas the name of Cortona does not appear in connexion with his before the seventeenth century. It is clear in any event that Elias did not belong to the noble family of Coppi as some have asserted. From Salmone, who knew Elias well, we learn that his family name was Benedictus or Benedict, that his father was from the neighbourhood of Bologna, and his mother an Assisian; that before becoming a friar Elias worked at his father's trade of mattress-making and also taught the children of Assisi to read the Psalter. Later on, according to Eccleston, Elias was a scripotor, or notary, at Bologna, where no doubt he applied himself to study. But he was not a cleric and never became a priest. Elias appears to have been one of the earliest companions of St. Francis of Assisi. The time and place of his joining the saint are uncertain; it may have been at Cortona in 1211, as Wadding says. Certain it is, however, that he held a place of prominence among the friars from the first. After a short sojourn, as it seems, in Tuscany, Elias went in 1217 as head of a band of missionaries to Palestine, and two years later he became the first provincial of the then extensive province of Syria. It was in this
ELIAS

capacity that he received Caesar of Speyer into the order. Although we are ignorant of the nature or extent of Elias's work in the East, it would seem that the three years he spent there made a deep impression upon him. In 1220–21 Elias returned to Italy with St. Francis, who showed further confidence in him by naming him to succeed Peter of Cataneo (d. 10 March, 1221) as vicar-general of the order. Elias had held this office for five years when Francis died (3 Oct., 1226), and he then took the responsibility of the moment and the provisional government of the Friars Minor. After announcing the death of Francis and the fact of the Stigmata to the order in a beautiful letter, and superintending the temporary burial of the saint at San Giorgio, Elias at once began to lay plans for the erection of a great basilica at Assisi, to enshrine the remains of the Poverello. To this end he obtained a donation, with the authority of the pope, of the so-called Collis Inferni at the western extremity of the town, and proceeded to collect money in various ways to meet the expenses of the building. Elias thus alienated the zealots in the order, who felt entirely with St. Francis upon the question of poverty, so that at the chapter held in May, 1227, Elias was rejected in spite of his prominence, and Giovanni Par- enti, prior of Minerva, of Malta, was elected second general of the order.

Theenceforth Elias devoted all his energies to raising the basilica in honour of St. Francis. The first stone was laid 17 July, 1228, the day following the saint's canonization, and the work advanced with such incredible speed that the lower church was finished within eleven months. It was consecrated 22 May, 1230, the hurried, secret, and still unexplained translation of St. Francis's body thither from San Giorgio planned by Elias having taken place a few days previously, before the general and other friars assembled for the purpose were present. Soon after this, though there is some difference of opinion as to the exact date, Elias attempted, as it seems by a kind of coup de main, to dispose Parenti and seize the govern- ment of the order by force, but the attempt failed. He thereupon retired to a distant hermitage, where we are told he allowed his beard and hair to grow, wore the vilest habit, and to all appearances led a most penitent life. This may have been, Elias was elected to succeed Parenti as general at the chapter in 1232, magis tumullosque quam canonicas, as a component of the tunic, and a collar, and thus to govern the Friars Minor for nearly seven years. Dur- ing that period the order was passing through one of the crises of its earlier development. It is well known (see Conventuals) that even during the lifetime of St. Francis a division had shown itself in the ranks of the friars, some being for relaxing the rigour of the rule, especially as regards the observance of poverty, and others for adhering to its literal strictness. The conduct of Elias after his election as general helped to widen this breach and fan the flames of disc- order in the order. In arbitrary fashion he refused to convene a chapter or to visit any of the provinces, but in his place "visitors", who acted rather as tax collectors—for Elias's chief need was money to com- plete the church and regards the Franciscan—were not only violating the rule himself, but causing others to do so also. In many other respects Elias abused his au- thority, receiving unworthy subjects into the order and confiding the most important offices to ignorant lay brothers, and when several of the early and most venerable companions of Francis withstood his high-handed methods, they were dealt with as mutineers, some were imprisoned or expelled, others called and imprisoned. Elias's manner of life made his despoticism more intolerable. It seems to have been that of a powerful baron rather than of a mendicant friar. We are told that he gathered about him a household of great splendour, including secular laicks, dressed in the gayest liveries, that he kept "a most excellent cook" for his exclusive use, that he fared sumptuously, wore splendid garments, and made his journeys to different courts on fine palffrey with rich trappings. Because of these excesses, which threatened the complete de- struction of the rule, the opposition to Elias became widespread. It was organized by Aymon of Faver- sham, who, in conjunction with other provincials from the North, determined to have him removed, and ap- pealed to Gregory IX. Elias excommunicated the appellants and sought to prevent their reception by the pope. But Gregory received them and, in spite of Elias, summoned a chapter at Rome. Elias resisted to the utmost and strove to browbeat his accusers, but Gregory called on him to resign. He refused to do so, and thereupon deposed by the pope, the English provincial, Albert of Pisa, being elected general in his stead. This was in 1229.

After his deposition, Elias, who still held the titles of Custos of the Assisi Basilica and Master of the Works, seems to have husbied himself anew for a time at the task of completing the church and convent of St. Frances, but subsequently retired to Cortona. Refusing to obey either the general or the pope, Elias now openly transferred his allegiance to Frederick II, and we read of him in 1240 with the em- peror's army, rid- ding among a mace and cross charger at the siege of Fueva and at that of Ravenna. Some two years before this Elias had been sent by Gregory IX as an ambassador to Frederick. He now became the support- er of the excom- municated emperor in his strife with Rome and was him self excommunicated by Gregory. It is said that Elias afterwards wrote a letter to the pope explaining his con- duct and asking pardon, and that this letter was found in the room of Peter of Cortona after the latter's death. Aymon of Faversham, who had been the principal opponent of Elias, and who was elected general in suc- cession to Albert, having died in 1241, a chapter was thereupon convened at Genoa. Elias was summoned by Innocent IV to attend it, but he failed to appear. Some say that the papal mandate never reached him. Be this as it may, Elias was excommunicated anew and expelled from the order. The news of his disgrace spread quickly "to the great scandal of the Church", and the very children might be heard singing in the streets:

"Hor attornia fratt' Helya
Ke pres' ha la mula via", a couplet which met the friars at every turn, so that the very names of Elias—Fr.ancis—and the Franciscan—Friars—were not only violating the rule himself, but causing others to do so also. In many other respects Elias abused his au- thority, receiving unworthy subjects into the order and confiding the most important offices to ignorant lay brothers, and when several of the early and most venerable companions of Francis withstood his high-handed methods, they were dealt with as mutineers, some were imprisoned or expelled, others called and imprisoned. Elias's manner of life made his despoticism more intolerable. It seems to have been that of a powerful baron rather than of a mendicant friar. We are told that he gathered about him a household of great splendour, including secular laicks, dressed in the gayest liveries, that he kept "a most excellent cook" for his exclusive use, that he fared sumptuously, wore splendid garments, and made his journeys to different courts on fine palffrey with rich trappings. Because of these excesses, which threatened the complete de- struction of the rule, the opposition to Elias became widespread. It was organized by Aymon of Faver- sham, who, in conjunction with other provincials from the North, determined to have him removed, and ap- pealed to Gregory IX. Elias excommunicated the appellants and sought to prevent their reception by the pope. But Gregory received them and, in spite of Elias, summoned a chapter at Rome. Elias resisted to the utmost and strove to browbeat his accusers, but Gregory called on him to resign. He refused to do so, and thereupon deposed by the pope, the English provincial, Albert of Pisa, being elected general in his stead. This was in 1229.

After his deposition, Elias, who still held the titles of Custos of the Assisi Basilica and Master of the Works, seems to have husbied himself anew for a time at the task of completing the church and convent of St. Frances, but subsequently retired to Cortona. Refusing to obey either the general or the pope, Elias now openly transferred his allegiance to Frederick II, and we read of him in 1240 with the em- peror's army, rid- riding among a mace and cross charger at the siege of Fueva and at that of Ravenna. Some two years before this Elias had been sent by Gregory IX as an ambassador to Frederick. He now became the support- er of the excom- municated emperor in his strife with Rome and was him self excommunicated by Gregory. It is said that Elias afterwards wrote a letter to the pope explaining his con- duct and asking pardon, and that this letter was found in the room of Peter of Cortona after the latter's death. Aymon of Faversham, who had been the principal opponent of Elias, and who was elected general in suc- cession to Albert, having died in 1241, a chapter was thereupon convened at Genoa. Elias was summoned by Innocent IV to attend it, but he failed to appear. Some say that the papal mandate never reached him. Be this as it may, Elias was excommunicated anew and expelled from the order. The news of his disgrace spread quickly "to the great scandal of the Church", and the very children might be heard singing in the streets:

"Hor attornia fratt' Helya
Ke pres' ha la mula via", a couplet which met the friars at every turn, so that the very names of Elias—Fr.ancis—and the Franciscan—Friars—were
In 1217, he sent Fra Gerardo da Modena to Cortona to beg Elias to submit, promising that he would be treated with the utmost clemency. But Elias, who seems on the one hand to have feared imprisonment by the pope and on the other to have been unwilling to renounce the favour of Frederick II, declined. During Passion tide, 1253, the lonely old man,—for Elias had lost his protector by Frederick's death in 1250,—fell seriously ill. We learn from the sworn testimony of the friars of St. Francis that he was lying on Holy Saturday, 10 April; that two days later Elias received Holy Communion at the hands of Fra Diotefee, but that he could not be anointed, since, Cortona being then under interdict, no holy oil was to be found. On Easter Tuesday Elias died, reconciled indeed with the Church, but outside the order. He was buried at Cortona in the church he had built, which two years later—his followers having returned to obedience—passed into the hands of the order. But Elias's bones were not suffered to rest at S. Francesco, for a later guardian dug them up and hung them out.

But perhaps the most difficult character to estimate in all Franciscan history. In the first place it is wellnigh impossible, with the documents at our disposal, to obtain even a clear idea of his chequered career. There is no contemporary life of Elias, and, with the exception of Celano's "Vita Prima," which is said to have been written under the influence of Elias, none of the early biographies of St. Francis make any allusion to Elias. The second and third lives of Elias have to be reckoned with in what is recorded of Elias in later works, especially in the writings of the Zelanti, which are often influenced less by historical considerations than by party spirit. Many stories have gathered around the life of Elias which are largely inventions. Yet these fictions have been in dispute until this day, and, with the result that Elias has come to be depicted by too many modern biographers of St. Francis as a traitor to his master's interests, as a mere tool of the Curia in transforming the order and destroying the manner of life intended by the Poverello. But if some have branded Elias as another Judas, others, going to the opposite extreme, have not hesitated to call him the "St. Peter" of the order. But stress on some words of St. Antoninus, they have sought to exculpate Elias altogether, to justify his conduct at all hazards, even where it is wholly unjustifiable; they would fain make him appear as a second founder of the order, whose ability its great success was mainly due. It is just because so few have written early about Elias that it becomes additionally difficult to form a just estimate of the real motives which guided him. He has been too much abused and too much lauded. Between the two extremes it seems necessary, if we would judge with fairness, to distinguish two periods in the life of Elias, namely, before the death of St. Francis and after it. In spite of the account of Elias's early pride and Irawordness given by the "Biography," which may be set aside, as picturesque slander introduced for artistic effect—there is nothing to show that Elias was other than a good religious during the lifetime of St. Francis, else it is hard to understand how the latter could have entrusted him with so much responsibility, and how he could have incurred the special death-bed blessing of the Poverello. On the other hand that Elias really loved St. Francis there can be no doubt, and so far as we have means of ascertaining there never was any breach between them. At the same time it would be difficult to imagine two characters more widely different than Elias and St. Francis. Their religious ideals were as far apart as the poles. The heroic ideal of poverty and detachment which the Poverello conceived for his friars Elias regarded as exaggerated and unpractical. Hence, while St. Francis did not desire large loci for the friars, Elias multiplied such buildings.

Again, Elias's views with regard to learning among the friars were very far removed from those of St. Francis. "Hoc solum habuit bonum frater Hehas," writes Salimbene, "quia Ordinem iatrum Minorum ad studium theologice promovit." But Elias did more than this. In particular the extension of the Franciscan order in his own life, the example of St. Francis, and the obligations of his office, Elias so far allowed ambition to dominate him that when it was thwarted he had not the humility to submit, but, reckless of consequences, plunged to his ruin.

It is no doubt owing to his fall and disgrace that in no order so pious as in any other biographies Elias remained so long without a biographer. It would be difficult, however, to exaggerate the importance of his influence upon the history of the Franciscan Order. Even his opponents conceded that Elias possessed a remarkable mind, and none doubted his exceptional talents. "Who in the whole of Christendom," asks Eccleston, "was more gracious or more famous than Elias?" May we of our time see so one-sided a worship of his preaching, and Bernard of Besse calls him one of the most erudite men in Italy. We know that as well as great men sought the friendship of Elias, and, strange as it may seem, he appears to have retained the confidence of St. Clare and her companions.

Nothing that can really be called a portrait of Elias remains. Giunta di Cortone, the first to speak of his "life" in 1236 having disappeared in 1264; but a seventeenth-century replica in the Municipio at Assisi is believed to have been more or less copied from it. In the latter, Elias is represented as a small, spare, dark-haired man, with a melancholy face and trim beard, and wearing an Armenian cap. With the exception of his letter to the order announcing the death of Francis, no writing of Elias's remains. But he has a place in the works dealing with alchemy, formerly circulated under his name, are undoubtedly supposititious. Whether or not Elias was himself the architect of S. Francesco, the fact remains that if the tomb of the Poverellohas become the "cradle of the Renaissance," the "first flower and the fairest of Italian Gothic," and the glory of Assisi, it is to Elias we owe this, and it constitutes his best monument.

Biographies of Elias: ANONIMO CORTONENSE (VENENTO), Vita di frate Elia (2nd ed., Leghorn, 1763); ARTO, Vita di frate Elia (2nd ed., Parma, 1819); BYRKE, Elia von Cortona (Leipzig, 1874); these may still be read with interest, but they have been to a certain extent superseded by LEMP, Vite frate di Cortone (Parma, 1903) in which the author has used the sources of both the religious and literary doctrines of the middle ages, Vol. III. Dr. Lempp has attempted to put order into the undigested mass of details handed down about Elias, and his monograph is thorough and "documented," but its objective value is greatly spoilt by the author's apparent anxiety to read a gospel of his own into the beginnings of Franciscan history. Those who wish to go behind these biographies to some of the original authorities from which the knowledge of Elias is based should consult the Legenda Prima B. Francisci, ed. d'ALENCON (Rome, 1906), p. xxviii with references to text; ECCLESTON, De Adventu Magistri in Asiatico, in Acta SS., April 30 and passion; Chromos fr. Jordanii, ibid., 1, 18 sqq.; BESSE, Catalogus Generalis, ibid., III (1897), 693; GLASBERGER, Chronicon, ibid., I, 18 sqq.; HERBART, Chronicon, ibid., XXX (1887), 297 sqq.; PIGNA, Liber conformitatis, ibid., IV (1906), passim. See also RUBCHENKO, Histoire, Serap. Relig. Venet., s. v. B. E. in cap.; ANTONI-MING, I. l. a. 1221, n. 9, XI. an. 1253, n. 30; Serapheis, ed. NABRE- CUIA (Rome, 1906), 72-73; SARALEA, Bullar. Francisci, 1
Elia of Jerusalem, d. 518, one of the two Catholic bishops (with Flavian of Antioch) who resisted the attempt of the Emperor Anastasius I (491–518) to abolish the Council of Chalcedon (451). Anastasius spent the greater part of his reign in a vain attempt to impose Monophysitism on his subjects. Unlike his predecessors, who favoured Monophysitism merely as a political expedient whereby to conciliate Egypt and the great number of Monophysites in Syria, Anastasius carried on his propaganda apparently from religious conviction. His chief adviser, Marinus, a Syrian, was also a convinced Monophysite. At first the emperor tried to arrange a compromise. The population of Constantinople and nearly all the Eastern provinces were too Chalcedonian to be overruled on the council. So Macedonius II, Patriarch of Constantinople (490–511), submitted so far as to sign Zeno’s Henotikon (482), but refused to condemn the council. Flavian of Antioch also for a time approved of a policy of compromise. The Acacian schism (484–519) still continued during the reign of Anastasius, but the emperor and his patriarch made advances towards a compromise. But he was nothing, since the pope always insisted on the removal of the names of former schismatics from the Byzantine diptychs. Gradually Anastasius went over completely to the Monophysites. Severus of Sozopolis, Xenais of Tapha in Persia, and a great crowd of Syrian and Egyptian Monophysite monks overwhelmed him with petitions to have the council of his convocations and to break openly with the Monophysites. In the emperor’s chapel the Trisagion was sung with the famous Monophysite addition (“who was crucified for us”). Macedonius of Constantinople was deposed (511), and an open Monophysite, Timothy I (511–518), took his place. Timothy began a fierce persecution of Catholics. Then the Government summarily summoned a synod at Sidon, 516, that was to condemn the Council of Chalcedon. It was chiefly Elia of Jerusalem who prevented this result. Elia was an Arab, by birth, who had been educated in a monastery in Egypt. In 457 he was driven out by the Monophysite Patriarch of Alexandria, Timothy the Cat. He then came to Palestine and founded a laura at Jericho. Anastasius of Jerusalem ordained him priest. In 458 Elia had succeeded Salustius as Bishop of Jerusalem and governed the see until 513. He acknowledged Euphemius of Constantinople (see EUPHEMIIUS) and refused the communion of Macedonius, the intruder. About 500 the Monophysite Xenais of Hierapolis tried to make Elia sign a Monophysite formula, and the emperor ordered him to summon a synod that should condemn the Council of Chalcedon. Instead, Elia sent the emperor a Catholic profession that his enemies seem to have falsified on the way. Evagrius says: “He when he had written it sent it to the Emperor by the hands of Dioscorus’ followers” (Monophysites). “And the profession that they then showed contained an anathema against those who speak of two natures in Christ. But the Bishop of Jerusalem says that he had been tempered with a sent another without that anathema. Nor is this surprising. For they often corrupted works of the holy Fathers” (H. E., II, xxxi, 333). The Synod of Sidon in 512 was to condemn Chalcedon and depose Elia and Flavian. But they succeeded in persuading the Fathers to do neither (Lamb, Concli, IV, 1414). The Monophysites went

V.—25
conspicuous for his fairness and consideration for his colleagues. He was also the author of "Observations sur les différentes formations dans le système des Volcans" (Paris, 1829); "Mémoires pour servir à une description géologique de la France" (with Dufrénoy), 4 vols., Paris, 1830–38; "Recherches sur quelques-unes des révolutions de la surface du globe" (Paris, 1834; "Explications de la carte géologique de la France," Paris, Part I, 1841; Part II–IV, 1848–58 (with Dufrénoy), 5 vols.).

Eligius (Fr. Eliu), Saint, Bishop of Noyon-Tournai, b. at Chaptelat near Limoges, France, c. 390, of Roman parents, Eucherius and Terrigio; d. at Noyon, 1 December, 660. His father, recognizing an unusual talent in his son, sent him to the noted goldsmith Abbo, master of the mint at Limoges. Later Eligius went to Neustria, where he worked under Babo, the royal treasurer, on whose recommendation Clotaire II commissioned him to make a throne of gold adorned with precious stones. His honesty in this so pleased the king that he deeded him at his death the绎胡illes, besides taking him into his household. After the death of Clotaire (629), Dagobert appointed his father's friend his chief councillor. The fame of Eligius spread rapidly, and ambassadors first paid their respects to him before going to the king. His success in inducing the Breton King, Judeel, to submit to the Frankish suzerainty (636–37) is due to his diplomatic skill. Eligius took advantage of this to obtain alms for the poor and to ransom Roman, Gallic, Breton, Saxon, and Moorish captives, who were arriving daily at Marseilles. He founded several monasteries, and with the king's consent sent his servants through towns and villages to take down the bodies of malesactors who had been executed, and gave them decent burial. Eligius was a son of Saint Eligius, at court, where he and his friend Dado (Audoenus) lived according to the Irish monastic rule, introduced into Gaul by St. Columbanus. Eligius introduced this rule, either entirely or in part, into the monastery of Solignac which he founded in 632, and into the convent at Paris where three hundred virgins were under the guidance of the Abbess Auma. He also built the church and founded that of St. Martin at Paris. He erected several fine churches in honour of the relics of St. Martin of Tours, the national saint of the Franks, and St. Denis, who was chosen patron saint by the king. On the death of Dagobert (639), Queen Nanthilde took the reins of government, and Eligius and Dado left the court and entered the priesthood. On the death of Acarius, Bishop of Noyon-Tournai, 13 May, 640, Eligius was made his successor with the unanimous approbation of clergy and people. The inhabitants of his diocese were pagans for the most part. He undertook the conversion of the Flemings, Antwerpians, Frisians, Suevi, and the barbarian tribes along the coast. In 654 he approved the famous privilege granted to the Abbey of Saint-Denis near Paris, exempting it from the jurisdiction of the ordinary. In his own episcopal city of Noyon he built and endowed a monastery for virgins. After the finding of the body of St. Quentin, Bishop Eligius erected in his honour a church to which was joined a monastery under the Irish rule. He also discovered the bodies of St. Piatus and companions, and in 654 removed the remains of St. Furepe, the celebrated Irish missionary (d. 630). Eligius was buried at Noyon. There is in existence a sermon written by Eligius, in which he combats the pagan practices of his time, a homily on the last judgment, also a letter written in 645, in which he begs for the prayers of Bishop Desiderius of Cahors. The fourteen other homilies attributed to him are of doubtful authenticity. His homilies have been edited by Krusch in "Mon. Germ. Hist." (loc. cit. infra).

Elisaeus (Elisa), the son of Saul, was a Gibeonite and a successor of Eliphas. He was, in the province of Antwerp, and at Tournai, Courtroi of Ghent, Bruges, and Douai. During the Middle Ages his relics were the object of special veneration, and were often transferred to other resting-places, thus in SN, 1066, 1137, 1255, and 1306. He is the patron of goldsmiths, blacksmiths, and all workers in metal.

Eliphaz, also put themselves under his protection. He is generally represented in Christian art in the garb of a bishop, a crosier in his right hand, on the open palm of his left a miniature church of chased gold.

Elijah, See Elia.

Elined (Almedha), saint, virgin and martyr, flourished c. 490. According to Bishop Challoner (Britannia Sancta, London, 1745, II, 59), she was a daughter of Bragan (Bryan), a British prince, after whom the present province of Brecknock is named, and her memory was kept in Wales. Garlandt Cambrensis, in his "Itinerarium Cambria," (I, 2), the chief author for Eligius, speaks of the many churches throughout Wales named after the children of Bragan, and especially of one on the top of a hill, in the region of Brecknock, not far from the castle of Aberhodni, which is called the church of St. Almeda, "who, rejecting the marriage of an earthly prince, and espousing herself to the eternal King, consummated her course by a triumphant martyrdom." Her feast was celebrated 1 August on which day the church was venerated, and many miracles were wrought. William of Worcester says that she was buried at Usk. The church mentioned by Garlandt was called, says Rees, Slwch chapel. The Bollandists (1 August) express themselves satisfied with the evidence of her cultus. This saint is the Lamed of the "Mabonigion" (Lady Guest, I, 113–14, III, 164) and the Lynette of Tennyson's "Gareth and Lynette." She is also supposed to be identical with the Enid of the "Mabonigion" and Tennyson's "Idylls".

Eliphas. See Adoptionism.

Eliseus (Elisha; Heb. yéhôw, God is salvation), a Prophet of Israel—After learning on Mount Horeb, that Eliseus, the son of Salmone, had been appointed to the prophetic office, Elias set out to make known the Divine will. This he did by casting his mantle over the shoulders of Eliseus, whom he found "one of them that were ploughing with twelve yoke of oxen." Eliseus delayed only long enough to kill the yoke of oxen, whose flesh he boiled with the very wood of his plough. After he had shared this farewell repast with his father, mother, and
friends, the newly chosen Prophet "followed Elias, and ministered to him". (III Kings, xix, 8-21.) He went with his master from Galgal to Bethel, to Jericho, and then to the eastern side of the Jordan, the waters of which, touched by the mantle, divided so as to permit both to pass over on dry ground. Elisha then beheld Elias in a fiery chariot taken up by a whirlwind into heaven. By means of the mantle let fall from Elias, Elisha miraculously recrossed the Jordan, and so won from the prophets at Jericho the rod of his predecessor. Elisha had inherited from Elias ... (IV Kings, ii, 1-15.) He won the gratitude of the people of Jericho for healing with salt its barren ground and its waters. Elisha also knew how to strike with salutary fear the adorers of the calf in Bethel, for forty-two little boys, probably encouraged to mock the Prophet, on being cursed in the name of the Lord, were torn by "two bears out of the forest". (IV Kings, ii, 19-24.) Before he settled in Samaria, the Prophet passed some time on Mount Carmel (IV Kings, ii, 25). When the armies of Judah, and Israel, and Edom, then allied against Mea, the Moabite king, were being tormented by drought in the Idumean desert, Elisha consented to intervene. His double prediction regarding relief from drought and victory over the Moabites was fulfilled on the following morning. (IV Kings, iii, 4-24.)

That Elisha inherited the wonder-working power of Elias is shown throughout the whole course of his life. To relieve the widow imported by a hard creditor, Elisha so multiplied a little oil as to enable her, not only to pay her indebtedness, but to provide for her family needs (IV Kings, iv, 1-7). To reward the widow of Shunem for her hospitality, Elisha obtained for her from God, at first the birth of a son, and subsequently the resurrection of her child (IV Kings, iv, 8-37). To nourish the sons of the prophets pressed by famine, Elisha changed into wholesome food the potage made from poisonous gourds (IV Kings, iv, 38-41). By the cure of Naaman, who was afflicted with leprosy, Elisha impressed the possessions of the Syrian general, whilst willing to free King Jeram from his perplexity, principally intended to show "that there is a prophet in Israel". Naaman, at first reluctant, obeyed the Prophet, and washed seven times in the Jordan. Finding his flesh "restored like the flesh of a little child", the general was so impressed by this evidence of God's power, and by the distinct prophecies of the Prophet, that he abandoned his conviction that "there is no other God in all the earth, but only in Israel". (IV Kings, v, 1-19.) It is to this Christ referred when He said: "And there were many lepers in Israel in the time of Elisha the prophet; and none of them was cleansed but Naaman the Syrian" (Luke, iv, 27). In punishing the avarice of his servant Giez (IV Kings, v, 20-27), in saving "not once nor twice" King Jeram from the ambushes planned by Benadad (IV Kings, vi, 8-12), in ordering the ancients to shut the door against the messenger of Israel's ungrateful king (IV Kings, vi, 25-32), in bewildering with a strange blindness the soldiers of the Syrian king (IV Kings, vi, 13-23), in making the iron swim to relieve an embarrassem to a son of a prophet (IV Kings, vii, 7), in, consistently predicting the sudden flight of the enemy and the devastations and famine of the famine (IV Kings, vii, 1-20), in unmasking the treachery of Hazael (IV Kings, viii, 7-15), Elisha proved himself the Divinely appointed Prophet of the one true God, Whose knowledge and power he was privileged to share.

Mindful of the order given to Elias (II Kings, xvi, 16), Elisha consecrated a son of one of the prophets to quietly anoint Jehu King of Israel, and to commission him to cut off the house of Acha. (IV Kings, ix, 1-10.) The death of Jeram, pierced by an arrow from Jehu's bow, the ignominious end of Jezabel, the slaughter of Achaib's seventy sons, proved how faithfully executed was the Divine command (IV Kings, ix, 11-x, 30). After predicting to Joas his victory over the Syrians at Aphec, as well as three other subsequent victories, ever bold before kings, ever kindly towards the lowly, "Elisha died, and they buried him" (IV Kings, xiii, 14-20). The very touch of his corpse served to resuscitate a dead man (IV Kings, xiii, 20-21). "In his life he did great wonders, and in death he wrought miracles" (Eccles., xlviii, 15).

Daniel P. Duffy.

Elisha. See Elishes.

Elishé, a famous Armenian historian of the fifth century, place and date of birth unknown, d. 450. Some identify him with Elishé, Bishop of Amaduni, who took part in the Synod of Artashat (449). According to a different and more common tradition, he had been in his younger days a companion, as soldier or secretary, of the Armenian general Vartan, during the war of religious independence (449-451) against the Persiran, King Yezdigdr II. Later he became a hermit and retired to the mountains, south of Lake Van, where he lived, and wrote his works, speaking of himself as "varteb" or "doctor". His first book under the title of the "History of Vartan and of the wars of the Armenians [written] at the request of David the Maimonian", in which he recounts the heroic struggle of the Armenians in union with the Iberians and the Albanians, for their common faith, against the Persians (449-451). It is considered one of the masterpieces of ancient Armenian literature, and it is entirely free from Greek words and expressions. A good edition of it was published at Venice (1826) by the Mechitarists of San Lazaro. One of the manuscripts on which it is based purports to be a faithful copy of another manuscript dated 616. The text of that edition was further improved in subsequent editions at the same place (1828, 1839, 1859, and 1864). Among other editions of value may be mentioned those of Theodosia (Crimea), 1861, and of Jerusalem, 1865. There is an English, but unfinished, translation by C. F. Neumann (London, 1830); one in Italian by G. Cappelletti (Venice, 1840); and one in French by V. Langlois in his "Collection des Historiens anciens et modernes de l'Arménie" (Paris, 1869), II, 177 sqq. In addition to the seven chapters mentioned by Elishé himself in his introductory remarks, all editions contain an eighth chapter referring to the so-called Leontian martyrs (454) and others. The genuineness of that chapter has been called in question. It has been also remarked that in all manuscripts the fifth chapter is missing, while in the editions the original sixth chapter is cut in two so as to make up for the missing chapter. On the first point see Langlois, op. cit., II, p. 180; on the second see C. F. Neumann, "Versuch einer Geschichte der armenischen Literatur, nach den Werken der Mechitaristen frei bearbeitet" (Leipzig, 1836), pp. 64 sqq. See also Terminassiantz, "Die armenische Kirche in ihren Beziehungen zu der syrischen Kirche" (Leipzig, 1904), p. 57. Elishé is also the author of a commentary on Joshua and Judges, an explanation of the Our Father, a letter to the Armenian monks, etc., all found in the Venice editions of the "History of Vartan".

II. IVHVERNAT.

Elizabeth (God is an oath—Ex., vi, 23), Zachary's wife and John the Baptist's mother, was "of the daughters of Aaron" (Luke, i, 5), and at the same time, Mary's kinswoman (Luke, i, 36), although what their actual relationship was, is unknown. St.

ELIZABETH
Hippolytus (in Nexcph. Call., Hist. Eccles., II, iii) explains that Sobe and Anna their mothers were sisters, and that Sobe had married a "son of Levi". Whether this indication, probably gathered from some apocryphal writings, and later on adopted by the compilers of the Greek Menologion, is correct, cannot be ascertained. Elizabeth, like Zachary, was "just before God, walking in all the commandments and justifications of the Lord without blame" (Luke, i, 6). She had been deprived, however, of the blessings of motherhood until, at an advanced age, a son was promised her by the Angel Gabriel (Luke, i, 8-20). When, five months later, Elizabeth was visited in her home by the Virgin Mary, not only was her son sanctified in her womb, but she herself was enlightened on high to salute her cousin as "the mother of my Lord" (Luke, i, 43). According to some modern critics, we should even attribute to her the canticle "Magnificat". After the birth and circumcision of John the Baptist, the Gospels do not mention Elizabeth any more. Her feast is celebrated on 8 September by the Greeks, and 5 September in the Latin Church.

Charles L. Souvay

Elizabeth, Sisters of St. Albert generally styled "Grey Nuns". They sprang from an association of young ladies established by Dorothea Klara Wolff, in connexion with the sisters, Mathilde and Maria Merkert, and Franziska Werner, 1842, in Neisse (Prussia), to tend in their own homes, without compensation, helpless sick persons who could not or would not be received into the hospitals. The members purposed to support the needy through the labour of their own hands. Without adopting any definite rule, they led a community life and wore a common dress, a brown woollen habit with a grey bonnet. For this reason they were soon called by the people the "Grey Nuns". At their work was soon recognized and praised everywhere, and as new members continually applied for admission, their spiritual advisers sought to give the association some sort of religious organization. They endeavoured, wherever possible, to affiliate it with already established confraternities having similar purposes. But their foremost desire was to educate the members for their assigned work. From the founders, great difficulties arose, and the attempt failed, principally through the resistance of the foundresses, who did not wish to abandon their original plan of itinerant nursing. Thus the association which had justified such bright hopes was dissolved, and many of the newly admitted members joined the Sisters of St. Charles Borromeo, while the foundresses left the novitiate which they had already entered. Klara Wolff and Mathilde Merkert died shortly after, in the service of charity. The other two began their work anew in 1850 and placed it under the especial patronage of St. Elizabeth. They speedily gained the sympathy of the sick of all classes and creeds, and also that of the physicians. New candidates applied for admission, and the sisters were soon able to extend the sphere of their activity beyond Neisse. Of especial importance was the foundation made at Breslau, where the work of the sisters came under the direct observation of the episcopal authorities. Soon after, 4 Sept., 1859, Prince-Bishop Heinrich Förster was prevailed upon by the favourable reports and testimonies to grant the association ecclesiastical approbation. As such a recognition presupposed a solid religious organization, a novitiate was established according to the statutes submitted. In the following year the twenty-four oldest sisters made the three religious vows. State recognition, with the grant of a corporative charter, was obtained by the confraternity 29 May, 1864, under the title, "Catholic Charitable Institute of St. Elizabeth", through the mediation of the Prussian Crown-Prince Frederick William, subsequent Emperor of Germany, who had observed the beneficent activity of the sisters on the battle-fields of Denmark. The approbation of the Holy See was granted for the congregation on 26 Jan., 1887, and for its constitutions on 20 April, 1898. The congregation has spread to Norway, Sweden, and Italy, and has (1908), dependent on the mother-house at Breslau, 305 filial houses, with 2565 sisters and about 100 postulants.

Elizabeth Associations (Elizabethenvereine), charitable associations of women in Germany which aim for the love of Christ to minister to the bodily and spiritual sufferings of the sick poor and of neglected children. On 10 December, 1814, eight ladies of Munich formed a society, of which the Princess Leopoldine von Löwenstein was the head, for the purpose of visiting and aiding the sick poor in their homes. In 1851 it was made a religious association, in which many indulgences were granted by the Holy Father. In order to carry on better the visiting of the sick the first branch or conference of the association was founded in 1870. According to its statutes the members are divided into two classes: associate members,
or those who aid the organization by means of annual contributions, and active members who, besides contributing of their means, also visit the sick poor and perform other duties as those of administration, at the discretion of the president of the society. The branches are merely means of carrying on the affairs of the main society with which they are closely affiliated, but they are independent in administration. The Elizabeth Association of Munich, according to the financial report covering the year 1907, has 157 active and 3686 associate members; the receipts were 124,305.77 marks 399.56; expenses, 123,422.77 marks ($30,855.69). During the year 1907 4315 poor persons were assisted, 195 children cared for in asylums and nurseries, and 18 old people were provided for in asylums and infirmaries.

Other Elizabeth Associations, although with some differences of organization, were formed on the model of that of Munich at Barmen and Trier in 1813, Collogne in 1818, etc. These societies are now found chiefly in the following sections of Germany: Bavaria, 36 societies, 24 of these being in the Palatinate; Diocese of Cologne, 110 societies with 1200 members, about 7000 contributors, and a total income of nearly 150,000 marks, families assisted 3500; Diocese of Paderborn, 120 societies with over 16,000 members and contributors, and a total income of 7000 marks; Diocese of Münster assisted 3600. There are also Elizabeth Associations in the Dioceses of Freiburg, Münster, Trier, Limburg, Hildesheim, and the Vicariate Apostolic of Saxony; in the Diocese of Breslau, instead of Elizabeth Associations, there are about 130 women's conferences of the Society of St. Vincent de Paul. In Germany the Elizabeth Associations number altogether some 357 branches or conferences which aid annually 10,000 to 12,000 families.

Elizabeth für die Diözese Paderborn (Paderborn, 1903); short sketch of the associations in Payriner, Die heilige Elizabeth von Thuringen (München-Gladbach, 1907); statistics in Krose, Kirch. Handbuch, 1910–15 (Freiburg in Baden, 1908), 224–25.

GREGOR REINHOLD

Elizabeth of Hungary, Saint, also called Saint Elizabeth of Thuringia, b. in Hungary, probably at Pressburg, 1207; d. at Marburg, Hesse, 17 November (not 19 November), 1231. She was a daughter of King Andrew II of Hungary (1205–35) and his wife Gertrude of England. By the will of the father, Andechs-Meran, Elizabeth's brother succeeded his father on the throne of Hungary as Bela IV; the sister of her mother, Gertrude, was St. Hedwig, wife of Duke Heinrich I, the Bearded, of Silesia, while another saint, St. Elizabeth (Isabel) of Portugal (d. 1336), the wife of the tyrannical King Diniz of that country, was her great-niece. In 1211 a formal embassy was sent by landgrave Hermann I of Thuringia to Hungary to arrange, as was customary in that age, a marriage between his eldest son Hermann and Elizabeth, who was then four years old. This plan of a marriage was the result of political considerations and was intended to be the ratification of a great alliance which in the political schemes of the time it was sought to form against the German Emperor Otto IV, a member of the house of Guelph, who had quarreled with the Church. Not long after this the little girl was taken to the Thuringian court to be brought up with her future husband and, in the course of time, to be betrothed to him. The court of Thuringia was at this period famous for its magnificence. Its centre was the stately castle of the Wartburg, splendidly placed on the Wartberge, a hill near Eisenach, where the Landgrave Hermann lived surrounded by poets and minnesingers, to whom he was a generous patron. Notwithstanding the turbulence and purely secular life of the court and the pomp of her surround-
career of Elizabeth. Brother Rodeger, one of the first Germans whom the provincial for Germany, Casarius of Speier, received into the order, was for a time the spiritual instructor of Elizabeth at the Wartburg; in his teachings he unfolded to her the ideals of St. Francis, and these strongly appealed to her. With the aid of Elizabeth the Franciscans in 1225 founded a monastery in Eisenach; Brother Rodeger, as his fellow-companion in the order, resolved to instruct Elizabeth, to observe, according to her state of life, chastity, humility, patience, the exercise of prayer, and charity. Her position prevented the attainment of the other ideal of St. Francis, voluntary and complete poverty. Various remarks of Elizabeth to her female attendants make it clear how ardently she strove to preserve the poverty of the order. Brother Rodeger had filled was assumed by Master Conrad of Marburg, who belonged to no order, but was a very ascetic and, it must be acknowledged, a somewhat rough and very severe man. He was well known as a preacher of the crusade and also as an inquisitor or judge in cases of heresy. On account of the latter activity he has been more severely judged than in the present day; however, the effect of him is a fairer one. Pope Gregory IX, who wrote at times to Elizabeth, recommended her to himself to the God-fearing preacher. Conrad treated Elizabeth with inexorable severity, even using corporal means of correction; nevertheless, he brought her with a firm hand by the road of self-mortification to sanctity, and after her death in a very active in her canonization. Although he forbade her to follow St. Francis in complete poverty as a beggar, yet, on the other hand, by the command to keep her dower she was enabled to perform works of charity and tenderness.

Up to 1288 it was believed, on account of the testimony of one of Elizabeth's servants in the process of canonization, that Elizabeth was driven from the Wartburg in 1227 by her brother-in-law, Heinrich Raspe, who acted as regent for her son, then only five years old. About 1288 various investigators (Börner, Mielke, Wenck, E. Michael, etc.) asserted that Elizabeth left the Wartburg voluntarily, the only compulsion being a moral one. She was not able at the castle to follow Conrad's command to eat only food prepared by the monastery. The only proper. Lately, however, Huyskens (1907) tried to prove that Elizabeth was driven from the castle at Marburg in Hesse, which was hers by dower right. Consequently, the Te Deum that she directed the Franciscans to sing on the night of her expulsion would have been sung in the Franciscan monastery at Marburg. Accompanied by two female attendants, Elizabeth left the castle on a stand that he commanded her to leave. The next day her children were brought to her, but they were soon taken elsewhere to be cared for. Elizabeth's aunt, Matilda, Abbess of the Benedicite nunnercy of Kitzingen near Wurzburg, took charge of the unfortunate landgrave and sent her to her uncle Eckbert, Bishop of Bamberg. The bishop, however, was in great trouble on account of the landmark婚 although during the lifetime of her husband Elizabeth had made a vow of continence in case of his death; the same vow had also been taken by her attendants. While Elizabeth was maintaining her position against her uncle the remains of her husband were brought to Bamberg by his faithful followers who had carried them from Italy. Weeping bitterly, she cried in the family vault of the landgraves of Thuringia in the monastery of Reinhardt'sbrun. With the aid of Conrad she now received the value of her dower in money, namely two thousand marks; from this sum she divided five hundred marks in one day among the poor. On Good Friday, 1228, in the Franciscan house at Eisenach Elizabeth formally renounced the world; then going to Master Conrad at Marburg, she and her maids received from him the dress of the Third Order of St. Francis, thus being among the first tertiaries of Germany. In the summer of 1228 she built the Franciscan hospital at Marburg and on its completion devoted herself entirely to the care of the sick, especially to those afflicted with the most loathsome diseases. Conrad of Marburg still imposed many self-mortifications and solemn renunciations, while at the same time he took from her regularly the remittance of money. Constant in her devotion to God, Elizabeth's strength was consumed by her charitable labours, and she passed away at the age of twenty-four, a time when life to most human beings is just opening.

Very soon after the death of Elizabeth miracles began to be worked at her grave in the church of the hospital, especially in the matter of cures. Conrad showed great zeal in advancing the process of canonization. By papal command three examinations were held of those who had been healed: namely, in August, 1232, January, 1233, and January, 1235. Before the process reached its end, however, Conrad was murdered, 30 July, 1233. But the Teutonic Knights in a letter dated 16 November, 1234, Conrad, Landgrave of Thuringia, the brother-in-law of Elizabeth, entered the order. At Pentecost (28 May) of the year 1235, the solemn ceremony of canonization of the "greatest woman of the German Middle Ages" was celebrated by Gregory IX at Perugia, Landgrave Conrad being present. In August of the same year (1235) the corner-stone of the beautiful Church of St. Elizabeth was laid on the castle of Marburg; on 1 May, 1236, Emperor Frederick II attended the taking-up of the body of the saint; in 1249 the remains were placed in the choir of St. Elizabeth, which was not consecrated until 1283. Pilgrimages to the grave soon increased to such importance that at times they could be compared to those to the Shrine of Our Lady at Rome. In 1259 Philip the Magnanimous, Landgrave of Hesse, who had become a Protestant, put an end to the pilgrimages by unjustifiable interference with the church that belonged to the Teutonic Order and by forcibly removing the relics and all that was sacred to Elizabeth. Nevertheless, the entire German people still honoured the "dear St. Elizabeth" as she is called; in 1906 the new pope, Pius X, proclaimed her as a saint by the declaration of the seven hundredth anniversary of her birth. St. Elizabeth is generally represented as a princess graciously giving alms to the wretched poor or as holding roses in her lap; in the latter case she is portrayed either alone or as surfeited by her husband, who, according to a legend, which is, however, related only in part, was not merciful to her unexpectedly as she went secretly on an errand of mercy, and, so the story runs, the bread she was trying to conceal was suddenly turned into roses.

The original materials for the life of St. Elizabeth are to be found in the letters sent by Conrad of Marburg to Pope Gregory IX (1232) and in the testimony of her four female attendants (Libellus de dictis ignorantiarum) taken by the third papal commission (January till May, 1234) of which the testimony is to be found in Huyskens, Quellenstudien zur Geschichte der hl. Elisabeth, Landgräfin von Thüringen (Marburg, 1907: Pp. 110-114). The latter materials are to be found in Historisches Jahrbuch des Goeres Society (Munich, 1907), XXXVII, 499-528, 729-818; previously the libellus, ed. Menckes in Scriptores rerum Germanicarum (Leipzig, 1788-90), II, 107-34; Epistola Cornelia in Huyskens, Quellenstudien, 155-60; and in Wyss, Heinrichs Urkundenbuch, 1, Urkunden, ed. Hamburger. A. Augusti, Berlin, 1907, 31-35, in the Publikationen aus den preussischen Staatsarchiven, III, formerly issued in Allatius, Scriptores, ed. Niesse (Cologne, 1853, 369, comprising these and other sources see Doppenberger, Requetta dissertationen wessen epistolaria historiae Thuringiae, I, 1-174, 18; 1907, 111, 240 sqq.; for the process of canonization see Huyskens, Quellenstudien, 110-209; Vita S. Michael Himmel.

Elizabeth of Portugal, Saint, Queen (sometimes known as The Peacemaker); b. in 1271; d. in 1336. She was named after her great-aunt, the great Elizabeth of Hungary, but is known in Portuguese history by the Spanish form of that name, Isabel. The daughter of Pedro I, King of Aragon, and Constance, grandchild of the Mercedarian Convent of Our Lady of the Merciful, she was pious and holy, and led a life of strict regularity and self-denial from her childhood; she said the full Divine Office daily, fasted and did other penances, and gave up amuse-
ment. Elizabeth was married very early to Diniz (Denis), King of Portugal, a poet, and known as Re Lrvor, or the "working king", from his hard work in his kingdom's service. His morals, however, were extremely bad, and the marriage which was intended for the benefit of Portugal and the Church was brought consequently most corrupt. Nevertheless, Elizabeth quietly pursued the regular religious practices of her maidenhood, whilst doing her best to win her husband's affections by gentleness and extraordi-
nary forbearance. She was devoted to the poor and sick, and gave every moment she could spare to helping them, even sitting on her count's ladies into their service. Naturally, such a life was a reproach to many around her, and caused ill will in some quarters. A popular story is told of how her husband's jealousy was roused by an evil-speaking page; of how he con-
demned the queen's supposed guilty accomplice to a cruel death; and was finally convinced of her inno-
cence by the strange accidental substitution of her ac-
cused in the punishment of the victim. The queen was not only unjustly sentenced, but also suffered in the maximum suffering that could be inflicted upon any woman; she was imprisoned in a monastic convent and, when she was permitted to return to Portugal, she retired to the Franciscan convent of Coimbra, where she took the Franciscan Tertiary habit, wishing to devote the rest of her life to the poor

Elizabeth of Reute, Blessed, of the Third Order of St. Francis, b. 25 Nov., 1386, at Waldsee in Swabia, of John and Anne Aecher; d. 25 Nov., 1420. From her earliest days "the good Betha", as she was called, showed a rare piety, and under the learned and devout Conrad Kugelin, her confessor, provost of the Canons Regular of St. Augustine at St. Peter's in Waldsee, she made extraordinary progress towards perfection. When fourteen she received the habit of the third order, but continued to live at home. Finding the life unengaging, she secured the consent of her parents after long entreaties to leave home. Receiving no support from them she remained at the house of a pious tertiary, and the two worked at weaving; but the remuneration was small and they frequently suffered from hunger and other privations. After three years she had established a house for tertiaries at Reute on the outskirts of Waldsee and Elizabeth entered it together with some others.

Here she took up her work in the kitchen, and now began her wonderful life of seclusion, fasting, and prayer. There was no clausura at the convent, still she led so retired a life that she was called the "Reclusa." She spent many hours in a little garden, kneeling on a stone for prayer, or on the earth, where she wished to be as close to God as possible. She took a vow of poverty, but pure was her life that her confessor could scarcely find matter for absolution. She had much to suffer from attacks of the evil spirit, from suspicions of her sisters in religion, from leprosy, and other sicknesses, but in all her trials she showed a heavenly patience. This she learned from the Passion of Christ, which she made the chief object of her prayer, and of meditation, the object of her love, and the rule of her life. In consequence God permitted her to bear the marks of the Passion on her body; her head often showed the marks of the Thorns, and her body those of the Scourging. The stigmata appeared only now and then, but her pains never ceased. She was shown the happiness of the blessed and the souls in the state of purgation; the secrets of hearts and of the dead were opened to her; she was conducted to the tomb of Martin V and the end of the Western Schism. Though so much favoured by Divine Providence she always preserved a great humility. After her death she was buried in the church of Reute. Her life was written by her confessor and sent to the Bishop of Constance, but it was only after 1623, when her tomb was opened by the provost of Waldsee, that her popular devotion spread in Swabia. Afterward the relics had been brought through her intercession the Holy See was asked to ratify her cult. This was done 19 June, 1766, by Clement XIII. The Franciscans celebrate her feast on 25 November.

Leo, Lives of the Saints and Blessed of the Three Orders of St. Francis (Tudor, 1855); Dictionnaire des Saintes Femmes (London, 1901); Dolfinger, Die selige gute Betha von Reute (Freiburg im Br., 1901).

Francis Mersman.
Elizabeth of Schönau, Saint, b. about 1129- d. 18 June, 1165.—Feast 18 June. She was born of an obscure family, entered the double-monastery of Schönau in Nassau at the age of twelve, received the Benedictine habit, made her profession in 1147, and in 1157 was made superior of the nuns under the Abbess Hildilin. After her death she was buried in the abbey church of St. Florin. When her writings were published the name of saint was added. She was never formally canonized, but her cult has been entered in the Roman Martyrology and has remained there.

Given to works of piety from her youth, much afflicted with bodily and mental suffering, a zealous observer of the Rule of St. Benedict and of the regulations of her convent, and devoted to practices of mortification, Elizabeth was favoured, from 1152, with ecstasies and visions of various kinds. These generally occurred on Sundays and Holy Days at Mass or Divine Office or after hearing or reading the lives of saints. Christ, His Blessed Mother, an angel, or the special saint of the day would appear to her and instruct her; or she would see quite realistic representations of the Passion, Resurrection, and Ascension, or other scenes of a supernatural character. She, the hearer, heard she put down on wax tablets. Her abbot, Hildilin, told her to relate these things to her brother Egbert (Eckebert), then priest at the church of Bonn. At first she hesitated, fearing lest she be deceived or be looked upon as a deceiver; but she obeyed. Egbert received the tablets and Elizabeth supplemented what she had written with matters of the monastic discipline. She was a monk of Schönau in 1155 and succeeded Hildilin as second abbot (7th octave of All Saints') put everything in writing, later arranged the material at leisure, and then published all under his sister's name.

Thus came into existence (1) three books of "Visions": Of these the first is written in language very simple and in unaffected style, so that it may easily pass as the work of Elizabeth. The other two are more elaborate and replete with theological terminology, so that they show more of the work of Egbert than of Elizabeth. (2) "Liber viarum Dei." This seems to be an imitation of the "Sevias" (seire vias Domini) of St. Hildegarde of Bingen, her friend and correspondent. It contains admonitions to all classes of society, to the church in particular, to the monastic and nunneries. Here the influence of Egbert is very plain. She utterss prophetic threats of judgment against priests who are unfaithful shepherds of the flock of Christ, against the avaricious and wordliness of the monks who only wear the garb of poverty and self-denial, against the vices of the laity, and against bishops and superiors delinquent in their duty; she urges all to combat earnestly the heresy of the Cathari, she declares Victor IV, the antipope supported by Frederick against Alexander III, as the one chosen of God. All of this appears in Egbert's own writings. (3) The revelation on the martyrdom of St. Ursula and her companions. This is full of fantastic exaggerations and anachronisms, but has become the foundation of the subsequent Ursula legend. The revelation is a great diversity of opinion in regard to her reputation. The Church has never passed sentence upon them nor even examined them. Elizabeth herself was convinced of their supernatural character, as she states in a letter to Hildegarde; her brother held the same opinion; Trithemius considers them genuine; Eusebius Amort (De revelationibus visionibus et apparitionibus privatis regiae tute, etc., Augsburg, 1744) holds them to be nothing more than what Elizabeth's own imagination could produce, or illusions of the devil, since in some things they disagree with history and with other revelations (Acta SS., Oct., IX, 81). A complete edition of her writings was made by F. W. E. Roth (Brunn, 1884); translations appeared in Italian (Venice, 1859), French (Tournai, 1864), and in Icelandic (1226-1254).

Ellis, Philip Michael, first Vicar Apostolic of the Western District, England, subsequently Bishop of Segni, Italy, b. in 1632; d. 16 Nov., 1726. He was the son of the Rev. John Ellis, Rector of Waddesdon, near Aylesbury, and his mother was a daughter of John Kiddell, Hall, Yorkshire, and Saunders Webber. Of six brothers, John, the eldest, became Under-Secretary of State to William III; William, a Jacobite Protestant, was Secretary of State to James II in exile; Philip became a Benedictine monk and Catholic bishop; Webber became Protestant Bishop of Kildare and afterwards of Meath, Ireland; Samuel was Marshal of King's Bench; and Charles an Anglican clergyman. Philip, while still a Westminster schoolboy, was converted to the Catholic Faith, and when eighteen years old went to St. Gregory's, Donau, where he was professed, taking the name of Michael in religion (30 Nov., 1670). After ordination he returned in 1685 to the English mission where he became one of the first Fathers of the Vicariate Apostolic of the newly created Western District and was consecrated by Mgr. d'Adda, the papal nuncio (6 May). At the revolution in 1688 he was imprisoned, but being soon liberated he retired to Saint-Germain and afterwards to Rome. In 1696 he was named assistant prelate at the pontifical throne; and in Rome his knowledge of English affairs procured for him the invitation to "publish My lord Ellis's" Eleven sermons preached in 1685 and 1686 before James II, Queen Mary of Modena, and Queen Henrietta Maria, were published in pamphlet form, some of which have been reprinted (London, 1741; 1772). The Acts of his synod at Segni in 1710 were also published by order of Clement XI. (Dodd, Ch. Hist. (Brussels, 1737-42), III, 467; Ellis, El. Correspondence (London, 1834), vol. i. 83-109; Cooper, Dict. Nat. Biog. (London, 1889), XVII, 511. Mershman, Catholic History, (London, 1893); Gmelin, Lexicon Liturg. (London, 1898), II, 161; Cooper in Dict. Nat. Biog. (London, 1889).—Edwin Burton.

Ellwangen Abbey, the earliest Benedictine monastery established in the Duchy of Württemberg, situated in the Diocese of Augsburg about thirty miles north-east of the town of Stuttgart. Hariolfus, Bishop of Langres, was the founder, and the date of foundation was about 761, though there are a few authorities for as early a date as 732. In later times it became a royal abbey, a privilege which seems to have been conferred in 1011 by the Emperor Henry II, and afterwards confirmed by the Emperor Charles IV, in 1347. Some authorities date the granting of this privilege as late as 1555. This cannot be correct, for it is known that the superior of Ellwangen took his seat in the Diet among the princes of the country in 1300. The Benedictine occupation of the abbey came to an end in the first half of the fifteenth century. In 1460 it was changed into a college of secular canons under the rule of a provost. Ellwangen had many men of renown connected with it: the Abbots Lindolf and Erfman, whom Mabillon speaks of as famous authors; Abbot Gebhard began to write the life of St. Udalricus but died before completing it;
Abbot Ermenrich (c. 845), author of the life of St. Solus which may be found in the fourth volume of "Acta Sanctorum" of Mabillon. Adalbero, a monk of this abbey, was made Bishop of Augsburg in 894. Abbot Lindebert became Archbishop of Mainz, also did Abbot Hatto (891). St. Gebhard, Abbot of Ellwangen, became Bishop of Augsburg in 995. Abbot Milo about the middle of the tenth century was one of the visitors appointed for the visitation of the famous Abbey of St. Gall.

Nothing is known of the property connected with Ellwangen during the period of its Francolinian history, but in 1892, after it had passed into the hands of the secular canons, its possessions included the court manor of Ellwangen, the manses of Taxtstett, Neuler, Rothlein, Tannenburg, Wasseraulingen, Abts-Gaundt, Kockenbur near the town of Aalen, Henchlingen on the River Lein, and Lautern. Most of the ecclesiastical buildings still exist, though they are no longer used for religious purposes. Since the secularization they have been held by the State and used for state purposes.

Elohim (Sept., 'Eloa; Vulg., Deus) is the common name for God. It is a plural form, but the usage of the language gives no support to the supposition that was made that the plural form 'Elohim, as applied to the God of Israel, the remains of an early polytheism, or at least a combination with the higher spiritual beings" (Kautzsch).

Grammarians call it a plural of majesty or of rank, or of abstraction, or of magnitude (Gesenius, Grammar, 27th ed., nn. 124 g. 152 h). The Ethiopic plural amhdk has become a proper name of God. Hoffmann has pointed out an analogous plural e'mim in the Phænician inscriptions (Usber einigen plöhn, Inschr., 1889, pp. 17 sqq.), and Barton has shown that in the tablets from El-Amarra the plural form i'mani replaces the singular more than forty times (Proceedings of the American Oriental Society, 21-23 April, 1892, pp. cxvii-excvii).

'Elohim', 'Eloah'. 'Elohim' has been explained as a plural form of 'Eloah or as a plural derivative of 'Elo. Those who adhere to the former explanation do not agree as to the derivation of 'Eloah. There is no such verbal stem as 'alak in Hebrew; but the Arabist Fleischer, Franz Delitzsch, and others appeal to the Arabic 'alaha, meaning "to be filled with dread," "anxiously to seek refuge," so that 'olah ('Eloah) would mean in the first place "dread," then the object of dread, Ges., xxv, 42, 53, where God is called "the fear of Isaac," Is., viii, 13, and Ps. lxv, 12, appear to support this view. But the fact that 'alaha is probably not an independent verbal stem but only a denominative from 'olah, signifying originally "possessed of God" (cf. tawbana, tawwada) renders the explanation more than precarious. There is no more probability in the combination of 'olah and 'olah than in 'olah and other's that the verbal stem, 'olah, means "to be mighty," and is to be regarded as a by-form of the stem 'alah; that, therefore, 'Eloah grows out of 'olah as 'Ely springs from 'olah. Baethgen (Beiträge, 297) has pointed out that of the fifty-seven occurrences of 'olah forty-one belong to the Book of Job, and the others to late texts or poetic passages. Hence he agrees with Bulil in maintaining that the singular form 'Eloha came into existence only after the plural form 'Elohim had been long in common use; in this case, a singular was supplied for its pre-existent plural. But even admitting 'Elohim to be the prior form, its etymology has not thus far been satisfactorily explained. The ancient Jewish and the early ecclesiastical writers agree with many modern scholars in deriving 'Elohim from 'El, but there is a great difference of opinion as to the method of derivation. Nestle (Theol. Stud. aus Würt., 1882, pp. 243 sqq.) supposes that the plural has arisen by the insertion of an artificial k, like the Hebrew 'mahdök (maidsens) from 'mahak. Buhl (Genesi'us' Hebräisches Handwörterbuch, 12th ed., 1885, pp. 41 sq.) considers 'Elohim as a sort of augmentative form of 'El; but in his discussion of the second method of derivation, these writers are one in supposing that in early Hebrew the singular of the word signifying God was 'El, and its plural form 'Elohim; and that only more recent times coined the singular form 'Eloah, thus giving 'Elohim a grammatically correct correspondent. Lagrange, however, maintains that 'Elohim and Eloah are derived collateral and independently from 'El.

The Use of the Word.—The Hebrews had three common names for God, 'El, 'Elohim, and 'Eloah: besides, they had the proper name Yahweh. Nestle is authority for the statement that Yahweh occurs about six thousand times in the Old Testament, while all the common names of God taken together do not occur more often. The number of times 'El, 'Elohim, and 'Eloah are found is 57 times (cf. Job: 4 in Pss.; 4 in Dan.; 2 in Hab.; 2 in Canticle of Moses, (Deut., xxi); 1 in Prov.; 1 in Is.; 1 in Par.; 1 in Neh. (11 Esd.); 'El, 226 times ('Elohim, 9 times). Lagrange (Etudes sur les religions sémitiques, Paris, 1905, p. 71) infers from Gen., xli, 3 (the most mighty God of thy father), Ex., vi, 3 (the name of God Almighty), and from aspiration that 'El remains Yahweh, in the presence of one, the conclusion that 'El was at first a proper and personal name of God. Its great age may be shown from its general occurrence among all the Semitic races, and this in its turn may be illustrated by its presence in the proper names found in Gen., iv, 18; xxiv, 13; xxxvi, 13. 'Elohim is not found among all the Semitic races; the Arameans alone seem to have had an analogous form. It has been suggested that the name 'Elohim must have been formed after the descendants of Sem had separated into distinct nations.

Meaning of the Word.—If 'Elohim be regarded as derived from 'El, its original meaning would be "the mighty one," according to Wellhausen's derivation of 'El from 'al 'olah, "the mighty one," and 'al 'olah, "to be mighty," (On Genesis, 1:1); or, finally, "He after whom one strives," who is the goal of all human aspiration and expectation in primitive times, the race in distress or when one is in need of guidance, "to whom one attaches oneself closely," (coinedeti-bus interea bono et fine, according to the derivation of 'El from the preposition 'el, "to," advocated by La Place (cf. Lagarde, Uberseh, etc., p. 167), Lagarde (op. cit., pp. 139 sqq.), Lagrange (Religions sémitiques, p. 79 sqq.), and others). A discussion of the arguments which militate for and against each of the foregoing derivations would lead us too far.

If we have recourse to the use of the word 'Elohim in the study of its meaning, we find that in its proper sense it denotes either the true God or false gods, and metaphorically it is applied to judges, angels, and kings; and even accompanies other nouns, giving them a superlative meaning. The present article, the singular construction of the word, and its context show with sufficient clearness whether it must be taken in its proper or its metaphorical sense, and what is its precise meaning in each case. Kautzsch
(Encyclopædia Biblica, III, 3324, n. 2) endeavours to do away with the metaphorical sense of ‘Elohim’. In- stead of the rendering “judges” he suggests the translation “God”, as witness of a lawgiver, as giver of decisions on points of law, or as dispenser of oracles; for the rendering “angels” he substitutes “the gods of the heathen”, which, in later post-exilic times, fell to a lower rank. But this interpretation is not supported by solid proof.

According to Renan (Histoire du peuple d’Israël, I, p. 160), the Semites believed that the world is surrounded, penetrated, and governed by the ‘Elohim, myriads of active beings, analogous to the spirits of the savages, alive, but somehow inseparable from one another, not even distinguishable by their proper names as the gods of the Aryans, so that they can be considered as a confused totality. Marti (Gescichte der israelitischen Religion, p. 28), too, finds in ‘Elohim a trace of a wide-spread idea of a multitude of Deities, but he supposes that the word signified the sum of the divine beings that inhabited any given place. Baethgen (op. cit., p. 287), F. C. Baur (Symbolik und Mythologie, I, 304), and Hellmuth-Zimmermann (Elohim, Berlin, 1900) make ‘Elohim an expression of power, grandeur, and totality. Lagrange (op. cit., p. 78) understands ‘Elohim in the sense that even the Semitic races need distinct units before they have a sum, and distinct parts before they arrive at a totality. Moreover, the name ‘El is prior to ‘Elohim (op. cit., p. 77 sq.), and ‘El is both a proper and a common name of God. Originally it was either a proper name and has become a common name, or it was a common name and has become a proper name. In either case, ‘El, and, therefore, also its derivative form ‘Elohim, must have denoted the one true God. This inference becomes clear after a little reflection. If ‘El was, at first, the proper name of a false god, it could not become the common name for deity any more than Jupiter or Juno could; and if it was, at first, the common name for deity, it could become the proper name only of that God in whoseAggregate

Patrick Ryan.

Elphin (Elphinium), Diocese of, suffragan of Tuam, Ireland, a see founded by St. Patrick. All the known facts respecting its first bishop are recorded in two important memorials of early Irish hagiography, the “Vita Tripartita” of St. Patrick, and the so-called “Patrician Documents” in the “Book of Armagh” (q. v.). On his missionary tour through Connacht, which he entered by crossing the Shannon at Drumbohan, near Battlebridge, to the parish of Ardcarne, in 434 or 435, St. Patrick came to the territory of Coreogbailain, in which was situated the place now called Elphin. The chief of that territory, a noble Druid named One, of the royal Connacian race of Hy-Briuin, gave land, and afterwars his castle or fort, to St. Patrick, who thereon founded a church and monastery. The place, which had hitherto been called, from its owner’s name, Emlagh-Ono, received the designation of Elphin, which signifies “rock of the clear spring”, from a large stone raised by the saint from the well opened by him in this land and placed on its margin, and the copious stream of clear water which flowed from it and still flows through the street of Elphin. There St. Patrick built a church called through centuries Tempall Phadraig, i.e., Patrick’s church. He established here an episcopal see, and placed over it St. Assicus as bishop, and with him left Bif, a bishop, son of the brother of Assicus, and Cipin, mother of the St. Patrick also founded at Elphin an episcopal monastery or college, over the place, the two monasteries founded by him, and placed Assicus over it, in which office he was succeeded by Bif. Both were buried at Raccoon, in Donegal, where St. Patrick built a church and a habitation for seven bishops. The “Septem episcope di Racoone” are invoked in the Festology of Ængus the Culdee (q. v.).

The first bishop of Elphin is described in the “Book of Armagh” as the “cord”, i.e. the wight or goldsmith of St. Patrick; and he made chalices, patens, and metal book-covers for the newly founded churches. Following the example of their masters, the successors and spiritual children of St. Assicus founded a school of art and produced beautiful objects of Celtic workmanship in the Diocese of Elphin. Some of these remain to the present day, objects of interest to all who see them. The famous Cross of Cong (see CROSS, undoubtedly one of the finest specimens of its age in Western Europe, was (as the inscription on it and the Annals of Innisfallen testify) the work of Maillia MacEgan, successor of St. Finian of Clooneraigh near Elphin, in the County Roscommon, and was made at Rosemonan under the superintendence of Domhnall, son of Flannan O’Duffy, successor of Conan and Kieran, abbots of Rosemonan and Clonmacnoise, and Bishop of Elphin. It is held that the exquisite Ardagh Chalice, which was given to Clonmacnoise by Turlough O’Conor, and was stolen thence by the Danes, was made, if not by the artist, at least in the same school at Rosemonan. The Four Masters record (1166) that the shrine of Manchan

Elphege (or Alphege), Saint, b. 954; d. 1012; also called Godwine, martyred Archbishop of Canterbury, left his widow mother and patrimony for his monastery of Deerhurst (Gloucestershire). After some years as an anchorite at Bath, he there became abbot, and (19 Oct., 981) was made Bishop of Winchester. In 984 Elphege administered confirmation to Olaf of Norway at Andover, and it is suggested that his patriotic spirit inspired the decrees of the Council of Eham. In 988, with the consent of Canterbury, he went to Rome for the pallium. At this period the land was much harried by the Danes, who, towards the end of September, 1011, having sacked and burned Canterbury, made Elphege a prisoner. On 19 April, 1012, at Greenwich, his captors, drunk with wine, and enraged at ransom being refused, pelted Elphege with bones of oxen and stones, till one Thurm discharged him. He died a martyr. After his death, in 1013, his body, which was in St. Paul’s (London), was translated by King Canute to Canterbury. His principal feast is kept on the 19th of April; that of his translation on the 4th of June. He is sometimes represented with an axe cleaving his skull.

and of Maithil (Mohill) was covered by Rory O'Conor, and an embroidery of gold placed over it by him in as good style as relic was ever covered in Ireland. It is, therefore, fair to conclude that this beautiful work was also executed in the school of art founded by St. Assisi in the Diocese of Elphin. Within four miles of the present town of Elphin is Ratherothagoon, the famous palace of Queen Meave and the Connaught kings; Relig-na-Righ, the Kings' Burial Place; also the well of Ogulla, or the Virgin Monument, the scene of the famous conversion and baptism of Aithne (Eithne) and Fideln, the daughters of Leogham, monarch of Ireland in the time of St. Patrick. Ware states that after the union with Elphin of the minor sees of Roscommon, Ardearne, Drumcliffe, and other bishoprics of less note, finally effected by the Synod of Kells (1152), the see was esteemed one of the richest in all Ireland, and had about seventy-nine parish churches. The Four Masters describe its cathedral as the "Great Church" in 1235, and speak of the bishop's court in 1258. It had a dean and chapter at this time, as we learn from the mandate of Innocent IV, sent from Lyons, 3 July, 1215, to the Archbishop of Tuam, notifying him that the pope had annulled the election of the Provost of Roscommon to the See of Elphin, and ordering him to appoint and consecrate Archdeacon

7661. The present chapter consists of a dean, archdeacon, treasurer, chancellor, theologian, penitentiary, and four prebendaries. The parishes number 33, parish priests and curates 100. There is a convent of Dominicans at Sligo. The female orders in the diocese are: Ursulines, Sligo; Sisters of Mercy, in various places; Franciscan Missionaries, Claret, at Loughlyn. To the convents are attached schools attended by 2500 girls. Three of them have also industrial schools for orphan and homeless children. The Ursulines conduct a boarding-school for young ladies. The diocesan seminary is the college of the Immaculate Conception at Sligo. The Marist and Presentation Brothers teach large schools. The cathedral of the diocese at Sligo, an early Romanesque structure, simple and massive, was erected by Most Rev. Dr. Gilly, and consecrated in 1897. He also built St. Mary's Presbytery, and the College of the Immaculate Conception, Sligo. These, with a Temperance Hall, form a group of ecclesiastical buildings worthy of their beautiful scenic surroundings.

Bishop Gilly was succeeded, 24 March, 1895, by the Most Rev. John Joseph of Arandas, O'Cann, the last bishop of Sligo, the ancient episcopal see of Riverstown, County Sligo, in 1856. He was educated at the Marist College, Sligo, and Summerhill College, Athlone, and entered Maynooth in 1876, where he spent two years on the Dumboye Establishment. In 1883 he was appointed professor in the Diocesan College, Sligo, and in 1887 professor of English Literature and French in Maynooth College, which office he held until he was made Bishop of Elphin.

Elusa, a titular see of Palestine Tertia, suffragan of Petra. This city is called Χελώσ in the Greek text of Judith, i. 9. It is also mentioned by Pline, v, xv, 10 (in Isidore), Peutinger's Table; Stephanes Byzantius (as being formerly in Arabia, now in Palestine Tertia), St. Jerome (in Isiavm, v, xv, 4), the pilgrim Theodosius, Antoninus of Piacenza, and Joannes Moschus (Pratum Spirituale, exlv). In the fourth century, as is to be learned from St. Jerome's life of St. Hilarian, there was at Elusa a great temple of Aphrodite; the saint seems to have introduced Christian doctrine of "Vita Hilarianis" in P. (c. XVIII, 41). Early in the following century a Bishop of Elusa, after consecrating the son of St. Niaus, who had been carried off from Mount Sinai by the Arabs, ordained both him and his father (P. G., LXXIX, 373-93). Other bishops known are Theodulus, 431; Aretas, 451; Peter, 518; and Zenobius, 530 (Lequien, Or. christ., i, 735). Today the ruins of the city are seen at El-halasa (Khalasa), about nineteen miles south of Bracase, on a large plain belonging to nomad tribes. Many inscriptions have been found there (Revue Biblique, 1905, 246-58, 253-55). In the vicinity, according to the Targums, was the desert of Sur with the well at which the angel found Agar (Gen., xvi, 7). (See Revue Biblique, 1900, 367).

The ancient See of Elusa (Eunu) in Gaul was united with that of Auch (q. v.) probably in the ninth century.

396

ELY

The exact year in which it was held is a matter of controversy upon which much has been written. Some copies of its Acts contain a date which corresponds with the year 321 of our reckoning; by some writers the council has accordingly been assigned to that year. Hardouin suggests 313, Mansi 309, and Hefele 305 or 306. Recent opinion (Duehemus, see below) would put the date considerably earlier, from 309 to 313, consequently preceding to the persecution of Domitius, but whether the record of the council was the famous Iunius of Cordova. Twenty-six priests are also recorded as sitting with the bishops. Its eighty-one canons were, however, subscribed only by the bishops. These canons, all disciplinary, throw much light on the religious and ecclesiastical life of Spanish Christians on the eve of the triumph of Christianity. They deal with marriage, baptism, idolatry, fasting, excommunication, the cemeteries, usury, vigils, frequentation of Mass, the relations of Christians with pagans, Jews, heretics, etc. In canon xxxiii we have, says Hefele (op. cit. below), the oldest positive ecclesiastical ordinance concerning the celibacy of the clergy. Canon xiii exhibits the institution of nuns (virginum Deo sacrae) as long familiar to Spain, and the architecture (non debere ne quod coluit et adoratorem in parietibus depingat) has often been urged against the venera-
tion of images as practised in the Catholic Church. Buterim, de Rossi, and Hefele interpret this prohibition as directed against the use of images in over-ground churches only, lest the pagans should carica-
ture them (see Vn Fumk in cdl. et placidchatae, 1880). Dom Leclereq opine that the council did not pro-
nounce as to the licety or non-licetiy of the use of images, but as an administrative measure simply forbid
bade them, lest new and weak converts from paganism should incur thereby any danger of relapse into idolatry, or be scandalized by certain superstitious excesses in no way approved by the ecclesiastical authority. (See Von Fumk in cdld. et placidchatae, 1880.)

Arthur S. Barnes.

ELY (ELIA OR ELYS), ANCIENT DIOCESE OF (ELI-

ENSIS), in England. The earliest historical notice of Ely is given by Venerable Bede who writes (Hist. Ecl., IV, xix): "ELY is in the province of the East-Angles, a country of about six hundred families, in the nature of an island, enclosed either with marshes or waters, and therefore it has its name from the great alth. They have one bishop, named Ely. This district was assigned in 649 to Etheldreda, or Audrey, daughter of Anna, King of the East Angles, as a dowry on her marriage with T orange of the South Gir
d. After her second marriage to Egfrid, King of Northumbia, she became a nun, and in 673 returned to Ely and founded a monastery on the site of the present cathedral. As endowment she gave it her entire prinicalty of the isle, from which subsequent Bishops of Ely derived their temporal power. St. Etheldreda died in 679, and her shrine became a place of pilgrimage. In 870 the monastery was destroyed by the Danes, having already given to the Church four sainted abbess, Sts. Etheldreda, Sexburga, Er-

menilda, and Werburga. Probably under their rule there was a community of monks as well as a convent of nuns, but when in 970 the monastery was restored by King Edgar and Bishop Ethelwold it was a foundation for monks only. For more than a century the monastery flourished, till about the year 1105 Abbot Richard suggested the creation of the See of Ely, to relieve the enormous Diocese of Lincoln. The pope's brief erecting the new bishopric was issued 21 Nov., 1108, and in Oct., 1109, the king granted his charter, the first bishop being Harvey, formerly Bishop of Chichester. The cathedral church thus became known as the "conventional" cathedrals. Of this building the transepts and two bays of the nave already existed, and in 1170 the nave as it stands to-day (a complete and perfect specimen of late Norman work) was finished. As the bishops succeeded to the principality of St. Etheldreda they enjoyed palatine power and great resources.

Much of their wealth they spent on their cathedral, with the result that Ely can show many beautiful examples of Gothic architecture and style. The first great period, including two unique features, the unrivalled Galilee porch (1198-1215) and the central o-
culus (1329); the church then became one which rises from the whole breadth of the building and towers up until its roof forms the only Gothic dome in existence. The west-
tower (215 feet) was built between 1174 and 1197, and the octa-

ger was added to it in 1400. Of the cathedral as a whole it is true that "a more vast, magnificent and beautiful display of the different periods of the pointed style can scarcely be conceived" (Winkles, English Cathedrals, II, 36).

It is fortunate in having perfect specimens of each of the successive styles of Gothic architecture: the Early English Galilee porch, the Decorated lady-chapel (1231-1349), and the Perpendicular chantry of Bishop Akezek (c. 1500).

The original Catholic diocese was much smaller than the present Anglican see and consisted of Cambridgeshire alone, while even of this county a small part belonged to Norwich diocese. The bishops of Ely usually held high office in the State and the roll includes many names of famous statesmen, includ-
ing eight lord chancellors (marked *) and six lord treasurers (marked #). Two bishops—John de Font-
tibus and Hugh Belsham—were reputed as saints, but never received formal cultus; the former was commemorated on 19 June. The following is the list of bishops:

Harvey, 1109
Nigel, 1133†
Geoffrey Ridel, 1171
William Longchamp, 1189*
Eustace, 1198*
John de Fontibus, 1220†
Geoffrey de Burgh, 1225
Hugh Norwold, 1229
William de Kilkenny, 1255*
Hugh Belsham, 1257
John Kirby, 1258
William de Louth, 1290
Ralph Walpole, 1299
Robert Orford, 1302
John Keeton, 1310
John Hotham, 1316†
Simon Montague, 1337
Thomas de Lisle, 1345
Simon Langham, 1362*
John Barnet, 1395†
Elymos. See Barjeus.

Elséar de Sabran, Saint, Baron of Ansouis, Count of Ariano, b. in the castle of Saint-Jean de Robians, in Provence, 1255; d. at Paris, 27 September, 1255. After studying under his uncle William de Sabran, Abbot of St. Victor at Marseilles, he acceded to the wish of Charles II of Naples and married the virtuous Delphine of the house of Glandèves. He respected her desire to live in virginity and joined the Third Order of St. Francis, vowing with her in the practice of prayer, mortification, and charity towards the unfortunate. At the age of twenty he moved from Ansouis to Puy-Michel for greater solitude, and formulated for his servants rules of conduct that made his household a model of Christian virtue. On the death of his father, in 1309, he went to Italy and, after subduing by kindness his subjects who despised the French, he went to Rome at the head of an army and aided in expelling the Emperor Henry VII. The pope made him Prince of the Church and in 1317 went back to Naples to become the tutor of Duke Charles and later his prime minister when he became regent. In 1323 he was sent as ambassador to France to obtain Marie of Valois in marriage for Charles, edifying a worldly court by his heroic virtues. He was buried in the Franciscan habit in the church of the Minor Conventuals at Apt. The decree of his canonization was signed by his godson Urban V and published by Gregory XI. His feast is kept by the Friars Minor and Conventuals on the 27th of September, and by the Capuchins on the 20th of October.

Gregory Carr.

Emanationism, the doctrine that emanation (Lat. emanare, "to flow from") is the mode by which all things are derived from the First Reality, or Principle.

I. The term emanation, being itself a metaphor, has been used in many senses, and frequently by writers who are not emanationists. Others, without using the word, really hold the doctrine of emanation. Furthermore, emanationism is always interwoven with different opinions on various subjects; to separate it from these so as to assign its fundamental elements is more or less arbitrary. Taking emanationism in the sense commonly received to-day, it is not primarily a theological, but rather a cosmogonic system, not a direct answer to the question of the nature of God, but to that of the mode of origin of things from God. In general it holds that all things proceed from the same Divine substance, some immediately, others mediately. All beings form a series the beginning of which is God. The second reality is an emanation from the first. It is the third reality, etc. At every step the derived beings are less perfect than its source; but, by giving rise to other beings, the source itself loses none of its perfections. The first source, then, from which everything flows, remains unchanged; its perfection is neither exhausted nor lessened.

Emanationism is frequently referred to as a form of pantheism; but while this latter is primarily a system of reality, identifying all things as modes or appearances of the one substance, emanationism is concerned chiefly with the mode of derivation. Nor does it necessarily affirm the substantial identity of all things; it may assert the distinct, though dependent, substantiality of emanated realities. It is true that emanation is conceived by some in a pantheistic sense, as an immanent process, an expansion of the Divine substance, but by others in a metaphysical sense, as involving a separation of the derived beings from their source. Hence, not only some forms of pantheism are not emanationistic, but also many emanationists— with more or less consistency—reject pantheism. For those who admit that matter is eternal and exists independently of God, God cannot be more than an architect, who arranges pre-existing materials. In the doctrine of complete and absolute emanation from the highest spiritual substances to the lowest forms of matter, come from God as their origin, matter being the last and therefore most imperfect emanation. Some views, however, combine the theory of the eternity of matter with the theory of emanation.

The doctrine of creation teaches that all things are distinct from God, but that God is their efficient cause. God does not produce things from His own substance nor from any pre-existing reality, but by an act of His will brings them out of nothing. According to emanationism, on the contrary, the Divine substance is the reality from which all things are derived, not by any voluntary determination, but by a necessity of nature. And God does not produce all things immediately; the lower things are not derived directly from Him, but through necessary intermediaries. (It may be noted, however, that sometimes the word emanation is used in a broader sense including also creation. Thus St. Thomas: "Quaritur de modo emanationis rerum a primo principio qui dicitur creatio."—Summa, I, Q. xiv, a. 1.)

Evolution implies the change of one thing into something else, whereas a reality from which another emanates remains identical with itself. The process of evolution—at least in its totality—is generally considered as an ascent, a movement upwards towards a greater perfection. Emanation is a descent; it begins with the infinitely perfect, and at every step the emanating beings are less perfect, less perfect, less divine. The Infinite is postulated as a starting-point, instead of being the goal which the universe is ever striving to realize. Some comparisons used by emanationists, though only metaphors, and consequently misleading if taken literally, may give a clearer idea of the system. Things proceed from God as water from a spring or an overflowing vessel; as the stem, branches, leaves, etc., from the roots; as the web from the spider; as light or heat from the sun or a fire; as the doctrine from the teacher. It is easy to see that all such comparisons are deficient in many points. They are intended simply to illustrate that which is above human comprehension.

II. Vague indications of emanationism are found in ancient mythologies and religions, especially those of
EMANATIONISM

India, Egypt, and Persia. Thus in the Upanishads things are said to issue from their eternal principle as the web from the spider, the plant from the earth, the hair from the skin. But, while these and other comparisons and expressions may be interpreted in the sense of emanationism, they are not sufficiently explicit to serve as a basis for the assertion that such systems of philosophy or religion are emanationistic. Plato's teaching on this point is not much clearer. His thought was influenced by two distinct currents: Greek philosophy, especially Platonism, and Judaism. In his endeavour to reconcile them, he sometimes falls into inconsistencies, and his real position is doubtful. According to him, God, infinitely perfect, cannot act on the world immediately, but only through powers or powers which would be an act of the will, and therefore proceed from Him. The primitive Divine force is the Logos. Whether the Logos is a substance or only an attribute, remains an obscure point. From the Logos the Spirit (πνεῦμα) proceeds. It is the soul, or vivifying principle, of the world. Sometimes God is looked upon as the efficient and active cause of the world, sometimes also as immanent, as the one and the whole of all things.

The first clear and systematic expression of emanationism is found in the Alexandrian school of Neo-Platonism. According to Plotinus, the most important representative of this school, the first principle of all things is the One. Absolute unity and simplicity is the best expression by which God can be designated. The One is a totally indeterminate and indeterminate force, and the term ένος (enos) introduces both limitation and multiplicity. Even intelligence and will cannot belong to this Primal Reality, for they imply the duality of subject and object, and duality presupposes a higher unity. The One, however, is also described as the First, the Good, the Light, the Universal Cause. From the One all things proceed; not by creation, which would be an act of the will, and therefore incompatible with unity; nor by a spreading of the Divine substance as pantheism teaches, since this would do away with the essential oneness. The One is not all things, but before all things. Emanation is the process by which all things are derived from the One.

The infinite goodness and perfection "overflow," and, while remaining within itself and losing nothing of its own, it produces or conveys, without incompleteness or duality, all other things, and bears or transmits them forth from its own superabundance. Or again, as brightness is produced by the rays of the sun so everything is a radiation (πυρόφερωσις) from the Infinite Light. The various emanations form a series every successive step of which is an image of the preceding one, though inferior to it. The first reality that emanates from the One is the Nous (Nous), a pure intelligence, an immanent and eternal thought, putting forth no activity outside of itself. The Nous is an image of the One, and, coming to recognize itself as an image, introduces the first duality, that of subject and object. The Nous includes in itself the intellectual world, or world of ideas, the ἰδέαν τοῦ ἱεροῦ of Plato. From the Nous emanates the Soul of the world, which forms the intermediate or middle stage of the world of the senses. It is intelligent and, in this respect, similar to the ideal world. But it also tends to realize the ideas in the material world. The World-Soul generates particular souls, or rather plastic forces, which are the "forms" of all things. Finally, the soul and its particular forces beget matter, which is of itself indetermined and becomes determined by its union with the form. With a few variations in the details, the same essential doctrine of emanation is taught by Iamblichus and Proclus. With Plotinus, Iamblichus identifies the One with the Good, but assumes an absolutely first One, anterior to the One, and utterly ineffable. From it emanates the One; from the One, the intelligible world (ideas); and from the intelligible world, the intellectual world (thinking beings). According to Proclus, from the One come the unities (έννια), which alone are related to the world. From the unities emanate the triads of the intelligible essences (being), the intelligible-intellectual essences (life), and the intellectual essences (thought). These again are further differentiated. Matter comes directly from one of the intelligible triads.

Gnostics teach that from God, the Father, emanated numberless Divine, supra-mundane Angels. less and less perfect, which, taken all together, constitute the fullness (πλήρωμα) of Divine life. Wisdom, the last of these, produced an inferior wisdom named Achemoth, and also the psychical and material worlds. To denote the mode according to which an inferior is derived from a superior degree, Basiliides uses the term ἀναταξία (άναταξια), "ordering forth, projection". The Fathers of the Church and Christian writers, especially when they treat of the divine exemplarism or of the relations of the three Divine Persons in the Trinity, and even when they speak of the origin of the world, may use expressions that remind one of the theory of emanation. But such expressions must be interpreted according to the context, and one must take care to adhere. Pseudo-Dionysius follows Plotinus and the later Neo-Platonists, especially Proclus, frequently borrowing their terminology. Yet he endeavours to adapt their views to the teachings of Christianity.

God is primarily goodness and love, and other beings are emanations from His goodness, as light is an emanation from the Sun. The primordial reality is God as the first principle of being. Creation is a "procession". Creatures and God are one and the same reality. In creatures God manifests Himself. Hence the name theophania which Erigena gives to this process. (4) Nature, which neither creates nor is created, i. e. God as the term towards which everything ultimately returns.

Arabian philosophy—not to speak here of the various forms of Arabian mysticism—is in many points influenced by Neo-Platonism, and generally holds some form of emanationism, the emanation of the different spheres to which all things celestial and terrestrial belong. According to Alfarabi, from the First Being, conceived as intelligent (in this Alfarabi departs from Plotinus), the intellectual soul of the cosmic soul; and from the cosmic soul, matter. Avicenna teaches that matter is eternal and uncreated. From the First Cause comes the intelligentia prima, from which follows a series of processions and emanations of the various celestial spheres down to our own earthly sphere. For Averroes the intellect is not individual, but identical with the universal spirit, which is an emanation at a very early stage. Interesting is a comparison found in one of the later mystics, Ibn Arabi. Water that flows from a vessel becomes separated from it; hence this comparison is defective, for things that issue from God are not separated from Him. Emanation is illustrated by the comparison with a mirror, which receives the features of a man, although the man and his features remain united.

In Jewish philosophy, influences of Neo-Platonism
are apparent in Avicebron and Maimonides. In the Cabbala the famous doctrine of the Seferitho is essentially a doctrine of emanations. It was developed and systematized especially in the thirteenth century. The Seferitho are the necessary intermediaries between God and the universe, between the intellectual and the material world. They are divided into three groups: the first group are the emanations of the world of thought, the second group, also of three, the world of soul, and the last group, of four, the world of matter. III. Philosophically the discussion of emanationism supposes the discussion of the whole problem of the nature of God, especially of His simphlicity and infinity. The doctrine of the Catholic Church is contained in the definition of the dogma of the creatio ex nihilo by the Fourth Lateran Council and the Concord of the Vatican. The latter expressly condemns emanationism (I. De Deo rerum omnium creatore, can. iv.), and anathematizes those "asserting that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance.

The literature on this subject includes the works of the authors mentioned in the course of the article, works on history of philosophy, both general and of special schools and philosophies. Heine in Roulcens, fur prot. Thel., y. 329; Haged- mann in Kicnentz., y. 1431.

Emancipation, Catholic. See England; Roman Catholic Relief Bill.

Emancipation, Ecclesiastical.—In ancient Rome emancipation was a process of law by which a slave released from the control of his master, or a son liberated from the authority of his father (patria potestas), was declared legally independent. The earliest ecclesiastical employment of this process was in the freeing of slaves. The Church, unable to change at once the customs of the Romans, was sometimes able, by gradual substituted for slavery the milder institution of servitudo, and to introduce in place of the elaborate formalities of the emancipatio the simpler form of the manumissio in ecclesiis (Cod., De his, qui in ecclesiis manumittuntur, i. 13), in which a simple statement to that effect by the master before the bishop and the congregation sufficed. The second group of slaves was afterwards recognized as a preliminary to his ordination. (can. 1 (Synod of Poi- tiers, 1078, can. viii), X, De filiis presbyterorum ordindis vel non, i. xvii; e. iii (Fourth Synod of Toledo, 653, can. Lxxiv), X, De servis non ordindis et eorum manumissione, i. xviii. Similarly, the entrance of a slave into a religious order, i.e. the taking of solemn vows, or the professio religiosa, carries with it in canon law his emancipation from the legal authority (patria potestas) of the father. No positive law, however, can be quoted on this point, nor does modern civil legislation recognize this consequence of religious profession. The canon law recognizes another, purely imitative form of emancipation. This was the release of a pupil of a cathedral school, a dose reflection of the authority of the scholasticus, or head of the school. This emancipation took place with certain well-defined ceremonies, known in the old German cathedral schools as Kappengang.

The term emancipation is also applied to the release of a secular ecclesiastic from his diocese, or of a regular from obedience and submission to his former superior, because of plea of elevation. The petition requesting release from the former condition of service or submission, which the collegiate electoral body, or the newly elected person, must present to the former superior, is called postulatio simplex, in contradistinc- tion to the postulatio sollemnis, or petition to be held before the pope, in case some canonical impediment prevents the elected person from assuming the episcopal office. The document granting the dismissal from the former relations is called littera dimis- soriae or emancipatorius. It is not customary to use the term emancipation for that form of dismissal by which a church is released from parochial jurisdiction, a bishop from subordination (to his metropolitan, a monastery or order from the jurisdiction of the bishop, for the purpose of placing such person or body under the ecclesiastical authority next higher in rank, or for the purpose of placing the church under the self of the diocese. This act is universally known as exception (q. v.)).

Ender-days (corruption from Lat. Quatuor Tempora, four times) are the days at the beginning of the seasons ordered by the Church as days of fast and abstinence. They were definitely arranged and prescribed for the entire Church by Pope Gregory VII (1073-1085) for the Wednesday, Friday, and Saturday after 13 December (St. Lucia), after Ash-Wednesday, after Whitsunday, and after 14 September (Ex- altation of the Cross). The purpose of their introduc- tion, besides the general one intended by all prayer and fasting, was to thank God for the gifts of nature, to teach men to make use of them in moderation, and to assist the needy. The immediate occasion was the practice of the heathens of Rome. The Romans were originally given to agriculture, and their native gods belonged to the same class. At the beginning of the time for seeding and harvesting religious ceremonies were performed to implore the help of their deities: in June for a bountiful harvest, in September for a rich vintage, and in December for the seeding; hence their feria quater tempora and feriae vi- nales. The Church, when converting heathen na- tions, has always tried to sanction any practices which could be utilized for a good purpose. At first the Church in Rome had fasts in June, September, and December; the exact days were not fixed but were announced by the priests. The "Liber Pontificalis" ascribes to Pope Callistus (217-222) a law ordering the fast, but probably it is St. Victor (336-346) who 461 considers it an Apostolic institution. When the fourth season was added cannot be ascertained, but Gelasius (492-496) speaks of all four. This pope also permitted the conferring of priesthood and deaconship on the Saturdays of ember week—these were formerly given only at Easter. Before Gelasius the ember-days were known only in Rome, but after his time their obser- vance spread. They were brought into England by St. Augustine; into Gaul and Germany by the Carlovingians. Spain adopted them with the Roman Liturgy in the eleventh century. They were introduced by St. Charles Borromeo into Milan. The Eastern Church does not know them. The present Roman Missal, in the formulary for the Ember-days, retains in part the old practice of the Church. See Ember-days. The ordinary time: for the Wednesdays three, for the Satur- days, six, and seven for the Saturday in December. Some of these lessons contain promises of a bountiful harvest for those that serve God.

Emblems of the Saints. See Iconography.

Embolism (Greek: ἐμβόλιον, from the verb, ἐμβάλλω, "to throw in"), an insertion, addition, in-terpretation. The word has two specific uses in the language of the Church:

1. The prayer which, in the Mass, is inserted between the Our Father and the Fraction of the Bread: "Libera nos, quaesumus, Domine, ab omnibus maleis", etc. It is an interpretation of the last petition. The
embroidery may date back to the first centuries, since, under various forms, it is found in all the Occidental and in a great many Oriental, particularly Syrian, Liturgies. The Greek Liturgies of St. Basil and St. John Chrysostom, however, do not contain it. In the Mozarabic Rite this prayer is very beautiful and is recited not only in the Mass, but also after the Our Father at Lauds and Vespers. The Roman Church connected it with the Mass, which is not the case for the Byzantine Church. It is an ancient prayer for our salvation, which was inserted into the Liturgy of St. John Chrysostom, St. Peter, and St. Andrew. The name of St. Andrew is found in the Gelasian Sacramentary, so that its insertion in the Embolismus would seem to have been anterior to the time of St. Gregory. During the Middle Ages the provincial churches and religious orders added the names of other saints, their founders, patrons, etc., according to the discretion of the celebrant (see Micrologus).

II. In the calendar this term signifies the difference of days between the lunar year of only 354 days and the solar year of 365.2922 days. In the Alexandrian lunar cycle of 19 years, therefore, seven months were added, one each in the second, fifth, eighth, eleventh, thirteenth, sixteenth, and nineteenth (the embolistic) years. Each embolistic year had 13 lunar months, or 384 days. The lunar calendar was called Dionysian, because Dionysius Exiguus, in the sixth century, recommended the introduction of the Alexandrian Easter cycle of 19 years and computed it for 95 years in advance.

Embroiderie, Ecclesiastical.—That in Christian worship embroidery was used from early times to ornament vestments, is confirmed by numerous notices, especially the statements of the "Liber Pontificalis". For the period before the tenth century no account, even partially satisfactory, has come down to us, either of the methods of producing the embroidery or of the manner and extent of its use. What is incidentally said is not sufficient to make the matter clear, and no embroidery of this period for ecclesiastical use has survived. The extant examples are the remains of a manipule and of a stole dating from the beginning of the tenth century, in the museum of Durham cathedral, and fragments of an altar-cover of the same century in the National Museum at Rovenna. Vestments magnificently embroidered appeared at the beginning of the eleventh century, such as the chasuble completely covered with pictures embroidered in pure gold, which is preserved in the Bamberg cathedral; the coronation mantle of Hungary, originally also a chasuble; and other specimens of the highest importance not only on account of their costly material and the skill shown in their execution, but even more on account of the deep significance of the pictures. Up to the tenth century embroidery was the ornamentation mainly used for ecclesiastical purposes. To a certain degree gold embroidery was intended to take the place of figured materials woven with gold thread. Consequently, this embroidery so closely resembles fabrics woven with gold that on superficial examination it could easily be taken for such. At the same time, however, embroidery with silk threads was also practised, as shown by the splendid cope preserved at St. Paul in Carinthis.

Ecclesiastical embroidery reached its fullest development in the thirteenth, fourteenth, and the first half of the fifteenth centuries. In this period whatever the name of vestment, wherever means allowed, was more or less richly embroidered. The working materials were gold, silver, and silk threads, small disks and spangles cut with a stamp from silver, plain or gilded, spangles and small disks of enamel, real pearls, precious stones, paste diamonds, and coral. The embroidery of figures was the branch of the art most pursued, purely ornamental embroidery being regarded as of subordinate importance. The cope and chasubles covered with pictorial embroidery of a deeply religious character, the aurifraea (bands) magnificently ornamented with embroidered figures, that were laid on the liturgical clothing and other vestments, the covers and wall-hangings embroidered in striking pictorial designs, the stoles covered with wonderful needlework, all these examples of the art of the needle of that era, still found in large numbers in the church treasuries and museums, show that ecclesiastical embroidery has been never since regained. In the eleventh and twelfth centuries Sicily was famous for its ecclesiastical embroidery; in the thirteenth and fourteenth centuries the workshops of England were more noted than all others. In this latter period mention of English embroidery, called opus Anglicanum, is found in almost all inventories of the more important churches of England. Embroidery most frequently sent from England to other parts of Western Europe was a cope completely covered with a rich embroidery of figures on a background of vine arabesques or elaborate architecture, the background being worked in gold thread; examples of these cope are still preserved at St. John Lateran at Rome, Limbourg, Chambord, or Saumur, Salzburg, Saint-Bertrand-de-Comminges in France, and elsewhere. A large amount of superb ecclesiastical needlework, splendid specimen of which still exist, was also produced in Germany, France, and Italy; in the last-named country the work of Florence, Siena, Lucca, and Venice was especially noted. In the fifteenth century the finest ecclesiastical embroidery was made; the predominantly largely produced was of that kind in which couched gold thread was worked over with coloured silks. The best examples of this are the mass-vestments of the Order of the Golden Fleece preserved in the Hofburg at Vienna. With the close of the Middle Ages ecclesiastical embroidery began to decline. Instead of the flat, sitting-up, the mediaeval, the mosaic, or raised embroidery, which frequently degenerated into a purely formal high relief totally unsuited in character to ecclesiastical embroidery, there was a continually growing tendency to aim at brilliant effects and a stately magnificence. At the same time pictorial needlework was less and less in use, owing to the influence of secular embroidery. Needlework for church vestments was limited more and more to purely ornamental designs, taken chiefly from the plant world, and to certain symbolic designs. The art sank to its lowest depths both in design and technique at the commencement of the nineteenth century, during the so-called Biedermaier (honest citizen) period.

Ecclesiastical embroidery flourished in the various provinces of the Byzantine Empire. While the costly needlework produced there was naturally used mainly in the services of the Greek Church, still many pieces were brought into Western Europe. This Byzantine needlework did not fail to influence Western ecclesiastical embroidery. One of the finest examples of art needlework of the Byzantine Empire is the Middles Ages is the imperial dalmatic in the treasury of St. Peter's at Rome, erroneously attributed to the eleventh century; it is, in reality, a Greek sakkos (vestment of a Greek bishop or patriarch) worked, probably, in the latter half of the fourteenth century. At no period has ecclesiastical differed in its technique from secular embroidery. The same varieties of stitches and other art resources have been employed in both cases. No special ordinances have
ever been issued by the Church in regard to embroidery for vestments, either as to material, colour, use, or design. Good taste, however, requires that the embroidery should harmonize with the character and colour-effect of the vestment, and that it should not be too heavy, too crowded, or too stiff.

Joseph Braun.

Embroidery in Scripture.—It is probable that the Israelites learned the art of embroidery during their sojourn in Egypt. The ornamentation of woven fabrics, especially of linen, by needlework in threads of different colours, spun or drawn from various materials, such as wool, flax, or gold, was known to ancient nations. The Greek and Romans acquired the art from the East. The monuments of Assyria and Babylon represent the garments of kings and officials as highly ornamented with what are commonly regarded as embroideries, and specimens of embroidered work have been found in Egypt for tombs. In Ezek., xxvii, 7, mention is made of the "fine brodered linen" used for sails on the ship of Tyre. The first reference to embroidery in Scripture is found in the Book of Exodus (xxvi, 1, 31, 36) in the directions given to Moses concerning the curtains of the Tabernacle, the veil for the Ark, and the hanging in the entrance to the Holy of Holies. The Douay, following the Vulgate, does not distinguish between the two embroidered expressions שעיר (Ex., xxvi, 1, 31) and שעיר תפירה (Ex., xxvi, 36). The former is translated in the Revised Version by "the work of a cunning workman" and seems to refer to the weaving of figured designs from different coloured threads; the latter may have been real embroidery, or needlework, called in the later books שערית.

Besides the hanging at the entrance of the Tabernacle (Ex., xxvi, 30), the hanging in the entrance of the court (Ex., xxvi, 16) and the girdle of the high-priest (Ex., xxviii, 39; xxxix, 28) were the work of the embroiderer (עקר על), whereas in regard to the ephod (Ex., xxviii, 6; xxxix, 3) and the rational (Ex., xxviii, 15; xxxix, 8) the word שעיר is employed. Beseleel and Oholiab are mentioned as the workers of the Tabernacle work (Ex., xxxix, 35; xxxviii, 22, 23). The word is used of the embroidered garments or scarfs mentioned in the Canticle of Debbora (Judges, v, 30), and of the bride's apparel in Ps. xlv (Hob., xlv, 15), where according to the Hebrew text she is said to be arrayed in broderies of gold and raiment of needlework. The garments of the faithless spouse, the figure of Israel (Ezech., xxi, 10, 13, 18), were likewise embroidered. In Ezech., xxvi, 16, it is foretold that the princes of the sea shall put off their brodered garments, and brodered stuffs are mentioned among the merchandize of Tyre (Ezech., xxvii, 7, 16, 24).

In the Authorized or King James Version (Ex., xxviii, 4) one of the high-priest's garments is called "a brodered coat"; the Revised Version changed it to "a richly brodered coat". The Vulgate has "a straight linen garment" (lineam strickam in the Vulgate). The Hebrew word שעיר used here is not found elsewhere in Scripture. It is believed by some to indicate "a surface device of lustre upon one colour", similar to work still done in Damascus. Even in regard to the nature of שעיר which is translated "embroidery", and described as being put on cloth, as an ornamentation produced by sewing on to a stuff pieces of materials of other colours, others again as a fabric woven from threads of different colours.

Emerentiana, Saint, virgin and martyr, d. at Rome in the third century. The old Itineraries to the graves of the Roman martyrs, after giving the place of burial on the Via Nomentana of St. Agnes, speak of St. Emerentiana. Over the grave of St. Emerentiana a church was built which, according to the Itineraries, was near the church erected over the place of burial of St. Agnes, and somewhat farther from the city wall. In reality Emerentiana was interred in the cemeteryum majorum, not far from the cemeterium Agnetis. Armellini believed that he had found the original burial chamber of St. Emerentiana in the former cemeteryum. According to the legend of St. Agnes Emerentiana was her foster-sister. Some days after the burial of St. Agnes Emerentiana, who was still a catechumen, went to the grave to pray, and while praying she was attacked by the pangs of fever and killed with stones. Her feast is kept on 26 January. In the " Martyrologium Hieronymianum" she is mentioned under 16 September, with the statement: In cemeterio maior. She is represented with stones in her lap, also with a palm or lily.

Emery, Jacques-André, Superior of the Society of St-Sulpice during the French Revolution, b. 26 Aug., 1752, at Gex; d. at Paris, 28 April, 1811. After his preliminary studies with the Carmelites of his native town and the Jesuits of Macon, he passed to the Seminary of St. Ireneus at Lyons and completed his studies at St-Sulpice, Paris, where he became a member of the society of that name and was ordained priest (1758). He taught with distinction in the seminaries of Orleans and Lyons; at Lyons, too, he sustained the rights of the Holy See with firmness and ability, yet with due courtesy, before the archbishop, Mgr. de Montazet, and, later on, both of them, in the scene of the Revolution. On the recommendation of the archbishop, he was made superior of the seminary at Angers (1776), and later became vicar-general of the diocese, displaying in both capacities marked powers of governing. In 1782 he was elected Superior-General of the Seminary and Society of St-Sulpice. His rule began in the lax days preceding the French Revolution, and Father Emery showed himself indefatigable in his zeal for the reform of the seminaries and for the training of a clergy fit to cope with existing evils and prepared for the troublesome times which, to some extent, he foresaw. After the Revolution broke forth, he watched its terrible progress without despair; he was, perhaps, during that period, the coolest head among the churchmen of France. His wide acquaintance among the priests and bishops, his munificence and munificence and munificence, his thirty years of teaching and ruling in the seminaries, had been under his authority, and his position as administrator of the Diocese of Paris during the absence of the exiled archbishop, and as superior of St-Sulpice, brought many to him for advice. He was, says the historian Sicard, "the head and the arm" of the party whose counsels were marked by moderation and good sense; "a man who was rarely found in bread, yet frequently learning, in knowledge of his time, in the clearness of his views, in the calmness and energy of his decisions; the oracle of the clergy, consulted on all sides less by
EMESA

reason of his high position than of his superior wisdom. M. Emery was called by Providence to be the guide throughout the long interregnum of the episcopate during the revolution" (L'Anecien Clergé, III, 549). And Cardinal de Bausset declares that he was the "real moderator of the clergy during twenty years of the most violent storms."

The decisions of the Archbishopiscopal Council at Paris concerning the several oaths demanded of the clergy inspired by Emery, were accepted by a large number of priests, though reluctantly by others. To their acceptance was due whatever practice of cult remained in France during the Revolution; to their rejection was due, in large part, the cessation of worship and the opinion which came to regard the clergy as "the irreconcilable enemies of the republic." Emery did not, like many others, mistake purely political projects for vital questions of religion. He felt free to take the "Oath of Liberty and Equality", but only as concerning the civil and political order; he upheld the lawfulness of declaring submission to the laws of the Republic (30 May, 1795), and of promising fidelity to the Constitution (28 Dec., 1799). He lent his influence to Mgr. Spina in his efforts to obtain the resignation of the French bishops, according to the will of Pius VII (15 Aug., 1804). Their good intentions and acts, as far as the rights of the Church permitted, he stanch in his opposition to the Civil Constitution of the Clergy (1790). Public religious services were suspended during the Revolution, and the seminaries closed; St-Sulpice was taken over by the revolutionists, and Father Emery was imprisoned and several times narrowly escaped execution. His faith, age, and good humour sustained many of his fellow-prisoners and prepared them to meet death in a brave and Christian spirit; the gaolers, in fact, came to value his presence because it saved them annoyance from prisoners condemned to death. The closing of the seminaries in France led Father Emery, on the request of Bishop Carroll, to send some Sulpicians to the United States to found the first American seminary at Baltimore (St. Mary's, 18 July, 1791). The future religion of the country, he wrote to Father Nagot, the first superior, depended on the formation of a native clergy, which alone would be adequate and fit for the work before it. Despite the discouragements of the first years, he continued the supporter of the institution and welcomed the foundation of the college at Pigeon Hill, and later at Messrs. and their efforts to bring it to perfection.

At one time, however, Bishop Carroll feared the withdrawal of the Sulpicians, but his arguments and above all the advice of Pius VII convinced Father Emery that the good of religion in America required their presence.

After Napoleon came into supreme control, Father Emery re-established the Seminary of St-Sulpice. His defence of the pope against the emperor caused Napoleon to expel the Sulpicians from the seminary; this, however, did not daunt Father Emery, who defended the papal rights in the presence of Napoleon (17 March, 1811) and gained the emperor's admiration, if not his good will. "He was", remarks Scierd, "the only one among the clergy from whom Napoleon would take the truth." The death of Father Emery occurred a month later. He left many writings which have been published by Migne in his collection of theological works. They deal chiefly with the political-religious questions of the day. He is best remembered, perhaps, by his dissertation on the mitigation of the sufferings of the damned. He wrote also on Descartes, Leibniz, and Bacon, and published from their principles a de-Christianization of religion. While clearly perceiving the intellectual evils of his day and the necessary remedies, he did not himself possess the fertility and originality of intellect, or the peculiar genius needed to counteract the influence of the powerful minds which then ruled France and Europe.

EMIGRANT

EMIGRANT AID SOCIETIES.—Records of the early immigration to the North American colonies are indefinite and unsatisfactory. The first legislation regarding immigration enacted by the United States was on 2 March, 1819, when Congress provided that a record be kept of the number of the immigrants arriving from abroad, their ages, sex, occupations, and nativity. Ireland has always supplied a large proportion of those landed at American ports, the steady stream
commencing in the first years of the eighteenth century. These immigrants were then nearly all Presbyterian, few Catholics being among those taking passage prior to the Revolution. Arthur Young, in his "Tour in Ireland" (1767-79), declares that "the spirit of emigrating in Ireland appears to be confined to two circumstances, the Presbyterian religion and the linen manufacture. I heard of very few emigrants except among manufacturers of that persuasion. The Catholics never went; they seemed not only tied to the country, but almost to the parish in which their ancestors lived." In this connection is the "Representatives of the Freemen of the Province of Pennsylvania and the Three Lower Counties," Lieutenant Governor Patrick Gordon declared, on 17 December, 1728, that he had "positive orders from Britain to provide by proper law against these crowds of Foreigners who are yearly power'd upon us. It may also require thoughts to prevent the importation of Irish Papists and convicts, of whom some of the most notorious, I am credibly informed, have of late been landed in this River."

The earliest American organization for the care of immigrants was the Charitable Irish Society of Boston, Massachusetts, founded 17 March, 1737. Says its charter: "Several Gentlemen, Merchants and Other Persons of the City of Boston, from Ireland, from an Affectionate and Compassionate concern for their Countrymen in these Parts, who may be reduced by Sickness, Shipwreck, Old age and other Infirmities and unforeseen Accidents, Have thought fit to form themselves into a Charitable Society for the Relief of such of their poor and indigent Countrymen."

The Managers, according to the rules, were to be "Natives of Ireland," and "To relieve or assist the poor of the British Dominions of Irish Extraction being Protestants and inhabitants of Boston." This anti-Catholic rule did not last long, for representatives of the Faith were members of the Society in 1742, and to-day they are in the majority on its roll.

In Philadelphia the Hibernian Society for the Relief of Emigrants from Ireland was organized on 3 March, 1790. Mathew Carey was its secretary, and Commodore John Barry, Jasper Molygan, George Meade, and other Catholics prominent in those days were among its first members. The Hibernian Society for "the aid of distressed Irishmen and their descendants" was started at Savannah, Georgia, in March, 1812, and emigration from Ireland being constant, the American Colonization Society, founded in New York, notably the Emigrant Assistance Society in 1825, with Dr. William James Maeneven, one of the United Irishmen of 1798, at its head. It was the canal- and railroad-building era, and the aim of this society was to take care of the new arrivals and direct them where to find employment. It was the predecessor of the Irish Emigrant Society founded, also in New York, by a group of the old editors of the New York Mercury, with Gregory Dillon as its first president.

Out of this organization ten years later came the Emigrant Industrial Savings Bank, which in subsequent years developed into one of the greatest financial institutions in the country.

As New York was the great entrepot for aliens, the Legislature, by act of 5 May, 1848, created the Board of Directors of the State of New York to protect from fraud and imposition alien passengers arriving at New York, and to care and provide for the helpless among them. The president of the Irish Emigrant Society was ex-officio a member of this commission, and at Castle Garden, which became the official landing depot, its agents were recognized officially in their arrangements for the care of the incoming immigrant. In addition to looking out for the welfare of the immigrants, a banking department was organized by the society to transmit money to Europe, to secure passage tickets over the ocean and the railways, to exchange the money brought in by the immigrants, and safeguard their material interests generally. In this way many millions of dollars, as well as many millions of immigrants, have been safely cared for through the instrumentality of this society. The discounts and commissions in these financial transactions paid its expenses and left a surplus which is given in charity, so that it will benefit either the immigrants or their descendants. The law by which the State of New York established the Commissioners of Emigration was declared unconstitutional in 1830, and the State was forced to abandon the unconstitutitional regulation of commerce, and an usurpation of the powers of Congress. In the twenty-nine years of its existence it had collected by a head-tax from the immigrants the sum of $11,239,329. The responsibility of caring for the immigrants was then taken over by the Federal Government, in July, 1891.

The State commission was abolished, Castle Garden abandoned, and the United States landing station established on Ellis Island under the supervision of the Treasury Department. Here, as under the State control, the representatives of the Emigrant Aid Societies are accorded all facilities for protecting and assisting those who need their help in starting out in the New World.

For the protection of Irish immigrant girls the Missions of Our Lady of the Rosary was founded in New York in 1851, through the efforts of Charlotte Grace O'Brien, daughter of William Smith O'Brien, the Irish patriot of 1848. At her solicitation—she was not until several years later a Catholic—Cardinal McGlinsky, the Rev. John J. Riordan chaplain at Castle Garden, and he began the work of the mission and exercised a most salutary influence over the shipping companies to protect the girls on board their vessels, and watches over and assists the girls at the landing depot. From its opening to the end of 1908, fully 100,000 girls were cared for by the mission, all free of charge. It is supported by voluntary contributions.

The increase of immigration having thus been recognized as a fact calling for charitable action, the German Society of New York offered advice and systematic assistance to German immigrants, but took no interest in their religious welfare. Its president was ex officio a member of the State Emigration Commission. In 1866, at the Catholic Congress held at Trier, Peter Paul Cahensly, a prominent merchant of Limburg, Prussia, suggested the establishment of the St. Raphael Society for the systematic protection of German immigrants, with the aid of the State government. The German Emigration Law of 1849 was repealed, and a law passed in 1867 to aid and protect the emigrants. Theus, the State Government, the German emigrants, and the American Government agreed in the policy of the Societies.

The increase of immigration having thus been recognized as a fact calling for charitable action, the German Society of New York offered advice and systematic assistance to German immigrants, but took no interest in their religious welfare. Its president was ex officio a member of the State Emigration Commission. In 1866, at the Catholic Congress held at Trier, Peter Paul Cahensly, a prominent merchant of Limburg, Prussia, suggested the establishment of the St. Raphael Society for the systematic protection of German immigrants, with the aid of the State government. The German Emigration Law of 1849 was repealed, and a law passed in 1867 to aid and protect the emigrants. Theus, the State Government, the German emigrants, and the American Government agreed in the policy of the Societies.
tained natives of France, Poland, Bohemia, and other Slavonic sections of the Austro-Hungarian Monarchy. The St. Raphael Society has its agents at Bremen, Hamburg, Antwerp, Rotterdam, Havre, Liverpool, and London, representatives in every diocese in Germany, and correspondents in all the large cities of the United States and of South America. The Austrian Society of New York was founded in 1898 by a number of former Austrians to aid the newly arrived immigrants at Ellis Island. It employs two agents at Ellis Island and runs a home under its supervision for the purpose of boarding them free of charge. Those who can afford it pay a nominal fee. Advice and help to employment is given free only to the newcomers, but also to Austrians who have been in the country for any length of time. The Society is supported by the dues of the members and by donations including an annual subsidy of $5000 from the Austrian Government. Among the members are twenty-one priests. The Austrian Society employs three agents at Ellis Island; one of them is the missionary who pleads before the board of inquiry for the unfortunate detained, cares for the sick, and looks after the spiritual needs of all. In the ten years of its existence 721,631 persons were entertained at Ellis Island, and now over 2000 inmates are housed there. As a result, the character of the home and of the Austrian Society at large, as originally intended by the Emperor of Austria, it has from the start been chiefly interested in the Catholic immigrants, but all others are welcome to its care and facilities.

Polish priests ministering in the Eastern section of the United States established at New York, in 1893, the St. Joseph's Society, for the aid and care of the immigrants of that nationality. Its chaplain and agents work on the same lines as those of other societies of the Government landing station. Its home is in charge of the Filicic Sisters, and its accommodations are free. Its support is derived from voluntary contributions and a yearly grant of $1000 from the Austrian Government on account of the Poles from Galicia who may seek the assistance of the home.

Under the auspices of the Fathers of Mercy the Jeanne d'Arc Home for the protection of French immigrant women was opened in 1895, in New York. It was founded through the generosity of Miss C. T. Smith, who gave the home as a memorial of her mother, Mrs. W. H. Smith. The Sisters of Divine Providence took charge of it, and they have since managed its affairs. Since its establishment 6500 women have received its care. It is supported by voluntary contributions. The inmates pay if they can, most of them are taken care of gratuitously. Employment is found for them and they are taught useful domestic arts. As part of the great work in behalf of Italian immigrants undertaken by Bishop Scalabrini of Piacenza, Italy, members of his Congregation of St. Charles Borromeo established the Society of St. Raphael for Italian Immigrants at New York in 1891. Its home is managed by the Sisters of Charity (Paillotte). Only women and children are kept there; men are given meals and advice, but no lodging. The chaplain and agent meet the immigrants at Ellis Island. A branch of this society was organized at Boston, in 1902. In December, 1908, Archbishop Blank of New Orleans appointed an Italian priest as chaplain to look after immigrants from Italy and open a home for them. Work here is carried on by the St. Vincent de Paul Society.

The Society for Italian Immigrants is a secular corporation organized in New York in 1901 for the aid and protection of immigrants. It has no religious affiliations. The Italian government makes it an annual appropriation equal to the amount received from all other sources, and its income is derived from the subscriptions of those interested in philanthropic work. Its home has accommodations for 200. It has founded four schools in Italian labour camps to prevent the demoralization usually attending those communities. The enormous volume of Italian immigration during recent years may be realized from the fact that from 1880 to 1906 it amounted to 2,500,000. In 1857 it was about 1000; in 1880 it was 12,000; in 1907, 258,000. It is estimated that 250,000 aliens arrived in the United States between 1789 and 1820. From 1820, when the official records begin, to the end of the fiscal year, 31st Dec. 1906, the number of immigrants arriving was 25,985,237.

The Association for the Protection of Belgian and Dutch Immigrants was organized 4 June, 1907, at Chicago, Illinois, by priests in charge of congregations in various sections of the United States, made up of those nationalities. Other priests interested in the spiritual and temporal welfare of the Catholic immigrants from Belgium and Holland assisted in its progress.

Emmanuel (Septt., άμμανα); Ileb. άμμαν: A. V., Emmanuel signifies "God with us" (Matt., i, 23), and is the name of the child predicted in Is., vii, 14: "Behold a virgin shall conceive, and bear a son, and his name shall be called Emmanuel." The various views advanced as to the identity of the child cannot be fully explained and discussed here; the following observations must suffice: (1) The child is not a merely ideal or metaphorical person; he cannot be identified with the regenerate people of Israel (Hoffmann), nor with religious faith (Porter), for "he shall eat butter and honey". (2) The Prophet does not refer to an Edinburgh child, but to the Messiah's son (cf. Rostra, Kuenen, W. R. Smith, Smend, Duhm, Cheyne, Marti); both text and context require this. (3) The child is not a son of the Prophet Isaias (cf. Hitzig, Reuss); Is. vii, 1-4, shows that the Prophet's son has a name different from that of Emmanuel. (4) The child is not a son of Achatz (cf. Lagarde, Mercador); for Ezeciah did not possess the most essential characteristics of Emmanuel as described by Isaias. (5) The Emmanuel is the Messiah foretold in the other prophecies of Isaias. In Is., viii, 8 Palestine is called the land of Emmanuel, though in other passages it is termed the land or the inheritance of Yahweh (Is., xiv, 2, 25; lxviii, 6; Osee, ix, 3; Jer., ii, 7; xil, 14; etc.), so that Emmanuel and Yahweh are identical. Again, in the Hymn of Isaias (xli, 9, 10), the Prophet proclaims the fulness of all the blissful schemes against Palestine, because of Emmanuel. In ix, 6, 7, the characteristics of the child Emmanuel are so clearly described that we can doubt no longer of his Messianic mission. The eleventh chapter pictures the Messianic blessings which the child Emmanuel will bring upon the earth. Moreover, St. Matthew (i, 23) expressly identifies the Emmanuel with Jesus the Messiah, and Christian tradition has constantly taught the same doctrine.

The question why the Messias was called Emmanuel, or "God with us", admits of a double answer; the name is a pledge of Divine help, and also a description of the nature of the Messias. King Achatz had not believed the Prophet's first promise of deliverance from
his enemies, Rasin, King of Syria, and Phacee, King of Israel (Is., vii, 1–9). And when the Prophet tried a second time to test his confidence, Achaz refused to ask for the sign which God was ready to grant in confirmation of the prophetic promise (vii, 10–12). The Prophet, therefore, forces, in a way, King Achaz to confide in God, showing that the Messias, the hope of Israel and the glory of the house of David, implies by his very name "Emmanuel", or "God with us", the Divine presence among his people. A number of the Fathers, e. g. St. Irenaeus, Laetantius, St. Epiphanius, St. Chrysostom, and Theodoret, regard the name "Emmanuel", not merely as a pledge of Divine assistance, but also as an expression of the mystery of the Incarnation by virtue of which the Messias will be "God with us" in very deed.

Emmaus, a titular see in Palæstina Prima, suffragan of Cesarea. It is mentioned for the first time in 166–165 B.c., when Judas Machabeus defeated there the army of the Gogias (I Mach., iii, 40, iv, 25). A little later the Syrian general Bacchides fortified and garrisoned it (Josephus, Ant. Jud., XIII, i, 3). In a.d. 4, during the tradition of Athronigus against the Romans, the inhabitants left their city, which was, nevertheless, destroyed by Varus (Josephus, "Ant. Jud." XVII, x, 7–9; Idem, "Bel. Jud.", ii, iv, 3). It soon rose again, for Josephus (Bel. Jud., III, iii, 5) and Pliny (Hist. Nat., XIX, 25) rank it amongst the "top-archies" of the country. Vespasian took it at the beginning of his campaign against the Jews, stationed a legion in the neighbourhood, and named it Nicopolis (Sosom., Hist. eccl., V, xxi). According to Eusebius and St. Jerome, this name was given to it only in 223, by Julius Africanus, his governor and most illustrious son, and this is the name commonly used by Christian writers. Here a spring in which Christ is said to have washed His feet, and which was reputed to cure all diseases, was closed up by order of Julian the Apostate (Sosom., Hist. eccl., V, xxi). Four Greek bishops are known, from the fourth to the sixth century (Lequien, Or. christ., III, 393). At the beginning of the Arab conquest the plague broke out in the city, and the inhabitants fled; they must have soon returned, however, for Emmaus remained a very important town. It was the last station of the Crusaders on their way to Jerusalem in June, 1099. Eubel (Hierarch. cath., II, 223) has a list of eleven Latin titular bishops, but only for the fifteenth century. To-day 'Am'was (the native name) is a Mussulman village about eighteen miles from Jerusalem, on the road to Jaffa. There are still visible ruins of a beautiful basilica built in the fourth or the fifth century, and repaired by the Crusaders. Near 'Am'was, at El-Atroun, the Trappists founded a priory in 1890.

In the opinion of many 'Am'was is the Emmaus of the Gospel (Luke, xxiv, 13–35), where Christ manifested Himself to two of His Disciples. Such is, indeed, the tradition of the Church of Emmaus that, as early as the fourth century by Eusebius of Cesarea, Titus of Bostra, and St. Jerome, a tradition confirmed by all pilgrims, at least to the time of the Crusades; it may even date back to the third century, to Julius Africanus and Origen. It is also supported by many Biblical commentaries, some of which are as old as the fourth or the fifth century; in these the Emmaus of the Gospel is said to have stood in 1099, at Jerusalem, the modern 'Am'was being at 176 stadia. In spite of its antiquity, this tradition does not seem to be well founded. Most manuscripts and versions place Emmaus at only sixty stadia from Jerusalem, and they are more numerous and generally more ancient than those of the former group. It seems, therefore, very probable that the number 180 is a correction of Origen and his school to make the Gospel text agree with the Palestinian tradition of their time.

Moreover, the distance of 160 stadia would imply about six hours' walk, which is inadmissible, for the Disciples had only gone out to the country and could return to Jerusalem before the gates were shut (Mark, xvi, 12; Luke, xxiv, 33). Finally, the Emmaus of the Gospel is said to be a village, while 'Am'was was the flourishing capital of a "top-archy". Josephus (Ant. Jud., VII, vi, 6) mentions at sixty stadia from Jerusalem a village called Ammaus, where Vespasian and Titus stationed 800 veterans.

S. Vailhè.

Emmeram, Saint, Bishop of Poitiers and missionary to Bavaria, b. at Poitiers in the first half of the seventh century; martyred at Asenheim (Bavaria) towards the end of the same century. Of a noble family of Aquitaine, he received a good education and was ordained priest. According to some authors Emmeram copied the See of Poitiers, but this cannot be verified, for his name does not appear among the Bishops of Poitiers. He probably held the see for a short time, from the death of Dido (date unknown) to the episcopate
of Ansoaldus (674). Having heard that the inhabitants of Bavaria were still idolaters, he determined to carry the light of the Faith to them. Ascending the Loire, laboring to cross it, he continued his journey along the Danube, he reached Ratisbon in a region then governed by the Duke Theodo. For three years he laboured in Bavaria, preaching and converting the people, acquiring also a renown for holiness. He then turned his steps towards Rome, to visit the tombs of Sts. Peter and Paul, but after a five days’ journey, at a place now called Kleinhefendorf, he was arrested by the order of the Duke of Bavaria who tortured him cruelly. He died shortly afterwards at Aschheim, about fifteen miles distant. The cause of this attack and the circumstances attending his death are not known. According to the legend related by Aribio, Bishop of Freising, the first to write a life of St. Emmeram, Ota, daughter of the Duke of Bavaria, who had been seduced by Sigibaldus, an important personage of her father’s court, fearing her father’s wrath, confessed her fault to the bishop. Moved with compassion, he advised her to name herself, whom every one respected, as her seducer, and it was in consequence of this accusation that Theodo ordered him to be followed and put to death. The improbability of the tale, the details of it, are fixed on the absence of any certain testimony, and the fantastic account of the prodigies attending his death show that the writer, infected by the pious mania of his time, simply added to the facts imaginary details supposed to redound to the glory of the martyr.

All that is known as to the date of the saint’s death is that it took place on 22 September, some time before St. Rupert’s arrival in Bavaria (996). At Kleinhefendorf, where he was tortured, there stands to-day a chapel of St. Emmeram, and at Aschheim, where he died, is also a martyr’s chapel built in his honour. His remains were removed to Ratisbon and interred in the church of St. George, from which they were transferred about the middle of the eighth century by Bishop Gawibaldus to a church dedicated to the saint. This church having been destroyed by fire in 1642, the saint’s body was found under the altar in 1645 and was encased in a magnificent reliquary. The relics, which were canonically recognized by Bishop Ignaz de Senestrez in 1833, are exposed for the veneration of the faithful every year on 22 September. It is impossible to prove that Emmeram occupied the See of Ratisbon, for the first authentic list begins with the above-mentioned Gawibaldus, who was consecrated by St. Boniface in 739 and died in 761.

Léon Clugnet.

Emmeram, Abbey of St. Benedictine monastery at Ratisbon (Regensburg), named after its traditional founder, the patron saint of the city. The exact date of foundation is unknown. St. Emmeram flourished in the middle of the seventh century and 652 is given by most authorities as the principal date in the history of this monastery. Its beginnings were connected with a chapel in which certain much venerated relics were preserved, and which, in 697, was enlarged and beautified by Theodo, Duke of Bavaria, who built at the same time a new monastery for Benedictine monks, of which Appolonus was first abbot. It was still further enlarged by Childebert I about the year 800 and endowed with extensive possessions and many privileges. When St. Boniface, in 739, divided Bavaria into four dioceses, the first Bishop of Ratisbon fixed his see at the Abbey of St. Emmeram, but later on it was removed by a subsequent bishop to the old Cathedral of St. Stephen, which stands beside the present one. In 830, the then bishop obtained from Louis, King of Bavaria, the administration of the abbey for himself and his successors, and for upwards of a hundred years the Bishops of Ratisbon ruled the monastery as well as the diocese, but in 968 St. Wolfgang restored its independence and from that time forward it enjoyed the rule of its own abbots. For some centuries it was customary to elect as bishop a canon of St. Stephen’s and a monk of St. Emmeram’s alternately. Many of the early bishops of Ratisbon were buried in the crypt of the Abbey, which is still to be seen there, as also is that of the Emperor Arnulph (d. 899). The abbots held the rank of princes of the Empire, and as such had a seat in the Imperial Diets. The present church, which is a Romanesque basilica, dates from the thirteenth century, but was restored in a somewhat debased style in the eighteenth. It is one of the few German churches with a detached bell-tower. The cloisters date from the fourteenth and fifteenth centuries, and are in a fair state of preservation. The monastery was suppressed early in the nineteenth century and in 1809 the conventual buildings became the palace of the Prince of Thurn and Taxis, hereditary postmaster-general of the old German Empire, whose family still (1840) resides on the upper floors of the former monastery, which is now used as a summer residence.

Emmerich, Anne Catherine, an Augustinian nun, stigmatic, and ecstatic, b. 8 September, 1774, at Flamsche, near Coesfeld, in the Diocese of Münster, Westphalia, Germany; d. at Dülmen, 9 February, 1824. Her parents, both peasants, were very poor and pious. At twelve she was bound out to a farmer, and later was a seamstress for several years. Very delicate all the time, she was sent to study music, but finding the organist’s family very pious, she gave up the little she had saved to enter a convent, and actually waited on them as a servant for several years. Moreover, she was at times so pressed for something to eat that her mother brought her bread at intervals, parts of which went to her master’s family. In her twenty-eighth year (1802) she entered the Augustinian convent at Agnetenberg, Dülmen. Here she was content to be regarded as a lowly servant, but was, however, disturbed by the tepid sisters, who were puzzled and annoyed at her strange powers and her weak health, and notwithstanding her ecstasies in church, cell, or at work, treated her with some antipathy. Despite her excessive frailty, she discharged her duties cheerfully and faithfully. When Jerome Bonaparte closed the convent in 1812 she was compelled to find refuge in a poor widow’s house. In 1813 she became bedridden. She foresaw the downfall of Napoleon twelve years in advance, and counselled in a mysterious way the successor of St. Peter. Even in her childhood the supernatural was so ordinary to her that in her innocent ignorance she thought all other children enjoyed the same favours as she herself did, i.e. to converse familiarly with the Holy Ghost and to profit by the abundant supply of voluble knowledge when the sick and poor came to the “little bright sister” seeking aid; she knew their diseases and prescribed remedies that did not fail. By nature she was quick and lively and easily moved to great sympathy by the sight of the sufferings of others. This feeling passed into her spiritual being with the result that she prayed and worked assiduously for the souls of the departed and for the salvation of sinners whose merits were known to her even when far away. Soon after she was confined to bed (1813) the stigmata came externally, even to the marks of the thorns. All this she unsuccessfully tried to conceal as she had concealed the crosses impressed upon her breast.
Then followed what she dreaded on account of its publicity, an episcopal commission to inquire into her life and the reality of these wonderful signs. The examination was very strict, as the utmost care was necessary to furnish no pretext for ridicule and insult on the part of the enemies of the Church. The vicar-general, the famous Overberg, and three physicians conducted the investigation with scrupulous care and became convinced of the sanctity of the "pious begotting" of her stigmata. At the end of 1818 God granted partially her earnest prayer to be relieved of the stigmata, and the wounds in her hands and feet closed, but the others remained, and on Good Friday were all wont to reopen. In 1819 the government sent a committee of investigation which discharged its commission most brutally. Sick unto death as she was, she was forcibly removed to a large room in another house and kept under the strictest surveillance day and night for three weeks, away from all her friends except her confessor. She was insulted, threatened, and even flattered, but in vain. The commission departed without finding anything suspicious, and remained silent until its president, taunted about his reticence, declared that there was fraud, to which the official reply was: In what respect? and why not publish it? In 1819 Klemens Brentano, the famous poet, was induced to visit her; to his great amazement she recognized him, and told him he had been pointed out to her as the man who was to enable her to fulfill God's command, namely, to write down for the good of innumerable souls the revelations made to her. He took down brief notes of the main points, and, as she spoke the Westphalian dialect, he immediately rewrote them in ordinary German. He would read what he wrote to her, and change and efface until she gave her complete approval. Like so many others, he was won by her evident purity, her exceeding humility and patience under sufferings insubstantial. With Overberg, Sailer of Ratisbon, Clement Augustus of Cologne, St. Bel, of Lomeland, etc., he reverenced her as a chosen bride of Christ.

In 1833 appeared the first-fruits of Brentano's toil, "The Dolorous Passion of Our Lord Jesus Christ according to the Meditations of Anne Catherine Emmerich" (Sulzbach). Brentano prepared for publication "The Life of the Blessed Virgin Mary", but this appeared at length only in 1860. In 1833, of Brentano's Father Schmeoller published in three volumes "The Life of Our Lord" (Ratisbon, 1838–50), and in 1841 a large illustrated edition of the same. The latter also wrote her life in two volumes (Freiburg, 1867–70, new edition, 1884). Her visions go into details, often slight, which give them a vividness that strongly holds the reader's interest as one graphic scene follows another in rapid succession as if visible to the physical eye. Other mysteries are more concerned with ideas, she with events; others stop to meditate aloud and to guide the reader's thoughts, she lets the facts speak for themselves with the simplicity, brevity, and security of a Gospel narrative. Her treatment of that difficult subject, the twofold nature of Christ, is admirable. His humanity stands out clear and distinct, but through it pass the divine. The rapid and silent spread of her works through Germany, France, Italy, and elsewhere speaks well for their merit. Strangely enough they produced no controversy. Dom Guéranger extolls their merits in the highest terms (Le Monde, 15 April, 1860).

Sister Emmerich lived during one of the saddest and least glorious periods of the Church's history, when revolution triumphed, impurity flourished, and several of the fairest provinces of its domain were overrun by infidels and cast into such ruinous confusion that the Faith seemed about to be completely extinguished. Her mission in part seems to have been by her prayers and sufferings to aid in restoring Church discipline, especially in Westphalia, and at the same time to strengthen at least the little ones of the flock in their belief. Besides all this she saved many souls and recalled to the Christian world that the supernatural is around about it to a degree sometimes forgotten. A rumour that the body was stolen caused her grave to be opened six weeks after her death. The body was found fresh, without any sign of corruption. In 1892 the process of her beatification was introduced by the Bishop of Münster (K. W. Gouwane, Sister Anne Katherine Emmerich (New York, 1907); de Cazes. Life of A. C. Emmerich prefixed to the 2d ed. of The Dolorous Passion of Our Lord (London, 1897). Urbanianus, Meditations, s. v.: Muñoz. Dict. de mystique chrétienne (Paris, 1858).

E. P. Graham

Empiricism (Lat. empiricus, the standpoint of a system based on experience).—Primarily, and in its psychological application, the term signifies the theory that the phenomena of consciousness are simply the product of sensual experience, i.e. of sensations variously associated and arranged. It is thus distinguished from Nativism or Innatism. Secondly, and in its logical (epistemological) usage, it designates the theory that all human knowledge—whether exclusively from experience, the latter term meaning, either explicitly or implicitly, external sense-percepts and internal representations and inferences exclusive of any superorganic (immaterial) intellectual factor. In this connexion it is opposed to Intellectualism, Rationalism, Apriorism. The two usages evidently designate but to find one of the same theory, the epistemological being the application of the psychological to the problem of knowledge. Empiricism appears in the history of philosophy in three principal forms: (1) Materialism, (2) Sensism, and (3) Positivism.

(1) Materialism—in its crudest shape was taught by the ancient atomists (Democritus, Leucippus, Epicurus, Lucretius), who, reducing the sum of all reality to atoms and motion, taught that experience, whatever they held knowledge to be constituted, is generated by images reflected from material objects through the sensory organs into the soul. The soul, a mere complexus of the finest atoms, perceives not the objects but their effluent images. With modern materialists (Helvetius, d'Holbach, Diderot, Feuerbach, Moltke, etc.) the images are either formed by reflex action of atoms for either by cerebral secretion or by motion; while Häckel looks on it as a physiological process effected by certain brain cells. Avenarius, Willy, Maeh, etc. sublitize this process so far as to reduce all experience to internal (empirico-criticism).

(2) Sensism.—All materialists are of course sensists. Though the converse is not the case, nevertheless, by deifying any essential difference between sensations and ideas (intellectual states), sensism logically involves materialism. Sensism, which is found with Empedocles and Protagoras amongst the ancients, was given its first systematic form by Locke (d. 1704), though Bacon (d. 1626) and Hobbes (d. 1679) had prepared the data. Locke derives all simple ideas from external experience (sensations), all complex ideas (most essential differences) from internal experience (reflection). Substance and cause are simply associations of subjective phenomena; universal ideas are mere mental figments. Locke admits the existence, though he denies the demonstrability, in man of an immaterial and immortal principle, the soul. Berkeley (d. 1753), accepting the teaching of Locke that ideas are only transfigured sensations, subjectivizes not only the sensible or secondary qualities of matter (sensibilia propria, e. g. colour and sound) as his predecessor had done, but also the primary qualities (sensibilia communis, extension, space, etc.), which Locke held to be objective. Berkeley denies the objective basis of universal ideas and indeed of the
whole material universe. The reality of things he places in their being perceived (esse est percipi), and this "perceivability" is effected in the mind by God, not by the object or subject. He still retains the substantial reality of the human soul and of spirits generally, God included. Hume (d. 1776) agrees with his two empiricist predecessors in teaching that the mind knows only its own subjective organic impressions, whereof ideas are but the images. The supersensibles is therefore unknowable; the principle of causality is resolved into a mere feeling. He still retains the substantive reality of the soul and of spirituality in the sense of the empirical associations of ideas. Leonardo da Vinci (d. 1516), who combined entirely the subjective factor (Locke's "reflection") and sought to explain all contemplative states by a mere mechanical, passive transmission of external sensations. The French scientist retained the spiritual soul, but his followers disposed of it as Hume done with the Berkeleian soul relic. The Herbartians confound the image with the idea, nor does Wundt make a clear distinction between primitive concepts (empirische Begriffe, representations of individual objects) and the image: "Denken, Phantasieren und Phantasien ist Denken in Bildern".

3. *Positivism.*—Positivists, following Comte (d. 1857), do not deny the supersensible; they declare it unknowable; the one source of cognition, they claim, is sense-experience, experiment, and induction from phenomena. John Stuart Mill (d. 1873), following Hume, reduces all reality of contemplative states linked by empirical associations and enlarged by inductive processes. The mind has no certitude of an external world, but only of "a permanent possibility of sensations" and antecedent and anticipated feelings. Spencer (d. 1903) makes all knowledge relative. The actual existence of things is their persistence in contemplative consciousness as subjective feelings. The relative supposes the absolute, but the latter is unknowable to us; it is the object of faith and religion (Agnosticism). All things, mind included, have resulted from a comysical process of mechanical evolution wherein they are still involved; hence all concepts and principles are in a continuous flux.

The teaching of Catholic Philosophy is that sense-experience is a source, and indeed the primary source, of human knowledge, but it holds that there are other sources beyond sensations. There is nothing in the intellect that had not its birth in sense; this is one of the generalizations of the School. Moreover, though every intellectual act is accompanied by sensory motion, and especially by some sense representation (phantasm) evoked in the imagination, nevertheless sensation and sensuous representation (phantasm, image) differ essentially from the idea produced in and by the intellect, which is an immaterial, supersensuous and superorganic power or faculty. The theory here proposed may be called empirico-intellectualism since it conceives a sensuous fact as the really intellectual, or immaterial agency in the genesis of knowledge. Its bases are as follows: (a) Ideas represent the natures or essences of things, not the mere sensuous qualities, the phenomena of things, but the underlying subject and cause thereof, e.g. substance, life, cause, truth, etc.; while ideas of sensuous qualities as such represent them in the abstract and as universal, e.g. light. (b) The idea is inseparable from the instance and accident) immaterial, invisible, possible, and impossible, etc., e.g. ideas of God, spirit, etc.—ideas which cannot be formed from purely sensuous presentations or images. (c) We make clear-cut distinctions between the essential and accidental or contingent properties and attributes of things. (d) Every predicate idea represents not a congeries of sensuous qualities, but what the subject is (its essence), under some particular aspect. Now none of these peculiarities of the idea can be covered in any sensation or image, which always represents sensuous phenomena, existent and concrete. Locke's "reflection" and Condillac's "processes of association" will not suffice to transmute sensations into ideas, since these two states are essentially, because objectively (representatively), different. Positivism is incoherent if it is reduced to a subjective state, whereby indeed they beg the question when they appeal to induction to explain the genesis of knowledge; the inductive process involves universal abstract principles and logical laws which are constituted of ideas that essentially transcend sensations. The supersensible character of ideas follows equally from their "extension" or range of applicability. Ideas representative of essences, are available as predicates, and are the terms whereof absolutely universal principles are constituted. Hence ideas are universal, whereas sensations and images can represent only objects that affect the sensory organs, i.e. individual, physically existing objects. Moreover, ideas represent objects as abstract—physically abstract, e.g. individual, sensuously abstract, e.g. extension and number; metaphysically abstract, e.g. nature, entity, substance, truth, etc. And indeed unless ideas were of the abstract there could be no science, physical, mathematical, or philosophical; all these sciences consider their objects apart from concrete individual determinations. No intellectual judgment whatsoever would be possible, since every predicate is a generalization of concrete and individual determinations. Sensation cannot represent an abstract object; for though the sight, e.g., perceives colour apart from sound, nevertheless a) no sense can abstract from the subject-matter—from the existence and individuality of its proper object; the eye does not see a colour as such and abstracted, but the coloured object physically and individually, i.e. as existing from its proper object (its appropriate stimulus or object-quality), nor from its common object (quantity, the extended object), (c) a fortiori, no sense can perceive one dimension of extension or a mathematical point, or things non-existent, or abstract forms like man and humanity.

But does not a common image suffice to explain the universal idea as Locke and the Herbartians suppose, the universal common object, though indistinct, remains always in some way concrete and sensible; since the imagination as primarily reproductive can represent only what the senses have reported. Consciousness attests this; for if the imagination represent e.g. a triangle, it is always of some certain size and shape; it cannot represent a triangle which is neither rectangu-
immediately form a concept of a thing, even though perceived but once. Furthermore, in order to form the common image a concept of the object must have preceded; for in order to compare similar things we must previously have perceived their likeness. Now, to perceive their likeness means to perceive some common objective aspect wherein the similar things agree, while differing in other aspects. But this the senses cannot require intellectual correction; whereas the intellectual perception of the note of agreement common to the objects represented by the images, i.e., a universal idea must precede the common image. The common image therefore does not precede but follows the common concept, whereof it is a sort of shadow. This is specially so in the case of the productive imagination, which re-arranges in new forms previously compared images and hence suggests reflections and judgment, operations which no sense can perform.

Sensism implies scepticism. (a) For if we do not immediately perceive external objects but only our subjective sensuous modifications, then, since these differ with different individuals (e.g., the varying judgments of distance, heat, cold, etc., which varying judgments require intellectual correction, whereas the senses are incapable), there could be no certain and objective truth, each individual would be the measure of truth, there would be no objective criterion of certainty, no universal truths. (b) In order to pass from a subjective affection to a knowledge of its object we must employ the principle of causality. Now, in sensism, either the concept of cause is not objective or causes; but the senses cannot perceive causes. (b) Positivists claim that by their method the sciences have made wonderful progress, that by employing observation and induction the laws of nature have been discovered. Now, observation of phenomena entails universal ideas whereby the phenomena are classified under groups or species, while induction, to be legitimate, as certain postulates the principle of causality. Therefore, the physical senses support physical abstraction; the mathematical, mathematical abstraction, the metaphysical, metaphysical abstraction (primitive, i.e., direct, and reflective; ontological, logical, psychological). The negation of universal, necessary, immutable ideas essentially different from sensations means the destruction of even physical, scientific, a fortiori of mathematical and philosophical sciences.

Sensism destroys the foundations of morality and religion. For, as sensists and positivists admit, their theories leave no proof of the soul’s spirituality and immortality; of the existence of moral law, its obligation and sanction in a future life; of the existence of God and His relation to man. Now, history bears witness that these truths are fundamental for man’s religious and moral life.

F. P. STIEGFRIED

**Ems, Congress of a, a meeting of the representatives of the German Archbishops Friedrich Karl von Erthal of Mainz, Maximilian Franz of Cologne, Clemens Wenceslaus of Trier, and Hieronymus von Colloredo of Salzburg, at the little town of Bad-Ems, near Coblenz, in August, 1786, for the purpose of protesting against papal interference in the exercise of episcopal powers and fixing the future relations between these archbishops and the Roman pontiff.**

The Gallican principles concerning the relation between the bishops and the pope, which had been disseminated in Germany by Honthem, the Auxiliary Bishop of Trier (1748–1790), in his treatise “De statu ecclésiae et legitimae pontis Rom. Pontificis” (1763) under the pseudonym “Peburnius”, were supported by some of the most influential archbishops of Germany. The archbishops became confirmed in the position which they took towards the pope by the encouragement and support of Emperor Joseph II, who arrogated to himself both temporal and spiritual jurisdiction. As early as 1769 the representatives of the Elector-Archbishops of Mainz, Cologne, and Trier, at a meeting held in Coblenz, had drawn up a list of thirty-two articles, most of which were directed against the Roman Curia. The proximate occasion of the Congress of Ems was the erection of an Apostolic nunciature in Munich (27 Feb., 1785) and the appointment of Zoglino, titular Archbishop of Athens, as nuncio (27 June), with jurisdiction over the entire territory of the Elector Karl Theodor, which then comprised Bavaria with the Diocese of Passau and the Territories of Jülich and Berg. Pius VI erected this nunciature upon the urgent request of the Elector of Bavaria, who was loath to have parts of his territory under the spiritual jurisdiction of bishops who, being electors like himself, were rather his equals than his subordinates. He had previously suggested to the Elector-Archbishops of Mainz to desire that he might be appointed to special vicars-general for their districts in his territory. Upon their refusal he requested Pius VI to erect separate dioceses for his territory, but in deference to the wishes of the three elector-archbishops, the pope also refused. Finally the Elector of Bavaria asked for the above-mentioned nunciature, and despite the protests of the archbishops his wish was granted.

Meanwhile Bolzoni, the nuncio to Rome, was transferred to Lisbon, and Paeo, the titular Archbishop of Damietta was appointed to succeed him at Cologne. Maximilian Franz, Archbishop of Cologne (a brother of Emperor Joseph II), refused to see him, and none of the three elector-archbishops honoured his credentials. Despite protests, both Paeo and Zoglino began to exercise their powers as nuncios. Relying on the proceeds of the Synod of Freiburg, the three elector-archbishops and the Archbishop of Salzburg planned concerted action against Rome and sent their representatives to Ems to hold a congress. Von Erthal of Mainz, who was the soul of the opposition, was represented by his auxiliary bishop Valentine Heimes; Maximilian Franz of Cologne, by his privy councillor Heinrich von Tauphaus; Clemens Wenceslaus of Trier, by his privy councillor and official representative in temporal matters, Joseph Ludwig Beck; Colloredo of Salzburg, by his consistorial councillor, Johann Michael Bönicker. On 25 August, 1786, these archiepiscopal representatives signed the notorious “Punctation of Ems”, consisting of twenty-three articles which aimed at making the German bishops independently of the pope, and in the case of the text of the articles see Munich, “Sammlung aller älteren und neueren Concordate” (Leipzig, 1831), i. 404–423.

Assuming that Christ gave unlimited power of binding and loosing to the Apostles and their successors, the bishops, the “Punctation” maintains that all prerogatives and reservations which were not actually and in the first three centuries owe their origin to the Pseudo-Esdras decreets, universally acknowledged as false, and, hence, that the bishops must look upon all interference of the Roman Curia with the exercise of their episcopal functions in their own dioceses as encroachments on their rights. Upon these seismac principles the four archbishops
based their demands, which may be summarized as follows: all direct appeals to Rome must be discontinued; all exempt monasteries must become subject to the bishops in whose districts the monasteries are situated; no German monasteries must have generals, provincials, or other superiors who do not reside in Germany; the bishops need not obtain quinquennial faculties from Rome, because by virtue of their office they can dispense from abstinence, from matrimonial impediments, including the second degree of consanguinity and the second and first degrees of affinity, from solemn religious vows and the obligations resulting from Holy orders; papal Bulls and ordinances of the Roman Curia are binding in each diocese only after the respective bishop has given his placet; all Apostolic nunciatures must be abolished; the manner of conferring benefits and the procedure in ecclesiastical lawsuits must be changed in favour of the bishops; the episcopal oath must be changed so that it shall not appear to be the oath of a vassal, etc.

It may easily be seen that the articles of the "Punctuation" lower the papal primacy to a merely honorary one and advocate an independence of the archbishops in regard to the pope which is entirely incompatible with the exercise of the papal power as handed down by Christ. Still the "Punctuation" was immediately ratified by four archbishops and sent to Emperor Joseph II with an humble request for his support. The emperor was pleased with the articles and would have pledged his unqualified support if his councillors, especially Kaunitz, had not for political reasons adviced the contrary. The emperor wisely makes his support dependent on the condition that the archbishops gain the consent of their suffragan bishops, the superiors of the exempt monasteries, and the estates into whose districts their spiritual jurisdiction extends. The suffragan bishops, especially the pious and learned prince-bishops August von Sturmy of Speier and Franz Ludwig von Erthal of Wurzburg-Dillingen (a brother of the Archbishop of Mainz), protested against the schismatic tendency of the "Punctuation" and saw in the anti-papal procedure of the archbishops merely an attempt to increase their own power to the detriment of their suffragans. The Elector of Bavaria likewise remained a zealous defender of the pope and his nuncio at Munich, and a few years later Prussia was an opponent of the "Punctuation" and favoured the nuncio Paccia at Cologne.

Still the archbishops insisted on their demands. When the nuncio at Cologne by authority of the pope granted a matrimonial dispensation from the second degree of consanguinity to Prince von Hohenlohe-Bartenstein and Countess Blankenheim, Archbishop Maximilian Franz of Cologne addressed to him a strong protest forbidding him for the future the exercise of all jurisdiction in the Archdiocese of Cologne. The archbishops themselves now began to grant dispensations from such degrees of relationship as were not contained in their ordinary quinquennial faculties, just as if the "Punctuation of Eins" were in full force. Realising a threat to the whole of the pope, informed the pastors that all marriages contracted by virtue of such dispensations were invalid, the archbishops ordered their pastors to return the circular to the nuncio and to obtain all future dispensations directly from their ordinary, the archbishop. The Church in Germany was now near to a schism. Fortunately, von Erthal of Mainz needed the services of Rome. He desired Karl Theodor von Durlberg as coadjutor, and, to obtain the consent of Rome, he withdrew, at least apparently, from the "Punctuation" and obtained a renewal of his quinquennial faculties from Rome on 9 Aug., 1787. Similarly the Archbishop of Trier asked for quinquennial faculties as Bishop of Augustusburg, but not as Archbishop of Trier. Von Erthal's submission to Rome was only a pretended one. He continued his opposition and on 2 June, 1788, requested Emperor Joseph II, in the name of himself and the three other archbishops, to bring the affair concerning the German nuncios before a diet. But soon the archbishops discovered that all the estates were opposed to the "Punctuation" and that a diet would rather retard than accelerate the fulfilment of their wishes. For this reason they addressed a letter to Rome (1788) asking the pope to put an end to the unedifying dispute and not to prevent a renewal by withdrawing the faculties from the nuncios and by sending representatives to the German estates with authority to come to an amicable agreement regarding the other demands of the archbishops. In answer to this request appeared the publication of a memorable document composed by order of the pope and entitled: "Sanctissimi Dom. nostri Pii Papae VI respon- sio ad Metropolitanos Moguntinum, Trevirensen, Coloniensien et Salisburgensem super Nunciaturis Apostolici" (Rome, 1789). It was a masterpiece in form and contents of Apostolic firmness and paternal reproof. After presenting a dispassionate and objective view of the whole litigation, the document refutes all the arguments of the archbishops against papal nuncios and shows them how to make their bishops to rebel against papal authority, explains that the pope cannot send representatives to worldly estates who have no right to pass judgment on ecclesiastical affairs, and admonishes the archbishops to give up their untenable position towards the Holy See.

The papal writing was not without effect. Archbishop Wenceslaus of Trier, who had long desired an amicable settlement of the odious affair, into which, it appears, he was drawn against his will, publicly withdrew from the "Punctuation" on 20 Feb., 1790, and admonished his colleagues to follow his example. They, however, continued their opposition and on occasion of the imperial capitulation of Leopold II (1790) and (1791) and a promise that their complaints concerning the nunciatures would be attended to as soon as possible by a decree of the diet. The threatening progress of the French Revolution finally changed the attitude of the Archbishops of Cologne and Salzburg, but the Arch- bishop of Mainz clung to the "Punctuation" until the French Revolution became a political event, and he was deprived of all his possessions west of the Rhine, at the Peace of Campo Formio, in 1797.

Emser, Hieronymus, the most ardent literary opponent of Luther, b. of a prominent family at Ulm, 20 March, 1477; d. 8 Nov., 1537 at Dresden. At the University of Tübingen, whither he went in 1493, he acceded to the master of arts. In 1497 he began the study of law and theology at the University of Basle. Through the good offices of Christopher, later Bishop of Utenheim, he barely escaped imprisonment at Basle for having inscribed some satirical verses of his countryman, Rebeul, in a volume which was circulated among the students. The legate Cardinal Raymond of Pergola of Gurt, who seems to have been the judge in this trial, shortly after engaged him as secretary. In 1500 he published a mediocore work on the miraculous crosses which were generally supposed to have fallen from heaven. Four years later he began a series of brilliant lectures at Erfurt on Reuchlin's "Sergius vel Caput Capitis" and numbered Martin Luther among his hearers. On account of his triumphs at Erfurt he always claimed the
distinction of having been one of the pioneers of classical humanism in Germany. Despite his renown and brilliant manner of teaching, Emser's lectures at Leipzig on the classics, in 1505, aroused little admiration. Disgusted at his failure he turned to the study of theology and won the degree of bachelor. George of Saxony befriended him in a financial way during these and subsequent years. Dissatisfied with the methods of teaching theology then prevalent, Emser applied himself to the study of Roman law, and, after the close of his studies served George of Saxony as secretary. At the request of the latter he composed a Latin ode in honour of St. Benno of Meissen, who had just been canonized. This canonization was largely due to the efforts of Emser at Rome, whither he went in 1510 at the express wish of George of Saxony, who saw in this solemn act a source of glory for his realm. The life of the new saint, which Emser wrote, is faultless. In Latin, his return in 1512, is worthwhile from a critical point of view. About this time Emser received Holy orders and two prebends at Dresden and Meissen. While preaching by command of George of Dresden, he became better acquainted with Luther. Emser admired the fiery Augustinian; Luther, the accomplished litterateur; and Bullinger, the inquisitor. With a love of knowledge, Emser, like Luther, to the express dissatisfaction of George of Saxony, who was present with Emser, gave utterance to Hussite opinions of a radical sort regarding the pope. Emser was deeply pained at this; and on learning that the Bohemians, in two semi-public letters, hailed a second Hus in Luther, he declared in a letter to John Zedek that Luther had reprimanded the Bohemians for their attitude towards the pope, and had upheld the papal supremacy as a necessary means to prevent division. Emser added a very lucid explanation based on Scripture in proof of the primacy, and in a subjoined poem dealt a severe blow to the calumnies against the pope. Luther soon learned the contents of this letter and, regarding it as an attempt to dis credits him among the Bohemians, replied in his "Ad sageterum Erminiarum M. Aurelium de Emser, where abuse of all kind was heaped upon the Church. Emser answered with an equally violent though not seculious work: "A venatione lutherani agenterod Aser tio", in which he portrayed the certain scandal arising from the words and conduct of a refractory monk. He defended the Scriptures in a very personal way against the arbitrary interpretation of the pope. The letter elapsed February 18th, 1512, which was intended to offset the aspersions cast on his probity by his opponent. Luther replied by burning at Wittenberg this letter and other writings of Emser, together with the Bull of excommunication and the "Corpus juris canonici" (10 Dec., 1520). This insult did not provoke Emser. But as Luther displayed an incredible literary activity in 1520, Emser wrote eight polemical works, 1520 and 1521 which abound in personalities and invective, yet defend the Faith in a masterly way and clearly point out the logical results of the new teaching. In 1522 he translated the address which the Englishman, John Clark, delivered on handing over to Pope Leo X the book written by Henry VIII against Luther. (O'Donovan, The Defence of the Seven Sacraments by Henry VIII, 1520, 110–17). Among other works may be mentioned his German translation of the New Testament with a hortatory preface by George of Saxony. Emser showed in this work the liberties taken by Luther with the Scriptures and refuted his errors.

---

**ENCINA, (of Encina), JUAN DE LA, Spanish dramatic poet, called by Ticknor the father of the Spanish secular drama; b. in the village of Encina near Salamanca, 7 Aug., 1466; d. in Salamanca, 1534. He was educated at the University of Salamanca, whence he proceeded to Madrid, where at the age of twenty-five he became a member of the household of Fabricio de Toledo, first Duke of Alba. Later, Encina went to Rome, where he took orders, and owing to his skill in music attracted the notice of Leo X, who made him maestro de capella, which was a signal honour. In 1519 he accompanied Fabricio Afan de Ribera, Marquis of Tarifa, on a pilgrimage to the Holy Land, where he remained two years, and upon his return in 1521 he published a poetical account of his travels, rather de void of literary merit, under the title "Trabagán o Via Sagrada de Hierusalem". At a more advanced age, he was appointed prior of Leon and returned to Spain, where he died. He was buried in the cathedral of that city.

Encina published the first edition of his works under the title of "El Cancionero". This was reprinted five times during the sixteenth century, showing that he enjoyed great popularity. Although he wrote lyrical poems, he is more celebrated as a dramatist. Of his most important works were his dramatic compositions which he himself calls representaciones, and which fill the fourth division of his "Cancionero". They are eleven in number, all in the nature of eclogues, and written in some form of old Spanish verse; in all there is singing, and in one of them a dance. They therefore have several elements of the secular drama, the origin of which is usually ascribed to Palladio, whose plays were furthered by any existing authentic monument. Two things must be considered, however, in connection with these compositions as the foundation of the secular drama. One is that they are eclogues in form and name but not in substance; the second, that they were really acted before an audience. The date of these performances has been given as early as 1492. The representaciones have not much dramatic merit. They are crude and slight, and there is no pretension to a plot. Some of the most important works of Encina are: "The Triumph of Love", "The Knight who turns Shepherd", and "The Shepherds who turn Courtiers". He was also the author of a prose work on the condition of the poetic art in Spain entitled "Arte de Poesía Castellana", 1529. See Ticknor, History of Spanish Literature (Boston, 1866).**

**VENTURA FUENTES.**

**ENCISO, DIEGO XIMÉNEZ DE, dramatic poet, b. in Andalusia, Spain, c. 1856; date of death unknown. All trace of him is lost after 1632. He was much admired and praised by Cervantes, Lope de Vega and Montalván; the last considers him a "model for those who wish to write great comedies". Although he enjoyed some fame, as his frequent mention by his contemporaries would show, he has shared the fate of many other Spanish dramatists of his day, and his works have undeservedly been consigned to oblivion. In his catalogue of the Spanish theatre Gayet gives a list of eleven plays by Enciso, but most of them are scattered throughout the great libraries of Europe, and only three have reached several editions, namely, "El Príncipe Don Cárlos", "La Mayor Hazaña del Emperador Cárlos Quinto", and "Los Médicos de Florence". To the average reader, however, only one of these is familiar. "El Maestro H. It was to be found in "La Biblioteca de Autores Españoles". These three plays were probably chosen for repeated editions because they show Enciso at his best. Enciso's idea of the historical drama is thoroughly unique for a Spanish dramatist, for he alone of all his contemporaries seems to regard the historical
Enciso, Martín Fernández de, navigator and geographer, b. at Seville, Spain, c. 1470; d. probably about 1528 at Seville. It is not known when, why, or with whom he went to America, but in 1508 he was living on the island of Santo Domingo, where he had accumulated a fortune in the practice of law. In 1509 Alonzo de Ojeda (or Hojeda) had been granted the government of Terra Firme (the region about the Isthmus of Darien), but he lacked the funds necessary to colonize the country. He then applied to Enciso, who had the reputation of being rich, able, and adventurous, and the latter agreed to provide a vessel with men and provisions. Ojeda set out in advance in 1509, and it was Enciso's mission to supply him with men and follow him in 1510. When the latter arrived, he found that Ojeda, having been beset by hostile Indians, and having exhausted his supplies and ammunition, had returned in search of him. Taking the survivors of Ojeda's expedition, Enciso founded the town of Santa María la Antigua del Darien (1510). Among his followers was one Vasco Nuñez de Balboa, in which Enciso enclosed such relics as for his discovery of the Pacific Ocean, then called the South Sea (Mar del Sur), and who had joined the expedition without Enciso's knowledge or authority, seeking to escape his creditors. Soon after the founding of the new city, Balboa stirred up rebellion among the men, and was able to depose Enciso, whom he banished to Spain. Here, the latter complained to the King of Balboa's arbitrary conduct and expelled him, and Balboa, partly owing to these accusations, sent Pedrarias Dávila to America in 1514 as Governor of Darien, with instructions to have the wrongs of Enciso righted. Enciso accompanied the expedition as "alguacil mayor" and continued to oppose Balboa until the latter's execution by Dávila in 1517. He soon afterwards returned to Spain where he published his "Suma de Geografía" (the treatise of lands as partidas del mundo"), the first account in Spanish of the discoveries in the New World. The work was published in 1519 at Seville and was reprinted in 1530 and 1549. It is dedicated to the Emperor Charles V, and in it, according to Navarrete, Enciso has embodied all that was then known of the theory and practice of navigation. The geographical portion is given with great care, and contains the first descriptions of the lands discovered in the western seas, that is, the results of the explorations of the Spaniards up to 1519. It is, on the whole, a more accurate work than the other early works of its kind.

Enclosure. See Cloister.

Encolpion (Gr. εγκόλπιον, that which is worn on the breast), the name given in early Christian times to a species of reliquary worn round the neck, in which were enclosed such relics as with the blood of a martyr, small pieces of parchment with texts from the Holy Scriptures, particles of the True Cross, etc. The custom of bearing on the person objects of this character was evidently derived from the pagan practice of wearing bulla, containing amulets, round the neck as a protection against enchantment; the Church endeavoured to purify this usage from superstition by substituting objects venerated by Christians for those to which they had been accustomed before conversion. According to St. Jerome, however (in Matt., c. xxiii.), some of the faithful in his day attached a superstitious importance to these aids to piety; he censures certain classes of women who seem to have, in some degree, identified sanctity with an exaggerated veneration for sacred relics: "Hoc quoque spiperat Deus, qui habet reliquias, et in crucifixum et in reliquias eius fidelibus, placuit in eis quod superstitiose fidelibus Editors. and in the perfection of the monastic order, and the prevalent abuses of the time; and the famous treasure of Monza contains the theca persica, enclosing a text from the Gospel of St. John, sent by Pope St. Gregory the Great (590–604) to Queen Theodolinda for her son Adalaid. Another of the gifts of this pope to the Lombard queen was a crucifix enclosed containing a portion of the True Cross. Probably the most interesting reliquary of this holy relic is the palatine cross discovered at Rome in 1636, in the basilica of St. Lorenzo (fuori la mura), on the breast of a corpse. On one side it bears the inscription: EMMANU' XRD COM DEFUS (Emmanuel, God with us), and on the other: CRUX E' VITA MIIH, MORI IN'IM' TIBI (To me the Cross is life; to thee, o enemy, it is death). To theCOVERY ofenclosuch objects to the early Christian sect, or rather to a tendency current to several sects, chiefly Gnostic, whose asceticism was based on heretical views regarding the origin of matter.

Encratites [Ἐγκρατεῖς (Ireneus)] Ἐγκρατικὸς (ClementAlex., Hippolytus), literally, "abstainers" or "persons who practised continence", because they refrained from the use of wine, animal food, and marriage. The term was given to an early Christian sect, or rather to a tendency current to several sects, chiefly Gnostic, whose asceticism was based on heretical views regarding the origin of matter.

1. History.—Abstinence from the use of some creatures, because they were thought to be intrinsically evil, is much older than Christianity. Pythagorism, Essenicism, Indian asceticism between the Ganges and the Indus, are actually quoted by Clement of Alexandria as the forerunners of the Encratites (Strom., I, xv). Although St. Paul refers to people, even in his days, "forbidding to marry and abstaining from meats" (I Tim., iv, 1–5), the first mention of a Christian sect of this name occurs in Irenaeus (I, xxviii). He connects their origin with Saturninus and Marcion, and rejects marriage, which they implicitly accuse the Creator, Who made both male and female. Refraining from all ἑκάταπλα (animal food and intoxicants), they are ungrateful to Him Who created all things. "And now?", continues Irenaeus, "they reject the salvation of the first man [Adam]; an opinion recently introduced among them
by Tatian, a disciple of Justin. As long as he was with Justin he gave no sign of these things, but after his martyrdom Tatian separated himself from the Church. Elated and puffed up by his professorship, he established some teaching of his own. He fabled about some invisible icons, as the Valentinians do; and proclaimed marriage to be corruption and fornication, as Marcion and Saturninus do, but he made the denial of Adam's salvation a specialty of his own. The Encratites are next mentioned by Eusebius (Hist. Eccl., iii, 23; Strom., i, xv; vii, xvii). The whole of the third book of the Stromata is devoted to combating a false encratia, or continency, though a special sect of Encratites is not there mentioned. Hippolytus (Philos., viii, xiii) refers to them as "acknowledging what concerns God and Christ in like manner with the Church in respect, however, of their mode of life, passing their days in abstinence", "abstaining from animal food, being water-drinkers and forbidding to marry"; "estimated Cynics rather than Christians".

On the strength of this passage it is supposed that some Encratites were perfectly orthodox in doctrine, and erred only in practice; but τὰ ἐπὶ τῷ θεῷ καὶ τῷ χρυσῷ need not include the whole of Church. The latter sects to which the apostate Dionysius had come, like the Gnostics, were not a movement of new life and strength by the accession of a certain Severus (Eusebius, Hist. Eccl., iv, xxix), after whom Encratites were often called Severians. These Severian Encratites accepted the Law, the Prophets, and the Gospels, but rejected the Book of the Acts and cursed St. Paul and his Epistles. But the account given by Eiphanius of the Severians rather betrays Syrian and Judaistic Judaism, for he finds some traces of hatred of marriage they declared woman the work of Satan, and in their hatred of intoxicants they called wine drops of venom from the great Serpent, etc. (Hist., xiv.)

Eiphanius states that in his day Encratites were very numerous throughout Asia Minor, in Cisidia, in the Adustain district of Phrygia, in Isauria, Pamphylia, Cilicia, and Galatia. In the Roman Provinces, in Antioch, in Arabic, and in Judæa, Eiphanius found them scattered here and there. They split up into a number of smaller sects, of whom the Apostolici (q. v.) were remarkable for their condemnation of private property, the Hydropastaratae for their use of water instead of wine in the Eucharist. In the Edict of 382, Theodosius pronounced sentence of death on all those who took the name of Encratites, and commanded Florus, the Magister Officiorum, to make strict search for these heretics, who were Manicheans in disguise. Sozomen (Hist. Eccl., v, xi) tells of an Encratite of Ancyra in Galatia, called Busiris, who bravely submitted to torments in the Julian persecution, and who under Theodosius abjured his heresy and returned to the Catholic Church. On the other hand, we learn from Macarius Magnes (about 403—Apoer., i, xlvii) of a certain Dositheus, a Cilician, who about the same time wrote a work in eight books in defence of Encratite errors. About the middle of the fifth century they disappear from history, absorbed, probably, by the Manicheans, with whom they had so much in common from the first.

The Encratites enjoyed a considerable literary activity. The earliest writer in their defence probably was Tatian in his book "Concerning Perfection according to the Saviour", which Clement of Alexandria quotes and refutes in Strom., iii, xii. Almost contemporary with him (about a.d. 150) was Julius Cassinus, known as the founder of Docetism (see Docetæ). He wrote a work "Concerning Self-restraint and Continency", of which Clement of Alexandria and Jerome have preserved some passages (Strom., i, xxi; Euseb., Præpf. Ev., X, xii; Strom., iii, xii; Jerome, Ad Gal., vi, viii). Concerning the eight books of Dositheus we know only that he maintained that, as the world had its beginning by sexual intercourse, so by continency (encratia) it would have its end; and that he inveighed against wine-drinkers and flesh-eaters. Among the apocryphal works which originated in Encratite circles must be mentioned: The Gospel according to the Egyptians, referred to by Clement (Strom., iii, ix, 13), Origen (Hom. in i Luc.), Hippolytus (Philos., v, vii), which contained a dialogue between Jesus and Salome specially appealed to by the Encratites in condemnation of marriage (to this Gospel the recently discovered "Logia" probably belongs); the Gospel of Philip, of Thomas, the Acts of Peter, of Andrew, of Thomas, and other Apocryphas, furthering Gnosto-Encratite views.

Eusebius (Hist. Eccl., iv, xxii, 28) says that Musanus (a.d. 170 or 210) wrote a most elegant book addressed to some brethren who had fallen into the heresy of the Encratites. Theodoret (Hist., Fab., i, xxi) says that Apollinaris of Hierapolis in Phrygia (about 171) wrote against the Severian Encratites.

Encyclical (Lat. Litterae Encyclical).—According to its etymology, an encyclical (from the Greek κύκλος, κύκλος meaning a circle) is nothing more than a circular letter. In modern times, usage has confined the term almost exclusively to certain papal documents which differ in their technical form from the ordinary style of either Bulls or Briefs, and which in their superscription indicate that they are directed to the bishops of the world or to particular archbishops and bishops of the Universal Church in communion with the Apostolic See. By exception, encyclicals are also sometimes addressed to the archbishops and bishops of a particular country. Thus this name is given to the letter of Pius X (6 Jan., 1907) to the bishops of France, in spite of the fact that it was published, not in Latin, but in French; while, on the other hand, the letter of Leo XIII to the bishops of the United States (16 Jan., 1898) is styled an encyclical, although in all other respects it exactly observes the forms of one. From this and a number of similar facts we may probably infer that the precise designation used is not intended to be of any great significance. From the nature of the cases to which they are addressed, the bishops of the world are generally concerned with matters which affect the welfare of the Church at large. They condemn some prevalent form of error, point out dangers which threaten faith or morals, exhort the faithful to constancy, or prescribe remedies for evils foreseen or already existing. In form an encyclical at the present day begins thus,—we may take the encyclical "Pascendi Dominicigregis mandatum" (20 Jun., 1903) as a specimen:

"Sanctissimi Domini Nostri Pii Divinæ Providentiae Pape X Litteræ Encyclicæ ad Patriarchas, Primate, Archiepiscopos, Episcopos aliosque locorum Ordinariorum et communiùnium eum Apostolica Sede habentes de Modernistariarum Doctrinis. Ad Patriarchas, Primate, Archiepiscopos, Episcopos aliosque locorum Ordinariorum et communiùnium eum Apostolica Sede habentes, Pius PP. X."
Encyclopedias, an abridgment of human knowledge in general or a considerable department thereof, treated from a uniform point of view or in a systematized summary. Although the word, used technically, dates only from the sixteenth century, encyclopedic treatment of human science reaches back to antiquity, growing out of the needs of general culture, necessities arising from the extent of the great empires of antiquity. The general culture which every free-born (free and noble) city and town of the empire in every region, from the technical and theoretical sciences, grammar, music, geometry, astronomy, and gymnastics, and was termed *encyclopedias* *via* *orbs* *doctrina* (cycle of the sciences), and, beginning with the Middle Ages, *artes* *liberales* (see Arts, The Seven Liberal).

According to their form, systematic encyclopedias are divided into two classes: (a) those which present all branches of knowledge, arranged uniformly and organically according to some fixed system of connexion, and (b) the lexicographical encyclopedias, which treat of the same matter arranged according to an alphabetical system. Suidas, in the tenth century, compiled an encyclopedia of the latter type, which became common only in the seventeenth century after the appearance of (21) *Symbolorum commentaria* (1690) on religious unity. Pius X has shown the same favour for this form of document, e.g. in his earnest commendation of catechetical instruction *Acerbo ninimus* (15 April, 1906) his address on the centenary of St. Gregory the Great (12 March, 1904), his first letter to the clergy and faithful of France, Vehement enter nos” (11 Feb., 1905), his encyclical or appeal to the people of Italy, and in the pronouncement on Modernism already mentioned.

Two officials presiding over separate bureaux still count it among their duties to aid the Holy Father in the drafting of his encyclical letters. These are the "Secretario dei brevi al Principi" assisted by two ministranti, and the "Segretario delle lettere Latine" assisted by the cappellani minori. It is the custom of Leo XIII to write his own encyclicals, and it is plainly within the competence of the sovereign pontiff to dispense with the services of any subordinates.

As for the binding force of these documents it is generally admitted that the mere fact of the pope should have given to any of his utterances the form of an encyclical does not necessarily constitute an exercise of infallible authority. The degree in which the infallible magisterium of the Holy See is committed must be judged from the circumstances, and from the language used in the particular case. In the early centuries the term *encyclical* was applied, not only to papal letters, but to certain letters emanating from bishops or archbishops and directed to the own flocks or to other churches. Such letters addressed by a bishop to all his subjects in general are now commonly called Pastoral.

Amongst Anglicans, however, the name *encyclical* has recently been revived and applied, in imitation of the usage of circular letters issued by the English primates. Thus the reply of the Archbishops of Canterbury and York to the papal condemnation of the Anglican Ordinaries ("Apostolic Cure", took the form of a Bull) was styled by its authors the Encyclical "Sapientia officii".

Little has been written professedly on the subject of encyclical, which in treatises on canon law are generally grouped with other official documents. The works of L. DE LECCES, *De Loegries Dissertatio* (Turin, 1728), deals almost exclusively with the early church documents which were so styled; see, however, especially those of *Apostolic* or *Vatican* (Munich, 1907), 1, 1310; and Goyan, *Le Vatican* (Paris, 1808), p. 336.

Herbert Thurston.
phy and interrelation of sciences was Francis Bacon, Lord Verulam, in his incomplete "Instauratio Magna," the second part of which was the "Novum organum" (London, 1620), and his "De dignitate et augmentis scientiarum" (1623). His immediate successors, however, who had not mastered their materials, did not rise above the old-fashioned compilation of dry facts suited only for general instruction or as works of reference, of which the "Polyhistor" (Lübeck, 1588 and 1717). A clearer idea of the proper organic construction of an encyclopedic work is first apparent in J. M. Gesner's "Prima lineae isagogae in eruditionem universam" (3rd ed., Göttingen, 1780), and J. G. Sulzer's "Kurzer Begriff aller Wissenschaften" (Leipzig, 1745; Eisenach, 1787). The way this had been prepared, however, by two earlier works, which mark an important advance in the conception of what is proper to an encyclopedia. Both works, but especially the second, exerted a far-reaching influence on the whole intellectual life of the time. These were: Bayle's "Dictionnaire historique et critique" (Rotterdam, 1698; "Encyclopedia"), Bayle's "Dictionnaire historique des sciences, des arts et des métiers,", compiled by Diderot and d'Alembert (28 vols., Paris, 1754–72, with 7 supplementary vols., 1778–80). While in these works the matter is arranged on an alphabetical system, a number of Sulzer's imitators essayed a systematic presentation of sciences on the old plan, e. g. Adelung, "Kurzer Begriff der Wissenschaften" (1st ed., 1777; 2nd ed., 1785); Bessen, "Encyklopädie" (Hamburg, 1775); Büsch, "Encyk. der mathematischen Wissenschaften" (Hamburg, 1793); Reuss, "Encyclopædia" (Tübingen, 1783); Bühlle, "Encyclopädie" (Lehma, 1790). A successful attempt in this direction, based on Kantian principles, was made by J. J. Escherich in his "Lehrbuch der Wissenschaftskunde" (Berlin, 1792; 3rd ed., 1808). In competition with this, Krug's introduction of a new method in "Versuch einer systematischen Encyklopädie der Wissenschaften" (Leipzig, 1796–97; Züllich, 1804–19) was unsuccessful. Not to mention Habel, Rüff, and Strass, the following imitators of Eschenburg gained no little reputation: Heffer, "Philosophische Darstellung eines systems aller Wissenschafien, ihrer Gliederung und Verwirklichung der menschlichen Wissenschaften und Kunst" (Leipzig, 1809); Kraus, "Encyklpadische Ansichten" (Königsberg, 1809); and the founders of Kaut, E. Schmidt, "Allgemeine Encyklopädie und Methodologie der Wissenschaften" (Jena, 1810), and K. A. Schaller, "Encyk. und Methodologie" (Magdeburg, 1812). The increase in knowledge and the demands for specialization which are noticeable from the beginning of the nineteenth century, destroyed even the possibility of presenting completely all the departments of human knowledge or even a single branch of any great extent. The last attempts made in this direction (and they deserve some attention) were Kirchner's "Akademische Propädeutik" (Leipzig, 1814), and E. H. Schleiermacher's "Bibliographisches System der gesamten Wissenschaftskunde" (Brunswick, 1852). The increasing specialization of sciences has resulted in the production of special encyclopedias, which in the course of time have gradually come to cover every department of science and art and every phase of human life. Thus there have appeared, for instance, Böhlle, "Encyk. der mathematischen Wissenschaften" (2nd ed., Leipzig, 1858); Hommel, "Semitische Wälker und Sprachen" (Leipzig, 1853); Schmitz's works on the modern languages; Körning's works on English and Romance philology (Heilbronn, 1884); Gröber, "Grundriss der roman. Philol." (Strasbourg, 1888); Paul, "Grundriss der german. Philol." (Strasbourg, 1889–93); Elze, "Grundriss der engl. Philol." (Halle, 1837); Geiger-Kuhn, "Grundriss der iranischen Philologie" (Strasbourg, 1896—); Bühler-Kielhorn, "Grundriss der indo-iranischen Philologie" (Strasbourg, 1896—); Jagie, "Grundriss der slavischen Philologie" (1908). The province of jurisprudence has also been covered in a similar manner in the course of the nineteenth century, especially by Meissner, "Mühlol." (Mainz, 1843; 10th ed., 1901); Bluhme, "Encyk. der in Deutschland geltenden Rechte" (Bonn, 1817–58); Merkel, "Juristische Encyk." (Berlin, 1853; 3rd ed., 1904). Theology was also summarized by the Catholic: Staudensmaier, "Encyk. der theolog. Wissenschaften" (2nd ed., Mainz, 1850); Wirthmüller, "Encyk. der Kath. Theologie" (1784); Klee, "Encyk. der Theologie" (1892); Kuhn, "Encyk. und Methodologie der Theologie" (1892); Krieg, "Encyk. der theolog. Wissenschaften" (1899); by Protestants: Zöckler, "Handbuch der theolog. Wissenschaften" (Munich, 1882–85); Hugenbach, "Encyk. und Methodologie der theolog. Wissenschaften" (12th ed., Leipzig, 1889); Heimric, "Theol. encyk.", (1893); Kathler, "Kathol. Wissenschaft der christl. Lehre" (1893); Rittinger, "Theol. Wissenschaft" (2nd ed., 1872); Baumstark, "Grundriss der theolog. Wissenschaften" (1892). Pedagogy is treated in the "Encyk. der Pädagogik" (Stey (1851; 2nd ed., 1878); political science by Baumstark, "Kamerallistische Encyk." (1830); and von Mohl, "Encyk. der Staatswissenschaft" (1839; 2nd ed., 1872); the progress of civilization by Dünkler, "Encyk. und Methodologie" (2nd ed., 1872); Dombrowski, "Allg. Encyk. der ges. Forst- und Jagdwissenschaften" (1850–91); physics by Lardner, "Cabinet Cyclopaedia" (1832 vols., London, 1829–46; 2nd ed., 1854); "Allgemeine Encyk. der Physik," ed. Lamont, Helmholz, and others; and chemistry by Frénay, "Encyol. chim." (Paris, 1889). The "Encyclopaedia Metropolitana" of S. Taylor Coleridge is of a more general scope, as also the vast undertaking of Ivan Müller, which embraces every branch of classical learning, treated by specialists, "Handbuch der klassischen Altertumswissenschaft" (Munich, 1885; vols. since republished separately). Among the various attempts to treat history in this manner may be mentioned Oncken's "Allgemeine Gesch. in Einzeldarstellungen" (45 vols., Berlin, 1879–93). Other encyclopedias which may even yet claim to be useful as works to facilitate a rapid general survey of the subject, its history, aim, and object, and, above all, to present the results of special investigation in the several departments of the science. An important contribution along these lines, now in the course of publication, which will give the general reader an outlook upon the various branches of knowledge, is "Die Kultur der Gegenwart", ed. Himmelberg (Leipzig, 1906–). The first to arrange encyclopedic matter according to an alphabetical system was Suida, during whose time (tenth and eleventh centuries) the necessity of general information on Byzantine culture made itself felt, especially during the reign of Constantine VII, Porphyrogenitus (913–59). The formation of Suida may likewise be divided into general encyclopedias (Konzensionslexikon), and technical encyclopedias or dictionaries (Realwörterbuch or Realencyklopädie). The most important work for the popularization of the results of scientific research was Bäyle's "Dict. historique et critique" (Rotterdam, 1693–97). The am-
hitious “Biblioteca universale” of Coronelli (7 vols., Venice, 1701) remained incomplete; the immense “Grosses, vollständiges Universal-Lexikon aller Wissenschaften und Künste”, edited by J. P. von Ludewig, Frankenstein, Longilius, and others and published by Zeller (64 vols. and 4 suppl. vols., Leipzig, 1731–54), was brought to completion. About the same time there appeared in France the great encyclopedia of Diderot and d’Alembert who were assisted in their work by numerous champions of rationalism, e.g. Voltaire, d’Holbach, Rousseau, and Grimm: “Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers” (28 vols., Paris, 1751–72, with 5 supplementary volumes, Amsterdam, 1776–77, and 2 vols. of analytical index, Paris, 1774–78). This monumental work, spread over a period of 23 years, was a breath of scope but had much greater influence on European thought, popularizing as it did the empiricist, sensism, and materialism of Locke. The first edition of 30,000 copies was followed by many later editions.

The encyclopedia of Diderot paved the way for the alphabetic encyclopedias. It was not only frequently read but was arranged as a system of separate dictionaries by Panckoucke and Agasse in the “Encyclopédie méthodique ou par ordre des matières” (166 vols. of text and 51 vols. of illustrations; Paris, 1782–1832). In Germany the first encyclopedia modeled on Diderot’s, by Koster and Roos, only reached Kinaal (23 vols., Frankfurt, 1778–1804); the more important German encyclopedias are those in which Ersch and Gruber, proved a success. This is considered the most scientific German encyclopedia, “Allgemeine Enzyklopädie der Wissenschaften und Künste” begun by Professor Johann Samuel Ersch in 1813 and continued by Professors Hufeland, Gruber, Meier, Brockhaus, Muller, and Hoffman. The work is divided into three sections: Section I, A to O (54 vols., 1828–63); Section II, O to Z (54 vols., 1830–40). Equally ambitious in scope is the “Ökonomisch-technolog. Encycl.” (242 vols., Berlin, 1773–1858), planned by Krinitz as a dictionary of economics and technology, but gradually enlarged by his successors Förke, Korth, and C. O. Hoffmann into a general encyclopaedia. In English Brittanica is the most ambitious encyclopedic work of the nineteenth century, the model of encyclopedic presentation, is the Brockhaus “Konversationslexikon”, which took its name from Hübner, and from Bayle’s “Dictionnaire” its arrangement and plan of presenting the results of scientific research and discovery in a popular form. Hübner gave as the reason for namin g his work “Brockhaus’ Zeitschrungs- und Konversations-Lexikon” that the fact that “it was to contain no professorial learning but all items of refined learning needed in daily intercourse with educated people”. As it was printed chiefly to satisfy people of a curious turn of mind, it was confined principally to geography, while history was excluded as a special science. The American Encyclopedia was begun by Lobel in 1796 (6 vols., Amsterdam, 1808; 2 supplementary vols., 1810). In 1800 the publishing rights were acquired by Friedrich Arnold Brockhaus; the firm of Brockhaus completely altered the original plan and is still engaged on the work (14th cd., 1901–abridged ed., 2 vols., 4th ed., 1888). Constructed on the same lines as the encyclopedia Brockhaus is the “Grande Encyclopédie” (26 vols., 1824–36; 7th ed., 12 vols., 1888–93), to which were added the Pierer “Jahrbiicher der Wissenschaften, Kunst und Gewerbe” (1865–73); similar works are Meyer’s “Konversations-Lexikon” (37 vols., Leipzig, 1810–52; 6th ed., 20 vols., 1902; 7th ed., abridged, 6 vols., 1907) and Sparre’s “Illustrirte Konversationslexikon” (8 vols., 1854–69; 3 supplementary vols., 1879–82; 2nd ed., 1884–91). These works were inspired by a superficial rationalism, if not by conscious hostility to everything Catholic. Early attempts were made to counteract this propaganda of religions indifferentism by the publication of encyclopedias from the Catholic point of view, such as the “Allgemeine Realencyklopädie oder Konversations-Lexikon für das katholische Deutschland” (15 vols., 1840–49; 4th ed. 1890–99); and Herder’s “Konversationslexikon” (5 vols., Freiburg, 1853–57); neither proved a thorough success. The third edition of the latter (8 vols., 1901–08), through its preservation of Catholic interests, by its impartiality, thoroughness, and comprehensiveness, gained general approval.

ENCYCLOPEDIANS—(1) The writers of the eighteenth century who edited or contributed articles to the "Encyclopédie". (2) Those among them especially who belonged to the "philosophic" party, joined in the "Encyclopédie" from the very beginning, or even before, because of a certain community of opinions on philosophical, religious, moral, and social questions. 1. THE ENCYCLOPÉDIE AND THE ENCYCLOPÉDIANS.——The "Encyclopédie", ou Dictionnaire raisonné des sciences, des arts et des métiers, par une société de gens de lettres, mis en ordre et publié par M. d'Alembert . . . et quant à la partie mathématique par M. d'Alembert . . . In the complete original edition comprises 35 folio volumes as follows: 17 vols. of text (Paris, 1751-1765); 11 vols. of plates (Paris, 1762-1772); 5 vols. of supplement, i.e. 4 of text and 1 of plates (Amsterdam and Paris, 1776-1777); 2 vols. of analytical index prepared by Pierre Mouchoin (Amsterdam and Paris, 1778). In 1745, a French translation of Chambers's "Cyclopaedia", prepared by John Mills with the assistance of Gottfried Sellius, was to be published in Paris by the king's printer, Le Breton. After the necessary royal privilege had been obtained, a number of difficulties between Mills and Le Breton caused the failure of the enterprise, and Mills returned to England. Le Breton asked Jean-Paul de Gua, professor in the Collège de France, to assume the editorship and revise the mathematical sections, under the protection of the victorious count of Gontaut, obliged de Gua to resign. Diderot was then called upon to complete the preparation of the manuscripts. At his suggestion, however, it was decided to undertake a more original and more comprehensive work. Diderot's friend, d'Alembert, agreed to edit the mathematical sciences. Diderot (1713-84) had not yet written any original work except the "Pensées philosophiques" (1740), in which the foundations of Christianity are examined and undermined, revelation rejected, and reason proclaimed independent. The Parliament had ordered the book to be burnt. The "Promenade d'un sceptique" was written in 1717, but not published before the author's death. Diderot had also published a translation of Stanyan's "Grecian History" (1743) and an adaptation of Shaftesbury's "Inquiry into the Principles of Morals", under the title "Principes de la philosophie, ou Essai sur la mérite et la vertu" (1745). His main recommendation as editor of the new Encyclopédie, however, was the "Dictionnaire universel de médecine" (1746-1748), a translation of Dr. Robert James's "Medical Dictionary". D'Alembert (1717-83) was already famous as a mathematician. At the age of twenty-two he had presented two studies to the Académie des Sciences, "Sur la réfraction des corps solides" (1739), and "Sur le calcul intégral" (1740). The following year he was elected a member of the Académie. He had acquired a still greater reputation by his "Traité de dynamique" (1743) and the "Mémoire sur la cause générale des vents" (1747), the latter winning for its author the gold medal of the Berlin Academy and membership in that body. While the articles were being printed Diderot was imprisoned at Vincennes, 29 July, 1749, for his "Lettre sur les avouages à l'usage de ceux qui voient", or rather for a passage in it which had displeased Madame Dupré de Saint-Maur. After four months his publishers obtained his release. In November, 1750, the Encyclopédie was published in Paris by Diderot and, in July, 1751, the first volume was published. It opened with a "Discours préliminaire" by d'Alembert, in which the problem of the origin of ideas is solved according to Locke's sensualism, and a classification of sciences is proposed which, except in a few minor points, is that of Bacon. In the prospectus Diderot had already said, "The object of this vast enterprise our principal debt will be to Chancellor Bacon who sketched the plan of a universal dictionary of sciences and arts at a time when there were, so to say, neither sciences nor arts." D'Alembert acknowledges the same indebtedness. Thus, British influence was considerable both in shaping the doctrine of the "Encyclopédie" and in bringing about its publication. The Encyclopédie may be considered to be the consequence of many protests against the spirit of the work, its sale was stopped, and later an arrêt of the King's Council suppressed both volumes as injurious to religion and royal authority (7 February, 1752). Three months later, however, Diderot and d'Alembert were asked to continue the work, a fact which they announce with pride in the preface to the third volume (October, 1753). The following volumes were published without any interruption until after the publication of the seventh volume (1757), when new difficulties arose. In his article on Geneva, d'Alembert had stated that the ministers of that city were Socinians, and praised them for their unbelief. They protested strongly, and this was the occasion for bitter discussions between the abbé Voltaire and the republicans, the last being the prominent part. The outcome was that d'Alembert, tired of vexations, resigned the editorship. Rousseau also ceased to have anything to do with the Encyclopédie, and thenceforth showed a vehement hostility to it. On the other hand, there were so many denunciations that finally an arrêt of the Council (8 March, 1753) revoked the privilege granted in 1746, and forbade the sale of the volumes then in print, and any printing of any future volume. And yet, under the secret protection of Choiseul, Madame de Pompadour, Malesherbes, then director-general of the Librairie, and Sartine, the chief of police, work was resumed almost immediately. The ten remaining volumes
were to be published together. After Diderot had corrected the proof-sheets, Le Breton, fearing new vexations, suppressed passages likely to be objectionable and to cause friction with the authorities. Diderot noticed the changes too late to prevent them. The articles were mutilated to an extent which it is now impossible to determine, as all manuscripts and proof-sheets were immediately destroyed. At last, in 1765, volumes VIII-XVII were published, completing the text of the Encyclopédie.

It is not possible to mention here all the contributors (about 160 to 1700). Diderot himself wrote 900 articles on almost every subject, philosophical, religious, and moral, but especially on the arts and trades. Great care was taken in the treatment of the mechanical arts. No trouble was spared to obtain minute descriptions of various machines and the means of using them. All this was explained in the text and illustrated in the plates.

D'Alembert's articles, with few exceptions, are on the mathematical and physical sciences. From the beginning Rousseau (1712-1778), then known as the author of several musical works and compositions, agreed to write the articles on music. He also wrote the article, "Economie politique". The collaboration of Buffon (1707-88) who had promised to write on "Nature" is announced in the second volume, but it is doubtful that this third volume was ever written. Most of the topics in natural history were treated by Daubenton (1716-99). Articles by d'Holbach (1723-89), Marmontel, Bordeu, are announced in the third volume.

The fourth introduces Voltaire (1694-1778) as the author of some literary articles, and says of him: "The Encyclopédie, on account of the justice which it has rendered and will always continue to render him, will be worthy of the interest which he now takes in it. In the "Discours préliminaire", d'Alembert had praised him as occupying "a distinguished place in the very small number of great poets", and extolled him for his qualities as a prose writer. Condorcet, Grimm, Quesnay, Turgot, Necker also contributed articles or memoirs. de Jaucourt furthered the cause of the Encyclopédie not only by his numerous articles and his constant interest, but also by his attitude and reputation. Far from sharing the materialistic and atheistic tendencies of many of his co-workers, he was at the same time friendly to the Encyclopédists and to some of their enemies. Montesquieu at his death (1755) left an unfinished article on Taste (Goût); but his "Lettres persanes" (1721) and "Esprit des lois" (1748) illustrates the social and political articles in the Encyclopédie.

II. The Spirit and Influence of the Encyclopédie.—The expression spirit of the Encyclopédie may at first seem to be a misnomer. In that vast compilation is found the greatest diversity of subjects and even of views on the same subjects. The writers of the articles belong to all professions. People of God and their disciples, literary men, lawyers, physicians, artists, clergymen, scientists, philosophers, theologians, statesmen, etc. appear on the lists of contributors. The articles are of unequal value; proportion is lacking, each contributor apparently writing as he thinks fit. Verboicity is a prominent defect, and, at times, the authors include abusive expressions and dogmas. Voltaire repeatedly assailed for brevity and better method. (See Letters to d'Alembert, esp. in 1756.)

The articles seem to have been gathered together from various sources without any preconceived plan, without any unity or sufficient supervision. Under these conditions the spirit of the Encyclopédie might denote merely one special tendency, or one group of tendencies, which, at first manifested along with many others, gradually became important and finally predominant. To some extent it is that, but it is also more than that. The Encyclopédie was not intended only as a great monument to record the progress realized in sciences, arts, civil and religious institutions, industry, commerce, and all other lines of human endeavour; the Encyclopédists purposed more than to record the past and the present, but to prepare the future and indicate the way to further progress. The Encyclopédie would be a record, but it would also be a standard; not a mere onlooker, but a leader. In fact, appearing as it did in the third quarter of the eighteenth century, it is a mirror in which the events of the whole century are focused.

At the time of the publication of the Encyclopédie, the French Government was under the influence of various causes and influences, already considerably weakened, and still weakening. Dissatisfaction and unrest, though not yet well defined, were spreading among the people. Existing institutions and customs, both religious and political, had recently been denounced in several publications. The "philosophers" were favourably received in the salons of the aristocracy. On the other hand, Jansenism, with the endless discussions of which it had been the source or the occasion, and also with the lack of knowledge and looseness of morals among some members of the clergy, had prepared the way for a reaction in the sense of unbelief. There were other causes less direct, perhaps, and more remote, yet influential in bringing about a break with the past. In Descartes the mind always finds a refuge. In the eighteenth century it was, for a great many, the only refuge, the only attempt even, of tradition in philosophy, especially when immediate evidence, the idée claire, is made the sole valid criterion of truth. The influence of British philosophers was far from tending to check the growth of rationalism. Nor can we overlook the influence of the famous "Querelle des Anciens et des Modernes", as it is known in the history of French literature. In the later years the second volume of the Encyclopédie was one of the main centres of attention. To this discussion, which resulted in a victory for those who favoured the "modern", Brunetiére traces back three important consequences: first, the meaning of tradition becomes gradually identified with that of supersession; second, progress is conceived as an emancipation from, and an abjuration of, the past; finally, and this is still more important, education in all its stages consists more and more in derision of the past. True, recent times everywhere offered masterpieces in art, literature, and science. Whatever side we may take in the old quarrel to-day, and however much less radical and more impartial our views may be, we can at least understand the attitude of those who succeeded the great men of the Enlightenment. The other important factor was scientific progress. After being too frequently confined to idle or priori controversies, science was asserting its rights, and these it soon came to exaggerate, while it failed to recognize the rights of others. Reason gradually freed itself from the superstition of the past and claimed absolute independence. Ancient, or rather Christian, conceptions of God and the world were not even deemed worthy of the serious consideration of a "thinker". Efficient causes alone were recognized, final causes proscribed. In nature science always dealt with immutable laws; soon the possibility of miracles and revelation was denied, while mysteries were regarded as absurd. Thus, in the place of traditional beliefs, new ideas were introduced, tending to rationalism, materialism, and naturalism. In other words, the Encyclopédie was but little agreement; the tendency was primarily negative. It was an opposition to received dogmas and institutions, an effort to establish a new theoretical and practical philosophy on the basis of merely naturalistic principles. Nothing is truer than d'Alembert's statement, in the "Discours préliminaire", that "our century believes itself destined to change all kinds of laws". Towards the middle of the eighteenth century the representatives of this movement were the "philosophers", and they were about to centralize their efforts in the Encyclopédie. Great prudence
was necessary, and it was used. Some men who were known for their conservative opinions were asked to contribute articles, and the Encyclopédie contained some unexceptionable doctrines and moderate views on religious, ethical, and social problems; moreover, the editors themselves and those who shared their views frequently concealed or disguised their true convictions. As Voltaire says, they were in the sad necessity of "printing the contrary of what they believed" (Letter to d'Alembert, 9 October, 1756). More than usual, what was not clearly expressed, and at times a sarcastic remark was substituted for a definite statement or argument. When the main article to which one would naturally turn for information contained nothing objectionable, other articles, less likely to attract attention, expressed different and more "philosophic" views. That such was the condition of affairs is attested by a significant passage in a letter of d'Alembert to Voltaire (21 July, 1757). To the latter's criticism of certain articles he replies: "No doubt we have had articles in theology and metaphysics; but with theologians for censors, and a privilege, I defy you to make them any better. There are other articles less exposed to the daylight in which all is repaired. Time will enable people to distinguish what good may be derived from what is written. Hence, although the Encyclopédie, itself contains many articles in which anti-Christian principles are openly professed, the true, unstrained encyclopedic spirit was found in the meetings of the "philosophers" and in the salons, where they were looked upon as oracles.

To-day it is to be found in the later works of the Encyclopedists and chiefly their letters and memoirs. In the impious and virulent "Candide" D'Alembert, for instance, is known from his correspondence with Voltaire, one would fail to recognize the prudent and reserved d'Alembert of the Encyclopédie. "You were born with the firmest and most virile genius", Voltaire wrote to him (4 June, 1769), "but you are free only with your friends, when the doors are closed". This last remark applies also to Diderot and the Encyclopedists. Their private letters reveal their true spirit and intentions, and prove that the apparent moderation and tolerance shown in their public writings were dictated by fear and not by conviction.

It is difficult to estimate the influence which the Encyclopédie exerted on the events that followed its publication, especially the French Revolution. To a large extent, this was due to the public discussion of the abstract philosophical questions. The influence of the Encyclopédie was not only in the intellectual and intellectual and religious and social views of the time. The Encyclopédie was a real influence. Since their spirit was antagonistic to the Church and, in many respects, also to the State, one may ask why its manifestations were not suppressed; why in particular its organ, the Encyclopédie, was allowed to proceed, notwithstanding the warnings of its adversaries and its repeated condemnation by the civil authorities. In a word, what was done to check its influence or to oppose its doctrines? In general, it may be answered that little was done, and that, under the circumstances, perhaps little could be done. The defenders of the Faith were not idle; they wrote books and articles in refutation of the "philosophers"; but the Encyclopédie was not stopped. The great and their scattered efforts were of little avail against the organized forces and the powerful protectors of their adversaries. The Jesuits, the secular clergy, especially Archbishop Christophe de Beaumont, of Paris, and Bishop Le Franc de Pompadour, of Le Puy, who wrote pastoral letters on the subject, and several other writers and preachers denounced the Encyclopédie. When the latter published an article claiming that having its publication and sale prohibited by the Government. The suspensions were only temporary. The Encyclopedists were under the patronage of high personages at the Court; they were protected especially by Malesherbes, the director of the Librairie, who controlled, among other things, the granting of privileges for new publications and the censoring of books, and by Sartine, the chief of police, on whom depended the enforcement of laws and ordinances concerning the printing and sale of books. Malesherbes always showed himself the friend not only of the Encyclopédie, but also of the Encyclopedists. Owing to this friendship, many works were published notwithstanding the official opposition of the Government. In 1769, after the decision of the council had revoked the privilege formerly granted, it was Malesherbes himself who interceded with better effect with Diderot or Voltaire to have it be seized the next day. As it was too late to look for a place of safety where they could be taken, Malesherbes had them sent to his own house.

Thus the Government secretly favoured an enterprise which it officially censured, and, under this protection the Encyclopédie was begun and completed. Partly for the same reason, partly also for deeper reasons concerning the religious and civil conditions in France, the efforts to combat the Encyclopédie were not rewarded with much success. Moreau in the "Mémoires pour servir à l'histoire des Cacouacs" (1757), Palissot, in his "Petites lettres sur de grands philosophes" (1757) and in his comedy "Les philosophes" (1760), tried to use the weapons of ridicule and satire, but some of them, especially Voltaire, wielded with greater skill. Freron, in the "Annales littéraires", was at times sarcastic, and always ready to give and take blows. Constantly at war with the Encyclopedists, he was at a great disadvantage, for they enjoyed Malesherbes' protection, whereas for him the censure was always very severe. Thus he was hard to refute, and, where he was successful, his caricature, "Ecossaise" (1760), in which he had been publicly insulted on the stage. The Jansenists, in the "Nouvelles ecclésiastiques", did little more than insult the Encyclopedists. In the "Journal de Trévoux", the Jesuits, and among them especially Berthier (1704–82), who was director of the Journal from 1745 till the suppression of the Society of Jesus, wrote frequent criticisms. But notwithstanding all this opposition the spirit of irreligion was steadily gaining. Too often the criticism was weak, the attack unskilful. In some cases even, the anti-Encyclopedists, instead of harming their opponents, rather contributed to their success by giving them notoriety and affording them an opportunity for using their influence. The Jesuits and the orthodox, for instance, used the expulsions, both by La Bruyère and Malesherbes, as a means of victory and a new prestige to the "philosophers". D'Alembert, who wrote "La destruction des Jésuites en France" (1753), looks upon this expulsion as the just punishment of their hostility towards the Encyclopédie. Gradually the people were becoming accustomed to the new punishment, and thus it was that, whereas the first volumes had created a great stir in France, the appearance of the last volumes was scarcely noticed.

Unknown or little known in 1750, the "philosophers" had now won their battle, and were the recognized victors. Their success made them bolder in declaring openly what fear had frequently obliged them to veil in former works and in the Encyclopédie. These defenses were put aside, and the Encyclopédie published several works before the completion of the Encyclopédie, the most important being Diderot's "Pensées sur l'interprétation de la nature" (1754); Helvétius's "De l'esprit" (1758); Rousseau's "Discours sur l'origine et les fondements de l'inégalité parmi les hommes" (1753), "Contrat social" (1762), and "Emile" (1762). Voltaire's "Philosophical Dictionary" (1762) and D'Alembert's "Système de la nature" (1770). Hence, on 8 July, 1765, Voltaire could write to d'Alembert: "They clamour against the philosophers, and are right; for, if opinion is the ruler of the world, this ruler is governed by the philosophers. You can hardly imagine how their empire is spreading."
Steadily the new current of thought gained in volume and power, until nothing could stop its destructive course. The French Revolution, following closely upon the publication of the Encyclopédie and the other works of the Encyclopaedists, was the practical result. 

**Endlicher, Stephan Ladislaus,** Austrian botanist (botanical abbreviation, Endl.), linguist, and historian, b. at Pressburg, Hungary, 24 June, 1804; d. at Vienna, 28 March, 1849. The son of a physician, he studied philosophy at Pesth and Vienna, and theology from 1823 to 1826 at Vienna; he did not, however, enter the priesthood. From 1826 at Pressburg he turned his attention to languages, studying especially Chinese, a knowledge of which he acquired in course of his later works. "An Anleitung zur Gebrauch der chinesischen Grammatik" (Vienna, 1814), and "Atlas von China nach der Aufnahme der Jesuiten" (Vienna, 1813). Urged by his father, Endlicher took up the study of botany in 1826, and devoted all his spare time to it during the years 1828–30, when he had charge of the MSS. in the Imperial Library of Vienna. In this same period he issued as librarian, in addition to a number of works on the ancient classics, German, and Hungarian literatures, the first volume (Vienna, 1836) of the MS. catalogue of the Imperial Library. In 1836, he was made curator of the botanical department of the Royal Natural History Museum, and in 1840, professor of botany at the University of Vienna, and director of the Botanical Garden of Vienna. In 1842, he was made professor of botany at the University of Vienna. Later, he was president of the institution, and held the professorship in botany from 1888 until his death. The endowment of the Endlicherian Society, or "Joseph Rompel".

**Endowment** (Ger, Stiftung, Fr. fondation, It. fondazione, Lat. fundatio), a property, fund, or revenue secured or founded for the use of a person, institution, or object, as a student, professorship, school, hospital. The term is more frequently applied to the establishment of ecclesiastical corporations by private endowment. In ecclesiastical circles the word is employed also in a more restricted sense, signifying a conditional donation or legacy, i.e., the establishment of a fund, by the provisions of a last will or otherwise, in order to secure permanently, or at least for a long time, some spiritual benefit, as, for instance, the offering and application of a monthly or annual Mass.

The early Christians were lavish in their support of religion, and frequently turned their possessions over to the Church (Lallemand, "Hist. de la charité", 1893). The "acte de donation" of the Huguenots to the parishes of the German Empire, Heidelberg, "Christenthum u. Wohlthätigkeiit" in his "Beiträge", I, 175. The Emperor Justinian (Novella Iviii) compelled those who built churches to endow them; and about the same time, ecclesiastical legislation prescribed that no cleric was to be ordained for a church without proper provision for his maintenance (Counc. of Epaon, 517, c. xxv). Whoever desired to have a parish church was obliged to set aside a sufficient landed endowment for its clergy (IV Counc. of Arles, 541, c. xxxiii); while a bishop was forbidden to consecrate a church till the endowment had been properly secured by a deed or charter (II Counc. of Braga, 572, c. v). If one who held a fief from the king built and endowed Churches, the bishop was required to procure the royal confirmation (III Counc. of Toledo, 559, c. xv). Ancient and noble Roman families, as well as others of less means, inspired by feelings of love and gratitude, made large bequests to the Church. In the fifth century, in countries inhabited by German tribes, the Church was endowed especially with lands. These possessions were lost during the political and social upheaval that followed the Germanic invasions, known as the Wanderings of Nations. Towards the end of Charlemagne's reign the regenerated peoples contributed once more voluntarily and generously to the support of ecclesiastical institutions.
**ENERGY**

In England, both under Saxon and Norman domination the generous zeal of the faithful prompted them to secure by endowments a permanent priesthood, and to provide for the dignity and even splendour of Divine worship. A considerable portion of the foundations thus established in England was squandered or confiscated during the Reformation of Henry VIII and Queen Elizabeth, while the remainder, by virtue of the Acts of Uniformity and Supremacy, was transferred to the Anglican Church, which still retains it. The conditions of the Cathedrals of England since the Reformation in temporal matters has not permitted the re-establishment of endowments, though instances have not been wanting and are on the increase. In Ireland and Scotland likewise the old foundations of the Church have been lost or diverted from their purpose. In Ireland the Protestant Church, which had received during the Reformation the lands and monies of the Catholic Church, was dispossessed and disendowed by the Act of 1698, but so liberal were the compensations allowed that they amounted practically almost to a re-endowment. In Scotland the Presbyterians of the Established Church, owing to the immense influence of Knox in the sixteenth century, still possess what is left of the ancient endowments of the Catholic Church. In Franconia and Saxony, the endowments undergone many vicissitudes, particularly from the year 1579, when a yearly income of about $14,000,000 was suddenly and unjustly confiscated. The influence of the French Revolution was felt elsewhere, especially in Germany, where by the fifty-fifth article of the Resolutions of the Deputation of the Empire (1803) "all property belonging to the foundations, altars, and religious institutions was subjected to the fullest and full disposal of the respective rulers, who were to provide for the expense of public worship, of instruction, of founding useful public institutions, and of lightening their own financial embarrassments". In Italy the annexation of the States of the Church in 1859, 1860, and 1870 by the King of United Italy was followed by the introduction of anti-ecclesiastical laws, the robbery of the Church, and the spoliation of her institutions. The endowments that remain are for the most part administered by the Government. Foundations in America are not numerous and merit no special mention.

Canon law lays down strict regulations regarding the acceptance and management of endowments as well as the observance of the conditions arising from them. They are to be accepted only by those whose interests are at stake, as, for instance, the rector of a church, the administrator of an institution. The consent of the ordinary, if they are presented to a diocesan institution, or of the competent religious superior, if given to regulars, is requisite. The superior in question should assure himself that the income accruing from the investment is a sufficient recompense for the service demanded. Once the conditions of acceptance have been established, they are unchangeable, and it is incumbent on the bishop or religious superior, as above, to procure the fulfilment of the obligation imposed. A catalogue or table of these obligations assigned by a church is to be kept and conserved in the sacred treasury or, in the absence of one, in the chancery office—while among the parochial books is one in which the satisfaction of these obligations is noted. The supreme law to be observed in this matter is the will of the founder of an endowment, to fulfil which the zealous vigilance of the Church is ever directed. If, however, the property or invested fund has been entirely consumed, the latter if connected with the church, the latter is exempt from its part of the contract. If a disproportion arise between the service required and the recompense, a proportionate reduction of the obligation entailed is permitted, under certain conditions, by the Holy See. Bishops are not allowed to lessen the original obligation, e.g. to reduce the number of Masses to be offered annually, though where the mind of the donor is not sufficiently clear, they may determine minor details, such as the hour of the service or the altar at which it is to be appointed. Founders of churches frequently, when reduced to themselves, with the approbation of Rome, the right to administer the temporal concerns of such foundations and to suggest candidates for vacant benefices in said churches (see Patronage), though ordinarily these trusts are under the supervision of a corporation or canonical trustees.

**ÉNERGUMENI.** See DEMONIACS.

**Energy, the Law of the Conservation of.**—Amongst the gravest objections raised by the progress of modern science against Theism, the possibility of miracles and the belief that, in order that virtue may suddenly and slightly alter the conditions of the present, there should be a new creation, that of the universe and the soul, its creation and immortality, are, according to many thoughtful men, those based on the Law of the Conservation of Energy. Consequently, as a full treatment of this topic in its philosophical aspects as the limits of space will allow, is here attempted.

**EXPLANATION OF THE DOCTRINE.**—The word energy comes from the Greek ἐνέργεια, "operation, actuality". This term is itself a compound of ἐν, and ἀργεῖα, "work". In modern physical science the notion of energy is associated with mechanical work. It is commonly defined as "the capacity of an agent for doing work". By "work" scientists understand the production of motion against resistance. Such energy, whilst existing in many forms, is considered especially in two generally distinct states known as kinetic energy, or energy of motion, and potential energy, or energy of position. The power of doing work in the former case is due to the actual motion possessed by the body, e. g., a cannon-ball on its course, or a swinging pendulum. Potential energy, on the other hand, is exemplified by a wound-up spring, or by the bob of a pendulum when at its lowest point; as the bob rises upwards its velocity and kinetic energy diminish whilst its potential energy is increasing. When at its highest point its potential energy is at a maximum, and its kinetic is nil. Conversely, when, moving downwards, it reaches its lowest point, it will have recovered its maximum kinetic energy, whilst its potential will have vanished. Energy is also recognized in the heat of a furnace, or the fuel of the same, in explosives, in an electric current, in the radiations of the ether which illuminates and warms the earth. Now, it has been found that these different forms of energy can be changed into one another. Further, the amount of a sum of energy in different forms can be measured by the quantity of work it can accomplish. The search for a high-dispended energy that could do work as it sinks to a lower level; likewise a steel spring as it expands, heat as it passes to a cooler body, electric current as it is expended, and chemical compounds in the course of decomposition. On the other hand, a corresponding amount of work will be required in order to restore the original condition of the agents. Perhaps the greatest and most fruitful achievement of science in the last century has been the establishment of a law of quantitative equivalence between these diverse forms of energy measured in terms of work. Thus a certain amount of heat will produce a definite amount of motion in a body, and conversely this quantity of motion may be made to
reproduce the original amount of heat—assuming that in the actual process of transformation there were no waste. In other words, it is now accepted as established that, in any "conservative" or completely isolated system of energies, whatever changes or transformations take place signify the sum of the energies, as long as no external agent intervenes, the sum of the energies will always remain constant. The Principle or Law of the Conservation of Energy has been thus formulated by Clerk Maxwell: "The total energy of any body or system of bodies is a quantity which can neither be increased nor diminished by any mutual action of these bodies, though it may be transmuted in the form of that which is incapable of transformation." (Theory of Heat, p. 93.) Thus stated, the law may be admitted to hold the position of a fundamental axiom in modern physics; the nature of the evidence for it, we shall consider later. But there is a further generalization, advancing a considerable way beyond the frontiers of positive science, which affirms that the total sum of such energy in the universe is a fixed amount "immutable in quality from eternity to eternity." (Von Helmholtz.) This is a proposition of a very different character; and to it also we shall return. But first a brief historical account of the doctrine.

History.—The doctrine of the Conservation of Energy was long preceded by that of the Constancy of Matter. This was held vaguely as a metaphysical principle of the Ancients. The doctrine was stated in its positive form by a philosopher by the name of Telesius, and Francis Bacon. Descartes assumed in a somewhat similar a priori fashion that the total amount of motion (MV) in the universe is fixed—"certam tamen et determinatam habet quantitatem" (Princip. Philos., II, 36). But the effort to establish such assumptions by accurate experiment begins later. According to Fahrenheit, the Conservation of energy virtually formulated for the first time in Newton's Scholion developing his third law of motion (action and reaction are equal and opposite), though his participation in the current erroneous conception of heat as a "caloric," or independent substance, prevented his clearly apprehending and explicitly formulating the principle of its constancy or degradation. But if the idea existed in his mind, that inuyang, in the seventeenth century, seems to have grasped, though somewhat vaguely, the notion of momentum, or vis viva (MV). This was clearly enunciated by Leibniz later. The fundamental obstacle, however, to the recognition of the constancy of energy lay in the prevalent "caloric theory." Assuming heat to be some sort of substance, its origin and disappearance in connexion with friction, percussion, and the like seemed a standing contradiction with any hypothesis of the constancy of energy. As early as 1780, Lavosier and Laplace, in their "Mémoire sur la chaleur," show signs of approaching the modern doctrine, though Laplace subsequently committed himself more deeply to the caloric theory. Count Rumford's famous experiments in 1798 with the boring of cannon and Sir Humphry Davy's analogous observations (1799) on the heat caused by the friction of ice, proved the death-blow to the caloric theory. For the view was now beginning to receive wide acceptance among scientists, that heat was "probably a vibration of the corpuscles of bodies tending to separate them." Dr. Thomas Young, in 1807, employed the "caloric" or "vis viva" of active force of a moving body, which is measured by its mass or weight multiplied by the square of its velocity (MV). Sadi Carnot (1824), though still labouring under the caloric theory, advanced the problem substantially in his remarkable paper, "Réflexions sur la puissance motrice du feu," by considering the question of the relation of quantity of heat to amount of work done, and by introducing the conception of a machine with a reversible cycle of operations. The great epoch, however, in the history of the doctrine occurred in 1812, when Julius Robert Mayer, a German physician, published his "Remarks on the Forces of Inanimate Nature," originally written in a series of letters to a friend. In this little work, "contemptuously rejected by the leading journals of physics of that day," (Poincaré), Mayer clearly enunciated the principle of the conservation of energy in its widest generality. His statement of the law was, however, in advance of the existing experimental evidence, and he was led to it partly by philosophical reasoning, partly by consideration of physiological questions. At the same time, Joule in his "Memoire sur la puissance motrice du feu," by experiment, was determining by accurate experiments the dynamical equivalent of heat—the amount of work a unit of heat could accomplish, and vice versa; and "Colding was contributing important papers on the same subject to the Royal Scientific Society of Copenhagen, so that no particular man can be described as the Father of the doctrine of the Conservation of Energy" (Preston). Between 1848 and 1851, Lord Kelvin (then Sir William Thomson), Clausius, and Rankine developed the application of the doctrine to sundry important problems in the science of heat. About the same time Helmholtz, approaching the subject from the mathematical side, and starting from Newton's Laws of Motion, with certain other assumptions as to the constitution of matter, deduced the same principle, which he called "the Law of Conservation of Forces." Subsequently, Faraday and Grove illustrated in greater detail the extent and variety of the transformation and correlation of forces, not only heat being changed into work, but light occasioning chemical action, and this generating heat, and heat producing electricity, capable of being again converted into motion, and so on round the circle. But it is a curious fact, there inevitably occurs a waste in the usableness of energy. Though the total energy of a system may remain a constant quantity, since work can be done by heat only in its transition from a warmer to a cooler body, in proportion as such heat gets diffused throughout the whole system it becomes less utilizable, and the total capacity for work diminishes owing to this dissipation. This principle was first formulated in what has been called the principle of Carnot or of Clausius. It is also styled the second law of thermodynamics and has been made the basis of very important conclusions as to the finite duration of the universe by Lord Kelvin. He thus enunciates the law: "It is impossible by means of inanimate material agency to derive a mechanical effect from a portion of matter by cooling it below the temperature of the coldest surrounding bodies." Living Organisms.—The successful determination of the quantitative equivalent of one form of energy in some other form, obviously becomes a far more difficult problem when the subject of the experiment is not inanimate matter in the chemical or physical laboratory, but the consumption of substances in the living organism. Among others, however, some essays in this direction, endeavouring to establish by experiment that the principle of the constancy of energy holds also in vital processes. By the nature of the case the experimental evidence is of a rougher and less accurate character. Still it tends to show at all events approximate equivalence in the case of some organic tissues. Anomalous observations, however, far seem to be those of Rubner, who kept dogs in a calorimeter, measuring carefully the quantity of food received and the heat developed by them. The chemical energy of the substances consumed manifests itself in heat and motion, and the heat generated in the consumption of different substances by the animals seems to have corresponded rather closely to that resulting in laboratory experiments; hence it is affirmed that the observations all point to the conclusion that "the sole cause of animal heat is a chemical process"
(Schräfer). This, however, is a long way from experimental proof that the conservation of energy holds in all vital processes with such rigid accuracy that every faintest change in the motor or sensory nerve-cells of the brain must have been completely determined by a preceding physical stimulus. Whether this proposition be true or not, there is not as yet even a remote approach to experimental proof of it (cf. Ladd).

The Law Considered.—Character and Range.—About the character and range of the law, and its bearing on sundry philosophical problems, there has been and still is much dispute. As a rule, however, the most eminent scientists, e. g. men like Clerk Maxwell and Poincaré, most candidly admit the limitations of their emunciation of the law. Be it noted that, when strictly stated, this proposition, "The sum of the kinetic and potential energies of a conservative system amid all changes remains constant", first applies only to an isolated or closed system. But such systems are hypothetical or ideal. As a matter of fact, no group of agents in the present universe is or can be thus isolated. Next, the proposition may be stated, as a legitimate generalization, only of inanimate bodies and material energies. The law affords no justification for the assertion that the only energies in any particular system, still less in the universe as a whole, are material energies. Clerk Maxwell himself explicitly reminds us that "we cannot assert that all energy must be expressed as kinetic energy: we may not be able to conceive of any other form". Again, many physicists insist that this concept of energy contained in the formula proves, when examined closely, to be vague and elusive. H. Poincaré asks: "What exactly remains constant?" And he concludes a searching analysis with the statement that "of the principle nothing is left but an emptiness. There is nothing remaining complete since it is a hypothesis" (Science and Hypothesis, p. 127). As eminent a physicist as George F. Fitzgerald tells us that "the doctrine of the conservation of energy is most valuable, but it only goes a very little way in explaining phenomena" (Scientific Writings, p. 391). Helmholtz’s extension of the principle in the statement, that "the total quantity of all the forces capable of work in the whole main- mains eternal and unchanged throughout all their changes", is a hazardous leap from positive science into very speculative metaphysics. This should be recognized. For even supposing the proposition true, it cannot be demonstrated a priori. It is not self-evident. It is obviously beyond the possibility of experimental proof. It assumes the present universe to be a closed and isolated whole in which new agents or modes of adding to its energy have never entered. Lucien Poincaré’s contention is just; "It behoves us not to receive without a certain distrust the extension by certain philosophers to the whole Universe of a property demonstrated for those restricted systems which observation can alone reach. We know nothing of the whole Universe of this kind out of singular fashion the limit of experiment." James Ward’s account of its character is much the same: "Methodologically, in other words as a formal and regulative principle, it means much, really it means very little." It furnishes very little information about the past, present, or future of the universe.

Proof of the Law.—On what evidence precisely, then, does the principle rest? Here again we find considerable disagreement. E. Mach tells us: "Many deduce the principle from the impossibility of perpetual motion, which again they either derive from experience or deem self-evident." Others frankly claim only an experimental foundation for the principle. A. Helmholz considers the justificating proof of the law to be in part experimental, in part a logical or formal postulate of the intellect. We have already alluded to the view that it is implicit in Newton’s laws of motion. The principle of causality, according to others, is its parent. Mayer himself quotes ex nihilò nil fit, and argues that creation or annihilation of a force lies beyond human power. Even Joule, who laboured so diligently to establish an experimental proof, would reinforce the latter with the proposition, that "it is manifestly incredible to suppose that the powers with which God has endowed matter can be destroyed". Preston judiciously observes: "The general principle of the conservation of energy is not to be proved by mathematical formulae. A law of nature must be founded on experiment and observation, and the general agreement of the law with facts leads to its acceptance and general truth. Further, the conservation of energy cannot be absolutely proved even by experiment, for the proof of a law requires a universal experience. On the other hand, the law cannot be said to be untrue, even though it may seem to be contradicted by certain experiments, for in these cases energy may be dissipated in modes of which we are yet unaware" (p. 90). In view of these extravagant conclusions some writers have attempted to deduce from the doctrine, it is useful to note these serious divergencies of opinion as to what is its true justification among those who have a real claim to speak with authority on the subject.

We shall best approximate to the truth by distinguishing three different parts of the doctrine of energy; the law of conservation, the law of dissipation or degradation. The law of transformation, that all known forms of material energy may be transmuted into each other, and are reconvertible, is a general fact which can only be ascer- tained and proved by experience. There is no a priori reason requiring it. The law of dissipation, that, as a matter of fact, the universe is dissipative, that the law of dissipation or degradation in the present universe there is a constant ten- dency for portions of energy to become unusable, owing to the equal diffusion of heat through all parts of the system—this truth similarly seems to us to rest entirely on experience. Finally, with respect to the principle of quantitative constancy, the main proof must be experience—but experience in a broad sense. It has been possible to verify for the conditions of inanimate matter that the more perfectly we can isolate a group of material agents from external interference, and the more accurately we can calculate the total quantity of energy possessed by the system at the beginning and end of a series of qualitative changes, the more perfectly our results agree. Further, modern physicists sometimes assumes this principle in most cases and elaborates it from the deduc- tions of its deductions with observed results veri- fies the assumption in a manner which would seem to be impossible were the principle not true. In fact, we may say that the assumption of the truth of the law, when correctly formulated, lies now at the basis of all modern physical and chemical theories, just as the assumptions of the generality of the observations of fundamental to mechanics. At the same time we must not forget the hypothetical character of the conditions postulated, and the limitations in its application to particular concrete problems. Bearing this in mind, even if there occurs some novel experience, as, e. g., the fact that radium seemed capable of sustaining itself at a higher temperature than expenditures of and of emitting a constant supply of heat without any observable diminution of its own store of energy, science does not therefore immediately abandon its fundamental principle. Instead, it readily seeks for some hypothesis by which this apparently rebellious fact can be reconciled with so widely ranging a general law—as, for example, the hypothesis that this ecen- tric accumulation possesses a peculiar power of ceasing breads of energy from the neigbouring ether and then dispensing it in the form of heat; or, that the high complexity of the molecular constitution of
radium enables it, while slowly breaking down into simpler substances, to continue expending itself in heat for an extraordinarily long time. Such an exception, however, is a useful reminder of the unwarranted rashness of those who, ignoring the true character and limitations of the law, would, in virtue of its alleged universal supremacy, rule out of existence, whether in living beings or in the universe as a whole, every agent or agency which may condition, control, or modify in any way the working of the law in the concrete. As we have before observed toward so simple a chemical and mechanical character in the living being, the principle of conservation may hold in much the same way as in non-living matter; whilst, in regard to other physiological or psycho-physical processes, the necessary qualifications and limitations may be of a different order. The kind of evidence most cogent in regard to inanimate matter—both direct experiment and verified deduction—is wanting here; and many of the vital processes, especially those connected with consciousness, are so unlike mechanical changes in many respects that it would be scientifically unjustifiable to extend the generalization so as to include them. The possibility of reversion, for instance, applicable in a cycle of changes in inanimate matter, is here unthinkably remote. Every fragment of the hard and solid products of exploded gunpowder and convert them into their original condition, but the effort to imagine the reversion of the process of the growth of a man or a nation brings us face to face with an absurdity.

**Philosophical Deductions.**—The philosophical conclusions which some writers have attempted to deduce from this law of God's existence and action in the world, the possibility of Divine interference in the form of miracles, the nature of the human soul, its origin and relation to the body, and its moral freedom.

The Materialistic Mechanical Theory, which seeks to conceive the world as a vast self-moving machine, self-existing from time to time, devoid of all freedom or purpose, perpetually going through a series of changes, each new state necessarily emerging out of the previous and passing into the subsequent state, claims to find its justification in this law of the conservation of energy. To this it may be replied in general, as in the case of the old objections to Theism based on the indeterminacy of matter, that the constancy of the total quantity of energy in the universe, whatever the form of different forms of material energy, does not affect the arguments from the evidences of intelligent design in the world, the existence of self-conscious human minds, and the moral law. These things are realities of the first importance which every philosophical creed that pretends to be a rational system of thought must attempt to explain. But the mere fact that the sum of material energies, kinetic and potential, in any isolated system of bodies, or even in the physical universe as a whole, remains constant, if it be a fact, affords no rational account or explanation whatever of these realities.

*Herbert Spencer's Doctrines.*—As Spencer is the best-known writer who attempts to deduce a philosophy from the doctrine of energy, we shall take him as representative of the school. Though the term *force* is confined by physicists to a narrower and well-defined meaning—the rate of change of energy per distance—Spencer identifies it with energy, and styles the conservation or constancy of energy the "Persistence of Force". To this general principle, he tells us, an ultimate analysis of all our sensible experience leads, and an explanation of all the universe must build up. Consequently, from this principle his "Synthetic Philosophy" seeks to deduce all the phenomena of the evolution of the universe. With respect to its proof he assures us that "the principle is deeper than demonstration, deeper than definite cognition, deep as the very nature of the mind. Its authority transcends all other whatever, for not only is it given in the constitution of our consciousness, but it is impossible to imagine a consciousness so constituted as not to give it." (First Principles, p. 162). The value of this assertion may be gauged from the fact that Newton and all the ablest scientists down to the middle of last century were ignorant of the principle, and that it required the labour of Mayer, Joule, Helmholtz, and other scientific engineers to show its practicality.

"Evolution is an integration of matter and concomitant dissipation of motion during which matter passes from an indefinite incoherent homogeneity to a definite heterogeneity, and during which the retained motion undergoes a parallel transformation. Owing to the ultimate principles the transformation among all kinds of existence cannot be other than we see it to be. The redistribution of matter and motion must everywhere take place in those ways and produce those traits which celestial bodies, organisms, societies alike display, and it has to be shown that this universality of process results from the same necessity which determines each simplest movement around us. . . In other words the phenomena of evolution have to be deduced from the Persistence of Force." (Spencer's "Synthetic Philosophy") is committed to in seeking the explanation of the phenomena of the universe, we have to dispense with an intelligent Creator. The same holds for every other project of a similar kind. A more remarkable feature still in Spencer's handling of the present subject is that he seats this "Persistence of Force" in the Absolute itself. It really "means the persistence of some Power which transcends our knowledge and conception. . . The Unknown Cause of the phenomenal manifestations" of our ordinary experience. This is a complete misconception, misrepresentation, and misuse of the principle of conservation, as known to science. Mayer and Joule never attempted to establish that some nominal power or unknown cause behind the phenomena of the universe has a constant quantity of energy in itself. Nor is it a self-evident datum of our consciousness that, if there be such an unknown cause, its phenomenal manifestations must be always quantitatively the same throughout all past and future time. The scientific principle merely affirms constant quantitative equivalence amid the actual transmutations of certain known and knowable realities, heat, mechanical work, and the rest. This, however, would afford no help toward an understanding of the universe as a whole. Consequently, it had to be transformed into something very different to serve as the basis of the Synthetic Philosophy.

*Professor Ostwald,* on the other hand, apparently opposed to mechanical theories, carries us little farther
by his special doctrine of energy. Matter, the supposed vehicle of support of energy, he rejects as a useless hypothesis. Every object in the universe is merely some manifestation of energy of which the total amount retains a constant value. Energy itself is work, or what arises out of work, or is converted back into work. It is the universal substance of the process of change in the world. Mass is merely capacity for energy of movement, density is volume-energy. All we can know of the universe may be expressed in terms of energy. To accomplish this is the business of the savant. Hypotheses are to be abandoned as worthless crutches; and the aims of science are to be discovered as lines of energy. But surely this is merely to abandon all attempt at explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities. The simple truth is that the quantitative law of constancy supplies not the faintest clue to the fundamental problem, how and why the present infinitely varied allotroic forms of reality have come into existence.

The Law and Its Consequences.—Not only does the modern scientific doctrine of energy fail to provide a foundation for a materialistic theory of a mechanical soul, it most positively puts a sword to the throat of that doctrine—the second law of thermodynamics and its consequences—presents us with the materials for a very powerful argument against that theory. Lord Kelvin, the most eminent authority on this point, working from data established by Carnot and Clausius, has shown that "although mechanical energy is indestructible, there is a universal tendency to the gradual augmentation and diffusion of heat, cessation of motion and exhaustion of the potential energy of the material Universe" (Lectures, vol. II, p. 356). The heat becoming thus diffused at an equally low temperature throughout the entire universe, all living organisms will perish of cold. In fact, the conclusion which Kelvin deduces from the modern scientific doctrine of energy is that the physical world, so far from being a self-existing machine endowed with perpetual motion, much more closely resembles a clock which has been put together and wound up at some definite date in the past and will run down to a point at which it will stop dead in the future.

Conservation of Energy and the Human Soul.—According to the ordinary Catholic doctrine, philosophical and theological, the soul is a spiritual principle, distinct from matter, yet, by its union with the organism constituting one substantial being, the living man. It is the source of spiritual activities, thought, and volition. It is endowed with free-will. It originates and controls bodily movements. In its origin it has been called the "soul" designated by bodies and passed away from the material universe. Now if the soul or mind, though itself not a form of material energy, acts on the body, originates, checks, or modifies bodily movements, then it seems to perform work and so to interfere with the constancy of the sum of energy. Moreover, if thus being sources of energy individual souls are created, the law of conservation is violated, for energy thus separated from the material universe and so not successively pass out of it, then their irruptions seem to constitute a continuous infringement of the law. For clearance we will handle the subject under separate heads.

I. Does the soul or mind initiate or modify in any way movements of matter, or changes in the forms of energies of the material world? Yes, assuredly: the soul through its activities does thus act on matter—Clifford, Huxley, Hodgson notwithstanding. The thoughts, feelings, and volitions of men have had some influence on the physical events which have constituted human history. All the movements of every material particle in the world would not have been precisely the same if there had been no sensation or thought. Art, literature, science, invention have had their origin in ideas, and they involve movements of material bodies. The mental states called feelings and desires have really influenced war and trade. If these feelings and ideas had been different, war, trade, art, literature, and invention would have been different. The movements of some portions of matter would have been other than they have been. The mind or soul, therefore, does really act on the body.

Is the soul a self-existing being, or the body? A most important question. Every soul, it is true, is the self-existing part of the body, for instance its conscious state is merely a particular form of energy interconvertible with the other formal materials of heat, motion, electricity, and the rest? Or is the soul and psychic activity something distinct in kind, not interchangeable with any form of material energy? Yes. That mental or psychical states and activities are realities, utterly distinct in kind from material energy, is the judgment of philosophers and scientists alike. These states are subjective phenomena perceptible only by the internal consciousness of the individual to whom they belong. Their existence depends on their being perceived. In fact, their esse is percipi. They are not transmutable into so much material energy. As Tyndall says, "the changes between the two are so utterly unlike as to be absolutely impassable". The phenomena of consciousness are not a fixed sum; though incapable of proper quantitative measurement they seem to grow extensively and intensively and to rise in quality in the world. Wundt, indeed, embodies this fact in his contrasted "principle of the increase of psychical energy", a law of qualitative value, which he attaches as the reverse or antithesis of the "law of conservation of energy" (of material energy). The psychical increase, being indefinite, holds only under the condition that the psychical processes are continuous. Mental states or activities are thus proved on the one hand to exert a real influence on the movements of matter, whilst on the other hand they are different in nature from all material energies and unconvertible with any of the latter. The soul, mind, or whatever we call the subject or source of these immaterial states or activities, must be therefore some kind of hyperphysical agent or power.

III. This brings us to the central crux of the subject. If the soul, or mind, or any of its activities, causes or modifies the movement of any particle of matter, then it seems to have produced an effect equivalent to that of a mechanical force or power; that is an "incalculably impossible". The phenomena of consciousness are not a fixed sum; though incapable of proper quantitative measurement they seem to grow extensively and intensively and to rise in quality in the world. Wundt, indeed, embodies this fact in his contrasted "principle of the increase of psychical energy", a law of qualitative value, which he attaches as the reverse or antithesis of the "law of conservation of energy" (of material energy). The psychical increase, being indefinite, holds only under the condition that the psychical processes are continuous. Mental states or activities are thus proved on the one hand to exert a real influence on the movements of matter, whilst on the other hand they are different in nature from all material energies and unconvertible with any of the latter. The soul, mind, or whatever we call the subject or source of these immaterial states or activities, must be therefore some kind of hyperphysical agent or power.

Diverse solutions, however, have been advanced. 

1. Some writers simply deny the application of the law to living beings, or at least its rigid accuracy, if referred to the entire collection of vital and psychical phenomena. They urge with much force that
the living, conscious organism, endowed with the power of self-direction, differs fundamentally in nature from a mere machine, and that it is therefore illegitimate to extend the application of the law to organisms in precisely the same sense as to inanimate matter until this extension is rigidly justified by experimental evidence. But evidence of this quantitative accuracy is not forthcoming—not at all likely to be. As a consequence, scientists of the first rank, such as Clerk Maxwell and Lord Kelvin, have always been careful to exclude living beings from their formulation of the law. Moreover, they remind us that, in certain respects, the animal structure resembles a very delicate mechanism in which an extremely minute force may liberate or transform a relatively large state of matter. Thus, as e.g., the pressure of a hair-trigger may explode a powder magazine.

(2) Again, many physicists of high rank (Clerk Maxwell, Tait, Balfour Stewart, Lodge, Poynting), who suppose, for sake of argument, the strict application of the law even to living beings, claim to harmonize the real action of the soul on the body with the law by conceiving this action as exercised merely in the form of a guiding or directing force. They generally do so, moreover, in connexion with the established truth of physics that an agent may modify the direction of a force, or of a moving particle, without altering the quantity of its energy, or adding to the work done. Thus, a force acting at right angles to another force, will deflect the latter's line of direction, diminishing its intensity. The pressure of the rail on the side of the wheel guides the tram-car; the tension of gravitation keeps the earth in its elliptical course round the sun without affecting the quantity of energy possessed by the moving mass. If the enormous force of gravitation were suddenly extinguished, say, by the annihilation of the sun, the earth would fly away at a tangent with the same energy as before. The axiom of physics, that a deflecting force may do no work, is undoubtedly helpful towards conceiving a reconciliation, even if it does not go the whole way to meet the difficulty.

(3) At the same time, the philosophy of Aristotle and St. Thomas provides us with a clue which assists us in the very difficult, complex enterprise of bringing towards the complete solution of the problem. For this, four distinct factors must be kept in mind:

(a) The entire quantity of the work done by the living being must in this view be accounted for by the material energies—mechanical, chemical, electrical, etc.—stored in the bodily organism. The soul, or mind, or vital power merely administers these, but does not increase or diminish them. The living organism is an extremely complex collection of chemical compounds stored in blood and cellular tissue. Many of these are in very unstable condition. A multitude of qualitative changes are constantly going on, but the quantity of the work done is always merely the result of the using up of the material energies of the organism. The soul, within limits, regulates the qualitative transformation, but not the alterations of these material energies without altering the sum total.

(b) The action of the soul, whether through its conscious or its merely vegetative activities, must be conceived as primarily directive.

(c) But this is not all. The soul not only guides but initiates and checks movements. The most delicate hair-trigger, it is true, does not move some process to move it, and this is work done, and so an addition to that of the machine. The trigger, too, presses with equal effective force against the finger, and through this emits some of its energy back to another part of the universe. Consequently, any action of the soul upon the body, even if the pressure or tension be relatively small, involves, it is said, a double difficulty: the pressure communicated by the soul to the body and that returned by the body to the soul. In reply: First, what is needed in order to originate, guide, or even inhibit a bodily movement is a transformation of the quality of some of the energy located in certain cells of the living organism. Whilst physics, which seeks to reduce the universe to mass-points in motion, is primarily interested in quantity, qualitative differences cannot be ignored or ultimately resolved into quantitative differences. Direction is the qualitative element in simple movement, and it is as important as velocity or duration. Now, although the initiation of movement, or the origination of a change in the quality of the material energy located in particles of inanimate matter, needs a stimulus involving the expenditure of some energy, however small, it does not seem to us, provisionally, as yet, to be decisive whether the transformation of energy in living beings requires a similar expenditure of energy to occasion the change. Be it noted also that the energy of the stimulus often bears no relation to the magnitude of the change and that in many cases it is not incorporated in the main transformation. Indeed, the explosive materials of the earth might conceivably be so collocated that the action of an infinitesimal force would suffice to blow up a continent and effect a qualitative transformation of energy faster than the sum total of all the changes that have gone on in all living beings since the beginning of the world. This should be remembered when it is alleged that any action of the human mind on the body would constitute a serious interference with the constancy of the organism total, and hence with the continuance of the organism.

However, as a matter of fact, some qualitative changes of energy in the living organism which result in movement at least appear not to be excited by anything of the nature of physical impact. Psycho-physics teaches that concentration of thought on certain projected movements, and the fostering of certain feelings, are speedily followed by qualitative changes in organic fluids with vesicular and neuromotor processes. States of consciousness becoming intense seem to seek expression and find an outlet in bodily movement, however this is actually realized. This brings us to the further step in the solution of the problem which the Aristotelico-Scholastic conception of the relation of body and mind, as "matter" and "soul", contains. We may say then that the predisposing principle is the "form" or determining principle of the living being. Coalescing with the material factor, it constitutes the living being. It gives to that being its specific nature. It unifies the material elements into one individual. It makes them and holds them a single living being of a certain kind. Biology reveals that the living organism is a mass of chemical compounds, many of them most complex and in very unstable equilibrium, constantly undergoing change and tending to dissolution into simpler and more stable substances. When life ceases, the process of disintegration sets in with great rapidity. The function, then, of this active informing principle is of a unifying, conserving, restraining character, holding back, as it were, and sustaining the molecular energies of the organism in a condition. From this view of the relation of the soul to the material constituents of the body, it would follow that the transformation of the potential energies of the living organism is accomplished in vital processes not by anything akin to positive physical pressure, but by some sort of liberative act. It would in this case suffice simply to unmediatedly resolve qualitative or restraining, and the unstable forms of energy released will thereby issue of themselves into other forms. In a sack of gas or liquid, for instance, the covering membrane determines the contents to a particular shape, and conserves them in a particular space. Somewhat analogously, in the Scholastic theory the soul, as "form", determines the qualitative character of the material with which it coalesces, while it con-
serves the living being in its specific nature. A "form" endowed with consciousness exerts a control, partly voluntary, partly involuntary, over the qualitative character of the energy. The use of the latter in this view would occasion qualitative changes in some of these by a merely liberative act, without adding to or taking from the quantity of physical energy contained in the material constituents of the organism. The illustration is of course imperfect, like all such analogies. It is given merely to aid towards a conception of the relations of mind and body in the Aristotelian view.

(d) Finally, in this theory, the action of the soul, or vital principle, upon the material energies of the living organism, must be conceived not as that of a foreign agent, but as of a co-principle uniting with the former to constitute one specific being. This most important factor in the solution is not sufficiently emphasized, or indeed realized by many physicists who seek to harmonize the law with the real action of the soul. Accepting the philosophy of Descartes, many of these adopt a very exaggerated view of the separateness and mutual independence of soul and body. In that philosophy soul and body are conceived as two distinct beings merely accidentally conjoint or connected. The action of either upon the other partakes of the extrinsic or external character. If an angel or a demon set a barrel rolling down a hill by even a slight push, the action of such a spirit would involve the invasion of the system of the material universe by a foreign energy. But this is not the way the soul acts, according to the philosophy of St. Thomas and Aristotle. Here is soul part of the living being, a component principle co-operating in the transformation of the material energies stored up in the constituents of the material organism, which along with itself combines to form a single complete individual being. This point is a vital element in the solution, whether the basis of the difficulty be the conservation of energy, the conservation of momentum, or Newton's third law. The directing influence is not exercised as the pressure of a material particle on another outside of it. The soul is in the body which it animates and in every part of it. Neither is "outside" the other.

This solution obviously provides an answer at the same time to the objections deduced from the conservation of energy against the creation of human souls or the freedom of the will. If the soul were a foreign energy supplied to the material organism, and if the freedom of the will involved incursions of a foreign physical force into the midst of existing material energies, then infringement of the law of constancy would seem inevitable. But if the soul merely directs the transformation of existing reserves of energy in the manner indicated, no violation of the law would necessarily follow. Similarly, the parture of such an immortal soul from the physical universe would not involve any withdrawal of material energy from the total sum. Finally, if human thought and volition can interfere in any degree with the movements of matter, and exercise a guiding influence on any of the processes of the bodily organism, a fortiori it must be possible for an Infinite Intelligence to intervene and regulate the course of events in the material universe; and if the human mind can effect its purposes without infringement of the law of conservation of energy, assuredly this ought to be still more within the powers of a Divine Mind, which, according to the Scholastic philosophy, sustains all beings in existence and continuously co-operates with their activities.

The extensive literature of the subject may roughly be distinguished as scientific and philosophic, though the two grade into each other.

The chief source of main scientific character are—The Correlation and Conservation of Forces, ed. Youmans (New York, 1865). This is a collection of the original papers of Helmholtz, Mayer, Young, Faraday, Lieb, and Carpenter on the subject.

Among the philosophical works on the subject are: CURTIS, La Liberté et la conservation de l'énergie (Paris, 1867); MERCIER, La Pensée et la loi de la conservation de l'énergie (Paris, 1900); DE MUNNENCK, in Revue Théiste (May, 1897), a useful article; VANDER, What is Life (London and St. Louis, 1906); LADD, Philosophy of Mind (London and New York, 1892); VIIP WALTER, Psychology (London and New York, 1905); WARD, Naturalism and Agnosticism (London, 1906); LADD, Life and Matter (London, 1905); see also a very interesting controversy on the subject in Nature (1903), in The Nature and General Significance of the Conservation of Energy (London, 1885) by Sharpe. W. PEDEEL, J. H. MUIRHEAD, C. T. PEASE, E. CULVERWELL, and others took part.

But with the rise of the science of psychology (1890); HOFFING, Outlines of Psychology (New York and London, 1898); WUNDER, The Mind of Man, the Unification of Psychology (London, 1908); also for brief treatment, see his Outlines of Psychology (tr., 3rd ed., New York, 1907); OSWALD, Schiller's Stimulation of Nature-philosophy (Leipzig, 1902), see also EIRL, Philosophisches Wörterbuch (Berlin, 1904).

MICHAEL MAHER.

Engaddi (Sept., usually Εγγαδί; Heb. 'En Gōdī, "Fountain of the Kid") is the name of a warm spring near the centre of the west shore of the Dead Sea, and also of a town situated in the same place. In II Par., xx, 2, it is identified with Assasontamar (Cutting of the Palm), the city of the Amorrhean, snubbed by Chodorlahomer (Gen., xiv, 7) in his war against the cities of the plain. Jos., xiv, 62, enumerates Engaddi among the cities of Judah in the desert Betharaba, but Ezech., xlvii, 10, shows that it was also a fisherman's town.

Later on, David hides in the desert of Engaddi (1 Kings, xxiv, 1, 2), and Saul seeks him "even upon the most craggy rocks, which are accessible only to wild goats" (ibid., 3). Again, it is in Engaddi that the Moabites and Ammonites gather in order to fight against Josaphat (2 Kings, xxi, 19), and "by the ascent named Sib" (ibid., 16). Finally, Cant., i, 13, speaks of the "vineyards of Engaddi"; the words, "I was excited like a palm tree in Cades" (ἐν αὑτοῦν), which occur in Eccles., xxiv, 18, may perhaps be understood of the palm trees of Engaddi.

To these strictly Biblical data concerning Engaddi the following notes taken from profane sources may be added. Josephus (Antiq., IX, i, 2) connects Engaddi with the growth of beautiful palm trees and the production of opobalsam. Pliny (Nat. Hist., V, xxvi, 73) places Engaddi only second to Jerusalem as far as fertility and the cultivation of the palm tree are concerned. Eusebius and St. Jerome (Onomastica sacra, Göttingen, 1857), pp. 119, 254, say that there still existed on the shore of the Dead Sea a large Jewish borough called Engaddi which furnished opobalsam. The name still lives in the Arabic form 'Ain Jeddi, which is now applied to a more oasis enclosed by two streams, the Wady Sudeir and Wady el-'Arech, and bounded by nearly vertical walls of rock. The former vineyards and palm groves gave place to a few bushes of thorn and tamarisk, and the site of the ancient town is now occupied by five Arabs.

Engel, Ludwig, canonist, b. at Castle Wagerin, Austria; d. at Grillenberg, 22 April, 1674. He became a Benedictine in the monastery of Mölk (Melk), 10 September, 1654, and, at the order of his abbot, applied himself to the study of law at the University of Salzburg, where theological studies were committed to the care of the Benedectines. He was proclaimed doctor of civil and canon law in 1657, ordained priest in the following year, and was soon professor of canon law at this university. His profound knowledge and personal qualities procured for him the most honourable functions. In 1669 he was unanimously chosen vice-chancellor of the university. He left Salzburg in 1674 at the invitation of the Abbot of Mölk, who was desirous that Engel should be known and appreciated by the religious of this monastery, in order to be chosen as his successor. The death of Engel, which occurred in the same year, prevented this plan from being realized. His principal works are: "Manuale parochorum" (Salzburg, 1661); "Forum competens" (Salzburg, 1663); "Tractatus de privilegiis et juribus monasteriorum" (Salzburg, 1664); and especially his "Collegium universi juris canonici", etc. (Salzburg, 1671-1674), a work remarkable for its conciseness, clearness, and solidity. It has placed its author in the first rank among Benedictine canonists. The fifteenth edition appeared in 1770. A compendium or summary of this work was published in 1720 by Mainardus Schwartz.

Engelberg, Abbey of, a Benedictine monastery in Switzerland, formerly in the Diocese of Constance, but now in that of Chur. It is dedicated to Our Lady of the Angels and occupies a commanding position at the head of the Nidwalden valley in the Canton Unterwalden. It was founded in 982 by Blessed Conrad, Count of Seldnätzen, the first abbot being Blessed Adelhelm, a monk of the Abbey of St. Blasien in the Black Forest, under whom the founder himself received the habit and established the monastery as a Benedictine house. New buildings, and rights and privileges, were granted to the new monastery by various popes and emperors, amongst the earliest being Pope Callistus II, in 1124, and the Emperor Henry IV. The abbey was placed under the immediate jurisdiction of the Holy See, which condition continued until the formation of the Swiss Congregation in 1602, when Engelberg united with the other territories of Switzerland and became subject to a president and general chapter. In spiritual matters the abbots of Engelberg exercised quasi-episcopal jurisdiction over all their vassals and dependents, including the town which sprang up around the walls of the abbey, and also enjoyed the right of collation to all the parishes of the Canton. In temporal matters they had supreme and absolute authority, and were moreover invested with the right of jurisdiction in all the lands and villages. This region contained numerous monasteries and other religious houses, which were incorporated under the abbatial rule by a Bull of Pope Gregory IX in 1236. These and other rights they enjoyed until the French Revolution, in 1798, when most of them were taken away. The prominent position in Switzerland which the abbey occupied for so many centuries was seriously threatened by the religious and political disturbances of the Reformation period, especially by the rapid spread of the Zwinglianism heresy, and for a time its privileges suffered some curtailment. The troubles and vicissitudes, however, through which it passed, were happily brought to an end by the wise rule of Abbot Benedict Sigrist, in the seventeenth century, who is justly called the restoring of his monastery. Alienated possessions and rights were recovered by him and the good work he began was continued by his successors, under whom monastic discipline and learning have flourished with renewed vigour. The library, which is said to have contained over twenty thousand volumes and two hundred choice MSS., was unfortunately pillaged by the French in 1798. The abbey buildings were almost entirely destroyed by fire in 1729 but were rebuilt in a substantial, if not very beautiful style and so remain to the present day. The monastery is now (1909) in a very flourishing state, having a community of about fifty and a school of over a hundred boys. The monks have charge of the parish of two thousand souls attached to the abbey and also minister to the needs of seven convents of nuns in the vicinity. In 1873 a colony from Engelberg founded the Abbey of New Engelberg, at Conception, Missouri, U. S. A. Abbot Leodegar Scherer, elected in 1901, was the fifty-third abbot of the monastery.

Engelbert of Cologne, Saint, Archbishop of that City (1216-1225); b. at Berg, about 1185; d. near Schwelm, 7 November, 1225. His father was Engelbert, Count of Berg, his mother, Margaret, daughter of the Count of Gelderland. He studied at the cathedral school of Cologne and while still a boy was, according to an account of that time, made provost of the churches of St. George and St. Severin at Cologne, and of St. Mary's at Aachen. In 1199 he was elected provost of the cathedral at Cologne. He led a worldly life and in the conflict between Archbishops Adolp and Bruno sided with his cousin Adolp, and waged war for him. He was in consequence excommunicated by the pope together with his cousin and deposed in 1206. After his submission he was reinstated in 1208 and, to atone for his sin, joined the crusade against the Albigenses in 1212. On 29 Feb., 1216, the chapter of the cathedral elected him archbishop by an unanimous vote. In appearance he was tall and handsome. He possessed a penetrating mind and keen discernment, was kind and condescending and loved justice and peace, but he was also ambitious and self-willed. His archiepiscopal see had passed through severe struggles and suffered heavily, and he worked strenuously to repair the damage and to restore order. He took care of its possessions and revenues and was on that account compelled to resort to arms. He defeated the Duke of Limburg and the Count of Cleves and defended against them also the Countship of Berg, which he had inherited in 1218 on the death of his brother. He
restrained the impetuous citizens of Cologne, broke the stubbornness of the nobility, and erected strongholds for the defence of his dioceses. He did not spare even his own relations when guilty. In this way he gained the universal veneration of his people and increased the number of his vassals from year to year. Although in exterior bearing a sovereign rather than a bishop, for which he was blamed by pious persons, he did not disregard his duties to the Church, but strove to uplift the religious life of his people. The most remarkable orders which had been founded before his accession, settled in Cologne during his administration, the Franciscans in 1219, the Dominicans in 1221. He was well disposed towards the monasteries and insisted on strict religious observance in them. Ecclesiastical affairs were regulated in provincial synods. Blameless in his own life, he was a friend of the clergy and a helper of the poor.

In the affairs of the empire Engelbert exerted a strong influence. Emperor Frederick II, who had taken up his residence permanently in Sicily, gave Germany to his son, Henry VII, then still a minor, and in 1221 appointed Engelbert guardian of the king and administrator of the empire. When the young king reached the age of twelve he was crowned at Aachen, 8 Aug., 1230. The king had known, and regarded, his son and honoured him as his sovereign. He watched over the king's education and governed the empire in his name, careful above all to secure peace both within and without the realm. At the Diet of Nordhausen (21 Sept., 1223) he made an important treaty with Denmark; in the rupture between England and France, he sided with England and broke off relations with France. The pope treated him as "Master of sovereigns", and "True guardian of the king, thy exalted traits do honour to our emperor; chancellor whose like has never been".—Engelbert's devotion to duty, and his obedience to the pope and to the emperor were eventually the cause of his ruin. Many of the nobility feared rather than loved him, and he was obliged to fight with a body-guard. The greatest danger threatened him from among his relations. His cousin, Count Frederick of Isenberg, the secular administrator for the nuns of Essen, had grievously oppressed that abbey. Honorius III and the emperor urged Engelbert to protect the nuns in their rights. Frederick wished to forestall the archbishop, and his wife incited him to murder. Engelbert was warned, and he went to Rome, but when he arrived and himself with a body-guard, the greatest danger threatened him from among his relations. Engelbrechtsen, Cornelis (also called Engelberts and Engelbrecht), and now more usually spelt Engelbrechtsz), Dutch painter, b. at Leyden, 1468; d. there 1533; is believed to have been identical with a certain Cornelis de Hollandere who was a member of the Guild of St. Luke at Antwerp in 1492. He is said to have been the favourite artist in Holland in his day, and to have been a profound student of the works of Jan Van Eyck. His principal paintings were executed in Leyden and for a long time preserved in that city, which still possesses in its picture gallery his large "Crucifixion", with wings representing the Sacrifice of Abraham and the Brazen Serpent, and a "Pieta" containing six scenes from the Life of Christ. There is an interesting account of him by St. Briccius, who was master of a convent moved from the convent of St. Bridget at Utrecht, a "Madonna and Child" in the London National Gallery, and a "Crucifixion" in the Munich Gallery, and there are two double pictures at Antwerp. However, most of his religious works were destroyed in Holland during the iconoclastic movement in the sixteenth century. He had also a son, called also Engelbrechtsen, who was the master of Lucas Van Leyden, but nothing very definite is known on this matter. Many of his pictures are signed with a curious mark resembling a figure 4 supported upon two swords, and others with a sort of star. He had two sons: Cornelis, known as Kunst (1493-1544), and Luke, known as Kok, born 1495. The latter came over to England during the reign of Henry VIII, and a picture signed by him is in Lord De L'Isle's collection at Penshurst.

England.—This term is here restricted to one constituent, the largest and most populous, of the United Kingdom of Great Britain and Ireland. Thus understood, England (taken at the same time as including the Principality of Wales) is all that part of the Island of Great Britain which lies south of the Solway Firth, the River Liddell, the Cheviot Hills, and the River Tweed; its area is 57,668 square miles, i. e. 1048 sq. m. greater than that of the State of New York, but 11,067 sq. m. less than that of Missouri; its total resident population in 1901 was 23,386,503, or 78.2 per cent of the population of the United Kingdom. The history of England will be considered in the present article chiefly in its relations with the Catholic Church—I. Before the Reformation; II. Since the Reformation. The concluding section will be III. English Literature.

Before the Reformation.—For the history of England down to the Norman Conquest the reader may be referred to the article Anglo-Saxon Church (in Vol. 1, 505-12). We begin our present account of pre-Reformation England with the new order of things created by the Reformation and the picture of the degradation of the English Church in the first half of the eleventh century which has been drawn by some authorities (notably by H. Boehmer, "Kirche und Staat", 79) is very exaggerated; it is nevertheless certain that even King Edward the Confessor, with all his saintliness, had not been able to repair the damage caused partly by the anarchy of the last ten years of Danish rule, but not less surely, if remotely, by the disorders which for many generations past had existed at the centre of Christendom. Of the prevalence of simoniacal practices, of a scandalous and widespread neglect of the canons enjoining clerical celibacy, and of a general subordination of the ecclesiastical order to secular influences, there is no room for doubt. These evils were at that time almost universal. In 1065, the year of St. Edith's death, Archbishop Aethelwine of Canterbury, in his pastoral letter to his clergy, wrote: "The clergy in England are more than twenty times as many as those on the Continent of Europe. Probably they were rather worse. But the forces which were to purify and renovate the Church were already at work. The monastic reform begun in the tenth century at Cluny had spread to many religious houses of France and among other places had been cordially taken up in the Norman Abbey of Fécamp, and later at Bec. On the other hand this same ascetic discipline had done much to form the character both of Bruno, Bishop of Toué, who in 1049 became pope, and is known as St. Leo IX, and of Hildebrand his chief counsellor, afterwards still more famous as St. Gregory VII. Under the auspices of these two popes a new era dawned for the Church. Effective action was at last taken to remove the dregs of the incontinent clergy, and a great struggle began to rescue the bishops from the imminent danger of becoming mere feudatories to the emperor and other secular princes. William the Conqueror had established intimate relations with the Holy See. He came to England armed with the direct authorization of a papal Bull, and his expedition, in the eyes of many great men, and in daily even, was identified with the cause of ecclesiastical reform. The behaviour of Normans and Saxons on the night preceding the battle of Hastings, when the former prayed and prepared for Communion while the latter caroused, was in a measure significant of the spirit of the two parties. Taken as a whole, the Conqueror's dealings with the English Church were worthy of a great mission. All the best elements in the Saxon hierarchy he retained and supported. St. Wulstan was confirmed in the possession of the See of Worcester. Leofric of Exeter and Seward of Rochester, both Englishmen, as well as some half-dozen prelates of foreign birth who had been appointed in Edward's reign, were not interfered with. On the other hand, Stigand, the intriguing Archbishop of Canterbury, and one or two other bishops, probably procured. But in this there was no indecent haste. It was done at the great Council of Winchester (Easter, 1070), at which three papal legates were present. Shortly afterwards the vacant sees were filled up, and, in procuring Lanfranc for Canterbury and Thomas of Bayeux for York, William gave to his new kingdom the very best prelates that were then available. The results were undoubtedly beneficial to the Church. The king himself directly enjoined the separation of the civil and ecclesiastical courts, for these jurisdictions in the old shiremoots and hundredmoots had hardly been distinguished. It was probably partly as a consequence of this division that ecclesiastical synods now began to be held regularly by Lanfranc, with such success that profit to the Church. Legislation was adopted (e. g. at Winchester in 1176) to secure celibacy among the clergy, though not without some temporary mitigation for the old rural priests, a mitigation which proves perhaps better than anything else that in the existing generation a sudden and complete reform seemed hopeless. Further, several episcopal sees were removed from what were then mere villages to more populous centres. Thus bishoprics were transferred from Sherborne to Salisbury, from Selsey to Chichester, from Lichfield to Chester, and not many years after from Dorchester to Lincoln, and from Thetford to Norwich. These and the like changes, and, not perhaps least of all, the drafting of Lanfranc's new constitutions for the Christ Church
monks, were all significant of the improvement introduced by the new ecclesiastical regime. With regard to Rome, the Conqueror seems never to have been wanting in respect for the Holy See, and nothing like a breach with the pope ever took place during his life. The two archbishops went to Rome in 1071 to receive their pallia, and when (c. 1073) a demand was made through the papal legate, Hubert, for the payment of arrears of Peter's-pence, the claim was admitted, and the contribution was duly sent. Gregory, however, seems at the same time to have called upon the clergy to refrain from cloistered life, and in 1072 he made a special appeal regarding the payment of Romescat as an acknowledgment of vassalage, as in some cases, e. g. that of the Normans in Apulia (See Jensen, "Der englische Peterspfennig", p. 37), it undoubtedly was. But on this point William's reply was clear, “One claim [Peter's-pence] I admit,” he wrote, “the other I do not admit. To do fealty I have not been willing in the past, nor am I willing now, inasmuch as I have never promised it, nor do I discover that my predecessors ever did it to your predecessors.” It is plain that all this had nothing whatsoever to do with the recognition of the pope's spiritual supremacy, and in fact the king says in the concluding sentence of the letter: “Pray for us and for the good estate of our realm, for we have loved your city like the apple of our eye, and we wish it to be peaceful and in accord, and to be brought up into the church, and I and my archbishop were only careful not to get entangled in the strife between Gregory and the Emperor Henry IV. In any case, the more strictly ecclesiastical policy of the great pontiff was cordially furthered by them, so that St. Gregory, writing to Hugh, Bishop of Die, remarked that although the King of England does not hear himself in all things as religiously as might be wished, still, he has been so good a king as he does not destroy or sell the churches, rules peaceably and justly, refuses to enter into alliance with the enemies of the Cross of Christ (the partisans of Henry IV), and has compelled the priests to give up their wives and laymen to pay arrears of tithe, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davies, England under the Normans, p. 476) "the long correspondence and career prove that he and his master conceded important powers to the Pope not only in matters of conscience and faith but also in administrative questions. They admitted for example the necessity of obtaining the pallium for an archbishop and the Pope's power to invalidate episcopal elections. They were scrupulous in obtaining the Pope's consent when the deposition or resignation of a bishop was in question and they submitted the time-honoured quarrel of York and Canterbury to his decision." No doubt a strong centralized government was then specially needed in Church as well as State, and we need not too readily condemn Lanfranc as guilty of personal ambition because he insisted on the primacy of his See. But he proved himself a good and able administrator from the Archbishop of York. The recent attempt that has been made to fasten a charge of forgery upon Lanfranc in connexion with this incident (see Bochler, "Falschungen Erzbishof Lanfranks") breaks down at the point where the personal responsibility of the great archbishop is involved. Undoubtedly many of the documents upon which Canterbury's claims to supremacy was based were forgeries, and forgeries of that precise period, but there is no proof that Lanfranc was the forger or that he acted otherwise than in good faith (see Walter in "Gotting. gelehrte Anzeigen", 1905, 582; and Saltet in "Revue des Sciences Eccles.", 1907, p. 429).

Well was it for England that William and Lanfranc, without any violent overthrow of the existing order of things, either in Church or State, had nevertheless introduced systematic reforms and had provided this country with good bishops. A struggle was now at hand which ecclesiastically speaking was probably more momentous than any other event in history down to the time of the Reformation. The struggle is known as that about Investitures, and we may note that it had already been going on in Central Europe for some years before the question, through the action of William I of England, reached its acme in England. Down to the eleventh century it may be said that, though the election of bishops always supposed the free choice, or at least the acceptance, of their flocks, the procedure was very variable. In these earlier ages bishops were normally chosen by an assembly of the clergy and people, the neighbouring bishops and the king or civil magnates exercising more or less of influence in the selection of a suitable candidate (see Imbart de la Tour, "Les elections episcopales"). But from the seventh and eighth century onwards it became increasingly common for the local Churches to find themselves in some measure of bondage. From the ancient principle of "no land without a lord" it was easy to pass on a claim that the king had a hand in the election of the bishop, and whether the bishopric was situated upon the royal domain or within the sphere of influence of one of the great feudatories, men came to regard each episcopal see as a mere fief which the lord was free to bestow upon whom he would, and for which he duly exacted homage. This development was no doubt much helped by the fact that the ecclesiastical system grew up, it was the oratory of the local magnate which in rural districts became the parish church, and it was his private chaplain who was transformed into the parish priest. Thus the great landowner became the patronus ecclesiae, claiming the right to present for ordination any cleric of his own choice. Now the relation of a sovereign towards his bishops came in time to be regarded as precisely analogous. The king was held to be the lord of the lands from which the bishop derived his revenues. Instead of the possession of these lands being regarded as the apanage of the spiritual office, the acceptance of episcopal consecration was looked upon as the special condition or service upon which these lands were held from the king. Thus the temporal sovereign claimed to make the bishop, and, to show that he "owned" the see, he would present a certain number of vassals to the see, and the chaotic system went on, the episcopal see was reduced to the status of an ordinary vassal with his fief by presenting to him the episcopal ring and crosier. The episcopal consecration was a subordinate matter which the king's nominee was left to arrange for himself with his metropolitan and the neighbouring bishops. Now, as long as the supreme authority was wielded by religiously-minded men, princes who took thought for the spiritual well-being of their kingdoms, no great harm necessarily resulted from this perversion of right order. But when, as too often happened during the iron age, the monarch was godless and unprincipled, he either kept the see vacant, in order to enjoy the revenues, or else sold the office to the highest bidder. It must be obvious that such a system, if allowed to develop unchecked could only lead in the course of a few generations to the total demoralization of the Church. When the bishops, the shepherds of the flock, were themselves licentious and corrupt, it would have been a moral miracle if the rank and file of the clergy had not degenerated in an equal or even greater degree. Upon the bishop depended ultimately the admission of candidates to ordination, and he also was ultimately responsible for their education and for the maintenance of ecclesiastical discipline.

Now the fact cannot be disputed that in the tenth century a very terrible laxity had come to prevail almost everywhere throughout Western Christendom-
The great monastic reform of Cluny and many individual saints like Ulric, at Augsburg, and Dunstan and Æthelwold, in England, did much to stem the tide, but the times were very evil. Worldly minded men, often morally corrupt, were promoted by sovereigns and territorial magnates to some of the most important sees of the Church, many of them obtaining that promotion by the payment of money or by simony. Some of these sees were so low in the estimation of the clergy that they were apparently grossly ignorant and in many cases unchaste, but under such bishops they enjoyed almost complete immunity from punishment. No doubt the corruptions of the age have been exaggerated by writers of the stamp of H. C. Lea, Michelet, and Gregorovius, but nothing could more conclusively prove the gravity of the evil than the fact that for two centuries the Church had to struggle with the abuse by which benefits threatened to become hereditary, descending from the priest to his children. Happily help was at hand. Many individual reformers strove to introduce higher religious ideals and met with partial success, but it was the merit of the great pontiff, St. Gregory VII, to go straight to the root of the evil. It was useless to fulfill the prevalent notion of the papacy that all things should remain as they were against their neglect of their spiritual functions if the great feudal lords could still nominate unworthy bishops, bestowing investiture by ring and crosier and enforcing their consecration at the hands of other bishops as unworthy as the candidates. Gregory saw that no permanent good could be effected until this system of lay investitures was utterly overthrown. He conceived that lay investiture was an intolerable arrogance, of a desire to exalt without measure the spiritual authority of the Church and to humble all secular rulers to the dust, make little allowance for the gravity of the evils he was combating and for the desperate nature of the struggle. When feudalism seemed on the point of so completely swallowing up all ecclesiastical organization, it was pardonable that St. Gregory should have believed that the remedy lay not in any compromise or balance of power, but in the unqualified acceptance of the principle that the Church was above the State. If, on the one hand, he considered that it was the function of the Vicar of Christ to direct and, if need be, chastise the princes of the earth, it is also clear from the history of his life that he designed to use his power in order that the true and holy function of the Church might be preserved. The Church and the struggle over investitures developed somewhat later than on the Continent. If, in the matter of the election of bishops, Gregory VII forbore to press the claims of the Church to extremities under such a ruler as William the Conqueror, this was surely not to be attributed to pusillanimity. The pope's forbearance was due quite as much to the fact that he was satisfied that the court had given good appointments as to the circumstance that his own energies were for the time absorbed in the greater struggle with the emperor. Even under the rule of William Rufus no great abuses declared themselves before the death of Lanfranc (1089). It is very noteworthy that William of St. Calais, Bishop of Durham, in 1088, having been accused of treason before the King's Court, questioned the competency of the Court and appealed to the pope. Practically speaking, his appeal was allowed, and he was granted a safe-conduct out of the kingdom, though only after the surrender of his fief. This was virtually an admission that a bishop held only the temporalities of his see from the crown, and that as a spiritual person he was free to challenge the decision of any national tribunal. Such an incident can with difficulty be reconciled with those theories of the independence of the English Church which commonly prevail among modern Anglicans.

With the death of Lanfranc, however, all that was evil in the nature of William Rufus seems to have come to the surface. Under the influence of the man who was his evil genius, Ralph Flambard, a cleric whom he eventually made Bishop of Durham, the king during nearly the whole of his reign set himself to undo the good effected by his father and Lanfranc. In the words of the chronicler, "God's Church was brought very low". Whenever a bishop or abbott died, one of the king's clerks was sent to take possession of all the rents for the use of the crown, leaving but a bare pittance to the monks or canons. The prelacies whose benefices were being disposed of were often held by men who were not genuine clerics, and no new appointment was made except upon payment of a large sum of money by way of a "relief". For the credit of one or two really good men like Ralph Luffa and Herbert Losinga, who during these bad times became respectively Bishops of Chichester and Norwich (the latter paying a thousand pounds for his nomination), it should be pointed out that a certain pretext of feudal custom lent a decent veil to the simony involved in these transactions. The obsolete doctrine that a fief was a precarious estate, and granted only for a lifetime, was revived by Flambard, and, as a corollary, large sums of money, as "reliefs" (from relevare, "to take up again"), were demanded, when any fief, lay or spiritual, was conceded to a new possessor, and such fees were charged proportionately more than ears or barons, and a relief was exacted in some cases even from all the subordinate tenants of episcopal sees the moment the estate came into the king's hands (see Round, "Feudal England", p. 309). All this only illustrates further the evils inherent in the system of regarding a spiritual office as a fief held from the king. In the case of the two archbishops of Canterbury, each was appointed until four years after Lanfranc's death. Even then William Rufus only yielded to the solicitations made to him because he had fallen grievously ill and was lying at the point of death. Most providentially, this illness coincided with the presence in England of Anselm, Abbot of Bec, whom all men regarded as marked out for the primacy alike by his learning and by his holiness of life. The king summoned Anselm to his bedside, and the latter extorted a solemn promise of radical reform in the administration of both Church and State. Shortly afterwards, in spite of all his protests, Anselm himself was invested, literally by force, with the insignia of the primacy; and he was consecrated archbishop before the end of the year. But the king still sought a will to save the throne, and all the possessions which belonged to the See of Canterbury at the time of Lanfranc's death, the king soon returned to his evil ways. In particular he still clung to the theory that by accepting investiture Anselm had become his liege man (biceps homo), liable to all the incidents of vassalage. When an aid was demanded for the war in Normandy, Anselm at first refused. Then, not wanting to provoke a conflict, he offered 500 marks; but when this sum was rejected as insufficient, he distributed the money to the poor. Early in 1095 the archbishop asked permission to go to the pope to receive the pallium. Rufus objected that, while the antipope Clement III was still disputing the title, it was for him and his Great Council to decide which pope should be recognized. When asked to recognize the juridical way to this end, the Anselm replied, "In the things that are God's I will tend obedience to the Vicar of St. Peter; in things touching the earthly dignity of my lord the King I will to the best of my ability give him faithful counsel and help." The other bishops seem to have been cowed by Rufus and to have supported the king's claim to decide which of the rival popes he should recognize. But Anselm prevailed in any way to this end. The Almain replied, when Abbot of Bec, he had sworn to Urban. He recognized no right of king or bishops to interfere, and he declared he would give his answer "as he ought and where he ought". These words, writes Dean Stephens (History of The English Church, II, 99), were understood to mean, that as Archbishop of Canter-
bury, Anselm “refused to be judged by any one save the pope himself, a doctrine which it seems no one was prepared to doubt; the church of the English bishops was recognized, and the pallium brought from him to England; but a little later Anselm again asked leave to go to Rome, and when it was refused he declared in the plainest terms that he must go without leave, for God was to be obeyed rather than man. Pope Urban received him with all possible respect, and publicly spoke of him as “alterius orbis papa.” Urban was recognized, and it implied the recognition in the Archbishop of Canterbury of a jurisdiction independent of Rome.

But the whole lesson of Anselm’s life centered in his belief that it lay with the pope to decide what course was to be followed in matters affecting the Church even at the risk of the king’s displeasure, and despite any pretended national customs. Neither does it appear that the rest of the English bishops maintained the contrary as a matter of principle, though they considered that Anselm’s attitude was needlessly provocative and uncompromising. There are no wanting signs that Eadmer’s desire to exalt his own beloved master has led him to be somewhat less than just to Anselm’s suffragans and to the Holy See itself. The archbishop of York was excommunicated for Rufus, when Henry, who succeeded, made generous promises of freedom to the Church, explicitly renouncing any sort of payment or relief for the appointment of new bishops or abbots, and promising that church revenues should not be seized during vacancies. He recalled Anselm to England, but came into conflict with him almost immediately over the appointment of investigation of investiture. Anselm attended the Councils of Bari (1068) and Rome (1099), at which the saint had personally assisted, anathema had been pronounced on those bishops or abbots who received investiture at the hands of laymen. Anselm accordingly refused either to do homage himself for the restitution of the possessions of the archbishops or to consecrate other bishops, who would received ring and crosier from the king. Eventually, by the consent of both parties, the matter was referred to Rome. In three different embassies that were sent, the pope upheld Anselm’s view, despite the efforts made by Henry’s envoys to extort some concession. Then Anselm himself went to Rome (1103) while a fresh set of royal emissaries were dispatched to work against him at the Curia. Not for an instant did Anselm yield, and St. Anselm accordingly remained abroad. But at last, when Anselm was on the point of launching an excommunication against the king, the latter, being in political straits, accepted such modified terms as his envoys could obtain from the Holy See. Anselm was allowed to consecrate those who had previously received investiture, but the kings at the Council (1107) were not accustomed for the future the claim to invest bishop or abbot by ring and crosier. On the other hand it was tacitly admitted that bishops might do homage to the king for the temporal possessions of their sees. This settlement of the investiture question in England was fifteen years earlier than that arrived at on very similar lines between Pope Callistus II and the Emperor Henry V. The importance of the Struggle for Henry may be exaggerated, for, as already pointed out, the whole ecclesiastical order was in danger of being reduced to the status of vassals sharing all the vices of secular princes. Moreover this resolute stand made by St. Anselm and the popes was not without its political importance. The clergy as a body had now become sufficiently independent to take a leading part in that resistance to despotism to which the people during the next two centuries were to owe their most fundamental liberties. During all this time England as a whole was in no wise in sympathy with the monarch in his quarrel with the pope. As Dr. Gairdner writes of a later period, “It was a contest not of the English people, but of the King and his government with Rome. . . . As regards national feeling, the people evidently regarded the Church of England as a State Church in this sense (Lollards and the Reformation, I, 6). Nothing contributed so much to win the confidence of the nation as the independence shown by the Church in such struggles as those that are associated with the names of St. Anselm, St. Thomas Becket, and Cardinal Stephen Langton.

St. Anselm died peacefully at Canterbury in 1109, but Henry I lived on until 1135. During the remainder of Henry’s reign and throughout the anarchy which prevailed under the rule of Stephen (1135-1154), good bishops were for the most part elected. The chapters were ostensibly left free in their choice, though they no doubt responded in some measure to the known preferences of the king. In any case simoniacal compacts are no longer heard of, while the Holy See had generally much to say to the final acceptance of the archbishops and of the more important prelates. A certain impatience of dictation from Rome, shown, for example, in occasional unwillingness to receive a legate or to allow appeals to the pope, may be noted at this as at other periods, but the principle of papal authority was never disputed. For example, Henry II according to the story related by St. Stephen Harding, on hearing that a pallium had been bestowed by a cathedral chapter on a prelate, he exclaimed that it was a symbol of archiepiscopal jurisdiction which still appears in the arms of the English Sees of Canterbury and York, was personally fetched from Rome or at least petitioned for by every archbishop, as it had been in the Anglo-Saxon Church from the very beginning. In cases when the pall was brought to England instead over, when prelates who made against the inclusion of the St. Anselm and Ralph d’Escures went to meet it bare-foot. To legates of the Holy See, notwithstanding the fact that their presence was not always desired, extreme deference was shown. Even a mere priest like Cardinal John of Crema, when he came to the country as papal legate, took precedence of the two archbishops in the Council of Westminster (1125). Moreover, as the investiture question was in point of fact, it was not so much that the presence of a papal representative in England was resented, as because men believed that such legatine powers, by old tradition, ought to be conferred on the Archbishop of Canterbury, as had been done, for example, in the case of Tewkes, Plemgund, and Dunstan. As Eadmer remarks (Hist. of Eng., No. 132, “in BENEDICT, HIST. OF THE CHURCH”, 2007, there was still a residue of the old rivalry between the See of Canterbury and the See of London. Anselm, however, had not the same influence that has been ascribed to him. The currying of favor by the man of the world was not in keeping with the spirit of the age. The man of the world, then as now, was not so much interested in the Church as in looking out for immediate advantage. For the same reason the political influence of St. Anselm made itself felt more in the fore while his name lived. In the context of the English Church the name of the great man was almost a byword for “blessed be the memory of St. Anselm.”

In the spirit of this protest Archbishop William de Corbeil almost immediately after Cnut’s departure eagerly sought the office of legate for himself, and from that time, though Henry, Bishop of Winchester, was made legate by Innocent II in 1129, the Archbishop of Canterbury was usually constituted legatus natus (nativus, or ordinary, legate), a term used in contradiction to the legatus a latere dispatched on extraordinary occasions “from the side” of the sovereign pontiff in Rome. For the sole purpose of the ordinary legatine appointment, first associated with the person of William de Corbeil (d. 1136), is unmistakable. It was, as Dean Stephens truly observes, “an acknowledgment of the supreme authority of the Pope. The primacy shone with a reflected glory, his precedence was not inherent but derivative” (Hist. of the Eng. Church, II, 142).
William de Warrene and Gundrada his wife c. 1077. But the priory of Lewes later on became the mother of several other Cluniac priories, of which the best known are those of Wenlock, Thatford, Bermondsey, and Pontefract. Still more intimately associated with England was the Cistercian Order, another Benedictine reform of which the virtual founder was a Somersetshire man, St. Stephen Harding. His name has been eclipsed by the glory of St. Bernard, the last of the Fathers and the founder of the Abbey of Clairvaux, but it was Stephen who received St. Bernard and his companions at Citeaux in 1113, and who gave them the white habit prescribed by the Cistercian rule. The first abbey of the order in England was that of Waverley in Surrey (1128), which itself became the mother of several establishments. But Waverley was eclipsed by the Yorkshire Abbey of Rievaulx established (c. 1133) by monks sent directly from Clairvaux by St. Bernard. Among the earliest recuits of Rievaulx was St. Ælred, perhaps the most eloquent of pre-Reformation English preachers. The foundations of the white monks thrive and multiplied exceedingly. By the year 1152 there were fifty Cistercian houses in England (Cockerell, ‘The Cistercians’, p. 352, Oct., 1893), of which the best known are Fountains, Tintern, and Meaux. Unfortunately, this rapid development seems to have been followed before long by some relaxation of primitive austerity and fervour, but the movement while it lasted must have contributed greatly to the diffusion of more spiritual ideas and to the correction of the manifold moral evils of the times. The bishops and the secular lords, the most austere of all, was not introduced into England until somewhat later—the first house, that of Witham in Somerset, was founded by Henry II in 1180, one of the indirect results of the martyrdom of St. Thomas. Probably the extreme rigour of the life prevented the Cistercian foundations from ever becoming numerous. But the Charterhouse at Waverley gave to England one of her greatest and holiest benefices, that of St. Hugh of Lincoln (d. 1200), and the Charterhouse of London at a later date played a noble part in the resistance it offered to the first stages of Henry VIII’s revolt from Rome.

The houses of the Austin Canons, or “Black Canons”, were more numerous and of earlier date than those of the Cistercians. Their first foundation was the Charterhouse of Reading, in 1105. There were two great establishments in London: St. Bartholomew’s Smithfield, and St. Saviour’s Southwark. At Carlisle they formed the cathedral chapter, the only exception to the rule that all the cathedrals which were not served by Benedictines were in the hands of secular canons. And here we may conveniently notice the fact that, owing, probably, to the initial impulse of St. Dunstan and the still lingering sympathies of Lanfranc, who virtually reorganized the English Church after the Conquest, England stood almost alone among the nations of Europe in the number of her cathedrals that were served by monks. Canterbury, Durham, Winchester, Rochester, Worcester, Norwich, Ely, Coventry, and Bath all had Benedictine chapters. If this arrangement was to some gain in point of piety, there was a proportionate disadvantage in the additional friction that was likely to result when it came to the election by religious of successors to the see. The Benedictines, the “Black Monks”, were of course always the most numerous monastic body in England, and, while they had been firmly established in the country from the very beginning, there was at all times a steady and almost proportionate increase in the number of abbey and cells which belonged to them. Bound specially by their rule to showhospitality to strangers, and being for the most part good farmers and good landlords, they formed a great element of stability and peace throughout the country, helping to bind district with district through their relations with their dependent cells and with one another. They were also the great centres of learning, more particularly in the collection and multiplication of books, and they were not only patrons of art but they provided in many cases the nearest approach to schools for architecture, painting, sculpture, embroidery, and other useful works. If their revenues were vast, so, it must be also remembered, were their charities. Neither would it be easy to imagine a more worthy object upon which to expend the superfluous wealth of the country than in the erection of those magnificent abbeys and churches which the monastic builders left to posterity.

Speaking of the religious orders generally, it may be said that no more misplaced charge was ever made than that which describes their members as idle and useless. Of all the sections of the community they almost alone in that day were profitably busy. The industrious man-at-arms, the industrious lawyer, the industrious forester, huntsman, or jongleur were too often only a scourge to the land in which they lived. For this reason we conceive that a quite unnecessary outcry has been raised by a number of Anglican writers against a practice which undoubtedly became very prevalent in the twelfth century, namely that of making the manor-house and the boundaries of the parishes of its shareholders, the first great houses. By this arrangement the monastery so benefitted received nearly all the funds properly belonging to the parish, but supplied for the religious needs of the parishioners, either by deputing one of the monks to act as parish priest or by paying a small stipend to some secular vicar. No doubt this practice was not altogether against the law, but if the tithes or other sources of revenue of the parish churches. By this arrangement the monastery so benefitted received nearly all the funds properly belonging to the parish, but supplied for the religious needs of the parishioners, either by deputing one of the monks to act as parish priest or by paying a small stipend to some secular vicar. No doubt this practice was not altogether against the law, but if the tithes or other sources of revenue of the parish churches.

ENGLAND 435  ENGLAND
With the accession of Henry II, in 1154, England, after years of strife, once more passed into the hands of a strong and capable ruler. Without being a whit less selfish or more patriotic than other princes of that age, Henry had the sense to see that good government meant stable government. His legal reforms and the new machinery of justice which he brought into being are of the highest possible importance to the jurist and to the student of constitutional history, but they do not specially concern us here. Henry at the beginning of his reign seems to have been well viewed in Rome, and believing, as the present writer does, that the Bull "Laudabiliter" is unquestionably one of the most shining examples of its kind (see AMERICAN JOURNAL OF THEOLOGY, Vol. X, No. 4, April, 1906), the religious mission entrusted to the king, no doubt upon his own representations, in the proposed conquest of Ireland, bears a close resemblance to the pretext advanced for William the Conqueror's invasion of Great Britain. In both cases, also, the Roman pontiff seems to have claimed dominion, granting the land to the invader as a fief upon payment of a certain tribute. The fact, and, as regarding to the Bull "Laudabiliter", Henry himself had admitted (quod tua etiam nobilitas recognoscit) that "Ireland and all other islands upon which Christ, the Sun of Justice, has shone belong to the prerogative of St. Peter and the Holy Roman Church," deserves to be borne in mind in connexion with King John's formal surrender of Ireland to the Pope at a later date.

But what specially interests us here in the reign of Henry II is the disputes between the king and Thomas, his archbishop, culminating, in 1170, in the martyrdom of the latter. Thomas Becket, a clerk in the household of Theobald, Archbishop of Canterbury, having been strongly recommended to Henry, had been taken into his intimate circle of palace clerks and became the King's clerk, an office which he had discharged with splendid ability for seven years. After the death of Theobald, Thomas, at the instance of the king himself, was elected Archbishop of Canterbury. He vainly tried to escape from the proposed dignity, but, once appointed, his consecration marked the beginning of a complete change of life. He renounced the chancellerly and secular pursuits, while he devoted himself to the practice of rigorous asceticism. It was not long before he found himself in conflict with the king, as indeed he had foreseen from the first. The first question which caused an open breach between them was a purely secular one. Henry demanded that a certain tax called "the sheriff's aid" should be paid directly to himself, to supply the king's will, the "tribute of taxation which is recorded in our national history", and, as he adds, "it would seem to have been, formally at least, successful" (Const. Hist., I, 463). This incident, however, was soon thrown into the shade by the more serious quarrel over the Constitutions of Clarendon. What was put by the king in the forefront of the dispute was not the question of the appointment of the clergy to the bishoprics, a matter to which Henry was constitutionally entitled, but the question of taxation which is recorded in our national history, and, as he adds, "it would seem to have been, formally at least, successful" (Const. Hist., I, 463).

What was of supreme importance was the lesson that there was something higher, stronger, and more enduring than the will of the most powerful earthly despot.

The life of the Carthusian, St. Hugh, whom Henry II himself caused to be elected Bishop of Lincoln in 1186, forms an admirable pendant to that of St. Thomas. It may be noted in the first place, in view of the outcry raised a little later against the provision of foreigners to English sees, that St. Hugh was a Burgundian, who is represented even at the end of his life hardly understood the language of the people. But no man ruled his diocese better, no man was more beloved alike by his own secular canons of Lincoln and by the numerous religious in his diocese; while, owing to his holiness, his fearlessness, and his merry humour, he was the only bishop who without yielding an inch of his high principles, preserved the respect and even the friendship of three such monarchs as Henry II, Richard Cœur de Lion, and John. Very memorable was his firm refusal in the national council to grant Richard an aid in knights and money for foreign warfare. Though the reign of Richard, like that of his predecessor Henry II, still continued to be a period of reform in law, it was also a period of unbridled licence. The two greatest ecclesiastics, Hubert Walter, who was also Archbishop of Canterbury, had made himself the instrument of the king's designs. Though all the temporal lords submitted, St. Hugh offered an uncompromising and successful resistance. "This", says Bishop Stubbs, "which was done not on ecclesiastical but on constitutional grounds, is an act which will not pass unnoticed in the history of the thirteenth century. It is one of the bright stars which, with some other main points of the national life of England. For our present purpose they are chiefly memorable as emphasizing the truth, so often ignored by Anglican writers, that medieval Christendom, while recognizing many different peoples and many different governments, conceived of the Church of God not as a manifold, but as one. According to that "political theory of the Middle Age," which, founded by Gregory VII, had already imposed itself almost universally upon the speculative philosophy of Europe, the Church, embracing and controlling every form of civil government, was cosmopolitan and all-pervading. It was precisely the fact that she was not identified with any country or people, and that she appealed for her sanctions to forces outside of this globe and that gave to the Church its great position and the arbiter of nations. In principle no temporal ruler disputed the supremacy of the Vicar of Christ so long as the question remained in the abstract and so long as it was some other sovereign who was the sufferer. It was only when his own will was thwarted that active resistance was made, and then it was nearly always on some slip issue, some technicality of law that the monarch and his advisers sought to evade the force of an unwelcome pronouncement. The very persistence with which monarchs at times sought to prevent the introduction into England of papal Bulls, provisions, or excommunications, was an acknowledgment rather than a repudiation of the papal authority; just as a man who barricades himself in his house that a writ may not be served on him is really giving proof of his supreme respect for the majesty of the law. This point of view is one that has carefully to be borne in mind in connexion with the resistance to the papal exactions of the thirteenth century and with such apparently unfriendly legislation as the Statutes of Pro- manure and Provisions which we shall have to consider later on.

The reign of John (1199–1216) was a time of terrible suffering for the country, but it had results of untold importance in the consolidation of England as a nation. The very loss of her foreign possessions—for in Henry II's day more than half France had recognized the suzerainty of the King of England—contributed to that result. But within Great Britain itself, ever since the Norman Conquest, the political constitution of the nation had been divided between two strongly marked parties more or less in opposition. The first, or feudal, element consisted of the great nobles of the Conquest, with their vassals and the influences they wielded. The tendency of this party was centrifugal or disruptive, and they looked upon the country and its peoples as their lawful prey. The second, which for convenience we may call the royalists, was more homogeneous. It comprised the king, the newer nobility which represented mainly the great officials of the Crown appointed under Henry I and Henry II, and with these the bishops and clergy almost to a man. Taken as a whole, all these recognized the advantage of a centralized government and sympathized with the native population, wishing their rights to be respected and justice to be done. Such was the work of John's lawless and despotic rule, especially after the restraining influence of Hubert Walter was withdrawn by death, to break up this combination and to unite all parties against himself. In this the action of Pope Innocent III, culminating in the Interdict and the sentence of deposition pronounced against John, played a most vital part. It is needless to recapitulate the story of the election of Stephen Langton as Archbishop of Canterbury, over which John's quarrel with the Holy See practically began. But it is well to recall that Langton, who rendered such splendid service to the liberties of his country, and whose name is imperishably associated with Magna Charta, was the pope's own nominee, elected at his instance by the clergy of the Church in Rome. Under stress of the Interdict and of John's exactions, the old feudal lords, the clergy, and the new "ministerial" nobility gradually drew together. John found that he had none but a few personal partisans upon whom he could count, and Philip of France with a great following threatened invasion to enforce the pope's sentence of deposition. Under these circumstances John made his submission to the legate, Pandulf, promising to receive all the exiled bishops and to make restitution for the injuries and losses the Church had sustained. A few days later, on 13 May, the vigils of the Ascension, 1213, he went even further, for he surrendered his crown and kingdom into the hands of the legate to be received back from him as a fief which he and all his pretended vassals were only to hold of the temporal feudal lord of one thousand marks. It is not unnatural, perhaps, that this transaction should have been denounced by historians in the language of unmeasured indignation. Even Lingard in his day described it as "heaping everlasting infamy on the memory of John", but the considerations he puts forward in explanation of the act have not been without weight with later students. It may be said to be now generally acknowledged that the idea of such a surrender probably did not originate with the pope, but with John himself (see Davis, "England under the Normans and Angevins", 1905, p. 368; Norgate, "John Lackland", 1902, p. 181). As the second of these two writers explains, there is a quite intelligible motive for
such an act: "John felt that he must bind the Pope to his personal interest by some special tie of such a nature as to make any attempt to prevent Innocent from casting it off or breaking it". But secondly, the statement formerly made about the cry of indignation heard in England when the news was known little or no foundation. The vehement denunciation of the act by the partisan Matthew Paris, as "a thing to be detested for all time", was written many years afterwards. "Some", says Davis, "stigmatised the transaction as ignominious, but the most judicial chronicler of his day calls it a prudent move, for, he adds, there was hardly any other way in which John could escape from all his dangers. Even the hostile barons whose plans received an unexpected check did not venture either now or later to dispute the validity of the transaction" (cf. Adams, "Political Hist. of Eng.", II, 315). For such vassalage there were abundant precedents, both within and without the British Isles. Only twenty years earlier, as Hove- den states, Richard Cœur de Lion resigned his crown to the Emperor Henry, engaging to receive it as a fief of the empire for an annual payment of five thousand pounds; while the Scottish patriots a century later, to their English king, would exchange him as their feudal lord and pretended that Scotland had always been a fief of the Holy See. It would be most misleading to interpret these and other similar transactions merely in the light of modern sentiment. Perhaps one of the most regrettable features in the in- cident of John's submission and absolution is the encoun- tronment which the sense of papal protection sanctioned the recognition of demands made at the price of wrongdoing. His later action toward his subjects was no more straightforward or constitutional than before, and he seems to have deceived or gained over the legate to his side. But Archbishop Langton and his barons by this time knew him well, and by inelastic persistence they forced John to accept their terms. The king, according to a prelate who was granted by Henry I at the beginning of his reign, they drew up a charter of liberties, many times confirmed with slight variations in the course of the next cen- tury, and destined to be famous through all time as Magna Charta. This great treaty between the king and his people, which Stubbs has described (Const. Hist., II, p. 1) as "the consummation of the work for which three generations of embattled prelates and laymen have been labouring for a century, the summing up of one period of national life and the starting point of another", begins with a religious preamble declaring that John was moved to issue this charter out of re- venance for God, for the benefit of his own soul, for the exaltation of Holy Church, and for the amendment of his kingdom, and, further, that he had acted therein by the advice of Stephen, Archbishop of Canterbury, of the other bishops, and of Pandulf "subdeacon of the Lord Pope and member of his household", as also of the secular lords, the more important of whom are mentioned by name. As in the charter of Henry I, so here, the first article promises freedom to the Church in England (quia ecclesia sua a omnibus libertate et integra et libertates suas illas) and specifies in particular the freedom of election of bish- ops, which, as the document further explains, had al- ready been promised by the king and ratified by Pope Innocent. For the rest it will be sufficient to say that Magna Charta in substance lays down the principle that the king has no right to violate the law, and, if he attempts to do so, may be constrained by force to obey it. In particular, justice is not to be sold, or de- layed, or refused to any man. No Freeman is to be taken or imprisoned or outlawed except by the lawful judgment of his peers. No sequestration or tax, other than the three regular aids, is to be imposed except by the consent of the common council of the kingdom. Twenty-five barons were appointed to watch over the execution of the Charter, but they were far from re- taining the sympathy of all. "Before the conference to an end", says Mackechnie, "confidence in the good intentions of the 25 executors, drawn it must be remembered entirely from the section of the baronage most unfriendly to John, seems to have been completely lost" (Mackechnie, "Magna Carta", p. 53). The indignation, therefore, formerly expressed at the subsequent action of Innocent III in declaring the charter null and void, is now generally admitted to be unreasonable. The barons had themselves claimed the credit of making England a papal fief (Lingard, II, 333; Rymer, I, 185), and it was certainly contrary to feudal usage for a vassal to con- tract obligations of this serious kind without reference to the overlord.

That the papal condemnation was not directed in principle against English popular liberties, may be in- ferred from the fact that the Charter was confirmed in November, 1216, upon the accession of the child king, Henry III, at a time when the papal legate Gualo was all-powerful, and was strongly supported by the new pope, Honorius III. The long reign which then began with a regency, despite the personal piety of the young king, and the iron grip of the old pope. The king's weakness and his partiality for foreign favourites involved him in a vast expenditure, while, on the other hand, the taxation thus necessitated could only have been carried through without dis- turbance by a strong central government, which was here entirely lacking. Cabals and intrigues of all kinds abounded, and the situation was kept from the pope by the Holy See. The exactions of the various legates and the never ending "provisions" of papal nominees to canonic- al and rich livings were undoubtedly the cause of very bitter feeling at the time, and have formed the favourite theme of historians ever since. It would be use- less to deny the existence of very serious abuses, more especially the fact that a large number of French and Italian clergy provided to English benefices never visited the country at all, and were content with sim- ply drawing the revenues. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the bitter anti-papal feeling which has gone on for cen- turies. The English clergy provided to English benefices never visited the country at all, and were content with simply drawing the revenues. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the bitter anti-papal feeling which has gone on for cen- turies. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the bitter anti-papal feeling which has gone on for cen- turies.
an now form no conception. In the early part of the thirteenth century nearly all the oldest and most influential men in England had made at least part of their studies in Paris. The two Archbishops of Canterbury, Stephen Langton and St. Edmund Rich, both men of pure English descent, might be instance as conspicuous examples, and if Englishmen had to complain of the many foreign ecclesiastics provided for in England, it must not be forgotten that there was quite a number of English bishops occupying foreign sees and other positions of emolument on the Continent. The fact is indisputable—as indisputable a fact that Englishmen formed a large proportion of the freebooters who roamed through Italy a century later and accepted the pay of anyone who would hire them—but it is interesting to find it strongly insisted upon by Matthew Paris, who in his indignation at the nomination of foreign ecclesiastics to English benefices, declares that England has no occasion to go abroad to beg for suitable candidates, seeing that she herself was rather accustomed to supply dignitaries for other distant lands ("Nec inquit Anglia extra fines suas in remotis regionibus personas regimini ecclesiasticum donaret, quae solet aliae sulpici ministrare").—Historia Major, IV, 61.

So it came to pass that men who had been trained to were very much increased in the thirteenth century by one of the greatest religious revivals which the world has seen, viz., that resulting from the foundation and rapid development of the mendicant orders. There is no reason to suppose that the effects produced by the preaching of the Franciscan and Dominican friars, who first came to England in 1224 and remained as a rule, were more remarkable in this country than abroad, but all historians are agreed that the impressions produced by this popularizing of religion were very marked. The work of spiritual regeneration which they performed at the first was wonderful, and they were warmly encouraged by such holy men and patriotic prelates as the great Bishop Grosseteste. It is perhaps more important to note that, despite the typically, there were remarkable in this country than abroad, but all historians are agreed that the impressions produced by this popularizing of religion were very marked. The work of spiritual regeneration which they performed at the first was wonderful, and they were warmly encouraged by such holy men and patriotic prelates as the great Bishop Grosseteste. It is perhaps more important to note that, despite the typically, men who were driven out of their houses and their churches were looted in common with those of the monks and nuns, the Friars had no broad acres and no manors, no real property to seize, and very little was gained by the spoiling of their goods, but inasmuch as they were at all times the most devoted servants and subjects of the Pope of Rome, they had to go at last, when Henry VIII had made up his mind to rule over his own kingdom and to be supreme head over State and Church" (Jessopp, "History of England").

It was during the thirteenth and fourteenth centuries that the relations between the medieval English Church, and the Holy See may be considered to have assumed their final shape. At least this was the period when such an outspoken champion as the great Bishop Robert of Lincoln (Grossseteste), or later, under so masterful a ruler as Edward I, or, again, amid the growing independence of Parliament, encouraged by such promoters of ecclesiastical disaffection as Walwyn and the other leaders of the "Ecclesia Anglicana," according to the theory recently most prevalent, began to assert herself and resolutely set to work to put the pope in his place. And here it may be said once for all that the not unnatural impatience of papal supervision and papal interference which was often shown by strong kings like Edward I, and especially at times by the clergy themselves, proves absolutely nothing against the acceptance of the pope's supreme authority as head of the Church. That subordinates should wish to be left free to enjoy a large measure of independence is a law of human nature. England's colonies, for example, may be quite loyal. They may fully recognize in principle the supreme right of the imperial Government, and yet prove absolute independence in practice, the reason being that it is customary, and especially when it is of a kind which touches the colonial pocket, provokes resentment and is apt to be angrily resisted. Even in a fervent religious order a proposed visitation of some outlying house or province may be met with remonstrance and an appeal to precedent on the part of those who, however docile, are doubtful of the ability of a foreign authority to understand local conditions.

An entire acceptance of the spiritual supremacy of the Holy See is not in the least inconsistent with the belief that an individual pontiff, and still more the officials who form the entourage of that pontiff, may be influenced by mercenary or unworthy motives. There is not any form of authority in the world which is not at times disobeyed and defied under more or less specious pretext by those who have not the slightest wish to submit to their own subordination. Thus it happens that the supporters of "Anglican Continuity" theories are able to quote many utterances of medieval writers that sound disaffected or rebellious in tone, they are able to appeal to many individual acts of disobedience, but they fail altogether in producing any, even the faintest, repudiating the claims or the papal primacy or papal supremacy by the accredited representatives of the pre-Reformation Church. By no historian has this truth been more clearly recognized than by the distinguished jurist, F. W. Maitland. Challenging the statement of the Ecclesiastical Courts Commission of 1833, which, largely under the guidance of the eminent historian, Bishop Stubbs, reported that "papal law was not binding in [medieval] England even in questions of faith and morals unless it had been accepted by the national authorities", Professor Maitland, with an irrefragable array of illustrations drawn mainly from the classical canon-law book of the English pre-Reformation Church, the "Province" of Bishop Lyndwood (1433), maintains the exact contrary. According to Lyndwood, as Dr. Maitland clearly proves, "papal law was binding in [medieval] England even in questions of faith and morals unless it had been accepted by the national authorities". Professor Maitland continues, "is no private opinion of a glossator, it is a principle to which archbishops, bishops and clergy of the province of Canterbury have adhered by solemn words" (Roman Canon Law, 17). As the same authority goes on to show, not only did the pope claim and obtain recognition of his right to take into his own hands the judgment of every ecclesiastical cause over the head of the bishop, but it was largely through the questions and appeals of English bishops to Rome, asking for decisions, that the fabric of Roman canon law was built up (loc. cit., 53, 66, etc.). In full accord with this we find Archbishop Peckham telling such a monarch as Edward I that he could not overrule the decrees of the pope, and that all kings are bound by those decrees. So we find the Archbishop of Canterbury with all his suffragans writing a joint letter to the pope and telling him that all bishops derived their authority from him as rivulets from the fountainhead (Sandale's Register). We find the claim of Edward the Confessor and the claims of English bishops, as in the case of the Abbey of St. Albans or of Bury St. Edmunds, and making it absolutely and entirely exempt from episcopal authority. We find the very kings who are supposed by their Statutes of Provisors and Premonstrate to have
shaken off their allegiance to Rome, begging the sover-
ign pontiff in most respectful language to issue le
t the necessary provision. Rolls of confirmation in favour
of such and such an ecclesiastic who enjoys the royal
favour. No doubt these statutes of Provisors and
Præmunire do in some sense play an important part
in the history of the English Church during the four-
teenth century, though it is admitted that they were so
continually set aside that the permanent result of the
legislation was greatly to strengthen the development of
other provisors, of which the first was passed in 1351, claimed
for all electing bodies and patrons the right to elect or
to present freely to the benefices in their gift,
and moreover declared invalid all appointments brought
about by way of papal "provision", i.e. nomination.
Two years later this legislation was supplemented by
the first Statute of Præmunire, which enacted that
those who brought matters cognizable in the King's
Courts before foreign courts should be liable to for-
feiture and outlawry. It has been maintained that
these acts prove that the English Church did not ac-
knowledge any providing power in the Holy See. To
this we may reply (1) that, like all the other English
bishops, even Grosseteste, who is so constantly repre-
sented as out of obedience to the Pope, never questioned
his authority, in this matter fully recognized the right
in principle, though he protested against abuses in the
use of it; (2) that the legislation at least professed to
be passed not in a spirit of hostility to Rome, but as a
remedy for manifold abuses caused by "Rome-run-
ers"—priests thronging to Rome and importuning
the Holy See for benefices. It was the lay patrons of
living the papal provisors, the forefathers of those who were the chief promoters of the Acts.
(3) That the bishops refused to consent to the Acts (Stubb's,
"Const. Hist.", III, 340) and caused their formal pro-
test to be entered on the rolls of Parliament; (4) that
the bishops and clergy petitioned spontaneously and
repeatedly for their repeal (ibid., 342), that the uni-
versity, in 1369, declared that the Acts operated to the
detriment of learning, and that in 1416 the Com-
mmons also petitioned the king for the abolition of
the Statute of Provisors; (5) that the kings themselves
disregarded the Acts and constantly asked the popes
to provide to the sees; (6) that it is universally admitted
that papal provisors were more numerous after the
passing of the Acts than before. In the 300 years pre-
ceding the 14th century, 313 papal provisors had
been provided by the popes; of these 47 were before
the passing of the Statute, 266 after it (see Moyes in "The Tablet", 2 Dec., 1893). One thing is
certain, that England in several instances owed some of
her best and holiest prelates to the action of the popes
in providing to English sees in opposition to the
known wishes of the laity. Stephen Langton, in
1203, St. Edmund Rich, in 1232, and John Peckham,
in 1279, are conspicuous examples. We have already
said above that a reaction against current Anglican
theories regarding the position of the pope in the
medieval English Church has been steadily growing
during the last quarter of a century. The complete
agreement of such writers as Professor F. M. Maitland,
Dr. J. H. Black, and Mr. R. W. Gairdner, in ad-
mitting the subject along quite different lines of research,
is very remarkable. The following passage from one
of the most distinguished of the younger school of
English historians, Prof. Tout, of Manchester, states
the case as frankly as it could have been stated by
Lingard himself. After insisting that the Statutes
of Provisors and Præmunire, like that of Labourers,
or the annuities law, remained a dead letter in prac-
tice, and after declaring that to the average clergy-
man or theologian of the day the pope was the one
Divinely appointed source of ecclesiastical authority,
the shepherd to whom the Lord had given commission
to feed His sheep, Prof. Tout continues: "The anti-
papal laws of the fourteenth century were the acts of
the secular not of the ecclesiastical power. They
were not simply anti-papal, they were also anticlerical
in their tendency, since to the man of the people an attack
on the Pope was an attack on the Church. . . . The
d Clergyman, though his soul grew indignant against the
curialists, still believed that the Pope was the divinely
appointed autocrat of the Church universal. Being
a man, a Pope might be a bad Pope; but the faithful
Christian, though he might lament and protest, could
not and would not resist. Hitherto the papacy had essen-
tially interwoven with the whole Church of the
Middle Ages, that few figures have less historical
basis than the notion that there was an antipapal
 Anglican Church in the days of the Edwards" (Polit.
Hist. of Eng., III, 379). No one who carefully studies
the language and acts of such a man as Grosseteste can
fail to realize the truth that in spite of all his fearless
criticism of the Roman Curia, his attitude of mind is
thoroughly reverential to papal authority. The
most famous, as being the least temperamentally worded,
of all his pronouncements is now known to have been
addressed, not, as formerly thought, to Pope Innocent
IV himself, but to one of his subordinates. On
the other hand, as Maitland points out, Grosseteste
wore about his anti-Catholicism; for his belief in the
plentitude of the papal power. "I
know", he says, "and I affirm without any reserve
that there belongs to our lord the Pope, and to the
Holy Roman Church, the power of disposing freely of
all ecclesiastical benefices." And this and similar
language, acknowledging, for example, the pope to be
the sun from which other bishops, like the moon and
stars, receive whatever powers they have to illumine
and sanctify the Church, was not only maintained by
Grosseteste to the end (see "The Month", March,
1895), but re-echoed by Bishop Arundel nearly two
centuries afterwards.
So again the occurrences which followed the publica-
tion by Boniface VIII of the Bull "Clerici Iacres", in
the days of Edward I and Archbishop Islip, tend to show that even when the pope took up a posi-
tion which was too extreme and from which he was
forced ultimately to retire, the English Church was
not less, but more, loyal to the Apostolic See than
other, Continental, nations. Nothing could be less
true to the facts of history than the idea that England
stood apart from the rest of Christendom, with an
independent spirituality. Or, if they have to illumi-
nate and sanctify the Church, was not only maintained by
Grosseteste to the end (see "The Month", March,
1895), but re-echoed by Bishop Arundel nearly two
centuries afterwards.

The great disturbing force in the ecclesiastical life of
England during the fourteenth century, much more
than the Statutes of Provisors or even the Black
Death, was the rise and spread of Lollardy. We
may perhaps doubt if the significance of the move-
ment in this country was by any means as great as
was once believed or, if so, what the motive or pur-
pose of this Bohemian upheaval under John Hüs which grew out of
Wyclif's doctrines, partly through the favourite
modern theory that Lollardy produced the Reforma-
tion, have generally attributed to it. Dr. James
Gairdner, however, who has recently investigated the
whole movement and its sequelae with a thoroughness
and knowledge of original materials to which no pre-
vious writer can lay claim, has arrived at conclusions
which tend very seriously to modify the views hitherto
very commonly received. In his ideal the novelty and
the socialistic tendency of the opinions so boldly pro-
claimed by Wyclif did constitute a grave political
danger, a danger which was not, perhaps, so acute in
the reformer's lifetime because the most startling of his views developed late, only ten years or less before his death (1384), but which were eagerly caught up and even exaggerated by ignorant disciples at a time of weak rule and political unrest. The fact that the Great Schism of the West broke out only six years before Wyclif's death added to the complications by leaving the greater part of Christendom in a state of uncertainty as to which of the rival popes had the better claim to men's allegiance, and to this cause most probably is due the fact that Wyclif was left during his last years to propagate his doctrines practically undisturbed. That his doctrines were utterly revolutionary, as judged by any standard of opinion tolerated up to that time it would be absurd to deny. No one can question the danger of the doctrines that were advocated by him. They were both heretical and seditious, and so far as the popes themselves were concerned, there was no real dominion, no real authority, no real ownership of property without the grace of God. From this he deduced the conclusions that a man in mortal sin had no right to anything at all, that among Christians there ought to be community of goods, and that, as to the clergy having property of their own, it was a gross abuse. Similarly he held that every layman had God as his own priest, since the pope was only to be obeyed when taught according to Scripture, and that a king might take away all the endowments of the Church. With these were combined in his later years theological opinions regarding the sacraments and Transubstantiation which were offensive in the extreme to the Christian sense of that day. Wyclif, no doubt, in his philosophical teaching provided safeguards which mitigated the practical consequences of the principles he held, but these were subtleties which were lost upon the more ignorant and fanatical of his followers, more especially after their master's death. The points that they clearly understood were that tithes were pure alms, and that if the parish priests were not good men the tithes need not be paid. That a priest receiving any unusual allowance by compact was simoniacl and excommunicated; that a priest who said Mass in mortal sin did not validly consecrate, but rather committed idolatry; that any priest could hear confessions (without faculties), and in fact that any holy layman predestined by God was competent to administer the sacraments without ordination. Such opinions as these, debated among a small and unpractised laity, were mitigated by a constant railing against devotional practices, such as pilgrimages, and against the Roman Court, the friars and all ecclesiastical authority, were obviously full of danger to social order at a time when the Black Death and the question of villeinage which resulted from it, had already provided many elements of disturbance.

Speaking of the proceedings against the foremost representative of Lollard opinions, Sir John Oldcastle, in 1113, Dr. Gairdner says: "It seems to have been a life-and-death struggle between established order and heresy”; and Bishop Stubbs, while doing too much honour by far to the fanatic credence of the Wyelife leader, remarks: "Perhaps we shall most safely conclude that in the infancy of history that had hitherto been the most far-sounder was the principle which guided either his moral or his political conduct." These comments really sum up the situation. The Wycliffe heresy became for a while a real danger to the peace of the country, as Oldcastle's insurrection proved. On the other hand, there was very little that was either sane or ennobling in the dreams which inspired the leaders, and which were imparted to their often very ignorant followers. Given the ideas then, and long after, universally prevalent in regard to heresy and the measures of repression necessary to prevent infection from spreading, there was nothing exceptionally cruel or intolerant about the statute "De hereticis com- burendo" of 1091, which provided that heretics convicted before a spiritual court, and refusing to recant, were to be handed over to the secular arm and burnt. There can be no doubt that before this extreme measure was resorted to much provocation had been given by the preaching of doctrines which all Christians then deemed blasphemous, and which were not confined to the vilifying of the Holy Eucharist, the pope, and the clergy, but touched upon the sanctity of marriage and the observance of Sunday as a day of rest. Dr. Gairdner, after very careful survey of all the evidence, is satisfied that Archbishop Arundel and his suffragans acted in the interests of public order and showed no inclination to enforce the statute either temperately or tyrannically. In point of fact after the suppression of Oldcastle's insurrection and his execution at the stake, Lollardy was no longer to be a subject as a political question, for it was too widely held in England upon men of any weight or consideration. They lingered on for a while and perhaps never entirely died down, though prosecutions for heresy became very rare long before the end of the fifteenth century, but they certainly cannot be regarded as a direct and primary cause of the religious changes which took place in the reign of Henry VIII.

Gairdner's account of the papacy of John XXII is that of a pope who seems to have had no particular prejudice against heretics, excepting, perhaps, to punish them as political enemies. But the speculative principles of all Wyelife's tenets was the supreme importance which he attributed to Holy Scripture. In his treatise "De Veritate Sacrae Scripturae", written about 1378, he practically adopts the position that Scripture is the sole rule of faith. It followed in his idea that the word of God ought to become accessible to all, and that all men were free to interpret it for themselves. We are told, moreover, by contemporaries of an privileged and hostile authority, the chronicler Knighton, that Wyclif himself translated the Gospel into English. Upon this and other evidence it has been commonly supposed that Wyclif was the first to bring the Bible to the knowledge of English readers and that the medieval Church uniformly adopted the practice of withholding the Scriptures from the laity. It is an old and oft-repeated story of students of medieval history that the grave misrepresentations involved in this traditional Protestant view are now generally abandoned (see e.g. Gairdner, "Lollardy", I, 100–17; "Cambridge Hist. of Eng. Literature", II, 50–62). We may summarize from the former of these writers the following conclusions, which represent what is best worth recalling of this incident and illuminate the practical application of a principle to the use of vernacular translations. Undoubtedly, translations into English of separate books of Scripture existed as far back as in the days of Bede. It is improbable, however, that a whole Bible in English, as distinct from Anglo-Saxon, existed before Wyclif's time; neither was it much required, for nearly all who could read, could read the Bible either in the Latin of the Vulgate or the Church preferred, or in French. There was, however, no express prohibition to translate the Scriptures into English until the prohibition of the Provinicial Synod of Oxford published in 1409. This prohibition was not seemingly occasioned by corrupt renderings or anything liable to censure in the text, but simply by the fact that it was composed for the general use of the clergy, which were by then no longer the only people who held without reference to the tradition and teaching of the Church. In fine, Dr. Gairdner concludes: "To the possession by worthy laymen of licensed translations the Church was never opposed, but to place such a weapon as an English Bible in the hands of men who had no regard for authority, and who would use it without being instructed to use it properly, was dangerous not only to the souls of those who read, but to the peace and order of the Church." The view has of late years been strongly urged by Abbot Gasquet, that the English version (or versions, for there are really two) commonly known as the Wyelife Bible, has no connexion with Wyclif, but is simply the fourteenth-century translation approved by ecclesiastical author-
ity and existing probably before Wycliff's time. There are not wanting arguments in support of such a contention, but the difficulties are also serious, and the theory cannot be said to have found general acceptance.

The fifteenth century, owing mainly to the long minority of King Henry VI, and to the Wars of the Roses, was a period of political disturbances, and does not add much to the ecclesiastical history of the country. We shall do well, however, to note that the invention of printing in England, as elsewhere, was cordially welcomed by the Church, and that it was under the influence of the printers of Westminster and St. Albans that the earliest presses were erected. Despite the religious indifference which is supposed to have heralded the Reformation, the tone of the literature given to the world at these presses seems to bear witness to the prevalence of a very genuine spirit of piety.

As the story of the English Reformation is more fully told in the second part of this article, while many separate articles are to be found in The Catholic Encyclopedia dealing with particular phases and leading personalities of that period, a brief outline of the great change will suffice to conclude this sketch of pre-Reformation England. Catholic historians and all others, except a small minority representing a particular school of thought, believe that England was concerned, even after the Wycliff movement, the Great Schism of the West, and the humanitarian revival of learning had done their worst, the position of the Church under the jurisdiction of Rome remained as secure as it had ever been. Lollardy no doubt had inoculated a certain section of the nation, and there were here and there stirrings indicative of a doctrinal revolt even during the early days of Henry VIII's reign, but with an episcopate thoroughly loyal to the Holy See and with the support of the king's strong government, these rumbles threatened no danger to the religious peace of the kingdom at large. Neither does there seem to have been any great deey of morals among clergy or laity. The public opinion of the learned world has in all substantial respects endorsed Abbot Gasquet's vindication of the discipline observed in the religious houses prior to the suppression. Occasional scandals there probably were, and even a great abbey like St. Albans may possibly have given some cause for the very grievous charges rehearsed against it in 1491 by Archbishop Morton, though authority has been interpreted by a sort of diplomaticer (or, perhaps, by a Jesuit), but there is not the least reason to believe that any wave of moral indignation at ecclesiastical corruption or any resentment of Roman authority had made themselves felt amongst the people of England until many years after Luther had thrown down the gauntlet in Germany. What produced the English Reformation was simply the passion of an able and unscrupulous despot who had the cleverness to turn to his own account certain revolutionary forces which are always inherent in human nature and which are always especially liable to be awakened into activity by the dogmatic teaching and the stern censures of the Church of Rome. Of course the movement was much helped forward by the wider distribution of a medium of communication, even as it was by the invention of the printing press, and which, while enabling people to read and interpret the text of Scripture for themselves, had too often filled them with conceit and with contempt for all scholastic traditions. The age was, at least relatively, an age of novelties and of unrest. The discovery of America had fired the imagination; the humanism of a coterie of scholars had in a measure spread into the world the spirit of "Sublimating the Clergy" by which they promised not to legislate for the future without submitting their enactments for the approval of the king and a mixed committee of Parliament. To bring pressure to bear on the pope, the king caused Parlia-
ment to leave it in Henry's power to withhold from the Holy See altogether the payment of annates, or fixed tracts of benefices, which consisted in the amount of the first year's revenue. By such gradual steps the breach with Rome was brought about, though even as late as January, 1533, application in a form most credibly insincere was still made to Rome for the Bulls of the new Archbishop of Canterbury, Cranmer, who had been elected on Warham's death, and who took the oaths of obedience to the pope, though he had been found guilty that he regarded them as null and void. Almost immediately afterwards Cranmer pronounced sentence of divorce between Henry and Catherine. The king then had Anne Boleyn crowned, and an Act of Succession was passed next year with a preamble and an oath to be taken by every person of lawful age. Parliament all submitted and took the oath, but More and Fisher refused and were sent to the Tower. The climax of the whole work of disruption may be considered to have been reached in November, 1534, by the passing of the Act of Supremacy, which declared the king Supreme Head of the Church of England, this time without any qualification, and which annexed the title to his imperial crown.

A reign of terror now began for all who were unwilling to accept exactly that measure of teaching about matters religious and political which the king thought fit to impose. Fisher and More had been sent to the block, and others, like the Carthusians, who rivalled them in their firmness, were dispatched by that ghastly and more ignominious death-penalty assigned to cases of high treason. In virtue of this martyrdom these and many more are now venerated upon our altars as beatified servants of God. The rising in the North known as the Pilgrimage of Grace followed, and, when this dangerous movement had been frustrated by the astuteness and unscrupulous perjury of the king's representatives, fresh disorders were witnessed in a repression which knew no mercy. Previous to this had taken place the suppression of the smaller monasteries; and that of the larger houses soon followed, while an Act for the dissolution of chantries and free hospitals was passed in 1545, which there was not time to carry entirely into execution before the king's death. Probably all these things, even the destruction of shrines and images, reflect a certain capacity in the king's nature rather than hostility to what would now be called popish practices. In his sacramental theology he still clung to the positions of the "assertio septem sacramentorum", the book he had written to refute Luther. Both in the Six Articles and in the "Necessary Doctrine" the dogma of Transubstantiation is insisted upon; and indeed more than one unfortunate reformat denied the Real Presence was sent to the stake. It was on this side that Henry's task was hardest. Against the Papalist sympathizers amongst his own subjects he consistently maintained a ruthless severity, neither did he relent until all were cowed into submission. Towards men of Calvinist and Lutheran tendencies, who were represented in high places by Cranmer, Cromwell, and many more, the king had intermittently shown favour. He had used them to do his work. They had been of the greatest assistance in prejudicing the cause of the pope, and even the most violent and sanguinary had rendered him service. True, the railing translation of the New Testament by Tyndale, which had been printed and brought in its first year 1526, was prohibited, as was Coverdale's Bible later on, in 1546, very near the close of his reign. It is plain that the security of the more revolutionary led him to regard such teaching as dangerous to public order. Very remarkable are the words used by Henry in his last speech in Parliament, when he deplored the results of promiscuous Bible-reading: "I am very sorry to know how that most precious book of the year's first-fruits, put, rhymed, sung and jangled in every alehouse, I am equally sorry that readers of the same follow it so faintly and coldly in living; of this I am sure, that charity was never so faint among you, and virtuous and godly living was never less used, and God Himself amongst Christians was never less revered, honoured and served." If ever a moral and religious calamity was the work of one man, most assuredly the first stage of the Reformation in England was the work of Henry VIII. One could wish we knew the exact sense of his own personal responsibility for the evils he deplored had come home to him before the hour when, on 28 January, 1547, he was summoned to his account.

Perhaps the most remarkable feature in the religious condition of England during the last year of Henry's reign was the fact that, besides the king himself, there were probably not a score of persons who were contented with the existing settlement. One large section of the nation was in complete sympathy with the doctrines of the German reformers, and to them the Mass, confession, communion in one kind, etc., which had been preserved untouched throughout all the changes, were simply as gall and wormwood. The great numerical majority, on the other hand, especially in the more remote and thinly populated districts, longed for the restoration of the old order of things. They wished to see the shrines of Canterbury and the shrines of Our Lady once more in honour, and the pope recognized as the common father of Christendom. During the two short reigns which intervened before Elizabeth came to the throne each of these parties alternately gained the ascendancy. Under Edward VI, the Protector Somerset, and after him the Duke of Northumberland, in full harmony with Cranmer, Hooper, and other bishops even more Calvinistically minded, abolished all remnants of popery. Chantries and guilds were suppressed, and their revenues confiscated, images in the churches, and then altars and vestments were removed and destroyed, while the material desecration was only typical of the outrages done to the ancient liturgy of Catholic worship in the first and second Books of Common Prayer. (See Anglicanism; Anglican Orders; Book of Common Prayer.) The bishops who were more Catholic-minded, like Bonner and Gardiner, were sent to the Tower. Princess Mary was subjected to the meanest and most petty forms of persecution. Neither can it be maintained that those in power were animated by any disinterested devotion to Reformation principles. Spoliation in many cases was the order of the day. It is only of late years that fuller historical research has done justice to what seemed the one redeeming feature in the general work of destruction—the foundation of the grammar
schools which are known by the name of King Edward VI. We have now learned that not one of these schools was originally of Edwardian creation (see Leach, English Schools at the Reformation”). Educational resources had already been seriously impaired under Henry VIII, and “the schools which bore the name of Edward VI owe nothing to him or his government but a more economic establishment. A good many of them had been chantry schools, for if the chantry priest of old wasted his time in singing for souls, he was not infrequently did good work as a schoolmaster.” So says a judicious summarizer of Mr. Leach’s researches.

There can be no doubt that these violent measures provoked a reaction. Already in 1549 there had been serious insurrections all over the country, and more particularly in Devonshire and in Norfolk. On the death of the boy king, in July, 1553, an attempt was made by Northumberland to secure the succession for Lady Jane Grey, but Mary, as soon as she was on the turn of Bonner, Gardner, and the Catholic reaction. Overtures were made to the reigning pope, Julius III, and eventually Cardinal Pole, whose mission as legate was unfortunately delayed by the Emperor Charles V for his personal reasons connected with the marriage of Queen Mary to his son Philip. Finally, England in November, 1554, where he was warmly received by the King. After the Houses of Parliament through the king and queen had petitioned humbly for reconciliation with the Holy See, Pole, on St. Andrew’s day, 30 November, 1554, formally pronounced absolution, the king and queen and all present kneeling to receive it. The restoration of the Church of England was consecrated during the previous reign was not insisted upon.

The reign of Mary is, unfortunately, chiefly remembered by the severity with which the statutes against heresy, now revived by Parliament, were put into force. Cranmer had been previously sentenced to death for high treason, and the sentence seems to have been politically just, but it was not at once executed. There seems to have been no doubt upon the part of Mary or any of her chief advisers for cruel repressions; but the reparationary force always at work seem to have frightened them into sterner measures, and, as a result, Cranmer, Latimer, Ridley, and a multitude of less conspicuous offenders, most of them only after release to recall their heresies, were condemned and executed. So firmly justified this miserable epoch of persecution more leniently than the terrorist who of all others has made himself live in the spirit of the times. Dr. James Gairdner, stanch Anglican as he is, in his recent work, “Lollardy and the Reformation”, seems only to press further the apology which he has previously offered for their terrible measures of repression. Thus he says: “With all one might imagine that it was not easy for Mary to be tolerant of the new religion, and yet tolerant she was at first, as far as she well could be. . . . The case was simply that there were a number of persons determined not to demand mere toleration for themselves, but to pluck down what they called idolatry ever and to keep the Edwardine service in the parish church and the pope’s authority, and even the feelings of their fellow parishioners. . . . short, there was a spirit of rebellion still in the land which had its root in religious bitterness; and if Mary was to reign in peace, and order to be upheld, that spirit must be repressed. Two hundred and seventy-seven persons are recorded to have been burnt in various parts of England during these three years and nine months, from the time of the persecution began to the death of Mary. But the appalling number of the sufferers must not blind us altogether to the provocation. Nor must it be forgotten that if it be once judged right to pass an Act of Parliament it is right to put it in force.” And as the same authority else-

where says, “Amongst the victims no doubt, there were many true heroes and really honest men, but many of them would have been persecutors if they had had their way.” Queen Mary died 17 November, 1558, and Cardinal Pole passed away on the same day twelve hours later.

To discuss at any length the monastic chronicles, the charters, rolls, and other records would trespass the limits of our information regarding the medieval history of England would be out of place in the present article. Only a small selection has been made from the main body of works and papers which have been published in recent years. It will be convenient to mention first the names of some Catholic books and studies which these works belong. The present attempt is to add a section of miscellaneous works and of books written from a Catholic point of view at any rate not distinctly Catholic.

Catholic.—LINGARD, History of England (London, 1849); RULE, Life of St. Anselm (2 vols., London, 1883); RAGET, the English Monks of the sixteenth century (2 vols., Paris, 1890); DELAC, St. Louis and the conquest of Angletare (Freiburg, 1887); RAGET, Edmer (Paris, 1902); MORRIS, Life of St. Edmund (London, 1903); KNOX, History of Thomas de Canterbury (Paris, 1891); THURSTON, Life of St. Hugh (London, 1898); BISHOP, Cathedral Canons in Dublin Review (London, 1891); CXXXI; WALLACE, Life of St. Edmund (London, 1879); CHETTY, St. Edmund Archbishop of Canterbury (London, 1903); DE PARAVICINI, Life of St. Edmund of Abingdon (London, 1879); R. KNSSELL, Der hl. Bischof Wilhelm von Gefangenschat (Freiburg, 1885); FELD, Robert Grosseteste (London, 1887); GASCUE, Henry III and the Church (London, 1805); L. B. Bonifacio Archivario di Canterbury (Turin, 1895); HILL, History of the Catholic Church in England (London, 1895); ID., The Old English Bible and other Essays (London, 1879); MOYES, How English Bishops rule (London, 1883); THE TRUTH about John Wyclif (London, 1885); STONE, Reformation (New York, 1884); RICHARD STUART STANFORD, Speech (London, 1895); GASCUE, The Eve of the Reformation (London, 1900); BISHOP, Life of Blessed John Fisher (London, 1885); IN, Life and Writings of Thomas Aquinas (London, 1886); GASCUE, The English Monasteries (London, 1888); RIVINGTON, Rome and England (London, 1897); BUDGE, Blunders and Forgeries of Mr. Gairdner (London, 1898); GASCUE, History of the English Church (London, 1895); ID. (ed.), CORDEO, Hist, of the Reformation, Stone, History of the Church in England (London, 1901); ZIMMERMANN, Cardinal Pole, London and seine friends (London, 1901); CHETTY, History of England (London, 1890). Upon the religious life of England generally, see: BUDGE, History of the Holy Eucharist in Great Britain (new ed., 1908); GASCUE, Parish Life in Medieval England (London, 1906); WATERTON, Portas Morastia Britania (London, 1876); BUDGE, Our Lady’s Dowry (London, 1873); GASCUE, English Monastic Life (London, 1901); TAUNTON, The English Black Monks of St. Benedict (2 vols., London, 1897); GAIRED, Bishop Morton and St. Albans in The Tablet, Oct. 17, 1898, and Jan. 1908; in id., GAIRED, History of the English Church (London, 1895); ID. (ed.), CORDEO, Hist. of the Reformation, Stone, History of the Church in England (London, 1901); ZIMMERMANN, Cardinal Pole, London and seine friends (London, 1901); WATTS, History of England (London, 1902); STONE, The Church in Eng, History, London, 1907). Nons-Catholic Works.—Of general histories, three different semi-biographical works of the last few years may be mentioned as representatives of the modern scholarship and of a conscientiously at impartiality in the treatment of religious questions: The Political History of England, of which the five volumes reaching from 54 b. c. 1717 were written by T. HUDSON, G. B. ADAMS, T. F. TOUT, C. OMAN, H. A. SCOTT, and J. W. F. NUTT, the last volume in particular is excellent.—A History of England in Legislations. The first four volumes, reaching from the beginning to the age of Elizabeth. Three volumes, written by C. H. DAVIS, OTIS EDWARDS, and A. D. INNES, (London, 1906). By far the best contribution in this series is that of Mr. Davis.—A History of the English Church. The first four volumes, written by William Meade, the last two by Elia, published separately. Stubbs’s views on the tenure of land during the thirteenth century are somewhat out of date, but the chief defect of his work from a Catholic point of view is his adherence to the fiction of a national English Church independent of Rome.—FREEMAN, History of the English Church in the Eleventh and William Rufus (2 vols.) show an immense command of detail, but are biased by the author’s rather eirenic views of British imperialism. Some of the works of Stubbs and Freeman will be found corrected in the works of Mary, W.
which are of primary importance in more than one field. His
*Romæs Canôn Law in the Church of England* (1898) is of the very
highest interest, as it states the position of the Church in regard to the
Holy See. His *History of English Law* (1895), *Domestacy Book and
deed* (1897), and various contributions to *Trall*, *Social England* (1901), are of great
influence from a legal and constitutional point of view. For the later
period ending in the reign of Henry VIII or Mary, the writings of
*The History of the Catholic Church* (1899), edited under the title of
*The Reign of Henry VIII to the Death of Wolsey* (2 vols., 1881), and of Dr. J. Gairdner
are of primary importance. There are many works which are
incomplete, such as Salter and others have shown; Round, *Feudal
England* (London, 1895); Nowage, *England under
Angevin* (London, 1897); and *John Lackland* (London, 1902); STEVENSON, *Robert Grosseteste* (London, 1899);
BLE and TREVOR, *Calendars of Entries in Papal Records*
Relating to Great Britain and Ireland (8 vols. already published);
JENSEN, *Der engliche Priesterpineun* (Heidelberg, 1893)
CROUCH, *Historical Lectures* (London, 1902); DR. *Historical
Lectures* (London, 1903)—both these able works are much baced
by the writer's Anglican standpoint; JESSOP, *The Coming of
the Fire* (London, 1899); BURKE, *Preface to the Monumenta
Francisca* in R.S., and to the works of GIBBON and
MAKOWER, *Constitutional History of the Church of England*
(London, 1891); HARRIS, *Elections of English Bishops under
Henry VIII* (4 vols., 1882-96); WOHRN, *John Wyche* (London, 1902);
DR. GASSET and the Old English Bible in the Church Quarterly
Review, 1899; *History of the English People* (Paris, 1898, 3 vols.);
Dixon, *History of the Church of England from 1789 to 1881*
(London, 1879); BURKE, *Dean of Echternach
Henry VIII* (Paderborn, 1902)—a cat. work. Of the
Divorce the best account is by GAIRDNER, *New Light on the
Divorce of Henry VIII* (London, 1871); and TYLER, *England
under Edward VI and Mary* (2 vols., London, 1839); LEACH,
*English Schools at the Time of the Reformation* (London, 1879); FOUCHER,
*The Reigns of Edward VI and Edward VII in English Historical
Review, July, 1895.

For social and economic condition of England, see
1893); CUNNINGHAM, *The Growth of Eng. Industry and Commerce*
Agriculture* (2 vols., London, 1870); Low, *Merchants
and Work and Wages* (2 vols., 1894); RASHDALL, *Universi-
turies of the M.A.* (3 vols., Oxford, 1895); CHAMBERS, *The Medic-

HERBERT THURSTON.

**ENGLAND SINCE THE REFORMATION.**—The Protestant
Reformation is the great dividing line in the his-
tory of England, as of Europe generally. This
momentous Revolution, the outcome of many causes,
assembled examples in diverse countries. Anglican
Reformation did not spring from any relig-
ous motive. Lord Macaulay is well warranted in
saying in his essay on Hallam's "Constitutional
History", that "of those who had any important share
in bringing it about, Ridley was, perhaps, the only
person who did not consider it a mere political job", and
that "Ridley did not play a very prominent part"
shall now proceed, first, to trace the his-
tory of the so-called Reformation in England,
and then to indicate some of its results.

It was not until the twenty-sixth year of the reign
of Henry the Eighth—the year 1535—that the Eng-
lish Schism was consummated. The instrument
by which that consummation was effected was the "Act
concerning the Real Presence" to the Supreme
Head of the Church of England, and to the same extent,
reform and redress all errors, heresies and abuses
in the same". This statute severed England from the
unity of Christendom and transferred the jurisdiction
of the supreme pontiff to "the Imperial Crown" of
that realm. That is the peculiar peculiarity of the Anglican
Reformation—the bold usurpation of all papal au-
thority, through the so-called "elusivitas", the
universal power of Government in Christ's Church, the power to rule, to distribute,
suspend or restore jurisdiction, and the power to
define Verities of the Faith and to interpret Holy
Scripture has descended on the shoulders of the Kings
and Queens of England. The actual bond of the Church
of England, her characteristic as a religious commu-
nion, that which makes her a whole, is the right of the
civil power to be the supreme judge of her doctrine." (Allin, "See of S. Peter", 3rd ed., p. 54.) The Act
of Supremacy was the outcome of a struggle between
Henry VIII and the pope, extending over six years.
Assuredly no such measure was originally contem-
plated by the king, who, in the early part of his reign,
manifested approval of the Catholic Church on which
THOMAS MORE thought exclusively (Roper's Life of
More, p. 66). The sole cause of his quarrel with the
See of Rome was supplied by the affair of the so-called
Divorce. On 22 April, 1509, he ascended the English
throne, being then eighteen years old; and on 3 June
following he was wedded, by dispensation of Pope
Julius, to the Spanish princess, Catherine, who had
already carried through her marriage with her elder
brother Arthur. That prince had died in 1502,
at the age of sixteen, five months after this marriage,
which was held not to have been consummated; and
so Catherine, at her nuptials with Henry, was arrayed
not as a widow, but as a virgin, in a white robe,
with her hair falling over her shoulders. Henry
conducted her for six years, and had issue three sons,
who died at their birth or shortly afterwards, as
one daughter, Mary, who survived. At the end of
that time the king, never a model of conjugal fidelity,
conceived a personal repulsion for his wife, who was
six years older than himself, whose physical charac-
ters had faded, and whose health was impaired; he
also began to entertain scruples as to his union with her.
Whether, as an old Catholic tradition avers, these
scruples were suggested to him by Cardinal Wolsey,
whether his personal repulsion prepared the way for
them, or merely seconded them, is uncertain. But

certain it is that about this time, to use Shakespeare's
phrase, "the King's conscience crept too near another
lady", that lady being Anne Boleyn. Here again,
exact chronology is impossible. We know that in
1522 Cardinal Wolsey publicly declared that Henry,
were he to marry again, would marry with the ground on the "that
the King intended to prefer her to another". But there is
no evidence that Henry then desired her for himself.
However that may have been, several years elapsed
before his passion for her, whatever the date of its
origin, gathered that overwhelming force which led
him to resolve with fixed determination to put away
Catherine. The motives of Catherine, and the
price on which, warns experience, she insisted.
Henry's relations with her family had been
scandalous. There is evidence, strong if not abso-
lutely conclusive—it is summed up in the Intro-
duction to Lewis' translation of Sander's work, "De
Schismate Anglicano" (London, 1577)—that he had
had an intrigue with her mother, whence the report,
at one time widely credited, that she was his own
daughter. It is certain that her sister Mary had been
mistress, and had been very poorly provided for by
him when the liaison came to an end, a fact which
doubtless put Anne upon her guard. That the king
had contracted precisely the same affinity with her, by
reason of this intrigue, as that which he alleged to be
the cause of his conscientious scruples with regard to Cathe-
rine, is not the less probable on this ground.

The first formal step towards the putting away of
Catherine appears to have been taken in 1527, when
Henry caused himself to be cited before Cardinal
Wolsey and Archbishop Warham on the charge of living
incestuously with his brother's widow. The proceed-
ings were secret, and the Court held three sessions,
the judge adjuring the die for the purpose of consulting
the most learned bishops of the kingdom on the ques-
tion whether marriage with a deceased brother's wife
was lawful. The majority of the replies were in the
affirmative, with the proviso that a papal dispensation
had been obtained. Henry, thus baffled, then deter-
ned to proceed in common form of law, and Sir
Francis Geyner in his learned work, "Marriage and
Family Relations", has summed up the proceedings as
follows: "By a process well known to Ecclesiastical Law, the King wished to institute his suit in the Appeal Court for this purpose given original jurisdiction. With this object, instead of, as originally intended, suing in an English Consistory or Arches Court, from which appeal lay to Rome, then menaced or actually occupied by the armies of Charles V, a commission from Pope Clement, dated June 9, and confirmed by a potestas dated July 13, 1528, was obtained constituting the two cardinals a Legatine Papal Court of both original supreme and ultimate jurisdiction and to proceed judicially. The Court opened May 21, 1529; there followed citation, articles, process, and public hearing. On July 29, 1529, the cause was ripe for judgment. At that day Campeggio [Campeggio] adjourned till October, on the ground that the Roman Vacation, which he was bound to observe, had already begun. But in September the advocacy of the cause to Rome, and inhibition of the Legatine Court, given by Clement contrary to his written promise on the word of a Pope, had arrived in England, and the last of never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment, till at last, in November, 1532, he married Anne Boleyn, and in the following year, May, 1533, Cranmer, Archbishop of Canterbury, gave sentence of nullity. At Rome the cause dragged on, there is a gap in this epoch in the reports, and it is difficult to say if there was any argument either by the advocates of the 'orator' or 'oratrix', or by the defense,—till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage with Katherine valid, and ordered restitution of conjugal rights."

The Statute of 1535 (26 Hen. VIII, c. 1) above quoted—it is commonly called the Act of Supremacy—transferred the kingdom the authority over the Church in England hitherto exercised by the pope, may be regarded as Henry's answer to the papal sentence of 1534. But, as Professor Brewer remarks, "to this result the King was brought by slow and silent steps". The Act of Supremacy was in truth, simply, and the last of never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment, till at last, in November, 1532, he married Anne Boleyn, and in the following year, May, 1533, Cranmer, Archbishop of Canterbury, gave sentence of nullity. At Rome the cause dragged on, there is a gap in this epoch in the reports, and it is difficult to say if there was any argument either by the advocates of the 'orator' or 'oratrix', or by the defense,—till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage with Katherine valid, and ordered restitution of conjugal rights."

The Statute of 1535 (26 Hen. VIII, c. 1) above quoted—it is commonly called the Act of Supremacy—transferred the kingdom the authority over the Church in England hitherto exercised by the pope, may be regarded as Henry's answer to the papal sentence of 1534. But, as Professor Brewer remarks, "to this result the King was brought by slow and silent steps". The Act of Supremacy was in truth, simply, and the last of never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment, till at last, in November, 1532, he married Anne Boleyn, and in the following year, May, 1533, Cranmer, Archbishop of Canterbury, gave sentence of nullity. At Rome the cause dragged on, there is a gap in this epoch in the reports, and it is difficult to say if there was any argument either by the advocates of the 'orator' or 'oratrix', or by the defense,—till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage with Katherine valid, and ordered restitution of conjugal rights."

The Act of 26 Hen. VIII, c. 13, prohibited, under pecuniary penalties, the obtaining from the pope of any dispensation or license to the King's dominions. The 23 Hen. VIII, c. 9, forbade the citation of a person out of the diocese wherein he or she dwelt, except in certain specified cases. The 23 Hen. VIII, c. 20, which is entitled "Concerning the restraint of payment of annates to the See of Rome", was not only an attempt to intimidate, but also to bribe the pope. It forbade, under penalties, the payment of first-fruits or annates, or to give to the pope any sum for the bishop's consecration were in consequence denied, he might be consecrated without them, and authorized the king to disregard any consequent ecclesiastical censure of "our Holy Father the Pope" and to cause Divine service to be continued in spite of the same; and further empowered the King by letters patent to give or withhold his assent to the Act, or any of its clauses: to suspend and enforce it. The Act as in fact what Dr. Lingard has called it, "a political experiment to try the resolution of the Pontiff". The experiment failed, and in the next year the royal assent was given to the Act by letters patent. In this year also was passed the Statute, 21 Hen. VIII, c. 12, prohibiting appeals to Rome in testamentary, matrimonial, and certain other causes, and requiring the clergy to continue their ministries in spite of ecclesiastical censures from Rome. The next year witnessed the passing of the Act (25 Hen. VIII, c. 19) "for the submission of the clergy to the King's Majesty", which prohibited all appeals to Rome. The Act following this in the Statute Book abolished annates, forbade, under the penalties of preannate, the presentation of bishops and archbishops to "the Bishop of Rome, otherwise called the Pope", and the procuring from him of Bulls for their consecration, and established the method still existing in the Anglican Church (of which more will be said later on) of electing, confirming, and consecrating bishops. It was immediately followed by an Act forbidding, under the same penalties, the king's subjects to sue to the pope, or the Roman See, for any divorce, or the revocation of compendious, faculties, grants, rescripts, delegacies or other instruments or writings", to go abroad for any visitations, congregations, or assembly for religion, or to maintain, allow, admit, or obey any process from Rome. The net effect of these enactments was to take away from the pope the headship of the Church of England. That headship the Act of Supremacy conferred on the king.

This sudden falling away of a whole nation from Catholic unity, is an event so strange and so terrible as to require some further explanation than Macaulay's, who refers it to the "brutal passion" and "selfish policy" of Henry VIII. In fact the struggle between that monarch and the pope was the last phase of a conflict between the respective claims of the temporal and the spiritual power which had been waged, with longer or briefer truces, from the days of the Norman Conquest. The Second Henry was no less desirous than the Eighth to emancipate himself from the jurisdiction of the supreme pontiff, and the destruction and pillage of the shrine of St. Thomas à Becket was not merely a manifestation of uncontrollable fury and unscrupulous greed; it was a part of Henry VIII's struggle to gain an independence of nearly four hundred years' standing. The reason why Henry VIII succeeded where Henry II, a greater man, had failed must be sought in the political and religious conditions of the times. Von Ranke has pointed out that the state of the world in the sixteenth century was "directly hostile to the Papal domination ... The civil power would no longer acknowledge any higher authority." (Die römischen Päpste, I, 39.) In England the monarch was virtually a tyrant. The Wars of the Roses had destroyed the old nobility, formerly an effective check upon regal despotism. "The prerogative", Brewer wrote, "was absolute both in theory and practice. Government was identified with the will of the Sovereign; his word was law for the consent of the governed. In Henry VIII's time, this letter was not in strictest sense a document. He was the only representative of the nation. Parliament was little more than an institution for granting subsidies" (Letters and State Papers, II, Part I, p. cxviii, Intro). The lax lives led by too many of the clergy, the abuses of pluralities, the scandals of the Consistorial Courts, had tended to render the influence of the clergy and the religious clergy and the religious party of the time. The Act of Supremacy, which had been proposed to the House of Commons as an "act of the Crown", for the supremacy, an ecclesiastical headship as it separated Henry VIII from all his predecessors, and an unprecedented interval, so was it without precedent and at variance with all tradition" (Brewer, Letters and State Papers, I, c, Intro). Henry VIII made full proof of his ecclesiastical
ministry. In 1535 he appointed Thomas Cromwell his vicegerent, vicar-general, and principal official, with full power to exercise all and every that authority appertaining to himself as head of the Church. The vice-general's function was, however, confined to ecclesiastical discipline. The settlement of doctrine Henry took under his own care and, as is related in the preamble to the "Act abolishing diversity of opinions" (31 Hen. VIII, c. 14), "most graciously vouchsafed, in his own princely person, to descend and come into his High Court of Parliament" and there expounded his theological views, which were embodied in that Statute, commonly called "The Statute of the Six Articles". It was in 1539 that this Act was passed. It asserted Transubstantiation, the sufficiency of communion under one kind, the obligation of clerical celibacy, the validity "by the law of God" of vows of chastity, the excellence of private masses, the necessity of the sacrament of penance. The penalty for denial of the first article was the stake; of the rest imprisonment and forfeiture as of felony. But while thus upholding, after his own fashion, Catholic doctrine, Henry had possessed himself of a vast amount of ecclesiastical property by the suppression first of the smaller and then of the larger religious houses, thus laying the foundation of English pauperism.

After the death of Henry (1547) the direction of ecclesiastical affairs passed chiefly into the hands of Thomas Cranmer. Lord Macaulay has described him accurately as "a supple, timid, interested courtier, who rose into favour by serving Henry in the disgraceful affair of his first divorce", who was "equally false to political and religious obligations", and who stood, contrary to the Statute of the Six Articles, to a daughter of the Protestant divine Osterley, whom, according to a tradition preserved by Sander and Harpsfield (both first-rate authorities), he was in the habit of carrying about in a chest until, in the latter part of Henry VIII's reign, he judged it prudent to send her, for greater security, to Germany. Shortly after the death of the king, he reclaimed her, showing
of the Holy Ghost'. Notwithstanding this encomium, it was superseded, within four years, by a second Cranmerian Prayer Book, not similarly commended in the Act prescribing it, in which the slight outward similarity to the Mass, preserved in the Communion Service of the first Prayer Book, was obliterated. The Ordinal underwent similar treatment; the sacrificing priest, like the Sacrifice, was abolished. Another of Cranmer's exploits was the compilation of Forty-two Articles of Religion which, reduced to Thirty-nine and slightly recast, still form the Confession of Faith of the Anglican Communion. In 1556, under Mary, he met his death, and, in the last hour, wrote a touching and copious recantation. Sander avers that "he signed them seventeen times with his own hand"—to save his life. This severity, though doubtless impolitic, can hardly be deemed unjust if his career be carefully considered. But his work lived after him and formed the basis of the ecclesiastical legislation of Elizabeth, when Mary's brief reign came to an end, and with it the ineffectual endeavour to destroy the new religion by the fagot. Mary's fiery zeal for the Catholic Faith failed to undo the work of her two predecessors, and unquestionably did ill service to the Catholic cause. It would be foolish to blame her for not practising a toleration utterly alien from the temper of the times. But there can be no question that Green is well war- ranted in saying that her 'intolerable rigour and inclemence’ were a serious drawback in the growth of the new Church, which, however partial and unjust it must seem to an historic observer, still lies graven deep in the temper of the English people' (Short History, p. 390).

The first act of Elizabeth, when she found herself firmly seated on the throne, was to annul the religious restorations of her sister. "All Laws and Statutes made or enacted and declared by any authority, within the twentie year of King Henry VIIII" had been abolished by the 1 and 2 Philip and Mary, c. 8, which "enacted and declared the Pope's Holines and See Apostolic to be restored, and to have and enjoy such authority, pre-eminence and jurisdiction as His Holiness used and exercised, or might lawfully have used and exercised, by authority of the same before that date". Elizabeth, by the first Act of Parliament of her reign, repealed this Statute, and revived the last six of the seven Acts against the Roman pontiff passed between the 21st and 26th year of Henry VIIII of which we have given an account, and also certain other anti-papal Statutes passed subsequently to the enactment of Henry's Act of Supremacy. That Act was "ordained and enacted, that the body of the woman, shrank from assuming the title of Supreme Head of the Church bestowed by it on the sovereign. But, although she did not take to herself that title, she took all the authority implied therein, by this first Act of her reign. It vests the plentitude of ecclesiastical jurisdiction in the Crown and the Queen's Highness, who is described as 'the only Supreme Head of this Church, as well as all spiritual and ecclesiastical things or causes as temporal', and it prescribes an oath recognizing her to be so for all holding office in Church and State. The next Act on the Statute Book is the Act of Uniformity. It orders the use in the churches of the second Prayer Book of Edward VI, in the place of the Catholic rites, and provides penalties for non-compliance. It also enforced the attendance of the laity at the parish church on Sundays and holidays, for the new service. This was the definite establishment of the new religious enactment in England, the consummation of the revolution initiated by Henry VIII. The bishops, with the exception of Kitchen of Llandaff, refused to accept it, as did about half the clergy. The majorities in both Houses also acquiesced in it, just as they had acquiesced in the ecclesiastical changes of Henry, and Edward, and Mary. Its effect was, virtually, to reduce the Church of England to a department of the State. The Anglican bishops became, and are still, nominees of the Crown, election by the dean and chapter, where it exists—in some of the newer dioceses there are no chapters, and the bishops are appointed by Letters Patent—being a mere farceal form of which Emerson has given a pungent description: "The King sends the Dean and Canons a congé d'élire, or leave to elect, but also sends them the name of the person whom they are to elect. They go into the Cathedral, chant and pray; and after these invocations invariably find that the dictates of the Holy Ghost agree with the recommendation of the King." If they arrived at any other conclusion, they would be found in the charge of a præmunire. The Convocations of York and Canterbury are similarly fettered. They cannot proceed so much as to discuss any project of ecclesiastical legislation without "Letters of Business" from the Crown. The sovereign is the ultimate arbiter in causes, whether of faith or morals within the Anglican Church, and his decisions of them given by the voice of the Privy Council, are irremovable. But of course in these days the sovereign practically means the Legislature. "The National Church", Cardinal Newman writes in his "Anglican Difficulties", "is strictly part of the Nation, just as the Law or the Parliament is part of the Nation." "It is simply an organ or department of the State, all ecclesiastical acts really proceeding from it, and depending on it, are a part of the State itself is the sovereign Lord and Master of the Prayer Book, its composer and interpreter."

Queen Elizabeth's Acts of Supremacy and Uniformity form, in the words of Hallam, "the basis of that restrictive code of laws which pressed so heavily, for more than two centuries, upon the adherents of the Roman church". It is not necessary here to describe in detail the code that has been prepared to supply the rights of the兰甘巴之Catholics, as those rights will be found in the first chapter of "A Manual of the Law specially affecting Catholics", by W. S. Lilly and J. P. Wallis (London, 1893). But we may observe that the queen who originated it was animated by very different motives from those which influenced her father in his revolt against Rome. Sandier has correctly said, "she gave up the Catholic faith for a clearer reason in the world than that which came from his lust and wickedness"; and, indeed, while severing herself from Catholic unity, and pillaging the possessions of the Church, he was as far as possible from sympathizing with the doctrinal innovations of Protestantism and savagely repressed them. Elizabeth, by the very necessity of her position, was driven—we speak cruelly here—to deal with the Protestant cause, not doubted, as Lingard writes, "it is pretty evident that she had no settled notions of religion", and she freely exhibited her contempt for her clergy on many occasions—notably on her death-bed, when she drove away from her presence the Archbishop of Canterbury and certain other Protestant prelates of her own making, telling them "she knew full well that they were her priests, and took it for an indignity that they should speak to her" (Dodd, "Church History", III, 70). But, like Cranmer, if she had no religious convictions, she had the convictions of her interests. Her lot was plainly cast in with the Protestant party. "Rome had declared her mother's marriage null, and her own birth illegitimate; Catholicity was thus made the single issue in the career of Scots, the rightful claimant to the throne which she occupied. Throughout her reign the Church policy and State policy are conjoint: But Janus-faces, looking different ways. The Anglican Church, as established by her, was a mere instrument for political ends; in her own phrase, she tuned her pulpit. The maxim, Cujus regio ejus religio, was carried out almost literally, and according to the natural order of things that the people should profess the creed of the prince. Elizabeth is not open to the charges made against her sister of religious fanaticism. But she was given up to that
"self will and self worship" which Bishop Stubbs justly attributes to her father. And in the well-weighed words of Hallam, "she was too deeply imbued with arbitrary principles to endure any deviation from the mode of worship she should prescribe." It was on the feast of St. John Baptist, 1559, that the statute took effect which abolished throughout England the old worship, and set up the new. Thenceforth Catholic rites could be performed only by stealth, and at the risk of severe punishment. But during the first decade of the queen's reign Catholics were treated with comparative lenity; occasional fines, confiscations, and imprisonments of the severest kind were employed against them. Camden and others assert that they enjoyed a "prettly free use of their religion." But this is too strongly put.

The truth is that a vast number who were Catholics at heart temporized, resorting to the new worship more or less regularly, and attending secretly, when opportunity offered, Catholic rites celebrated by the Marian clergy commonly called "the old priests." Of these a considerable number remained scattered up and down the country, being generally found as chaplains in private families. These occasional conformists were supported by the vague hope of political change which might give relief to their consciences. Elizabeth and her counsellors calculated that when the old priests dropped off, through death and other causes, persons generally loyal to the new régime would take their places. But it fell out otherwise. As the old priests disappeared, the question of a supply of Catholic clergy began to engage the minds of those to whom they had ministered. Moreover, stricter conceptions of their duty in respect of heretical worship were gaining ground among English Catholics, partly on account of the developments of ecclesiastical life of the new régime. The attendance at it was " grievously sinful," inasmuch as it was "the offspring of schism, the badge of hatred of the Church." Then a man appeared whom Father Bridgett rightly describes as "the father, under God, of the Catholic Church in England after the destruction of the ancient hierarchy," to whom "principally, we owe the continuation of the praetorium of the Church and the Roman care over her charitable works." That man was William Allen, afterwards cardinal. He conceived the idea of an apostolate having for its object the perpetuation of the Faith in England, and in 1565 he founded the seminary at Douai, then belonging to Spanish Flanders, which was for so many generations to minister to the wants of English Catholics. It is notable as the first college organized according to the rules to have been put at the death of the queen.

The missionaries, full of zeal, and not counting their lives dear, who were sent over from this institution, revived the drooping spirits of the faithful in England and maintained the standard of orthodoxy. Elizabeth viewed with much displeasure this frustration of her hopes, nor was the Bull "Regnans in excelsis" of St. Pius V, which was a virtual condemnation of her and her Catholic subjects released from their allegiance, calculated to mollify her. Increased severity of the penal laws marks the rest of Elizabeth's reign. By the Act of Supremacy Catholics offending against that statute had been made liable to capital punishment as traitors, the queen hoping thereby to escape the odium attaching to the infliction of death for the violation of religious beliefs. In 1570, however, Green in his "Short History": "There is something even more revolting than open persecution in the policy which brands every Catholic priest as a traitor, and all Catholic worship as disloyalty." But, for a time, the policy succeeded, and the martyrs who suffered for no other cause than their Catholic faith were commonly referred to as victims of "a law which, in the eyes of the law, never existed." In 1581 this offence of spiritual treason was the subject of a far more comprehensive enactment (23 Eliz., c. 1). It qualified as traitors all who should absolve or reconcile others to the See of Rome, or willingly be so absolved or reconciled. Many English historians (Hume is the most considerable of them) have affirmed that "sedition, revolt, even assassination were the means by which seminary priests sought to compass their ends against Elizabeth." But this sweeping accusation is not true. No doubt Cardinal Allen, the Jesuit Persons [see Persons (Parsons), Roberts], and other Catholic exiles were cognizant of, and involved in, plots which had for their end the queen's overthrow, nor would some of the conspirators have shrunk from taking her life any more than she showed the life of her Protestant Queen of Scots. But, in spite of all their sufferings, the great body of English Catholics maintained their loyalty. From the political intrigues in which the exiles were so deeply involved they held aloof, many, of them viewed with suspicion not only the exiles, but the whole Society of which Persons was a foremost representative, and desired the exclusion of Jesuits from English Colleges and from the English mission. When the Armada was expected they repaired in every county to the standard of the Lord Lieutenant, imploring that they might not be suspected of bartering the national independence for their religious belief. They received from Elizabeth a characteristic reward. The Queen," writes Lingard, "whether she believed to satisfy the unexpected events, or to humble the exiles, or to display her gratitude to the Almighty by punishing the supposed enemies of His worship, celebrated her triumph with the immolation of human victims" (History of England, VI, 255). In the four months between 22 July and 27 November, of 1588, twenty-one seminary priests, eleven laymen, and one woman were put to death for their Catholic faith. But, notwithstanding this growth of the number of victims groaned under incessant persecution, of which one special note was the systematic use of torture. "The rack seldom stood idle in the Tower during the latter part of her reign," Hallam remarks. The total number of Catholics who suffered under her was one hundred and eighty-nine, one hundred and twenty-eight of them being priests, fifty-eight laymen, and one woman. The register of deaths is noted by Hume in his "Calendar of English Martyrs" (London, 1870), thirty-two Francisians who were starved to death.

Notwithstanding the severities of Elizabeth, the number of Catholic clergy on the English missions in her time was considerable. It has been estimated that at the end of the sixteenth century there were only a hundred and sixty-eight priests of the old Marian, three hundred priests from Douai and the other foreign seminaries, and sixteen priests of the Society of Jesus. On the queen's death the eyes of the persecuted remnant of the old faith turned hopefully towards James. Their hopes were doomed to disappointment. That prince was the intellectual offspring of the Stuart family, but nothing showed the same lack of understanding of his countrymen's case as his attitude towards the Catholics. He chose rather to be the successor of Elizabeth than the avenger of Mary Stuart, and continued the savage policy of the late queen. The year after his accession an Act was passed "for the due execution of the Statutes against Jesuits, Seminary priests and other priests," which took away from Catholics the power of sending their children to be educated abroad, and of sending seminaries for them at home. In the course of the same year a proclamation was issued banishing all missionary priests out of the kingdom. The next year is marked by the Gunpowder Plot, "the contrivance" as Tierney well observes, "of half a dozen persons of desperate fortunes, who, by that means, brought an odium upon the body of Catholics, who have ever since laboured under the weight of the calumn, though no way concerned." Soon afterwards a new oath of allegiance was devised, rather for the purpose of dividing than of relieving Catholics. It
was incorporated in "An Act for the better discovery and repression of Popish recusants" (a recusant Catholic was simply one who refused to be present at the new service of the Protestant religion in the parish church), and was directed against the deposing power. The Holy See disallowed it, but some Catholics took it, among them being Blackwell the Archpriest. Twenty-eight Catholics, of whom eight were laymen, suffered under James I, but that prince was more concerned to extract money from his Catholic subjects than to slay them. According to his own account he received a net income of £36,000 a year from the fines of Popish recusants (Hardwick Papers, I, 446).

Hatred between the Church and the State, the latter of which was an established church, went on. In 1625 a somewhat brighter time began for English Catholics. He was unwilling to shed their innocent blood—indeed only two underwent capital punishment while he bore rule—and this reluctance was one of the causes of rupture between him and the Parliament. His policy, Hallam writes, “with some fluctuations, was to wink at the domestic exercise of the Catholic religion, and to admit be reverent to it so long as they refrained from influence in policy, which were not regularly enforced”. The number of Catholic clergy in England received a considerable augmentation in his reign. Panzani reported to the Holy See that in 1634 there were on the English mission five hundred secular priests, some hundred and sixty Jesuits, a hundred Benedictines, twenty Franciscans, and a dozen Carmelites, and one Carthusian lay brother, besides the clergy, nine in number, who served the queen’s chapel. This large increase in the number of Jesuits was not regarded by all as an unmixed gain, unquestionable as was their zeal and devotion. It was considered by some as the cause of rivalries and dissensions, unpleasant to read of, among the small remnant who knew the Church in her true antiquity, and times opened to the charge of aggressiveness, and certainly they did not succeed in dissipating the prejudice so universal against them. One of the burning questions among English Catholics was concerning the episcopal succession. The secular clergy desired a bishop, and Allen had proposed to Gregory XIII that one should be consecrated by the Pope to the see of London, which was very great, instead of a bishop an archpriest was appointed (1598) in the person of George Blackwell, who has been already mentioned, a friend of his own, who was deprived by the Holy See ten years later for taking the oath of allegiance under James I. Birkhead succeeded him, and Harrison succeeded Birkhead, until, in 1622, Dr. William Bishop was appointed Bishop of London, and was succeeded by Dr. Richard Smith. Shortly afterwards there was an outbreak of persecution occasioned by the Puritan party in the House of Commons led by Sir John Eliot, and Bishop Smith withdrew to France at the end of 1622, never to return to England, which remained without a bishop till 1667.

This was an attempt to place, so far as the Parliament, English Catholics, to a man, espoused the cause of the king. They could not do otherwise. Hatred of Catholicism was a dominant note of the Parliamentary party, who bitterly resented the quasi-toleration which the Catholics had for some years enjoyed; and between the meeting of the Long Parliament and the death of Cromwell twenty-four adherents of the Catholic religion suffered murder. Catholics, as Hallam points out, were “the most strenuous of the King’s adherents”; they were also the greatest sufferers for their loyalty. One hundred and seventy Catholic gentlemen lost their lives in the royal cause; and Catholics were especially oppressed under the Commonwealth.

The abjuration of Charles II, in 1660, English Catholics expected, not unnaturally, to receive some recompense for their unwavering devotion to the royal cause and this more especially as the new king’s personal obligations to them were very great. After his total overthrow at the battle of Worcester, he owed his life to the Catholics of Staffordshire, the Huddlestons, the Giffards, the Whitegreaves, the Penderells. But “Let not virtue seek remuneration for the thing it was” is a lesson written on every page of the history of the Stuart Catholics. Charles, asked, in a petition presented to the House of Lords by Lord Arundell of Wardour, that they might receive the benefit of the Declaration of Breda. Charles was inclined to give them “liberty of conscience”, but Lord Chancellor Hyde, afterwards Earl of Clarendon, we read in Kenneth’s ‘Register and Chronicle’, “was so hot upon it that he was obliged to yield rather to his importunities than his reasons”. The king, who, as he himself expressed it, was not minded to set out again on his travels, recognized that there was in the nation a strong anti-Catholic feeling, and bowed to it, though himself intellectually convinced of the truth of the Catholic religion. The laws against Papists remained on the statute book, and, from time to time they were applied. It bore on Catholics, especially, that part bratum fulmen—were issued requiring Jesuits and other priests to quit the kingdom under the statutory penalties. A singular instance of overmastering anti-Catholic prejudice prevailing in the nation is supplied by the monument erected by the Corporation of London to commemorate the Great Fire of the City. It bore on it these lines:

"Let us not forget/That brave, valiant, and most zealous priest/Who, against the odds of that lamentable day/Diadministered with his own hand and heart/That which his faith required/And thereby preserved the Church's good name/And, for his trouble, to our joy/Is now a monument in this place/Where he deserved to lie/With other good men of the faith who perished."-

Where London’s column pointing to the skies,

Like a tall bully lifts its head and lies,

Pope had the courage to write. But not until the nineteenth century was well advanced was the calamity erased.

It is not possible here to follow, even in briefest outline, the course of Charles II’s reign. We may, however, point out that two things are necessary to a right view of it: to understand the character and aims of Charles II, and to realize the dominant temper of the English nation. Idle, voluptuous, and good-humoured, clerical Charles certainly was; but he possessed the deep knowledge of human nature, great political tact, and remarkable tenacity of purpose. That he preferred the Catholic religion to any other, is certain; and he was glad to embrace it on his death-bed. But he recognized the strong Protestant feeling of the people over whom he ruled, and was not prepared to imperil his crown by defying it. He was, however, weakly disposed to do that which the interests of himself, for the relief of Catholics; and this was the motive of his Declaration of Indulgence in 1672, by which he ordered “that all manner of penal laws on matters ecclesiastical against whatever sort of Nonconformist or recusants” should be suspended, and gave liberty of public worship to all dissentents, except Catholics, who were to be compelled to worship of religion in private houses only. This declaration was sovereignly displeasing to all parties in the House of Commons, who answered it by a resolution “that penal statutes in matters ecclesiastical cannot be suspended except by consent of Parliament”, and refused supplies until the declaration was recalled. That was a convincing argument to Charles. He yielded, and Parliament then proceeded to pass a bill—it went through both Houses without opposition, and Charles dared not refuse his royal assent to it—which required every one in the civil and military employment of the Crown to take the oaths of allegiance and supremacy, to subscribe a declaration against Transubstantiation, and to receive the Eucharist according to the rites of the Church of England. One effect of this Act (25 Car. II, c. 2) was to deprive James, Duke of York, who had become a Catholic, of his office of Lord High Admiral.
ST. ALBANS ABBEY

BEVERLEY MINSTER, YORKSHIRE
HOUSES OF PARLIAMENT, WESTMINSTER
During the next nine years the struggle between the king and the Parliament continued. The popular leader was Ashley, Earl of Shaftesbury—for some time Chancellor—whose character has been delineated by Dryden with merciless severity, but with substantial accuracy, in "Absalom and Achitophel". This statesman's own Protestantism was of the harshest kind, but he was zealous, from political motives, for the interests of the Church of England, and was in February 1664, upon excluding the Duke of York from the succession to the throne. To accomplish this end, he fought strenuously, unremittingly, nor was any weapon too vile for his use. The Second Test Act, passed through his exertions in 1678, rendered Catholics incapable of sitting in Parliament, and thus deprived twenty-one of them of their seats in London, thus checking the influence of the English Franciscans, but the king contrived to procure the insertion of a clause exempting the Duke of York from the operation of the Statute. It was in this same year that Titus Oates appeared on the scene with his pretended Popish Plot. There is no evidence that Ashley was the instigator of the colossal vilanye, but he did not scruple to employ it for his own purposes. "The origin of the Plot", says a recent well-informed writer in "Blackwood's Magazine" (May, 1905), "is a mystery. We know no more than that the English people, being mad, interrupted the course of justice, insisted that the judges should condemn every man brought before them, suspected of papistry, and easily believed the crazy stories of hired perjurers. It is most probable that the real instigators of the delusion were Admiral Godfrey. However that may have been, certain it is that the calumnies of Oates and his confederates and imitators awakened the Elizabethan Statutes into fresh activity. The king was far too averse to give credence to what Macaulay has well called "a hideous romance resembling rather the dream of a sick man than any transaction which ever took place in this world". To placate the popular fanaticism; "I cannot pardon them", he said, "for I dare not." And so, in 1679, the horrors of 1588 were repeated, eight priests of the Society of Jesus, two Franciscans, five secular priests, and seven laymen being put to death, while many more died in their foul prisons. The next year witnessed the judicial murder of Lord Stafford, his peers being unable to waste him in the House of Lords, and Plunket, the Archbishop of Armagh, was executed at Tyburn, after a mock trial. His was the last blood shed for the Catholic religion in England. The persecution, which had begun with the execution of the three saintly Carthusian friars in the twenty-sixth year of Henry VIII, had lasted, with little intermission, for a century and a half. Three hundred and forty-two martyrs had sealed their faith with their blood, while some fifty confessors, in the reign of Elizabeth and her successors, ended their lives in prison. The king's long struggle with the popular party ended in his complete victory. No more consummate master of political strategy ever perhaps existed; and the violence of the party led by Shaftes-bury and his followers was excessive, so that the king was arrested on a charge of suborning false witnesses to the Plot; although the Grand Jury of Middlesex ignored the bill of his indictment, he saw that the tide of popular feeling, which had begun to ebb with the execution of Lord Stafford, was now turned completely against him, and at the end of 1682 he fled to Holland, where, two months afterwards, he died.

Charles II was the most popular of kings during the last two years of his reign, and he was careful not to mar his popularity by illegal acts or by measures opposed to the feeling of the nation. The statute for the regulation of printing, passed immediately after the Restoration, had expired in 1679; Charles made no attempt for its renewal. In the same year the Habeas Corpus Act—that great charter of the liberty of the subject—was passed; Charles acquiesced in it. He did indeed infringe the Test Act by the Duke of York's readmission to the Council and restoration to the office of lord high admiral. But, in the recrudescence of loyalty, this tribute to fraternal affection passed unblamed. In his last illness the churches were thronged with crowds praying that God would raise him up again to be a father to his people; and on his deathbed, in February 1685, all sorts and conditions of his subjects made great lamentation over him.

In the first year of the reign of James II Dr. Leyburn was appointed by the Holy See as vicar Apostolic. In the next year Dr. Giffard received a like appointment, as did Dr. Ellis and Dr. Smith the year after that, England being divided into four districts: London, the Southern, the Northern, and the Western, in each of which the papal vicar exercised all the authority possessed by an ordinary. The new king came to the throne with advantages which he could hardly have hoped for. He inherited, in some sort, the popularity of his brother, and his religion was forgotten in his blood. He began his reign by a solemn pledge to keep the laws inviolate and to protect the Church of England, and the nation believed him. "We have the word of a king", it was said, "and of a king who was never worse than his word." The saying, whoever was its author, went abroad. It expressed the general conviction, and his first Parliament made proof of exuberant loyalty, granting to the monarch, without demur, a revenue of nearly two millions for life. After the rebellion of Monmouth and Monmouth's execution, the king was able to bring out the devotion of the nation at large to the sovereign. But the cruelties of Kirke and the savageries of Jeffreys in the "Bloody Circuit" caused a change in the general feeling. The king's popularity began to wane, and the measures to which he now resorted soon put an end to it. Monmouth's revolt was made the pretext for resuming the厉害 of 1672. In the next year appeared that James supposed himself able, with this force at his command, to place himself above the law. He attempted to nullify the provisions of statutes by the exercise of his dispensing power. Judges who refused to fall in with his plans were dismissed; and it was held by a bench packed with his creatures that his dispensation could be pleaded in bar of an appeal. James now betting that his authority was absolute, the king proceeded set aside the disabilities of Catholics and the restraints upon the exercise of their religion. They were admitted to civil and military offices closed to them by the law; members of religious orders appeared in the streets of London in their habits; the Jesuits opened a school which was soon crowded. Further, the king found himself ex officio supreme head of the Anglican Communion, and he resolved to use his supremacy as a weapon for its overthrow. Following the precedent of Elizabeth, he appointed an Ecclesiastical Commission, in defiance of an Act of Charles I which declared that court illegal; and he placed Jeffreys at the head of it. He forbade the clergy to preach against popery, and suspended the Bishop of London when he was against the king's will. At Oxford he presented a Catholic to the deanery of Christ Church and converted Magdalen College into a Catholic society. Among English Catholics most men of reputation stood aghast at this reckless violence. Few approved it but converts of broken fortune and tarnished reputation. Rome gave no countenance to it. Macaulay is absolutely warranted in writing: "Every letter which went from the Vatican to Whitehall recommended patience, moderation and respect for the prejudices of the English people". "The Pope", he observes in another page, with equal justice, "was too wise a man to believe that a nation so bold and stubborn could be brought back to the Church of Rome by the violent and unconstitutional exercise of royal authority. It was not difficult to
see that if James attempted to promote the interests of his religion by illegal and unpopular measures, his attempt would fail: the hatred with which the heretical islanders regarded the true faith would become fiercer and stronger than ever: and an insidious association would be created in men's minds between Protestantism and civil freedom, between Popery and arbitrary power. This is precisely what happened. And indeed it is not too much to say that British Catholics have, in great measure, to thank the two last Catholic sovereigns for the strong feeling which so long existed against them throughout the nation, and which, even now, has not wholly disappeared. The severities of Mary appeared to give countenance to the popular Protestant opinion that Catholics rely chiefly on the argument from fire and are always ready, if their.cts be strong enough, to resort to it. The conduct of James II seemed an object lesson confirmatory of the vulgar conviction that Catholics are not bound to keep faith with heretics, and that any violation of law, any "crooked and indirect bye-ways" are justifiable means to the end of advancing the Catholic religion.

The reign of James II lasted only three years. It is not too much to say that before two of them were out he had succeeded in alienating the devotion of the entire nation. The famous Declaration of Indulgence supplied the supreme proof of his folly and was the immediate occasion of his downfall. The gist of it was that by the royal authority all laws against all classes of Nonconformists were suspended, that all religious tests imposed for all public and naval appointments and qualification for office were abrogated. Only an absolute monarch could claim to exercise such a prerogative. It is true that the Declaration was full of professions of love of liberty of conscience—professions which came oddly from a monarch with James's record.

Moreover, as we now know, upon the very eve of publishing it he resolved to have his revocation of the Edict of Nantes, an example which Barillon, a very competent judge, thought he would have only too gladly followed if he had been able. Those hollow and palpably false professions deceived no one, and the failure of the Declaration to conciliate the support of those who would have chiefly benefited by it, might have suggested caution to a wiser king. But a Declaration is an instrument to be compromised, and on 27 April, 1688, he ordered the Anglican clergy to read his Declaration of Indulgence during divine service on two successive Sundays. Nearly all the clergy refused to obey, and Saneroft, the Archbishop of Canterbury, with six of his suffragans, addressed to the king a respectful and temperate protest. The document was treated as a libel, and the famous trial of the seven bishops was the result. The acquittal of the prelates was greeted throughout the country with a tumult of acclaim, which was the signal for the Revolution, whereby the ancient liberties of England were vindicated, and a Parliamentary title to the crown was substituted for an hereditary one.

The disfavour with which Catholics were viewed was never more at its height than on the throne vacated by James II, was natural enough. They shared in the hatred inspired by the perfidy, cruelty, and tyranny of the abscended sovereign. William, indeed, would have gladly extended to them the same measure of toleration which, in spite of Tory opposition, he was able to secure for Protestant Nonconformists. He was unperturbed not only to the emperor, but also to the pope, whose sympathy and diplomatic support had been of much help to him in his perilous enterprise. He was, by temperament and by conviction, averse from religious persecution. Moreover, as Halkett justly observes, "no measure would have been more politic, for it would have dealt to the Jacobite cause a more deadly wound than any which double taxation or penal laws were able to effect."

And this, no doubt, was one of the reasons why the High Tories persistently opposed it. But the Legislature did not content itself with leaving on the statute book the former statutes against Catholics; it enacted new disqualifications and penalties. The Bill of Rights provides that no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, and that the sovereign, on being crowned, either a Catholic, or marrying a Catholic, thereby forfeits the crown. The articles of the constitutional writ was confirmed by the Act of Settlement (12 & 13 Will. III, c. 2), which conferred the succession on the descendants of the Electress Sophia (a daughter of James I), being Protestants. Another statute, of the first year of William and Mary, prohibited Catholics from residing within ten miles of London and encouraged the removal of Catholics from England, if they were non-conformers appointed by law", providing that any who refused it, and yet remained within ten miles of London, was to forfeit and suffer as a Papist recusant convict. A third Act of the same year (1 W. & M., c. 15) provides that no suspected Papist who shall neglect to take the oath appointed by law, when tendered to him by two justices of the peace, and who shall not appear before them upon notice from one authorized under their hands and seals, shall keep any arms, ammunition, or horse above the value of five pounds in his possession, and in that of any other person to his use (other than such as shall be allowed him by the sessions for defence of his house and person); that any two justices may authorize by warrant any person to examine him to what extent he deals in arms, ammunition, horses, or any other person to be suspected of treasonable practices. The charge against William was that he "kept a loader of Papists" and that he "had been in the daytime, with the assistance of the constable or his deputy or tithing-man, and to seize them for the king's use; and that if any person shall conceal such arms, ammunition, or horses, he shall be imprisoned for three months and shall forfeit to the king the value of such arms, ammunition, or horse. The subject of the Act was limited to the case of William, but Erskine May observes, "cannot be read without astonishment". It incapacitated every Roman Catholic from inheriting or purchasing land, unless he abjured his religion upon oath; and on his refusal it vested his property, during his life, in his next of kin who was a Protestant. He was even prohibited from sending his children abroad, to be educated in his own faith. And while his religion was thus proscribed, his civil rights were further restrained by the oath of abjuration. It prescribed imprisonment for life for all Catholic priests, and enacted that an informer, in the event of their being convicted of saying Mass, was to receive a reward of one hundred pounds.

Concerning this Act of William III Hallam remarks, "It is unparalleled in any nation is the disgrace of the Parliament that passed it." But he goes on to add, "The spirit of Liberty and tolerance was too strong for the tyranny of the law and this statute was not executed according to its purpose. The Catholic landholders neither renounced their religion nor abandoned their inheritance. The judges put such constructions upon the clause of forfeiture as excluded its efficiency." No doubt this is generally true. But, as Charles Butler tells us in his "Historical Memoirs" (London, 1819-21), "in many instances the laws which deprived Catholics of their landed property were enforced." He adds that "in other respects they were subject to great vexation and contumely." They were a very small and very unpopular minority in an age when a common creed was regarded, in every
European country, as the chief bond of civil polity and dissidents from it were more or less rigorously repressed. As a matter of fact, it is to a great English magistrate that we owe the statement that the papacy is an almost insuperable difficulty in the way of the tribe of informers. At the trial of the Rev. James Webb on the 25th of June, 1768, at Westminster, at the suit of a notorious common informer named Payne, Lord Mansfield told the jury that the defendant could not be condemned "unless there were sufficient proof of his ordination". Such proofs, of course, were not forthcoming. It was said, as Charlie which relates an above-mentioned "Historical Memoirs", discredited the prosecution of Catholic priests and took care that the accused should have every advantage that the form of proceedings, or the letter or spirit of the law, could allow. And at that period the same temper animated English judges generally.

As the second half of the eighteenth century wore on, English Catholics ceased to be regarded by the Government as politically dangerous. A certain number of them had taken part in the rising of 1715, and in the far more serious rising of 1745, and had in some instances been executed for their pains. But in 1766 the Old Pretender died, and the Young Pretender, upon whom his claim devolved, had ceased to excite either dread or hope. He had fused the clergy and English Catholics in time—it was no very long time—acquiesced in the Revolution of 1688. Nay, they did something more than acquiesce. In 1778 an address was presented to George III, bearing the signatures of the Duke of Norfolk and nine other peers, and of one hundred and sixty-three commoners, on behalf of the Catholic body. It represents to the sovereign their "true attachment to the civil constitution of the country, which having been perpetuated through all changes of religious opinions and establishments, has been at length perfected by that Revolution which has placed your Majesty's illustrious house on the throne of these Kingdoms, and inseparably united your title to the crown with the law and liberties of your people". In this year, 1778, the first Catholic Relief Act was passed. It repealed the worst portions of the Statute of 1699 above mentioned, and set forth a new oath of allegiance which a Catholic could take without denying his religion. Though a very modest measure of relief, it was extremely distasteful to some bigoted Protestants, among whom it is distressing to find the name of John Wesley. But in truth Wesley—it is not a rare case—was the most accidental, the most disastrous and devout, as is sufficiently evident from his "Letter concerning the Principles of Roman Catholics". In this document, besides other equally foolish assertions, he alleges that they hold an oath not binding if administered by heretics, and that they believe in the remission of future sins through the Sacrament of Penance. The conclusion he draws is that no government can enforce the most Catholic persuasion. There can be no doubt that the distastefulness of Wesley and his followers largely swelled the agitation for the repeal of the Act of 1778, which was conducted by the Protestant Association, and which issued in the Lord George Gordon riots.

It would be an error to impute the prevalence of a milder spirit towards Catholics at this period to sympathy with their religion. It arose rather from the relaxation of dogmatic belief, the latitudinarianism, the indifference which is a notable sign of those times, and which infected Catholics as well as Protestants throughout Europe. In England it was manifested, among other ways, in the apostasy of nine Catholic peers, while many other Catholic laymen, of position and influence, assumed a quite un-Catholic attitude towards the episcopate and towards the Government. They desired, legitimately enough, further deliverance from the penal laws; and to compass this end they had recourse to means not at all legitimate. In May, 1783, five of these constituted themselves "a Committee appointed to manage the further affairs of Catholics in this kingdom and to call the attention of the public to the public grievances in some respects", writes Canon Flanagan (History of the Church in England, II, 393), "a useful institution, working zealously for the supposed interests of the Catholic body. Its zeal, unfortunately, was not according to knowledge. It sought to win emancipation by making to Protestants every concession that it believed it could in effect obtain; and this minute theological knowledge would be necessary for so delicate a task; or rather it forgot that it was unintentionally perhaps, but not the less certainly, usurping the place of the bishops and of the Holy See. It was now in treaty with the government for fresh measures of relief. It complained that the Catholics were not allowed their own 'mode of worship'; were punished severely for educating their children 'in their own religious principles', whether at home or abroad; could not practise any of the professions of the law, or serve in the Army or Navy, or vote in the elections, or hold a seat in either House; and it prayed William Pitt, who was now prime minister, to aid them in their intended application for redress'. Pitt was favourably inclined towards the committee, which presented no doubt the best-marked mark of great unwise. Protestant Nonconformists were at that time striving to obtain a complete toleration, and held out the right hand of fellowship to Catholics. The Catholic committees were well pleased by the proposed alliance, and in a bill which they drafted for the House of Commons, they inserted a clause providing that the relief to be given by it was to be available to those only who subscribed their names, in a Court of Justice, in the following form: "I, A.B., do hereby declare myself to be a Protesting Catholic Dissenter." The four vicars Apostolic, in an encyclical letter, condemned this and other vagaries of the Catholic Committee, and declared that none of the faithful clergy or laity under their care ought to take any oath or subscribe to any instrument wherein the interests of religion are concerned without the previous approbation of their respective bishops. The Holy See approved this letter. In the Relief Act which was passed in 1791 the foolish phrase "Protesting Catholic Dissenters" was struck out, and the oath proposed by the Catholic Committee was utterly discarded, the inoffensive Irish oath of 1778, with slight variations, being substituted for it. Catholics taking this oath were relieved from the penalties which resulted from the Revolution and from the obligation of taking the oath of supremacy prescribed by the Statute of William and Mary. Various disabilities were removed, and toleration was extended to Catholic schools and worship. Shortly after this Act was passed the Catholic Committee turned itself into the Ossaline Club and continued under that name for forty years, to trouble more the Italian Apostolic. There can be little doubt that the passing of the Relief Act was facilitated by the outbreak of the Revolution in France. Another result, at first extremely prejudicial to the Catholic Church in England, of that great upheaval was the closing of the seminaries on the Continent, which had furnished to that country a supply of priests. Donat was seized by the French Revolutionary Government in 1793. The English Benedictine houses in France also disappeared. The closing of the English Catholic colleges in France was, however, to some extent compensated by the influx of clergy from that country. No less than eight thousand of these confessors of the Christian Faith sought the hospitality of Protestant England, and of these eight thousand the College at Winchester sheltered a thousand of them, and for several years a considerable sum was voted for their relief by Parliament and was largely supple-
mented by voluntary subscriptions. A certain number of these priests sought and found work on the English Mission. By far the greater part of them returned home when Napoleon had concluded his Concordat with the Holy See and re-established Christian worship in France. Of those who remained a few were irreconcilably dissatisfied with the new ecclesiastical arrangements in their country. They were known as Blanchardists, from their leader Blanchard, and were a source of much annoyance to the vicars Apostolic. The heroic Milner was especially prominent in combating them, and in asserting the rights of the Holy See. That strenuous champion of orthodoxy had, at the dawn of his career, been called to the position of a general anti-nationality. The spirit which had animated the Catholic Committee and the Cisalpine Club was by no means extinct, and led to the formation, in 1808, of what was called a "Select Board" which professed as its object the organization of an association for "the general advantage of the Catholic body". That "general advantage" turned out to be the further removal of Catholic disabilities, and the price which the Select Board was prepared to pay for such removal was the vesting in the Crown of an effectual negative upon the appointment of Catholic bishops—commonly called the Veto. The Irish episcopate unanimously opposed this arrangement, and passed a vote of thanks to Dr. Milner for his "apostolic constancy and fortitude. Dr. Milner, however, decided to accept the offer. In 1826 he tendered to the Crown a Catholic relief bill in the House of Commons, which substantially provided for the Veto. It was thrown out on the third reading. Eight years later a similar bill passed the House of Commons, but was rejected by the House of Lords. Of the eventual emancipation of Catholics Dr. Milner had no doubt. Twelve years before his death, which took place in 1826, he had foreseen the possibility and the time to come. But he would not purchase it by the slightest sacrifice of Catholic principle. In 1826 a declaration was put forward by all the vicars Apostolic of England explanatory of various articles of the Catholic faith greatly misunderstood by many Protestants. It was widely read and doubtless helped to remove prejudice. In the same year Sidney Smith published his masterly "Letter on the Catholic Question". Not, however, till March, 1829, was the long desired boon conceded to Catholics. It was wrung, so to speak, from statesmen who had always opposed it. The Clare election convinced Peel and the Duke of Wellington, who were then in power, that the settlement of the Irish question was a political necessity. The duke, it is said, believed, not without reason, that the Irish Rebellion of 1798 had been suppressed the Legislative Union had been proposed in the next year mainly for the purpose of introducing this very measure of concession, and not obscurely intimated his opinion that further to refuse it must lead to civil war. This relief bill passed both Houses by large majorities. The difficulty of the enacting clauses of the Emancipation Act became law. It should be noted that before the passing of the Emancipation Act the friction of which we have been obliged to speak, between certain prominent members of the Catholic laity and the vicars Apostolic, was virtually at an end. The Cisalpine Club still existed; but, as Monsignor Ward remarks (Catholic London A Century Ago, p. 187), "the mind of Milner, found in corners and alleys, and cellars and the house-tops, or in the recesses of the country". Their chapels were few and far between, and were purposely placed in quarters where they were unlikely to attract observation. It was common to locate them in mews, and in their exterior they were hardly distinguishable from the adjoining stables. George Eliot has well remarked in Felix Holt, "Till the agitation about the Catholics in '29, rural Englishmen had hardly known more of Catholics than of the fossil mammoths." Their political emancipation was the beginning of a great change in their social condition. "The steps were higher that men took"; their ostracism began to pass away. Moreover, the reaction which had followed the French Revolution had told in favour of Catholicism even in England. Chateaubriand's "Genie du christianisme" had a world-wide influence, and some of the more enlightened, like Scott, however deficient in accuracy, presented a much kinder view of the ancient faith than had been commonly taken in Protestant countries. In the history of the Catholic Church in England since 1829 two events require special notice. One was the rise of what is called "The Oxford Movement". Cardinal Newman used to date that movement from the year 1833, when Keble preached at Oxford his famous assize sermon on "National Apostasy". But indeed it was simply the bodying-forth of tendencies which had been long in the air. The old notion of the medieval period as a "milennium of darkness" had passed away; and from the contemplation of its masterpieces in architecture and painting men proceeded to study its intellectual life. They were resolved to investigate, in the light of facts and first principles, the claims of Anglicanism. No doubt the "Lectures on the History and Structure of the Prayer Book of the Church of England" delivered by Dr. Lloyd, the Regius Professor of Divinity at Oxford, set many of his hearers thinking, Newman among them. But the object of the leaders of the Oxford Movement was beginning was not so much to defend, the Anglican Church. This was the intention of the "Tracts for the Times", begun in 1833. It is not here possible, or indeed necessary, to follow the course of the movement, which, as it went on, departed ever more and more widely from the standards—even the highest—of Anglicanism, and approximated ever more and more closely to the Catholic Ideal. It culminated in the famous "Tract XC"; the theme of which was that the Thirty-nine Articles were susceptible of a Catholic interpretation and could be accepted by one who held all the dogmas of the Council of Trent. Of course the movement greatly interested Catholics, and by no one was it more closely and anxiously followed than by Dr. Wiseman, who had made the acquaintance of Newman and Proudhon, and had considered Rome in 1833. In September, 1840, Wiseman arrived at Oscott from Rome—where almost all his previous life had been spent—to take up his residence as president of that college and Vicar Apostolic of the Midland District. He felt from the day of his arrival there, as he wrote in a memorandum eight years afterwards, that a call upon England was now imperative. To help forward that era was the end to which his great gifts and his large heart were utterly devoted. The majority of hereditary English Catholics were much prejudiced against the Tractarians. Dr. Lingard warned Bishop Wiseman not to trust them. Dr. Griffiths, the Vicar Apostolic of the London District, used similar language. But Wiseman did trust them. He held that if the great storm, of which he was well convinced, must lead to the Catholic Church, and he fully believed in the honesty of Newman and Newman's followers. Now Newman was influenced by a paper of his on the Donatists, published in the Dublin Review in 1839, is well known. The Oxford Movement had been directed to the impossible aim of unpres tantizing the Anglican Church, and of his friends came gradually to see that the aim was impossible. The kindly light which they had so faithfully followed step by step led them on to Rome.
Wiseman testified: "The Church has not received at any time a convert who has joined her in more docility and simplicity of faith than Newman."

Wiseman had earnestly desired "an influx of fresh blood" into the Catholic Church in England. The accession of the converts due to the Oxford Movement brought it. And no doubt it accelerated the restoration of the hierarchy which had been so strongly desired by generations of Catholics. In 1840 Gregory VI had increased the number of English vicars Apostolic from four to eight. Ten years afterwards Pius IX decreed that "the hierarchy of Bishops ordinary, taking their titles from their sees, should, according to the usual rules of the Church, again flourish in the Kingdom of England". The whole of the country was formed into one province consisting of the metropolitan See of Westminster, and the twelve suffragan sees of Southwark, Plymouth, Clifton, Newport and Menevia, Shrewsbury, Liverpool, Salford, Hexham and Newcastle, Beverley, Nottingham, Birmingham, Northampton. This restoration of the hierarchy was certainly not designed as an act of war; it was indeed "unattended by any suspicion that it would give offence to others". But it did give dire offence, and the country resounded with denunciations of what was called "The Papal Aggression". An "insolent and insidious aggression", Lord John Russell, the prime minister pronounced it to be, and shortly afterwards introduced into the House of Commons a bill by which the Catholic bishops were prohibited, under penalties, from assuming the territorial titles conferred upon them by the pope. The bill became law after long and angry debates, but was, from the first, a dead letter. There can be no question that Cardinal Wiseman's appeal to the people of England largely contributed to allay the popular passion which his pastoral letter "From without the Flaminian Gate" had had no small share in exciting. Though a somewhat lengthy pamphlet, it was printed in extenso in "The Times" and in four other London newspapers, and its circulation was immense. The cardinal appealed to the "manly sense and honest heart" of his countrymen, to "the love of honourable dealing and fair play", which is the instinct of an Englishman; and he did not appeal in vain.

Cardinal Wiseman filled the metropolitan See of Westminster from 1850 to 1865, and it would be hard to overrate the greatness of his services to the Catholic cause in England. Manning truly said in the sermon preached at his funeral: "When he closed his eyes he had already seen the work he had begun expanding everywhere, and the traditions of three hundred years everywhere dissolving before it." When he began that work, there were less than five hundred priests in England; when he ceased from it there were some fifteen hundred. The number of converts during these fifteen years had increased tenfold, and fifty-five monasteries had come into being. But mere statistics give no sufficient notion of the progress made by the Catholic Church under Wiseman's rule, a progress directly due to him in large measure. Not the least important item of his service to religion was the way in which he presented the Church to his countrymen. Mr. Wilfrid Ward is well warranted when he writes: "Wiseman may claim to have been the first effectively to remind Englishmen in our own day of the historical significance of the Catholic Church, which so much impressed Mæcaulay, and which affected permanently such a man as Comte, which kindled the historical enthusiasm of a De Maistre, a Görres and a Frederick Schlegel." The organization of the Catholic Church, as it now exists in England, may be said to be due to him. He himself drew up, almost entirely, the decrees regarding it for the First Provincial Synod, held at Oscott (1852). His work, indeed, was not done in the tranquillity which he loved. "Without were fightings, within were fears." Some of the converts did not fuse with the hereditary Catholics, "the little remnant of Catholic England", whom they judged to be ill-educated and behind the times, and this prejudiced Wiseman regarded as ungenerous, even if, to some extent, it was not unfounded. He deprecated strongly the spirit of party and sought in all gentleness, to put it down and to guide his flock into the way of peace. On the other hand, some of the old clergy, taking their stand upon the ancient ways, regarded with distrust certain innovations of discipline and devotion introduced by the more zealous of the converts. They looked upon the Oratorians as extravagant. They viewed Monsignor Manning with suspicion. It is unnecessary to enter into the dissections which embittered Wiseman's declining years. The last two, indeed, were passed in comparative quiet, but amid much physical suffering. Not long before he died he said: "I have never cared for anything but the Church. My sole delight has been in everything connected with her."

Cardinal Wiseman's successor in the See of Westminster—the successor he desired—was the provost of his chapter, Monsignor Manning, whose episcopate lasted until 1892. They were twenty-seven years of fruitful activity, through evil report and through good report. For some time he was certainly unpopular, not only among his Protestant fellow countrymen but among his own clergy, who did not like his strict discipline and some of whom by no means sympathized with what was called his "ultra-papalism". But gradually the prejudice against him wore off, and his great qualities obtained general recognition. It was the victory of his faith unfeigned, his deep devotion, his spotless integrity, his indomitable courage, his singleness of aim, his entire devotion to the cause which, in his heart of hearts, he believed to be the only cause worth living for. One who knew him well said of him: "He was an Archbishop who lived among his people", the "door-steps of his house were worn with
the footsteps of the fatherless and the widow, the poor, the forlorn, the tempted and the disgraced, who came to him in their hours of trouble and sorrow." No doubt he made mistakes, some of them grave enough—as, for example, his persistent opposition to the fre-
quentation of the Universities of Oxford and Cambridge by young Catholic men and his abortive and costly attempt to supply the loss of academical training by a college of higher studies at Kensington under the direction of Monsignor Capel. But it is certainly true that the movement of social reform, to which he gave the new impetus of his Ordination, revealed him not only as a great philanthropist and a great churchman, but also as a statesman of no mean order. It was said by an able writer, upon the occasion of the twenty-fifth anni-
versary of his consecration: "To him, more than to any man, it is due that English Catholics have at last outgrown the narrow cramped life of their past of persecution, and stand in all things upon a footing of equality with their fellow countrymen." No doubt this happy result was largely due to Manning; but perhaps it was more largely due to another. The revela-
tion of his inner life which John Henry Newman thought himself obliged to put before his countrymen in order to vindicate himself from the wanton attacks of his enemies has left the impress of multitudes of what Catholicism as a religion really is.

The "Apologia pro Vita Sua" was like a burst of sun-
light putting to flight the densest mists of Protestant prejudice. And the "Letter to the Duke of Norfolk" (1873), in reply to Gladstone's pamphlet on the Vati-
can decrees which appeared in 1871, may be said to have made an end of the old error that a loyal Englishman cannot be a Catholic. It was enough for Newman to affirm that there was no incompatibility between the two characters. His countrymen be-
lieved him on his word. Lord Morley of Blackburn, a very competent judge, writes: "Newman raised his Church to what would, not so long before, have seemed a strange and incredible rank in the mind of Protestant England" (Miscellanea, Fourth Series, p. 161).

Herbert Vaughan, who succeeded Cardinal Manning in the See of Westminster, ruled the diocese as arch-
bishop, and the province as metropolitan for nearly eleven years. It was reserved for him to take up a work which his predecessor had put aside—the erection of a cathedral for London. Manning had in vain tried to have his nomination to the archbishopric—it was even before his consci-
ence—was to preside over a meeting summoned to promote the building of a cathedral in memory of Cardinal Wiseman. He declared on that occasion: "It is a work which I will take up and will to the utmost of my power promote—when the work of the poor children in London is accomplished, and not till then." This work for the poor Catholic children of London—provision for their education in their religion—was Cardinal Manning's life-work; and before he passed away it was accomplished. The building of the cath-
dral he left, as he announced in 1874, to his successor. The magnificent fame conceived by the genius of John Francis Bentley may, in some sort, be creditably ascribed to Cardinal Vaughan, who, as being the outcome of his energy and zeal, it is a memorial of him, as well as of Cardinal Wiseman.

So much must suffice regarding the history of Catholicism in England from the so-called Reforma-
tion to the present day. We now proceed to give some account of the actual position of the Church in that country. We have already seen that in 1850 Pope Pius IX reconstituted the hierarchy, making England one ecclesiastical province under the metropolitan See of Westminster, with the twelve suffragan Sees of Southwark, Hexham and Newcastle, Beverley, Liverpool, Salford, Newport and Menevin, Clifton, Plymouth, Nottingham, Birmingham, and Northampton.

In 1878 the Diocese of Beverley was divided into the Dioceses of Leeds and Middleborough; in 1882 the Diocese of Southwark was divided into the Dioceses of Southwark and Portsmouth, and in 1895 Wales, excepting Glamorganshire, was separated from the Dio-
cese of Newport and Menevia, and formed into the Vicariate Apostolic of Wales. Three years later this vicariate was erected into the Diocese of Menevia, so that the Archbishop of Westminster now has fifteen suffragans. Hitherto, since the Reformation, England had been in one diocese, which had been immediately subject to the Congregation of Propaganda. But Pius X, by his Constitution, "Sapi-
centi Consilio", transferred (1908) England from that state of tutelage to the common law of the Church.

The number of priests, secular and regular, in Eng-
land, according to the most recent list, is three thou-
sand five hundred and twenty-four, and the number of churches, chapels, and institutes, one thousand seven hundred and thirty-six. Of the regulars who are over a thousand in number, many are French ex-
iles, and a considerable number of them are not en-
gaged in parochial or missionary work. There are three hundred and eleven monasteries and seven hun-
dred and eighty-three convents; a great increase dur-
ing the half-century since the last number was given. In 1851, when there were only seventeen monasteries and fifty-three convents. During the same period many churches of imposing proportions, adorned with more or less magnificence, have been erected. Conspicuous among them is the cathedral of Westminster of which mention has been already made. It is in the Byzant-
inian style and is one of the noblest religious edifices. Nearly two hundred and fifty thousand pounds have already been expended on it, and, although still unfinished, it has been open for daily use since Christmas, 1903.

Catholics in England are still subject to various legal disabilities. We have already seen that by the Bill of Rights (1 Will. and Mary st. 2, c. 2) no member of the reigning house could become a Catholic, or marry a Catholic, thereby forfeits the crown, and that the Act of Settlement (12 and 13 Will. III, c. 2, s. 2), by which the suc-
cession was confined to the descendants of the Elec-
tress Sophia, being Protestants, confirms this article of the Constitution. But the Act of Settlement, as it is now enacts "that whosoever shall hereafter come to the possession of the Crown of England shall join in communion with the Church of England as by law established". The Emancipation Act (10 Geo. IV, c. 7), which was largely a disabling Act, provides that nothing contained in it "shall extend or be construed to enable any person otherwise than he is now by law entitled, to hold the office of Lord Chancellor of Eng-
land or Lord Lieutenant of Ireland"; and the common opinion is that Catholics cannot now fill these great positions, but this view appears questionable. The point is discussed at length in Lilly and Wallis’s "Manu-
als of the Law specially affecting Catholics", pp. 36–
43. The Emancipation Act also contains sections imposing fresh disabilities upon Catholics, such as of other religious orders, communities or Societies of the Church of Rome, bound by monastic or religious vows". These sections have never been put in force; still, as they remain on the statute book, they have the serious effect of disabling religious orders of men from holding property. An Act of 1860 (23 and 24 Vict., c. 131) has, however, somewhat mitigated the hardship, as also a like hardship regarding bequests for what are deemed superstitions uses, such as Masses for the dead. Such bequests are held by English law to be void, but the Irish courts do not follow the Eng-
ish on this point. It should be noted that up to the passing of the Emancipation Act, trusts for the pro-
motion of Catholic charities were held to be illegal.
PROVINCES and DIOCESES of ENGLAND From the 12th Century to the Schism of Henry VIII

It should be noticed that in England provision is made for securing religious liberty for pauper and criminal Catholics. In every workhouse a creed register is kept in which the religion of every inmate is entered by the master, upon admission, and the Guardians of the Poor are empowered to appoint Catholic clergy, at suitable salaries, to minister to the Catholic inmates. Similar rules as to the appointment of Catholic priests may be appointed in public lunatic asylums. Catholic pauper children may be transferred from the workhouse schools to schools of their own religion, and, if boarded out, provision is made for their attending the Catholic church. Catholic ministers to prisons are appointed by the Home Secretary, and are duly remunerated.

There are sixteen commissioned army chaplains in the United States. Similar rules as to the appointment of Catholic priests may be appointed in public lunatic asylums. Catholic pauper children may be transferred from the workhouse schools to schools of their own religion, and, if boarded out, provision is made for their attending the Catholic church. Catholic ministers to prisons are appointed by the Home Secretary, and are duly remunerated.

We go on to say some words on Catholic education in England since the Reformation. Of course it hardly existed when the penal laws were enforced in their full rigour. The clergy, as we have seen, were trained abroad at Rome, at Douai, at Lisbon, at Valenciennes. The young laity benefited in intermittent and uncertain fashion by the teaching of the priests. Shakespeare, whom there is strong reason for accounting a Catholic (see Lilly's "Studies in Religion and Literature"), was "reared up," according to an old tradition, by an old Benedictine monk, Dom Thomas Combe, or Combes. In Pope's time a few Catholic schools existed in England: the University of Cambridge, which was sent to one of them, "a Roman Catholic seminary," it is called, at Twyford, kept by Thomas Deane, an ex-fellow of Magdalen College, Oxford. But these "seminaries" were carried on with difficulty, being illegal, and it was not until the outbreak of the French Revolution that much was effected for the cause of Catholic education in England. The professors and pupils of these分成re a century or two after the Revolution were the first to return to England. The English school of education, founded in 1795, some going to Herefordshire, in the South, and some to Tudsne, in the North. The Herefordshire establishment developed in time into St. Edmund's College. The school founded at Tudhoe, and removed first to Crook Hill, has expanded into the great college of Ushaw, which now preserves as a seminary for the five northern dioceses of Durham, Newcastle, York, Middlesbrough, Salford, and Shrewsbury. Thus these two noble institutions may claim as their far-off founder Cardinal Allen. The magnificent Jesuit college of Stonyhurst may in like manner derive its origin from Father Parsons, for it was founded by the religious who fled from the house established by him at St-Omer. The not less magnificent college of Downside is the descendant of St. Gregory's, Douai, i.e. of the Benedictine monastery and college founded there in 1606. The monks fleeing from the fury of the French Revolution were received at Aeton Burnell in Shropshire by Sir Edward Smith who had been one of their pupils. It was in 1814 that they settled at Downside. The great college of Oscott is now a seminary in which priests are trained for the southern dioceses and is under the joint direction of the Archebishops of Westminster and the Bishops of Birmingham, Clifton, Menevia, Newport, Northampton, and Portsmouth.

St. Joseph's Missionary College was founded by Cardinal Vaughan, who ever took the deepest interest in it, and who is buried in the grounds. Of Catholic higher schools two deserve special mention: first, that of Douai, founded by Omer, and that at Beaumont, established by the Jesuits. Until 1895 Catholic young men were discouraged—many were inhibited, without special permission of the ecclesiastical authorities from frequenting the Universities of Oxford and Cambridge, but in that year a letter from the Congregation of Propaganda to Cardinal Vaughan announced that the Holy See had removed this restriction, the bishops, however, being enjoined to make proper provision for Catholic worship and instruction for Catholic young men resorting to these ancient seats of learning. Elementary education has also been largely provided for by Catholics in England. Before the Protestant Reformation all the great monasteries had, attached to them, primary schools for keeping out the children. In the eighteenth century a number of Protestant charity schools were founded, but it was not until the end of the first quarter of the nineteenth century that provision for elementary public instruction began to be recognized as a public duty. In 1833 a Parliamentary grant was first made "for the purpose of education" to a college divided between two Catholic societies, the British and Foreign School, which ignored dogmatic religious teaching, and the National, which represented the Church of England. In 1847 Catholic elementary schools, which had much increased in numbers, were admitted to share in the government grant, and the Catholic Poor School Committee was founded to supervise and direct them, a duty which this body, now called the Catholic Education Council, still fulfils.

Catholic journalism in England is zealously represented by "The Tablet" newspaper, which was founded so long ago as 1810. It is published weekly. Other Catholic journals are the "Catholic Times", "Catholic Weekly", "Catholic Herald", "Catholic News", and "Universe". The chief Catholic review is "Wiseman", long edited by W. G. Ward, and now by his son Mr. Wilfrid Ward. It is published quarterly. "The Month", a magazine of general literature edited by Fathers of the Society of Jesus, is issued monthly, as its name denotes. An extremely important publication is the "Catholic Directory", which in its present form dates from the year 1838. But for nearly a century previously there had been a Directory which, however, in its earliest issues was merely an Ordo, or Calendar, for the use of priests resorting Office. It remains now to speak of certain Catholic societies existing in England. In the first place mention must be made of the Catholic Union of Great Britain, founded in 1871. The earliest meeting recorded in the minute book was held at Newcastle House, on 20th February of that year, when it was unanimously agreed, "that a Society of Catholics be founded, under the title of the Catholic Union of Great Britain, to promote all Catholic interests, especially the restoration of the Holy Father to his lawful Sovereign rights". The establishment of the society was sanctioned by the archbishops and bishops of England and by the vicars Apostolic of Scotland. The hierarchy in that country was not restored until 1878, and was emphatically approved by Pius IX. In the rules of the Catholic Union the following means of effecting its objects are specified: "1. By meetings of
the Union and of the Council; 2. By public meetings; 3. By petitions or memorials, or deputations to the Authorities; 4. By local branches; 5. By correspondence with similar societies in other countries; 6. By procuring and publishing information on subjects of interest to Catholics; 7. By cooperation with approved Confraternities, Institutions, and Charitable Associations, for the furtherance of their respective objects; which cooperation shall, in each case, be sanctioned by the Bishop of the Diocese; 8. By any other mode approved of by the Council and the Bishop.

For forty-seven years the Catholic Union has worked steadily and successfully. It has done its work; it has been the means of bringing about the end of a great controversy; to the success of which it has contributed largely. It has also been of great utility in affording advice and assistance to Catholics, especially the clergy, in matters of doubt and difficulty, and in civil and administrative matters. It is governed by a president and council elected by the general body of members. From the first the office of president has been held by the Duke of Norfolk, and for many years the Marquis of Ripon has been the vice-president. On its list of members will be found most British Catholics of position and influence.

The Catholic Truth Society was founded in 1834 by the late Cardinal Vaughan, then rector of the Foreign Missionary College at Mill Hill, and has since had a circulation of much usefulness. Its main objects are to disseminate Catholic truth in its various educational and devotional works; to assist the uneducated poor to a better knowledge of their religion; to spread among Protestants information about Catholic truth; to promote the circulation of good, cheap, and popular Catholic books. It holds every year a Conference for the elucidation and discussion of questions affecting the work of the Catholic Religion than in some others, and for three years of its existence it has issued publications, great and small, at the rate of about a million a year. It has formed a lending library of books for the blind; and it has a collection of about forty sets of lantern views, with accompanying readings on subjects connected with Catholic faith and history. It has been copied by societies bearing the same names in Scotland and Ireland, in the United States, Canada, Bombay, and Australia.

The Catholic Association was originally founded in 1891. Its objects are stated in its Rules as being 

(1) To promote unity and good fellowship among Catholics by organizing lectures, concerts, dances, whist tournaments, excursions, and other gatherings of a social character, with the object of making the work of Catholic organization, and in the protection and advancement of Catholic interests. It has been particularly successful in the organization of pilgrimages to Rome and other places of Catholic interest.

We cannot better bring to an end this brief survey of the career of Catholicism in England since the Protestant Reformation than in some eloquent and touching words with which Abbot Gasquet concludes his "Short History of the Catholic Church in England":—"When we recall the state to which the long years of persecution had reduced the Catholic body at the dawn of the nineteenth century, we may well wonder at what has been accomplished since then. We see a Church strong and efficient, living deep down in the soil of the past. Over such a tree, since the small beginnings of its growth, many vicissitudes of climate have passed; periods of storm, of calm, of sunshine, and of rain; of bitter winds and of genial life-bearing breezes; each change leaving its trace behind in the growth and development of the living plant. It is obvious, then, that to present the complete history of such an organism in a few pages is impossible; all that can be attempted in this article is to describe the main lines of its life.

It should not be forgotten, at the outset, that English literature has been no isolated growth. It has sprung from the common Aryan root, has branched off from the primal stem, and has received, and continues to receive, in the course of its growth, multitudinous influences from other literatures growing up around it, as well as from those of an earlier time. Yet, as Freeman said, "We are ourselves, and not somebody else", and one of the most remarkable things about English literature is its power of assimilation. Latin, French, Italian, Greek, Spanish literatures, to name only a few, have poured their influences upon us, in some cases, to the extent of leaving their trace, and yet our character, our language, our literature, remain unmistakably English. The ancestors of the English (the Teutonic tribes of Angles, Saxons, Jutes, and some Frisians) spent nearly
ENGLAND 459

one hundred and fifty years (455 to 600) in the con-
quest of the island from the British tribes who had
been abandoned by the Roman colonizers nearly fifty
years earlier, in 410. Little by little these fierce and
hardy heathen tribes, after much fighting among
themselves for the supremacy, settled down, and a
slow process of civilization made itself felt among
them. Christianity, preached by St. Augustine in
597, bringing in its train education, science, and the
arts, was the main factor in this refining change. Such
British tribes as had escaped the English destroyer
remained for a time almost entirely apart, though they
and their literature were afterwards to have no small
influence upon the literary development of England.

It is not unlikely that the written literature may
have begun as early as the sixth century, but at any
rate, by the middle of the seventh century the traces
of it are clear in the work of Cædmon, according to
the testimony of Bede. Be-
tween this date and the
Norman Conquest, Anglo-
Saxon Old English writers
(recent scholars often pre-
fer the latter term as pre-
serving the idea of contin-
uity) produce bodies of
literature in prose and verse
which were furnished by no
other Teutonic nation either in amount or quality
during the same centuries. There are extant at least
20,000 lines of verse, and of prose somewhat more. It
is almost certain, too, that a good deal has been lost.
The language in which we possess it is English of the
oldest form, before any notable foreign admixture
had taken place. The verse, with rare exceptions, is of
the Teutonic alliterative type. Speaking generally,
this body of literature may be classed under two great
periods: the first, when the monasteries of Northum-
berland were the homes of learning, between about 670
and 800, when, according to the legend, Cædmon, a
lay brother of Whitby, received the gift of poetry and
passed it on to not unworthy followers; and the sec-
ond, from the time of King Alfred (871), with some
spaces of interruption, to the early part of the eleventh
century, when literature, driven from the North by the
Danes, came south and spoke in prose of the vernacular.
In all this work, more particularly in the verse,
there is great variety. Growth may be traced and
changes of style.

Putting aside minor verse we come first upon the
"Beowulf", a narrative poem which, together with a few
other fragments, is all we have of the Old English epic.
It seems clear that by matter of it is much older than its
form. It is a storehouse of the thinking and feeling of
the forefathers of the English people when they were still heathen and before they came to
Britain, even though the poem may not have been
actually put together in its present form until the ninth
or tenth century. It gives a picture of very
great interest of certain aspects of the actual life of
the people. The English temper of mind at its best, en-
during and heroic, pervades it throughout.

But this was before Christianity and the monas-
teries. After the introduction of the new religion the
first important record of literature comes under the
patrician name of Cædmon. It is clear from recent
research that Cædmon himself only wrote a small
portion of the so-called Cædmonian poems, but the
story of his vision, given by Bede, even if only
legend, testifies clearly that the first poetry produced
in England began among the people and in religion.
The chief interest of the work lies, not in the actual
subject-matter, Scriptural paraphrase, but in the way
the matter is treated, a Teutonic aspect being fre-
frently given to the narrative. The craving for free-
dom, the exultation in war, the longing for moral
goodness, the respect for women, all these and many
other things come out in the rendering of the "Fall
of the Angels", the "Temptation of Man", and else-
where. It is quite clear that several hands have
worked at the Cædmonian poems, but in the next
great group, a hundred years later, we come upon one
individual poet who has signed at least four poems
with his name, Cynewulf, and he insists upon our
knowing him as the Ancient
Mariner constrained the
Wedding Guest. He reveals
his personality, he becomes
real to us. His poems are
religious, and perhaps the
f ne is the "Christ". He is
a poet of high order.

Among the rest of Old
English poetry the elegies
and the war poems stand
out as the most original.
Old English prose, if we
except St. Bede's lost trans-
lations of St. John's Gospel,
groups itself round two
names, those of Alfred and
Elfric. Alfred (849-901)
was eager for his people's
education, and his literary
work consists chiefly of trans-
lations of important
books of his time—Gregory's
the Great's "Pastoral
Care", Orosius's "History
of the World", Boethius's
"Consolation of Philo-

sophy"; and (probably
done under his superintendence)
Bede's "Ecological History",
and Bishop Wurthur's
"Dialogues". To some of
these he added prefaces and notes in simple, unaffect-

ed English, which make us realize his remarkable
and lovable character, both as man and king.

Many years after, Elfric (c. 955-1025). Abbot of
Eynsham, a much more cultivated scholar, and a
more finished, though not so passionate, prose writer
than Alfred, put forth volumes of homilies, saints'
lives, translations of books of the Old Testament, and
other works, which were greatly and justly prized by
his hearers and readers.

The "Old English Chronicle", of which there are
seven MSS., a record of events in England from the
sixth century to 1154, was meanwhile being written in
the monasteries, undisturbed by the many changes
passing over England. It is almost certain that Al-
freed encouraged this work and set it on a sure founda-
tion, perhaps himself adding portions of the record
where it concerned his own reign. One other piece of
prose literature must be mentioned. In Wulstan's
"Address to the English", with its vivid indignation at
the sufferings of the people from the Danes, the poem
is often as impassioned as an English reformer might
be over the abuses of present-day society. It brings
us up in date to the last half-century before the Nor-
man Conquest.

The Norman Conquest is as important in the history
of English literature as in that of England's political

...
and social life. It brought a new and invigorating influence to bear upon the English genius, though in the immediate present of the eleventh century it seemed a crushing disaster for the nation. For nearly one hundred and fifty years the race, the language, and the literature of the people were apparently stilled. It seemed as if England had become Norman-French. But as long as the drawn-trodden English kept life in them the springs of poetry and art could not dry up; and though Robert of Gloucester says that only "low men" held to English at this time, yet there were a good many of these "low men", and we have proof that the native population had still their songs and their wandering bards, while in certain of the monasteries and abbeys a sacred minstrelsy lingered on in their mother tongue much as they had done when a Saxon king had ruled England. The continuity of native verse and prose was never really broken, and just as the English race was at last to absorb its foreign conquerors, and to gain infinitely more than it had suffered from them, so English language and literature were by the same means to be enriched and ennobled to an extent no one then looking on could have dreamed of.

Yet at first literature was apparently silenced, and until the beginning of the thirteenth century there is no writing of much importance except the "Old English Chronicle", which ends in 1154. There was, of course, writing in Latin and in French, and the French was even looked upon as the language of the Church, and it was the medium for communicating between scholars and the language of nearly all books of scholarship. The native work, however, never quite disappearing, revives unmistakably at the beginning of the thirteenth century, and between that date and the death of Chaucer in 1400 there is produced a great mass of literature of endless variety but of varying value.

We come then to the Middle Ages, called "of Faith"; the age of the Crusades, "of cathedrals, tournaments, old coloured glass, and other splendid things"—the age to which, in times of dryness, artists, lovers of romance, as well as pious souls of all kinds, have often looked upon in enthusiasm drawn from it fresh inspiration. It has stimulated in modern times new and noble movements in art and in poetry, and its power of inspiration is not yet exhausted. It was an age of contrasts, of faith and of unbelief, of extraordinary saintliness and of strange wickedness, of reverence and of ribaldry. It was the great Catholic age, when the sacred role of the Church, spotted though it might be in places through human frailty, was still unrent, whole, and she herself was everywhere acknowledged in Europe as the Divinely appointed mother of men. The history of English literature from the beginning of its revival in the thirteenth century is first that of transition (up to about 1250), then of development for about eighty years, in which the work is largely anonymous, finally, a period of achievement, the second half of the fourteenth century, in which individual writers of power begin to emerge, and among them one supreme artist, Geoffrey Chaucer. We trace, too, during these ages the rise of the drama in the miracle-plays.

On the threshold of the revival stand two works: "The Brut" (1205), a poem of 30,000 lines concerning the history of Britain, written by Layamon, a patriotic English priest of Word-prose full of more or less historical stories, partly translated from French sources and written in an alliterative metre; and it gives us the first account in English of King Arthur, the British hero. The second, a religious work, "The Ormulum", a series of metrical homilies upon the daily Gospels of the Church, was written by Ornmin, an Augustinian canon. After this the stream of English literature is continued in a series of poems and prose tracts, of which many are lyrics. In "The Owl and the Nightingale", a delightful poem standing at the end of this "transition period", we have a happy combination of old and new elements which have already begun to form a fresh native poetry. Nor had prose been idle: one of the most interesting books of the time is the "Ancren Riwle" (q.v.), a series of exhortations on their rule for a community of Dorsetshire nuns.

Passing on over these fifty years we are met by a further outpouring of literature: abundant and various, if not remarkably original, poetry always taking the chief place. The main kinds of literature in this period of quick development are romances; tales; religious tracts; chronicles; homilies on morality and religion; the great book called "Cursor Mundi"; historical writings; songs of love and religion, and songs of political and social life. In all this, French influence is strongly marked but there gradually appear among it English elements which are now beginning to hold their own. The romances concerned with the adventures of well-known heroes are the most prominent among all this literature, and these in some cases are translated directly from the French, though never without English touches. The religious work of this time is edifying, but the prose homilies and treatises are sometimes very long and commonplace. Yet a simple faith and tender piety, together with a most sane sense of humour and some imagination, make the religious writings not unfrequently attractive, even from the literary point of view. But regarded as literature, the lyrics of the thirteenth century are perhaps the most remarkable. They are native, and though they bear the marks of artistic culture in their matter, they remind us more of the country than the town. There is a real though un-self-conscious love of nature in them, and the promise of that peculiar and fine quality of the later English lyric which is the glory of the golden age, a delicate and restrained love of nature. Love, law, and religion are the inspiration of these little medieval poems.

This multitudinous work formed a discipline and preparation, and resulted in the achievements of the latter half of the century. The period 1300 to 1400 is marked by a strong reassertion of the national spirit, and in literature there is a curious reappearance of the Old English alliterative verse after 300 years of apparent neglect. Amongst other poems in this metre there are four by an anonymous writer of high
poetic power, one of them, "The Pearl", of great beauty and of deep religious feeling. To this alliterative class belongs too the well-known "Piers the Plowman". Chaucer's work, coming almost at the same time, has to some extent overshadowed this poem, but as a picture of the society and ideals of the time it forms a complement to Chaucer's "Canterbury Tales". In "Piers the Plowman" we have that grave outlook upon life which marks the English character at its best, carried almost to excess. The author (or authors, we ought now to say, for it has been recently proved that at least three writers must have had a hand in its making) looks upon the society of his time as a "realist". He describes the world almost entirely on its dark side, and though the remedies he offers are thin "(Love is the physician of Life)", and though he never altogether loses his belief in a Divine over-ruling order, yet there is an accent of uncertainty and sometimes of despair in his voice.

Chaucer (1340-1400), on the other hand, does not care for problems of life or dark thinking. His picture of society is, on the whole, from its bright side, when men are out on holiday, and when over-seriousness would seem out of place. Poetically, and in its structure, "Piers the Plowman" stands below Chaucer's work; but its forcefulness, its pathos, its sincerity, its grim humour, its realistic descriptiveness, and its dramatic moments make it a great poem. Chaucer's work marks the full flowering of English literature in the Middle Ages, and it was he who first raised English poetry to a European position. It is the custom of historians of literature to divide the literary life of Chaucer into a French, an Italian, and an English period, according as his work was influenced by the manner of each national literature. This division represents a fact if it be remembered that he carried on, all through his career, certain of the lessons he had learned from the foreign sources in the earlier time. There is little doubt that the impulse to write verse came to Chaucer from France. Old English literature was practically unknown to him, but he was saturated with French poetry, for the literature of France was then, outside the classics, the most influential in Europe. As early as 1340 he was writing for the court, and the "Canterbury Tales" are his first great work. It was his belief in the supremacy of what he called the "poet's craft" that he most valued in the French language. He was not the first to write in English, but he had begun to assume nearly that modern form we know. People, language, and literature had now become wholly English.

After reviewing this brilliant half-century of poetry, the prose of the same time seems a poor matter. There is no great progress to record, nothing really original of importance was written, and the style follows Latin models rather than the simpler natural manner of the Old English prose. Chaucer wrote prose which in its mediocrity is a curious contrast to his poetry. Sir John Mandevile's "Travels" was a translation of an amusing book, and Wynkyn's translation or paraphrase of the "Pardoner's Tale" (in which, however, several other hands than his own had a share), together with his vigorous but heretical tracts and sermons, form the chief prose work of this time.

After the death of Chaucer, poetry declined in quality with strange swiftness. For the next one hundred and fifty years there is no great poet; the art of poetry, chiefly owing to the scarcity of native poetic genius, but also partly to the swift change of the language, was undergoing and to the carelessness of those who attempted verse, ceased to be finely exercised. The tradition of Chaucer almost disappeared. In the earlier part of the fifteenth century Lydgate (1370?–1451?) and Hoecele (1370–1450?) tried to follow in the footsteps of the master they revered, but frankly recognized their own failure. Their voluminous and mediocre work, especially Lydgate's, is not without...
interest to the student, but certain anonymous poets, such as the authors of "The Flower and the Leaf" and "London Lickpenny" (formerly given to Lydgate), succeeded better than they, and the latter poem shows that Chaucer’s power of social satire had not disappeared. Satire, as always in the decline after a rich imaginative period, crept to the front as subject-matter for verse, and later in the century the scathing verse of John Skelton (1460–1529), though poor as art, is of interest in the light it throws upon the social life of the times. This poet and Stephen Hawes (d. 1523?), who tried in the "Pastime of Pleasure" to revive the old allegorical style, are the only English names that remain in evidence in the latter part of the century. In Scotland, however, the followers of Chaucer, of whom the chief were King James I, Dunbar, Henryson, and Gawain Douglas, were producing and continued to produce poetry worthy of immortality.

Fifteenth-century prose was less barren than the poetry of the age. Since the Confessor nearly all serious subject-matter, with few exceptions, had been written in Latin, but with the invention of printing, and as the power to read and write spread downwards, English prose became more widely recognized as a medium for the treatment of many varied as well as more popular kinds of matter. Four names—Pecock, Fortescue, Caxton, Malory—are recognized as leaders of this movement, but out of their work it is possible to form a notion of what English prose was like in the latter part of the century. Malory’s has become classic. His "Morte D’Arthur", which draws together as many stories and series of stories about King Arthur as he could lay hands upon, is a work of genius, and remains a living book. Its varied and innumerable forms grew up during these centuries, was, with one or two exceptions, not the work of poets or literary artists, yet it was one of the most educative influences of the time. Beginning in connexion with the liturgy of the Church, there gradually developed a whole cycle of religious plays, showing forth the history of the world from the Creation to the Last Judgment. These, acted in a series, in public places of the towns, at certain great church festivals, provided as much instruction as amusement. There is no doubt that, in spite of passages in which they may now seem to us materialistic or irreverent, these simple and rude dramatic representations, both miracle-plays and the later developed moralities, pressed home great religious truths upon the people. From the spirit of one of the development of drama, we may say that English tragedy and comedy have, at least to some extent, their roots in these crude plays in doggerel verse.

Leaving the Middle Ages behind us, we come now to the threshold of the most fateful epoch in the history of the English people—the disruption of the Church, or the triumph of the protestantism. This was preceded and accompanied by the earlier movement called the "Renaissance", which, having opened up fresh branches of classical learning, more especially that of Greek poetry and philosophy, awakened and stimulated the human mind both to good and to evil. In England the "New Learning" movement, in the hands of men like More and Colet tended to enlightenment and true learning. The "Utopia" of Sir Thomas More, a book of the noblest ideals, represents its spirit at the best. But the effect of the Renaissance on the manners and morals of those Englishmen who came back imbued with its intoxication from Italy, was much lamented by contemporary writers, as we find in Ascham’s "Schoolmaster". Yet it is to this acquaintance with Italy and its literature that we owe the revival of English poetry after its long repose since the death of Chaucer. In the work of Sir Thomas Wyatt and of the Earl of Surrey, young as it was and the beauty and power of the great Italian poets, we discover a new beginning, a new poetic art. It was yet uncertain of itself, experimental, hesitating, and not engaged with deep or very noble subject-matter, but, while observing certain common laws of sense and diction which the last one hundred years had formed, attempted new and better melodies.

The publication of Tottel’s "Miscellany" in 1557, which contains the work of these two poets, marks an epoch in literature. It set up a standard of metric and artistic beauty on which the work could sink. The literary world of that age grew full of expectation looking for a new poet who should embody still more fully the poetic ideals of the time.

The new poet came in Edmund Spenser (1552–1599). Seldom has a young writer been so immediately recognized and acclaimed by the accredited literary judges of his own time as Spenser was. And posterity has agreed with their judgment. He formed the second great landmark in English poetry after Chaucer, from whom he received inspiration. He had been bred in the stimulat ing atmosphere of the new learning and was greatly influenced by classic and Italian literature, and he also appreciated much of the English work, and the only master he openly acknowledged was Chaucer. Spenser’s poetry throughout is of wonderful beauty in its art, and is marked by nobility of aim, purity of spirit, and reverence for religion. His "minor poems" are many, and as Professor Saintsbury remarks, would be "major poems" for any smaller poet. He was, for example, a satirist of no mean order and chaste in the general judgment, and rightly, Spenser is the poet of the "Faerie Queene". All his special powers are shown there, and all his character, one might almost say all his history.

The large allegorical ground-plan of the "Faerie Queene", not half completed, interesting as it is, does not form the great attraction of the poem. That lies in the pure and unspurious beauty of the verses, the variety and glorified description, often minutely detailed, in the wealth of imagination, and in the impassioned love of everything beautiful which enthralls the reader as it did the poet. That there are flaws in the poem goes without saying, more especially as Spenser died leaving it half finished.

The complete plan of the work cannot be gathered from the poem itself: Spenser’s letter to Sir Walter Raleigh, prefixed to all editions, is necessary to make it clear. "The centre falls outside the circle." For Catholics, too, the historical allegory is seriously marred by the anti-Catholic bias of the poet's time.
In places, the Church is bitterly assailed, though in other passages Spenser clearly deprecates the desecration of monasteries, churches, altars, and images as the work of the “Blatant Beast of Calumni”. Nor does he give by any means undiluted approval to the Anglican Church or the Puritans. Modern criticism, however, places little emphasis upon any portion of the historical allegory, regarding it as an antiquated hindrance rather than a living help to the true appreciation of the poem. The more purely spiritual elements of the allegory, such as the struggles of the human will against evil, aided by Divine power, are those which are valued by discerning readers. Considered in its spiritual and allegorical aspects “The Faerie Queene” is “the poet of the noble powers of the human soul struggling towards union with God”. Spenser holds the supreme place among a multitude of other poets of as real though of less genius than his in the sixteenth century, and the work of these, outside the drama, is perhaps seen at its best in the song and the sonnet, two forms which had now an extraordinary vogue. Nearly a dozen anthologies of Elizabethan lyrics, of which the finest is England’s “Helicon” (1600), remain to show us the sweetness, beauty, and rarity of these songs. The sonnets, one of the new Italian poetic forms, introduced by Surrey and Wyatt, are less original, and many of them are translations of Petrarchan forms, but those of Sidney and Shakespeare, at least, stand out by their exceptional force and beauty.

Among the many lesser poets of the time Michael Drayton (1563-1631) has been singled out as especially representative of the general character of Elizabethan poetical genius. He wrote every sort of poetry that was the fashion except moral allegory. His work deserves more notice than it is often given to it, and his name is sometimes only associated with his long historical poem of the “Polyolbion”. This type of poetry reflects the patriotism of the age, and Samuel Daniel and William Warner, both poets of some genius, also worked at it. The huge “Mirror for Magistrates”, begun in 1555, and not in its final edition until James I’s reign, had encouraged this kind of verse. Poetry of a more personal and philosophic type was produced towards the end of the century, but very little of value that was religious, except the work of Robert Southwell. This heroic young Jesuit and martyr wrote with a high object: to show to the brilliant young poets of his time, whose love poems often expressed unworthy passion, “how well verse and virtue sort together”. And he did this by using the literary materials of the “worlding”, as he himself says, “a new web in their old loom”. His book had a distinct influence on contemporary and later poetry, touching even Ben Jonson and perhaps Milton himself. Its quaintness of wit (allying it somewhat to the “metaphysical” school of the next generation) are shot through with warm human feeling which makes its direct appeal to the reader. And sincerity is the very note of it all.

But it is, of course, in the drama that we find all the well-known poets—with the one exception of Spenser—putting forth their greatest force. The sudden rise of the drama in the latter half of the sixteenth century is the most remarkable phenomenon of this supremely remarkable literary age. It has never been fully accounted for. Many of the contemporary records concerning plays and the theatre have undoubtedly been lost, so that we have to form our own judgment of Elizabethan dramatic literature and its causes upon, comparatively speaking, insufficient grounds. Out of some 2000 plays known to have been acted, only about 500 exist, as far as we know, and discoveries of new contemporary testimony or work might revolutionize our judgment on the history of Elizabethan drama. But the facts, as we have them, are that in the earlier half of the sixteenth century we find scarcely any dramatic work that would enable us to foresee the rise of the great romantic drama. Miracle-plays were acted up to 1579, but clearly no great development could come from these, and still less, perhaps, from the scholarly movement towards a so-called classical drama, imitations of the Latin comedies of Plautus and Terence, such as “Ralph Roister Doister” or “The English comedy”, or of the dramas of Seneca, as in “Gorboduc”, the “first English tragedy”. There was also a popular tragi-comic drama of a somewhat rude kind (such as Shakespeare travels) the two “Passions and Thise” in the “Midsummer Night’s Dream”), but this was no more prophetic than the others. Then suddenly there appear between 1580 and 1590 plays with life, invention, and imagination in them, often faulty enough, but living. The predecessors of Shakespeare, Peele, Greene, Kyd, and others, but most of all that wild and poetic genius, Marlowe, technically created our dramatic blank verse, prepare the way for Shakespeare. Rejecting, gradually, by a sort of instinct, those elements in the drama of the past that were alien to the English genius, they struck out, little by little, the now well-known type of Elizabethan romantic drama which in Shakespeare’s hands was to attain its highest. And Shakespeare’s genius made of it not only a vehicle for the expression of Elizabethan ideals of drama and of life, but a mouthpiece of humanity itself.

Shakespeare belongs not to England but to the whole world, and most modern nations have vied with each other in acute and wondering appreciation of his genius. A mass of critical literature has grown up round his name, discussing the poet, the man, personal, of every kind, and continues to grow. Shakespeare and his work furnish inexhaustible material for meditation upon almost every human interest and problem. After his time there are some fine dramatists, but none can approach him in completeness and height of genius. Ben Jonson, Chapman, Webster, Ford, Massinger, and Shirley—the two last Catholic converts—with others, carry on the poetic, dramatic writing with genius, skill, and energy, but the glory gradually departs until one is led to think that if the theatres had not been closed in 1642 on account of
the civil war they would have ceased of themselves for want of good plays. Not only had the technical skill in versification, dialogue, and plot decayed, but the moral tone had so much degenerated that most of the hard charges brought against the drama by the Puritans at this time seem well justified.

When we turn to Elizabethan prose we find it a much inferior and less practised form of art than verse. No standard of good prose towards which writers might aim was recognized, and the masterpieces of the Elizabethan age are few. Hooker's "Ecclesiastical Polity" has rightly, by its weighty argument and its grave eloquence, won a place among classics. Lyly in his two volumes of "Euphues" was the first, perhaps, to treat prose as equally worthy with poetry of artistic ends. The form was growing and moralizing, often most excellent as well as interesting in its ethical musing, instituted a fashion of speech and writing from which for some years few writers stood aloof. Sir Philip Sidney's "Arcadia", a long pastoral romance of sentiment, however, broke the spell and in its turn created a vogue. The novels of this time follow the "Euphues" or the "Arcadia" in most examples, but there is also a third type in the work of Nash, the novel of wild and reckless adventure, which was afterwards to become famous in the greater works of Smollett. Criticism of poetry, history, often in the form of chronicles, geography, and adventure, such as in Hakluyt's collection of "Voyages", together with innumerable translations from classical and modern authors, were some of the matters treated in prose. In the novel, as in the drama, the foreign influences, especially those of Spain and Italy, are easy to trace. Though not of the first order of art, the Elizabethan novel created a vogue, for it reflects the varied interests and the complex character of the strange and wonderful time of the sixteenth century, and it exhibits in their early stages certain forms of literature, such as criticism and the novel, which were afterwards to develop into orders of the first importance. It is scarcely needful to say that with the growth of learning, in this epoch, for them, of disaster and persecution, took little part in the great output of literature.

From one point of view the history of English poetry would seem to be a record of action and reaction, of a struggle between one type of poetry and another, between that in which the matter delivered is all important and the formlessness of form is the chief end at which the poets aim—between, in fact, the romantic and the classical schools. This general trend may be most clearly seen in the work of the crowd of secondary poets in any age, but the few who excel will be found to combine and reconcile in themselves, more or less, the opposing elements, though, naturally, both small and great poets will exhibit some individual bias, however slight, toward one type of work or another. This statement is practically true of the seventeenth century. In the very heart of the romantic poetry of the immediate successors of the Elizabethans, there arose, in the early years of the century, a few young men who began to write verse of another kind altogether, whose work was not developed from that of the preceding age, however slight, toward one type of work or another. Perhaps the most striking example of this is that of John Donne, whose "Sermons" were among the finest of their kind, and whose "Devotions Upon Emergent Occasions" and "The Sun Rising" are among the most beautiful and penetrating of the great meditations of this school, and who, with Crashaw, Herbert, and Vaughan, religious poets, together with Herrick, are the only ones whose work has secured immortality. Crashaw, a fervent Catholic convert, whose religious verses are often very beautiful, seems in a measure detached from this school; some of the best work of his is in a kind of satirical verse, which is not the least weakness of this school. Professor Saintsbury, the most discerning critic of this poetical group, has said that if Crashaw "could but have kept himself at
his best he would have been the greatest of English poets’; Of another Catholic poet, William Habington, Crashaw’s contemporary, but less than he, though occasionally writing fine passages, the same critic remarks that he is ‘credibly distinguished’ from too many others “by a very strict and remarkable decency of thought and language.”

But this was poetry which could not develop; it was a kind of second crop from the Elizabethan field, and it gradually withered away. Some time before its essence was mastered by the intellect rather than to imagination or feeling. Satie or didactic poetry gradually usurped almost the whole field. But this was not accomplished in full until Dryden came. It was he who stamped this school with its leading marks, and gave the heroic couplet its “long resounding march and energy divine”. Yet the restricted and prosaic subject-matter of this verse—satie, didactic, and argumentative work on religion (“The Hind and the Panther” was written in the cause of the Church) and politics—has made some critics deny to it, unjustly, the name of poetry. It is poetry of a certain restricted kind.

John Dryden (1631-1700), had he lived in a time more favourable to imaginative work, would have written verse more purely poetic. He had about him something of the amplitude, inventiveness, and freedom of the Elizabethans, and the history of his poetic development shows him passing from stage to stage of excellence. Though he was the crown and chief of the so-called “classical school”, he was indeed deeply tinged with romantic feeling; and he himself knew and acknowledged that poetry was capable of a higher flight and wider range than it had ever taken in his own day. He was, moreover, a man of many powers. He was a prolific dramatist, and his critical writings have made an epoch in the history of English prose. In the course of his life he changed his politics and his religion; and though doubts have been cast upon his religious faith and principles, the most recent criticism is of opinion that he had nothing but spiritual ends to gain by his conversion to Catholicism. It is unfortunate that we cannot exonerate him as an author from the charge of that sensuality which mars a good deal of his dramatic writing—it is no better and sometimes worse than the immoral though brilliantly witty drama of his time. He himself at the close of his life wrote a full apology for this trait in his work.

Dryden’s lines on Milton show the exalted estimate he had formed of his greater and earlier contemporary, and time has proved the general truth of it. The poetry of Milton (1608-1674) has become an English classic, and “Paradise Lost” has been translated into many tongues. It is regarded as the one great epic in English, and its fame has somewhat overshadowed that of Milton’s earlier works, “L’AlLEGRO”, “II Penseroso”, “Comus”, and “Lycidas”—poems within their own limits as perfect as anything he ever did. It is when we turn to his prose that we realize, from the immeasurable difference between it and his verse, how comparatively low the received standard of prose must have been.

“Milton, the great architect of the paragraph and the sentence in verse, seems to be entirely ignorant of the laws of both in prose, or at least utterly incapable or careless of obeying those laws.” Yet it contains some splendid passages more like poetry than prose, but the controversial matter which is the subject of most of it—to say nothing of its often violent manner—is scarcely interesting to the present generation. Prose in the seventeenth century had an eventful history, and in spite of the lack of a high common standard, produced some masterpieces. At the beginning of it there is the weighty work of Sir Francis Bacon (1561-1626), embracing in many volumes matters of natural science, philosophy, history, ethics, worldly wisdom, even fiction, and in his Essays and in his “Advancement of Learning” especially, adding to English classics. Lord Clarendon’s “History” presents a noble gallery of portraits; there is Sir Thomas Browne (accounted by his enthusiastic admirers one of the greatest prose writers, though in the range of the English), the finest of the rhetorical, fantastic, and wholly delightful set of writers who arose at this time, treating in a semi-speculative fashion a wide, various range of subject-matter. A number of religious and devotional works appear, among which the sermons of Jeremy Taylor stand high, and John Bunyan in “The Pilgrim’s Progress” produced a masterpiece of English. Nor must we forget the Authorised Version of the Bible, 1611—a work of the greatest eclecticism, drawn from many sources, and yet having the appearance of absolute naturalness and simplicity. Preaching was a notable feature of the time, and the very long sermons of Tillotson, Barrow, Stillingfleet, and others make good literature. Dryden claimed Archbishop Tillotson as his master in prose, and it is when we come to Dryden’s own work in the latter half of the century that we find prose beginning to take its place as “the other harmony” of verbal artistic expression. On the whole, it is the mark of Restoration prose to become conversational, and we may say that modern prose, easy, flexible, and fitted for general use, arose in Dryden’s critical prefaces.

Dryden died in 1700, and with the opening of the eighteenth century was an age of strongly marked characteristics. The Revolution by which the Stuart dynasty was displaced had been accomplished, involving, naturally, great changes in the fortunes of religious and political life, particularly disastrous to the Catholic Faith in England. In its earlier stages the century is filled by the party strife of Whigs and Tories, and by the religious movements known as Methodism and Deism—two strange opposites. In the upper classes there was a general lowering of spiritual and emotional temperature—to be enthusiastic was “bad form”—and religion and literature equally suffered. The growing middle class seems to some extent to have escaped this tepidity, and the preaching of Methodism touched their hearts.
The “Church of England”, now the State “established” Church, was, however, in a state of spiritual poverty—many of her best clergy having left her for conscience’ sake at the time of the Act of Uniformity. As far as the current stream of poetry was concerned, it had become an affair of a circle of learned and fashionable people. A great admiration prevailed for the classics and classical principles, seen generally through the eyes of French critics.

The century opened badly for literature. For years there had not been such a barren literary time. Dryden had just died, and though much verse was being written, it was mostly poor. In prose, there were few men of any mark. The only work showing power was the “Essay on Criticism”, a work of genius. Congreve, Vanbrugh, and Farquhar. But within ten years there was a remarkable change. Pope came to the front in verse, and for many years poetry was to be almost synonymous with his name. In prose there was a galaxy of genius, Swift (1667-1746), Addison (1672-1719), Steele(1671-1726), Berkeley (1685-1753), to mention only a few, in whose hands modern prose—mature, varied, capable, combining, when at its best, strength, sweetness, grace, and magnificence—becomes henceforth a secure possession of English literature. But this work of genius opened the way for the guidance of the hands not only of writers but also for that of the masters in the half of the century, from Dr. Johnson and those who collected his works. Dunton are the historians Gibbon and Robertson. It thus took on a certain formality and stateliness not known before.

Pope and Johnson are the two names that dominate almost tyrannically the first and second half of the century, the eighteenth century. Most of the elements of his age are more or less represented in the work of Alexander Pope (1688-1714), though, as a Catholic, his religious sympathies lay in another direction than those of his day. His first important poem, the “Essay on Criticism”, lays down the rules for the guidance of the modern prose; his “Rape of the Lock”, perhaps his best poem, gives a brilliant and witty picture of the high society of his time; his translation of Homer is a Greek story told in an eighteenth-century manner; his “Essay on Man” is a versifying of Shaftesbury’s philosophy; and the “Essays and Epistles” and “Essay on Man” are the sources of Dryden and Pope share between them the chief honours of English satire. Pope’s picture of Atticus (Addison) and Dryden’s of Zimri (Buckingham) have no equals in our satiric literature. The subject-matter of Pope’s poetry may sometimes fail to interest us, but the versification always claims attention. Pope refined and polished and super-refined the heroic couplet until it became the most perfect instrument for satiric verse. He has not the original vigour and variety of Dryden’s couplet, but it has a finer finish and a more subtle thrust.

The greatest strength of literature, however, at this time went into prose, and the prose writers contemporary with Pope are men of genius, with Swift by far the greatest of them. His “Tale of a Tub” and “Gulliver’s Travels”—to mention only the two greatest of his writings—show a power of intellect and imagination worthy to be employed upon much finer subject-matter. The first part of “Gulliver’s Travels” finds him, perhaps, at his happiest, and is less marred by the bitter rage against men and life, and the touches of founness, which spoil so much of his work. He is, too, one of the great humourists, and his style is marked by sincerity, clearness, force, flexibility, and sometimes grace.

But the greatest work in prose, on the whole, was done by Addison and Steele in the essays of “The Tatler” and “The Spectator”. They were men of less genius than Swift, but who looked at life humanly and wished to add to men’s peace and happiness. They expressed with wit, kindness, and literary skill their views and their intentions. The definite aim was to bond together the large parties in politics and religion by showing them how much of life and interests they possessed in common, and by gentle railly and wellbred exhortation, to “rub off their corners”. They did accomplish much of this; everybody, regardless of politics, read the Essays, which came out several times a week, or daily, and every one enjoyed and talked them over. Polite literature by this means permeated and helped to refine the great and growing middle class.

Another form of prose which arises now, and was destined to become much greater than the essay, was the novel. The modern novel is born with the work of Richardson and Fielding—the work of the one viewing things from an emotional standpoint, that of the other giving a more comprehensive and objective picture of life. Richardson wrote out of his own native feeling and somewhat restricted experience; Fielding, equally original, was largely and beneficially influenced by Cervantes and the novels of many other men of genius, whose work grips the reader, but their offences against good taste and morality will always prevent their becoming household companions as Scott and Dickens have become. Smollett and Sterne continue the life of the novel, and Goldsmith, in his masterpiece “The Vicar of Wakefield”, has earned the gratitude of all readers. Biography, philosophy, and history have a large and distinguished place in the prose of this time. Samuel Johnson (1709-1784) accomplished many kinds of literature. His earliest attempt as well as his latest is biography; of essays he wrote many, but his genius is not best suited to that form, and the work is too often peremptory and dogmatic. His famous dictionary is philosophy with an autobiographical flavour; his lives of the poets are partly biographical, but mainly critical, while criticism fills a good space in his edition of Shakespeare. But it is not only the range and value of all this work which makes it so attractive, but—in spite of its limitations—it is a strong, kindly character that animates every line of it.

“That fellow calls forth all my powers”, said John of Burke. Edmund Burke (1729-1797) is now looked upon as England’s greatest political philosopher, and his writings belong in subject-matter to history and politics, rather than to literature. His works, however, rich, imaginative, full of energy, varied to suit its theme, moving among worlds of knowledge, and selecting just the right word and illustration in each place, puts him among the great liter-
ary writers of the century. Both Johnson and Burke are touched with the romantic spirit, but Johnson would have vigorously repudiated any charge of romanticism in his work, and indeed he stood as a great bulwark against the flood of new thought and feeling which, becoming apparent after the death of Pope, had been rising little by little, especially in poetry, ever since the twenties. The great romantic movement, so difficult to define, and yet so easy to trace, becomes the supreme point of interest for the literary historian in the later eighteenth century. There is no class of poets more typical of this time, but stands in some relation to it, and its influence, as we have said, may be seen, though less clearly, in many of the prose writings.

This movement was for the widening and deepening of literature. New fields of subject-matter were taken in hand, and the treatment of these gradually became more imaginative and emotional than it had been since the Elizabethan age. Nature and human life, after suffering from some out-frigid treatment at the hands of the classical school, seemed to un-stiffen and to become warm, living, and natural with the romantic writers. But this was a very gradual process, and began in the very heart of the classical movement; we may even see traces of it in the un-realized longings of Pope himself, who loved Spenser, and who wished he could write a fairy tale. We see the change coming in the gradual rise of fresh metres, and especially of blank verse, in opposition to the heroic couplet; in fact the struggle of romantic against classic centred to some extent round these two forms.

But just as marked is the choice of new subject-matter, "Nature for her own sake"—natural description imbedded in other matter, or even forming the sole subject of poems—now occupy the writer. Human life, in aspects neglected by the school of Pope, begins to assert itself. And all this new matter, treated in a melancholy-humanizing spirit, gradually grows in imaginative strength, simplicity, and naturalness, until we reach the poetry of Wordsworth and Coleridge, in which the movement is brought to its height and at the same time takes on a new freshness and impetus. James Thomson (1700–1748) published his blank-verse poem of "The Seasons" in 1720–90, and, even though there are many traces in it of the school of Pope, it sounds the first clear note of revolt. It is the first blank-verse poem of importance in the century, and the first important poem devoted to natural description. Many new elements are found in it, too, such as the interest in the poor and the labouring class, and in lands beyond England, as well as a new feeling and affection for animals. In 1748, the year of his death, Thomson published his "Castle of Indolence", the best imitation of Spenser's verse and manner that exists, and this was another sign of change. There were many poems written in blank verse or in Spenserian stanza between this poet and the work of Gray, whose contribution to the romantic movement is seen perhaps most clearly in his translations from the Icelandic and Gaelic, where he opened up a new field of subject-matter for the interest of readers and the use of poets. And Gray's poems, small in quantity, but exquisitely finished, were not his only work; as a prose writer he gives us in his letters and journals first-hand and beautiful descriptions of nature in unaffected English. But his poetry is less simple, and, with its restraint of manner, might in some aspects be claimed by the classical school. It is in the decade after his death that we find the movement towards the more natural style expressing itself unmistakably in the half-mournful glamour of Macpherson's rhetorical prose "translations" of the Celtic poetry of Ossian, in the poems of the unhappy boy-genius Chatterton, and in the collection of "Percy Ballads".

Following on these, however, there is a strong attempt at re-creation in the poetry of Dr. Johnson, Churchill, and Goldsmith—though Goldsmith's charming poems are more romantic than he knew. But in the next few years the battle is quickly won for romance by four poets: Burns, Cowper, Crabbe, and Blake, whose significance in the movement is more fully recognized now than it was then. Burns, who wrote the best of his poetry in a mixed Scottish dialect, had been nourished on the best English poets of the past, and the clearness and precision of his verse as well as its satirical and didactic subject-matter belongs to the school of Pope at its best. But, on the other hand, the essential spirit of his satire, in contrast with the detached coldness of Pope's, is a consuming fire, as Swinburne has pointed out, while his songs, full of melody and passionate feeling, though all in the line of previous Scottish poetry, were new as regards England, and were truly romantic in tone and manner. There are poems and passages of verse that we wish Burns had never written, but the largest part of his work belongs to our great literary store of things noble and humane.

In William Cowper (1731–1800) we come to a poet whose influence is more and more recognized as of first importance in the romantic trend of eighteenth-century poetry. Living the most retired of lives, and not writing much until over fifty years of age, he is a body of poetry marked with his own gentle, affectionate, humorous, and sometimes tragic genius, much of which has become classic in English. His best long poem, "The Task", in blank verse, contains his most original work in the clear and simple descriptions of natural scenery. He also, like Gray, was one of the best of our letter-writers. George Crabbe (1754–1832) wrote nearly all his poetry in the heroic couplet, but used that form with more freedom than his contemporaries. Much of his work is of the story kind, and some of his poems are like novels in verse. Though he chose a hackneyed form for his work, and though all his sketches and stories tend to edification in a didactic way, he is never dull, and his analysis of motive and temperament, and his realism are strangely modern in the antiquated setting of the heroic couplet. His work deserves more notice than English readers as a rule give to it. William Blake (1757–1827), the fourth of these poets, is one of those geniuses who belong to no one time or place. Some of the simple and charming poems in his two best-known little volumes, "Songs of Innocence" and "Songs of Experience", might have been written by an Elizabethan, while his long mystical works in verse, not truly poetical, show him in the light of a dreamer whose dreams are rooted in some spiritual reality which only a very few readers can discern with him. But his poetry, as a whole,
though scarcely heeded at all by the public of his own day, has been found, as it has received more attention recently, to contain within itself the germs of many later developments of thought and feeling in society and literature. He was an engraver and painter as well as a poet, and his work in these capacities cannot be neglected if one wishes to understand the character of his genius.

Crabbe and Blake carry us on into the nineteenth century, but before their death Wordsworth and Coleridge accomplished the first of their epoch-making work. With these two poets we enter upon the story of our modern literature. Wordsworth and Coleridge are still in some sense with us, as their predecessors of the seventeenth and eighteenth century and English modern poets are directly or indirectly influenced by them. They deliberately determined to be missionaries in poetry, and they accomplished a mission in the face of great discouragement and opposition. The small volume of "Lyrical Ballads" published in 1798, when they were young men together under thirty, made a revolution in poetry and was the fullest expression of the feeling that the English was the half unconsciously to bring about. The "Ancient Mariner", which opened the book, and the "Tintern Abbey Lines", which closed it, to say nothing of the many successes and few failures which fill up the space between, were alone enough to set up a poetic standard of high and peculiar significance. In these poems there was accuracy and truth to the kind of human spirit with the poet's own imagination and feeling; there was love of, and interest in, vivid human life, regardless of class or country; there was weighty ethical matter without dullness. It is perhaps in this seriousness with which life is viewed that we find one of the key-notes of the poetical literature of the later Victorian age. It has been said of Wordsworth that he was a philosopher, and he wrote of "what is in all men", and the leading ideas of his poetry are indeed those in which all natural and sane human beings can join. The healing and joy-giving power of nature, the strength, beauty, and pathos of the simplest human affections, more especially as seen in the less sophisticated men and women of the poorer classes, in the earth that is the realized by all. But Wordsworth had also a philosophy of nature and her relationship to human beings which was the foundation of all his teaching, and which he expounded in poem after poem, in passages often of very great beauty, and in much variety of style. It may be here noticed that Wordsworth's philosophy varies more than the ordinary judgment gives him credit for. In his eagerness for freedom from conventional phrasing, he strove, as he himself tells us in his prose critical preface to the poems, for utter simplicity of language which to us at times seems bare and even puerile in its effect; but he is capable more than most of a richness of style and diction, especially in his blank verse, that is the very opposite of his own theory. He has many styles, and no critical summary of his work is ever satisfactory to the Wordsworthian who realizes this.

The poetry of Samuel Taylor Coleridge (1772–1834) does not represent the poet with anything like the same fullness as does that of Wordsworth. Those of Coleridge's poems which are of the first order of poetry are few, but they are inimitable and perfect of their kind, and have a melody of peculiar witchery. Coleridge was a nearly all that he realized by all. He has left only fragmentary work on philosophy and criticism behind him, but even that has affected and still affects the thought of our own time. Had Coleridge possessed the will-power and endurance of Wordsworth in addition to his own genius, no one could tell to what heights he might have attained. His career is a tragedy of character.

On these two poets when young men, as well as on Southey and others, the altruistic philosophy of the French revolutionary movement had a profound effect, and in Wordsworth's "Preface" we may see to some extent the extraordinary and stimulating influence of these ideas upon some of the young and generous English minds. But in spite of much that was true in it, the elements of error, inadequacy, and crudeness in this philosophy became apparent, especially in the course of the French Revolution, and a revulsion from it fell upon both Coleridge and Wordsworth. Wordsworth alone of the two emerged from the trial unembittered—thanks to nature and to his sister Dorothy—though how crucial to his life this crisis was he has himself told us. No one can properly understand this romantic poetry in the light of the momentary uprising of Shelley, Byron, and Keats, if he does not to some extent realize the high and generous hopes raised by the ideas of the Revolution in certain ardent minds in England. They saw countless evils and oppression in the social life of the time, and here, in the working out of the ideas of Liberty, Equality, and Fraternity, seemed a full remedy. The three poets just mentioned lived in the memory of the revolutionary spirit and were affected, partly from personal causes, and partly because of the state of the society in which they lived. He saw no redemption at hand. Shelley was fired by the revolutionary principles as he found them interpreted by the rationalism of Godwin, even while he shared, too, in the reaction caused by the excesses of France. Keats knew neither the revolutionary philosophy nor any of the romantic elements in the life of the past which are more particularly associated with the Ages of Faith. His close and affectionate description of the Scottish scenery he loved so much was a strong influence in developing the care for natural scenery which has become one of the leading marks of the nineteenth century. His poetry is by all means the most genuine of all his work, his short songs and ballads, and in detached passages of his longer poems, and it is verse not unworthy to be placed beside the finest romantic work of the time. But his best-known narrative poems—"The Lay of the Last Minstrel", "Marmion", and "The Lady of the Lake"—have all through a great and special charm, and their style, clear, rapid, full of energy, and together with their pure, faultless, melody, have made them worthy of their place among our classics. The popularity of Scott's narrative poetry was overshadowed, however, by the narrative work of Lord Byron, but to our gain, since this led Scott to turn to another form of art and to produce "The Waverley Novels".

Of the three young poets of genius whose short lives accomplished so much in the poetry of their day, Lord Byron (1788–1824) is now perhaps the least influential, though at the time his fame overshadowed every other writer of verse. His extraordinary vigorous satires, marked by his study of Pope, whose poetry he championed in a literary controversy of the time, are unique in the energy of their style and the strength and sting of their wit. It is in this character that he is now marred, for the ordinary reader, by their extreme voluptuousness. His verse tales of romantic adventure are imaginative, but pull upon us by their tendency to sentimentality. His songs and occasional pieces, together with "Childe Harold"—parts of which have fine nature-description—show him in a more agreeable poetic light. His many dramas are not truly dramatic, but are rather the outpouring of his own powerful mind seeking an outlet. If we are inclined to take an anti-Byronic attitude, it is well to
remember, first, that his brilliant, undisciplined, passionate work, though it never reached the height of the noblest art, yet taught a lesson of force, vitality, and sincerity to an age which, in spite of its good, was marked by much artificiality, callousness, and insincerity in both life and literature. He did this in a rude and melodramatic way, but he did it. And secondly, let those who judge Byron's wild private career not forget to read the last poem that he wrote, and rest assured that in the temporary nobler things, was awakening in him before he died.

Keats and Shelley invite comparison; their difference and their likeness are equally striking. They lived the same length of time, did all their work before thirty, dying young and with tragedy. They left behind them poetry of the highest order—their lyrics are masterpieces containing the promise of still finer work. They were the devoted lovers of beauty, believing in it as the supreme reality, and were in earnest over their art, both of them leaving behind grave poems expressing their unfinished, and therefore often unsatisfactory and misleading, philosophy of life. Each poet also has written remarkable prose. It is a great mistake to consider Percy Bysshe Shelley (1792-1822) as the dry, unemotional, and too systematic poet of his generation. He was quite half human, and not at all ineffective. His most ethereal lyrics will be found to possess a basis of logical thought, while his prose writings show him as a thinker quite capable of keeping the imagination in her place. There are signs, too, in the development of his work that he was growing and more and more capable of preserving the balance of his imagination and rational faculty. Of the work accomplished in his short life is much and varied. Putting aside his early poems, there is the almost perfect "Adonais," the grave and beautiful lyrical drama of "Prometheus Unbound," in which he states his hopes (not always well grounded and apparently anti-Christian, though he revered certain elements in Christianity) for the future. For the most part, his crowd of short and exquisite lyrics—the highest watermark of English poetry of this kind—as well as the fateful and mystic "Triumph of Life," to say nothing of many others, and amongst them some fine dramatic work in blank verse. And he was only twenty-eight when he was drowned. Upon his errors of thought and of conduct we need not dwell. They are plain before all who read him. But Tennyson and Browning now and then intruding into it, a certain cruelty of youth appears. But all he does and says is in good faith, and for his errors he suffered bitterly during his short life. One of the noblest and most discerning of tributes ever paid to his genius has been lately published from the pen of the now well-known Catholic poet, Francis Thompson. John Keats's "The Nightingale" and "Autumn" are supreme art. Some of his narrative poems are among the best of their kind and his fragment of "Hyperion" shows what he might have accomplished had he lived to practise this graver type of poetry. His fame, however, is now established, and his poetic influence has been one of the strongest in the nineteenth century.

After the death of Keats poetry seems for a time to have exhausted itself. There is little to chronicle except the chirpings of small poets until the great age of Victorian poetry opens with Tennyson and Browning. But, to fill up the early years of the century, there is fine work in prose. The great series of Sir Walter Scott's novels extend from 1814 to 1831, and many smaller efficient writers are ranged round this central figure. The wild enthusiasm with which the Victorian novels were received can perhaps never be renewed. A multitude of causes have tended to divert and disturb the public taste for these great books, and it now fluctuates sometimes farther from, sometimes nearer to, them. But such work as his is immortal, and regardless of human fluctuations, it will, and does, appeal always to a multitude of readers—learned or unlearned—who for tone and temper of words, and rather more than to the gifts of genius apart from the trend of fashion. Scott's novels are full of kindly humanity, of close and accurate drawing of many types of character, only to be equalled by Shakespeare or Chaucer, of wide and detailed historical knowledge, though, to Catholic regret, he never understood or adequately represented the Church, handled magnificently with equal imagination and sanity, so that age after age lives again, not only as the dry facts of history which have been brought laboriously together "bone to his bone," but as a living human world whose dwellers have been raised out of silence to their feet by the creative voice—an exceeding great army. Of Scott's work even more than of Chaucer's, we may say, with Dryden, "it is God's own work of art.

Scott died in 1832, and the Victorian age opened in literary faintness. Alfred Tennyson and Robert Browning were on the verge of the horizon, but it was not until 1840 or so that there came that dazzling revival of literature such as had not been seen since the Elizabethan age, and which in extent and swiftness of production eclipsed that age. Into the causes of this it is impossible to go further than to say that Tennyson and Browning are leaders among the poets far into the century. Elizabeth Barrett Browning makes a distant third. Tennyson and Browning are representative of the most important phases of the Victorian age, universally acknowledged, though general opinion is still divided as to their relative merits. Both are artists of high order, but their genius is not consistent. Both feel the importance, gravity, and interest of life. Both take a religious view of life and have that spirit of reverence which is lacking in many of their followers. Both believe in their mission to call men to forsake materialism, and each, in his own particular way, is a lover of natural beauty. Browning's sympathies are, in a sense, wider than Tennyson's, but Tennyson's feeling goes deeper, perhaps, on the great religious and moral questions than Browning's.

If we are still too near Tennyson and Browning to be able to form a true estimate of them, we are even less able to judge the writers of the latter half of the nineteenth century. The numerous streams of literature become bewildering to follow. We distinguish before the end of the career of the greatest poets the fine but smaller figures of Rossetti, William Morris, Matthew Arnold, and others, doing work of true genius though not all of equal power. None of them, however, have the vivid inspirations of great, impelling, impersonal ideas such as filled Wordsworth and Shelley. The note of melancholy and uncertainty concerning life and death is more characteristic of this age. All this life, is always more or less there in undertone. The optimism of Browning and the faith of Tennyson are not to be found, but their love of beauty is fervent and stimulating.

In the last quarter of the century poetry has taken on many strange and sometimes beautiful forms. A high level of excellence has prevailed on the whole. Poets of remarkable promise and achievement have appeared. Amongst these, Francis Thompson (1859-1907), in the opinion of most, takes the commanding place. The appreciation of him by well-known and most able critics has been extraordinarily unanimous and unstinted. He seems to have reached the peaks of Parnassus at a bound."
with almost every great previous English poet, and whatever may be the more balanced verdict of the future, his poetic immortality is assured. And his Catholic religion was his deepest inspiration.

The prose which grew up around the greatest Victorian poetry was worthy of its company. A brilliant group of writers as well as of thinkers in many spheres of knowledge and art appeared, and in this respect the age has surpassed the Elizabethan. The development of the novel is the most distinguishing mark of Victorian prose literature. Dickens and Thackeray follow upon Scott, with a host of other novelists, men and women, of varying grades of power, who come up to yonder. The beginning of the second period of Scottish prose has been many and splendid. There are the essayists, with Lamb and Hazlitt as the chief; the historians with Macaulay and Carlyle, Froude, Freeman, and Green; Ruskin, with his immense and varied work upon art, economics, and the conduct of life, and whose influence, all for good, in spite of the vagaries of literary taste, is still strong and growing. The enormous extent and range of theological literature is a remarkable feature of the last fifty years, and here the writings of John Henry Newman (q. v.) stand out as a supreme "literary glory". Newman touched poetry with imagination, grace, and skill, but it is by his prose that he is recognized as a great master of English style. While all critics agree that the "Apologia" is a masterpiece, there is a "nothing he wrote is more superfluous", there is some difference of opinion as to the respective literary values of his earlier and later work. R. H. Hutton, however, one of his acutest non-Catholic critics, considers that "in irony, in humour, in imaginative force, the writings of the later portions of his career far surpass those of his theological prophecies".

Catholic writers are now many. After long years of repression they have their full freedom in the arena of literature, and there is more than a promise that when the history of the twentieth century comes to be written many Catholic names will be found in the highest places on the roll of honour.

K. M. WARREN.

England, Established Church of. See Anglica.

England, John, first Bishop of Charleston, South Carolina, U. S. A.; b. 23 September, 1756, in Cork, Ireland; d. at Charleston, 11 April, 1842. He was educated in Cork until his fifteenth year, was then taught privately for two years, and entered Catholic College, Dublin, in 1803. That same year he began to deliver catechetical instructions in the parish chapel and zealously instructed the soldiers in garrison at Cork. He also established a female reformatory together with male and female poor schools. Out of these schools grew the Presentation Convent. He was ordained priest in Cork, 10 October, 1809, and within a month at the bidding of the Bishop he preached people thronged to hear him. Pending the opening of the Magdalen Asylum he maintained and ministered to many applicants. In the same year he published the "Religious Repertory", established a circulating library in the parish of St. Mary, Shandon, and attended the city jail. In the elections of 1812 he fearlessly exerted his influence, maintaining that, "in advocating the political rights of his countrymen, he was but asserting their liberty of conscience". In the same year he was appointed president of the new diocesan College of St. Mary, where he taught theology. In 1814 he vigorously and successfully assailed with tongue and pen the insidious Veto measure which threatened disaster to the Church in Ireland. Next to O'Connell's his influence was the greatest in the agitation which culminated in Catholic Emancipation. To help this cause he founded "The Chronicle" which he continued to edit until he left Ireland. In 1817 he was appointed parish priest of Bandon. (The bigotry and prejudice of this city at that time may be conjectured from the inscription over its gates: "Turk, Jew or Atheist may enter here, but not a Papist."") In spite of the prejudices which he found there, he soon consolidated men of every sect and party.

He was consecrated Bishop of Charleston at Cork, 21 Sept., 1820, and refused to take the customary oath of allegiance to the British Government, declaring his intention to become a citizen of the United States as soon as possible. He arrived in Charleston 30 Dec., 1820. Conditions were most uninviting and unpropitious in the new diocese, which consisted of the three States of South Carolina, North Carolina, and Georgia. The Catholics were scattered in little groups over these States. The meagre number in Charleston consisted of very poor immigrants from Ireland and ruined refugees from San Domingo and their servants. In 1832, after twelve years of labour, Bishop England estimated the Catholics of his diocese at eleven thousand souls: 7500 in South Carolina, 3000 in Georgia, and 500 in North Carolina. South Carolina was divided between two provinces and was ruled by the Lords Proprietors, who brought with them the religion of the Established Church, and it was only in 1763 that concerted attempts imposing religious disabilities were expunged from the constitution of the new State. Religious and social antecedents and traditions, and the resultant public opinion, were antagonistic, not antagonistic, to the growth of Catholicism. The greatest need was a sufficient number of Catholic clergy. This sparsely settled section, with scattered and impoverished congregations, had not heretofore attracted many men of signal merit and ability. Bishop England faced these unfavourable conditions in a brave and determined spirit. The day after his arrival he assumed formal charge of his see, and immediately issued a pastoral and set out on his first visitation of the three States comprising his diocese. No bishop could be more regular and constant in these visitations. He went wherever he heard there was a Catholic, organized the scattered little flocks, ministered to their spiritual needs, appointed persons to teach catechism, and wherever possible established a rectory of a church. During these visitations he preached in halls, court houses, State houses, and in chapels and churches of Protestant sects, sometimes at the invitation of the pastors. When in Charleston he preached at least twice every Sunday and delivered several courses of lectures besides various addresses on special occasions. He successfully advocated before the Legislature of South Carolina the granting of a charter for his diocesan corporation, which had been strongly opposed through the machinations of the disaffected trustees. In 1826 he delivered, by invitation, an eloquent discourse before the Congress of the United States. It was the first time a Catholic priest was so honoured. He was chiefly instrumental in having the First Provincial Council of Baltimore convened, and pending this, formulated a constitution for his diocese defining its relations to civil and canon law. This was incorporated by the State and adopted by the several congregations. He
also organized conventions of representative clergy and laity in each of the States in his diocese, to meet annually. In 1840 these were merged into one general convention. He held a synod of the clergy, 21 Nov., 1831, and in 1832 established a seminary and college under the name of "The Philosophical and Classical Seminary of Charleston", hoping with the income from the collegiate department to maintain the seminary. Notwithstanding his many and varied duties he devoted himself to this institution as teacher of classics and professor of theology. Organized bigotry soon assailed it, reducing the attendance from one hundred and thirty pupils to three; but through the spirit of the institution and the energy and zeal of its students it became the alma mater of many eminent laymen and apostolic priests. In the words of Chancellor Kent, "Bishop England revived classical learning in South Carolina". In 1832 he organized and incorporated a Book Society to be established in each congregation, and in the same year his indefatigable energy and zeal led him to establish the "United States Catholic Missal", the first distinctively Catholic newspaper published in the United States. It continued to be published until 1861 and is a treasury of instructive and edifying reading. He also compiled a catechism and prepared a new edition of the Missal in English with an explanation of the Mass. He was an active member of the Philosophical Society of Charleston, the American Bible Society, the Anglican and Protestant Episcopal Church in its infancy, the Edinburgh (or Immortal) Philological Society, and strenuously opposed Nullification in a community where it was vehemently advocated. His intense loyalty to his faith led him into several controversies which he conducted with a dignity and charity that commanded the respect of his opponents and elicited touching tributes from some of them at his death.

In 1836 he established in Charleston the Sisters of Our Lady of Mercy "to educate females of the middling class of society; also to have a school for free colored girls, and to give religious instruction to female slaves; they will also devote themselves to the service of the sick". Subsequently their scope was enlarged, and branch houses were established at Savannah, Wilmington, and Sunter. In 1834 he further promoted education and charity by the introduction of the Ursulines. In 1835 Rt. Rev. William Clancy arrived from Ireland as the coadjutor of Bishop England, but, after a year's dissatisfied sojourn, he requested and obtained a transfer to another field. Bishop England had originally asked for the appointment of the Rev. Dr. Paul Cullen, then rector of the Irish College, Rome (and afterwards, as Dr. Charles Thaddeus, a Irish bishop and, in 1880, a cardinal), as coadjutor to the Bishop. A striking phase of Bishop England's apostolic character was manifested in his spiritual care of the negroes. He celebrated an early Mass in the cathedral for them every Sunday and preached to them at this Mass and at a Vesper service. He was accustomed to deliver two afternoon sermons; if unable to deliver both, he would disappoint the rich and cultured society by declining to preach to the ignorant Africans. In the epidemics of those days he exhibited great devotion to the sick, while his priests and the Sisters of Mercy volunteered their services in the visitations of cholera and yellow fever. His personal poverty was pitiable. He was known to have walked the streets of Charleston with the bare soles of his feet to the ground. Several times the excessive fatigue and exposure incurred in his visitations and ministrations prostrated him, and more than once he was in danger of death. Twice he visited Hayti as Apostolic Delegate. In 1823 he was asked to take charge of East Florida and, having been given the powers of vicar-general, made a visitation of that territory.

In the interests of his impoverished diocese he visited the chief towns and cities of the Union, crossed the ocean four times, sought aid from the Holy Father, the Propaganda, the Leopoldine Society of Vienna, and made appeals in Ireland, England, France, Italy, wherever he could obtain money, vestments, or books. After Easter, in 1841, he visited Europe for the last time. On the long and boisterous return voyage he was taken very sick, but the spirit of his country and his love of the church sustained him through his constant attendance on others. Though very weak, notwithstanding, on his arrival in Philadelphia, he preached seventeen nights consecutively, also four nights in Baltimore. With his health broken and his strength almost exhausted, he promptly resumed his duties on his return to Charleston, where he died, sincerely mourned by men of every denomination.

His apostolic zeal, saintly life, exalted character, profound learning, and matchless eloquence made him a model for Catholics and an ornament of his order.

Most of his writings were given to the public through the columns of the "United States Catholic Miscellany", in the publications of which he was aided by his sister, a woman of many-sided ability and talents. His successor, Bishop Reynolds, collected his various writings, which were published in five volumes at Baltimore, in 1849. A new edition, edited by Archbishop S. B. Messmir of Milwaukee, was published at Cleveland in 1898.

Englefield, Felix, a Franciscan friar, d. 1767. He was the younger son of Henry Englefield of White Knights, Reading, and Catherine, daughter of Benjamin Poole of London. His elder brother, Henry, succeeded their cousin Charles as sixth baronet in 1728. It is uncertain whether his own baptismal name was Charles or Francis. He joined the Franciscans at Douai and was ordained there, probably about 1732, when he was approved for preaching and hearing confessions. He had been teaching philosophy there before ordination, and from 1734 to 1746 he taught theology. In 1744 and 1745 he was titular guardian of York, but remained in residence at Douai. From 1746 to 1749 he was elected as dean, as during that period was in England, for in March, 1749, he was sent to Rome on behalf of his own order and other regulars to procure the repeal of the papal decree of 1745 regulating the relations between the vicars Apostolic and the regulars. In this he failed, as Benedict XIV supported the vicars Apostolic by the "Rites of the English Mission", issued in 1746, under the title of guardian of Oxford, and in the following year he attended the general chapter at Rome in place of the provincial, Father Thomas Holmes, who was too infirm to undertake the journey. In 1750-1751 he was titular guardian of Greenwich; custos 1752-1755, and finally, on 19 Aug., 1755, he was elected provincial and held that office till 1758, living for part of the time at Hatfield. In 1759, in Glutenay, he drew up a valuable list of all the Franciscans then (1758) in England, with their addresses. Father Thadeus, O.F.M. (op. cit. inf., p. 14) states that he was the reputed author of the "Miraculous Powers of the Church of Christ", published anonymously in 1756. But this was really written by William Walton, afterwards Vicar Apostolic of the Northern District, whose name appears in the title-page of a subsequent issue. Father Englefield died probably at Douai, though one account says he was on the English mission at the time.

Edwin Burton.
Englefield, Sir Henry Charles, Bart., antiquary and scientist, b. 1752; d. 21 March, 1822. He was the eldest son of Sir Henry Englefield, sixth baronet, by his second wife, Catherine, daughter of Sir Charles Bucke, Bart. His father, who was the son of Henry Englefield, of White Knights near Reading, had in 1728 succeeded to the title and the Englefield estates at Wooton Bassett. He had inherited both White Knights and Wooton Bassett on the death of his father, 25 May, 1780. He was never married and devoted his entire life to study. In 1778, at the early age of twenty-six, he was elected a Fellow of the Royal Society, and in the following year Fellow of the Society of Antiquaries. For many years he was vice-president of the latter, and in 1799 President. Owing, however, to his being a Catholic, objection was taken to his re-election, and he was replaced by the Earl of Aberdare. Under his direction the society produced between 1797 and 1813 the series of engravings of English cathedrals, to which series he contributed the dissertations on Durham, Gloucester, and Exeter. In 1781 Englefield joined the Dilettanti Society and acted as its secretary for fourteen years. Besides his antiquarian studies, which resulted in many contributions to "Archaeologia", he carried on research in chemistry, mathematics, astronomy, and geology. His "Discovery of a Lake from Madder" won for him the gold medal of the Society of Arts. He took no part in public life, owing to Catholic disabilities, but was intimate with Charles James Fox, whose society in political matters and erudite conversation won him many friends. His portrait was painted by Sir Thomas Lawrence, and two bronze medals were struck bearing his likeness.

In Catholic affairs Englefield took a prominent part, being elected in 1782 a member of the Catholic Committee, formed by the laity for the promotion of Catholic interests. He was throughout entirely unmade by the conflict with the vicars Apostolic. In the early stages of this dispute he was one of the moving spirits and contributed the pamphlet, mentioned below, in answer to Dr. Horsley, the Anglican prelate. The latter afterwards became the friend of the Catholics, and it was through his influence that the Catholic Relief Bill of 1791 was modified to suit the requirements of the Catholics. Englefield took an independent line and at times went far in his opposition to the vicars Apostolic, as in 1792, when he was prepared to move a strong resolution at the general meeting of English Catholics. He was dissuaded at the last moment by the three who undertook to act as "Gentlemen Mediators" between the two parties. He is said to have returned home that evening with his eyesight failed; he died at his house, Tilney St., London, the baronetcy thereupon becoming extinct. His works are: "Tables of the Apparent Places of the Comet of 1661" (London, 1788); "Letter to the Author of 'The Review of the Case of the Protestant Dissenters'" (London, 1790); "On the Determination of the Orbits of Comets" (London, 1793); "A Walk Through London" (London, 1806); "Description of a New Transit Instrument, Improved by Sir H. Englefield" (London, 1814); "The Andrian, a Verse Translation from Terence" (London, 1814); "Description of the Principal Beauties, Antiquities and Geological Phenomena of the Isle of Wight", with engravings from his own drawings, and a portrait (London, 1816); "Observations on the Structure of the Bank of England" (London, 1821). In addition to these, there are a number of papers contributed to the transactions of the Society of Antiquaries, Royal Society, Royal Institution, Society of Arts, and the Linnean Society, as well as to "Nicholson's Journal" and "Tillock's Philosophical Magazine".

English College, The, in Rome.—I. Foundation.

—Some historians (e.g., Dodd, II, 108, following Polydore Vergil, Harphæld, Spelman, etc.) have traced the origin of the English College back to the Saxon school founded in Rome by Ina, King of the West Saxons, in 727. To an antiquity so great however, the college, venerable though it be, has no just claim. It dates from about the middle of the fourteenth century, when the Hospice of St. Thomas of Canterbury was founded. This hospice owed its existence to the Englishmen who frequented the Holy City from every country of Europe. Those who arrived from England in 1350 to perform their devotions, found it difficult to obtain suitable accommodation. This suggested an institution, national in character, where English pilgrims might receive shelter and hospitality. The archives of the English College seem to point to the establishment of a guild of laymen, which acquired certain property at the Palazzo Serrato, the principal persons who took part in the transactions being John Shepherd and Alice his wife, who devoted themselves and their fortunes to the service of the pilgrims in the hospice, and William Chandler, chamberlain, Robert de Pinea, syndic, and John Williams, officials of the community and society of the English College. In his "History of the English College in Rome" Dr. William Allen's visit to Rome in 1576, it was arranged with Pope Gregory XIII that a college should be founded there for the education of priests for the English Mission. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college, six more went in 1577, and, again assisted by Dr. Allen, property was acquired by the College. Dr. William Allen's visit to Rome in 1576, it was arranged with Pope Gregory XIII that a college should be founded there for the education of priests for the English Mission. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college, six more went in 1577, and, again assisted by Dr. Allen, property was acquired by the College. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college, six more went in 1577, and, again assisted by Dr. Allen, property was acquired by the College.
The Welsh rector was accused of favouring his fellow-countrymen; and finally the English students broke out into open mutiny. They petitioned the Holy Father that the college should be entrusted to the Fathers of the Society of Jesus, and declared that they would rather leave the college than remain under Dr. Clenock.

The students were ordered by the Cardinal Protector to submit under pain of expulsion; but they preferred to go, and began to make preparations for the journey back to Douai and Reims, or to England. Much sympathy, however, was shown for them in Rome, and, intercession being made with the Pope on their behalf (Liber Ecclesiae), the rector granted the college two days, and their petition was granted. Dr. Clenock was removed from the rectorship and the government of the college handed over to the Jesuits, the famous Father Robert Persons being given temporary charge till the appointment of the first permanent Rector, Father Alphonse Agazzari, on 23 April, 1579.

This day is the real birthday of the English College in Rome; for on this day the Bull of Foundation was signed by Pope Gregory XIII; on this day the students took the oath to lead an ecclesiastical life, and proceed to England when it should seem good to their superiors; and on this day the College Register begins. The Bull, however, was not published till 23 Dec., 1580. Under this date, the entry occurs in the College Register (Liber Rectoris), II, of which the following is the translation: "A.D. 1580, on the 23rd of December, to the praise and glory of the most Holy Trinity and of St. Thomas the Martyr, was expedited the Bull of the Foundation of this College, which, though it was granted by Pope Gregory XIII in April last year, did not reach our hands before the above date, and in which, as besides many faculties and spiritual goods, the faculties and the English Hospice were united with the College, we received possession of them on the 29th, Dec., which is dedicated to St. Thomas the Martyr: and although it does not explicitly appear in the Bull, yet the Pope declared by word of mouth that this College was bound to receive and maintain the English pilgrims according to the statutes of the said Hospice. This Bull has been deposited in the College Archives."

Thus the English College, the oldest but two of all the national colleges of Rome (the German College and the Greek College), was launched on its career, the number of students at the time in the college being fifty, a number which later rose to seventy-five. That the college did its work efficiently, and fulfilled the expectations of those who founded it, is abundantly attested by the lists of names of the priests sent into the mission-field, and especially by the roll of its martyrs. During the period 1682–1694, under the Cardinal Protector Howard, O.P., the greater part of the college was rebuilt.

The eighteenth century was a period of decline. Conflicts with the original constitutions of the college, boys were admitted for the course of humanities, and some even, of very tender years, for more elementary studies. In August, 1773, the Society of Jesus was suppressed, and the administration of the college was handed over to Italian secular priests. During this period the students were ill-treated, the college was mismanaged, and a large portion of the archives sold for the rack. At last, in the time of the Revolution the number of students was reduced to four divines, three philosophers, and three grammarians... Of those divines and philosophers, only three were ordained priests at Rome, and two at Douay; and the whole number of those ordained at Rome from 1775 to the year 1798, a period of 23 years, did not exceed seven, and of the novices who was founded a number of important duties, and the third but for a short time. In that same period four died in the College, and 34, if not more, quitted the house re infecto!—Six, however, afterwards pursued their studies in other Colleges, and were ordained priests." (Catholic Magazine, 1832, pp. 359–360.) Bishop Challoner, and afterwards the three vicars Apostolic, Bishops James and Thomas Talbot and Matthew Gibson, entertained the Pope to restore the college to its first administrators, the English secular clergy; and finally, on 12 April, 1783, the Congregation of Propaganda answered that when the rectorship fell vacant, an English priest might be appointed to the post. Cardinal Braschi, the Protector, wrote to Bishop Douglas on 4 November, 1797, informing him that the rector was about to resign, and requesting him to choose, in consultation with Mr. Cranmer (Cardinal Erskine), an English priest for the office. But before this could be done, the French had invaded Rome, the college was seized and suppressed, and the students sent to England. On the 30th of July, 1811, Cardinal Litta, Prefect of Propaganda, wrote to Bishop Poynter, vicar Apostolic of the London District, informing him that the college was about to be reopened, and inquiring about the fitness of the Rev. Stephen Green, who had been recommended by Bishop Milner for the rectorship. But Father Green died, and other obstacles arose, and nothing more was done for three years. Then Cardinal Consalvi, Secretary of State, acting as protector of the college, directed the English vicars Apostolic to select a priest for rector, and to send him to Rome at once. They chose the Rev. Robert Grauvel, who received his appointment on 8 March, 1818. Ten students, among whom was the future cardinal, Nicholas Wiseman, arrived in the following December. Thus the English College began to live again, and continued to flourish in its career of usefulness to the Church in England.

II. SCHOLASTIC STATUS.—In the Bull of Foundation, Gregory XIII confers on the college the privileges and rights of a university with the power of conferring the degrees of Bachelor, Licentiate, Doctor, and Master in Arts and Divinity. The students, from the beginning, attended the lectures of the Roman College, and then during the suppression of the Society of Jesus, at the University of St. Apollinaris (the Roman University). They returned, however, to the Roman College, on Green's death, and still attend it, taking its degrees in philosophy and theology, as the English College does not exercise its faculty of conferring degrees. The college is immediately subject to the Holy See, which is represented by a cardinal protector. The immediate superiors are the rector, appointed by the pope on the recommendation of the bishop of the diocese, and the vicar apostolic, appointed by the rector. The first rector, Dr. Maurice Clenock (1575–9), belonged to the English secular clergy. The Jesuits took the reins of government in 1679, and held them for one hundred and ninety-four years. Three of their rectors were Italians, and the rest English, the last being Wm. Hotherson, who, on the suppression of the society, landed the college over to the English secular priests.

The college has been, since 1818 the rectors have always been chosen from the English secular clergy. The college has the privilege of extra-parochiality, the rector being parish-priest for all its members, and exemption from the jurisdiction of the cardinal vicar and other ordinaries and tribunals of the Curia.

III. ILLUSTRIOUS STUDENTS.—Among the names of those included on the college lists, who have laid down their lives for the Faith, and the supremacy of the Holy See, six have been beatified, and thirty-six declared Venerable. The former are, Ralph Sherwin, John Shert, Luke Kirby, Laurence Richardson (ere Johnson), William Laey, and William Hart. Shert was the first missionary priest from the college to enter England. The Venerables are: George Haydock, Thomas Hemerford, John Mundem, John Lowe, Robert Morton, Richard Leigh, Christopher Buxton, Ed-
Confessors and Martyrs (1534-1729).—

Though the resistance of the English as a people to the Reformation compares very badly with the resistance offered by several other nations, the example given by those who died for their faith is so full of interest and instructive. (1) They suffered the extreme penalty for maintaining the unity of the Church and the supremacy of the Apostolic See, the doctrines most impugned by the Reformation in all lands and at all times. (2) They maintained their faith almost entirely by the most modern methods, and they were the first to make use of modern seminaries, of Catholic youth in colleges, of the risk, and often at the cost, of life. (3) The tyranny they had to withstand was, as a rule, not the sudden violence of a tyrant, but the continuous oppression of laws, sanctioned by the people in Parliament, passed on the specious plea of political and national necessity, and operating for centuries with that almost irresistible force which the law acquires in experiments in conservative and law-abiding countries. (4) The study of their causes and their acts is easy. The number of martyrs is many; their trials are spread over a long time. We have in many cases the papers of the prosecution as well as those of the defence, and the voice of Rome is frequently heard protests against the cruelty of the authorities. We are not certain that this or that matter is essential, on which no compromise can be permitted; or by her silence she lets it be understood that some other formula may pass.

The cause of the Beatification of the English Martyrs is important not for England only, but for all missionary countries, where its precedents may possibly be followed. The English cause is a very ancient one. Beginning in 1581-1585, made several important viva voce concessions. Relics of these martyrs might, in default of others, be used for the consecration of altars, a Deem might be publicly sung on the receipt of the news of their martyrdoms, and their pictures with their names attached might be placed in the church of the English College in Rome. Sometimes the Congregation of Rites enquired after any systematic inquiry into that we knew of the Pope Urban VIII, in 1612, commenced such an inquiry, and though the outbreak of the Civil War in 1642 postponed indefinitely the public progress of the cause, a list of martyrs was drawn up by the then Viceroy of Rome, their authenticity, however, not being examined. There were no systematic inquiry that we know of. Pope Urban VIII, in 1612, commenced such an inquiry, and though the outbreak of the Civil War in 1642 postponed indefinitely the public progress of the cause, a list of martyrs was drawn up by the then Viceroy of Rome, their authenticity, however, not being examined. There were no systematic inquiry that we know of.
four were admitted; in 1895 eight more were added, with one not in the Roman pictures), while the lists drawn up by Bishops Smith and Chaloner led to the "admission of the cause" of 241 martyrs (all but twelve post-Gregorian), who are therefore called "Venerables". Forty-four were left with their fate still in suspense, and are called Dilatii. Except seven, these are all "Confessors", who certainly died in prison for their faith, though it is not yet proven that they died precisely because of their imprisonment. There is yet another class to be described. While the foregoing case was pending, great progress was being made with the arrangement of papers in the Public Record Office of London, so that we now know immeasurably more of the persecution and its victims than before. In 1896 additional sufferers seemed possibly worthy of being declared martyrs. They are called the Pretorians, because they were passed over in the first case. A new cause was thereupon held at Westminster (September, 1888, to August, 1889), and the proceedings have been sent to Rome. For reasons which it is not necessary to touch upon here, it was thought best to include every possible claimant, even those of whom there was very little definite information, and the far-reaching cause of Queen Mary Stuart. This, however, proved a practical mistake. An obscure cause needs much attention as a clear case, or more. Moreover, the Roman courts are, on the one hand, so short-handed that they grudge giving men to work without an order to the religious, or the other hand, they are overwhelmed with causes which certainly need attention. In order to facilitate progress, therefore, the cause has been split up; the case of Queen Mary has been handed over to the hierarchy of Scotland, and other simplifications have been attempted; nevertheless the cause of the Pretorians so far hangs fire. Apostolic letters for the cause were read at the Congregati Congregation of Rites on 24 March, 1899, ordering the then Archbishop of Westminster to gather up copies of all the extant writings of the martyrs declared Venerable. This proved a lengthy task, and when completed the collection comprised nearly 500 scripta, and over 2000 pages. It was not completed till 17 June, 1901. Then, by special concession, four censors were appointed, the report of the prelates was presented (October 1901) to the Congregation of Rites, and this was forwarded to Rome, where, after further consideration, a decree was drawn up and confirmed by the pope on 2 March, 1906, declaring that none of the writings produced would hinder the cause of the martyrs now under discussion. In the course of the same year a further decree was obtained, allowing altars for the beati, but not without many restri-

J. BRATI.—The sixty-three Blessed will be noticed in detail elsewhere, and the principal authorities will be there noted. Their names are here arranged in companies when they were tried or died together.

II. VENERABLES.—Separate notices will be given of the more notable martyrs and groups of martyrs. But, though they all died heroically, their lives were so retied and obscure that there is generally but little known about them. Thereafter, it should be noted that, being educated in most cases in the same seminars, engaged in the same work, and suffering under the same procedure and laws, the details which we know about some of the more notable martyrs (of whom special biographies are given) are generally also true for the more obscure. The authorities, too, will be the same in both cases.

(1) Under King Henry VIII. 1539: Friar Walre, O.S.F., and John Griffith p. (generally known as Griffith Clarke), Vicar of Wandsworth, for supporting the papal legate, Cardinal Pole, drawn and quartered at Tyburn, 30 July, 1539. (2) Under Queen Elizabeth. 1572: Thomas Cartwright, Knight of the Garter, beheaded, 31 Dec., with Bl. Adrian Fortescue, q. v. John Travers, Irish Augustinian, who had written against the supremacy; before execution his hand was cut off and burnt, but the writing fingers were not consumed, 30 July, 1540-4; Edmund Brindholme p., of London, and Clement Philpot, of Calais, attainted for "adhering to the Pope of Rome", hanged and quartered at Tyburn, 4 Aug., 1540; Sir David Gosson (also Genson and Gunston), Knight of St. John, son of Vice-Admiral Gosson, attainted for "adhering" to Cardinal Pole, hanged and quartered at St. Thomas Waterings, 1 July, 1541, with John Ireland p., once a chaplain to More, condemned and executed with Bl. John Larke, 1544; Thomas Ashly, Mar., and 29 others, q. v. 1547: 200 martyrs, q. v. 1572: 200 martyrs, q. v. 1581: 200 martyrs, q. v. 1582: 200 martyrs, q. v. 1591: 200 martyrs, q. v.

From this time onwards almost all the priests suffered under the law of 27 Elizabeth, merely for their priestly character. 1586: Edward Stranham p., q. v., with John Withy, 25 March, 1586; Margaret Cletterow l., q. v., 25 March, York; Richard Seller, p. v., with William Thompson p., 20 April,
May, Tyburn. 1654: John Southworth p., q. v., 28 June, Tyburn.

11. The Forty-four Dilatants.—These, as has been explained above, are those "put off" for further proceeding. The following were confessors, who perished after a comparatively short period of imprisonment, though definite proof of their death ex arvis non est forthcoming. (1) Under Queen Elizabeth (18).— Robert Dimock, hereditary champion of England, was arrested at Mass, and perished after a few weeks' imprisonment at Lincoln, 11 Sept., 1580; John Cooper, a young man, brought up by the writer, Dr. Ford, at Oxford, and坡于 been distributed at Catholic books, arrested at Dover, and sent to the Tower, died of "hunger, cold and stench", 1580; Mr. Allworth (Aylward), probably of Passage Castle, Waterford, who admitted Catholics to Mass at his house, was arrested, and died after eight days, 1580; William Chaplen p., Thomas Cotesmore p., Robert Holmes p., Roger Wakeman p., James Lomax p., perishcd in 1581. Cotesmore was a bachelor of Oxford in 1536; of Wakeman's sufferings several harrowing details are on record. Thomas Crowther p., Edward Pole p., John Jetter p., and Laurence Vaux q. v., p. v., perished in 1585; John Harrison p., 1586; Martin Shepson p., and Gabriel Thynlewy p., 1587; Thomas Metham, S.J., 1592; Eleanor Hunt and Mrs. Wells, gentlewomen, on unspecified charges and for a few days in monachus. (8)—Edward Wilkes p., died in York Castle before execution in 1612; Boniface Kempe (or Francis Kipton) and Idelophene Hesket (or William Henson), O.S.B., professed of Montserrat, seized by Puritan soldiery in Yorkshire, and hurried to death, 26 July (7), 1644; Richard Bradley, S.J., b. at Bryning Hall, Lanes, 1605, of a well-known Catholic family, S.J., at the trial at Manchester, 20 Jan., 1645; John Felton, S.J., visiting another Father in Lincoln, was seized and so badly used that, when released (for no one appeared against him), he died within a month, 17 Feb., 1645; Thomas Vaughan of Courtfield p., and Thomas Blount p., imprisoned at Shrewsbury, d. at an unknown date, 1645; S.R.B. and S.J., in Newgate Prison, 1650. (3) During the Oates Plot (10).—Thomas Jen- nison, S.J., d. after twelve months' imprisonment, 27 Sept., 1679. He had renounced a handsom inheritance in favour of his brother, who, nevertheless, having apostatized, turned king's evidence against him. William Lloyd, d. under sentence of death at Brecknock, 1679. Placeh Aldham or John Adland (O.S.B.), a convert clergyman, chaplain to Queen Catherine of Braganza, d. under sentence in 1679. William Atkins, S.J., condemned at Stafford, was too deaf to hear the sentence. When it was shouted in his ear, he turned and thanked the judge; he was reprieved and d. in bonds, 7 March, 1681. Richard Birkett p., d. 1680 under sentence in Lancaster Castle; but our martyrologists seem to have made some confusion between him and John Penketh, S.J., a fellow prisoner (see Gillow, Catholic Rec., Soc., IV, pp. 131-40). Richard Lacey (Prince), S.J., Newgate, 11 March, 1680; William Allison p., York Castle, 1681; Edward Turner, S.J., 19 March, 1681, Gatehouse; Benedict Constable, O.S.B., professed at Lamspring, 1669, 11 Dec., 1683, Durham Gaol; William Bennet (Bentney), S.J., 30 October, 1682, Leicester Gaol under William Hill (4) (Gillow, Catholic Rec., Soc., 11, p. 61). John Mason, assigned to 1614, is not yet sufficiently distinguished from John Mason, 1591; there is a similar difficulty between Matthias Harrison, assigned to 1599, and James Harrison, 1602; William Tyrwhitt, named by error for his brother Robert; likewise the identity of Thomas Dyer, O.S.B., has not been fully proved; James Atkinson, killed under torture by Tolpuddle, but evidence is wanted of his constancy to the end. Father Henry Garnet, S.J., q. v.; was he killed ex otdio fidei, or was he believed to be guilty of the Powder Plot, by merely human judgment, not through religious prejudice? The case of Lawrence Hill and Robert Green at the time of the Oates Plot is similar. Was it due to odium fidei, or an unprejudiced error?

V. The Eleven Bishops.—Since the process of the Prætermissi has been held, strong reasons have been shown for including on our list of sufferers, whose causes ought to be considered, the eleven bishops whom Queen Elizabeth deprived and left to die in prison, as Bonner, or under some form of confinement. Their names are: Cuthbert Tunstall, b. Durham, died 18 Nov., 1559; Ralph Bayle, b. Lichfield, d. 18 Nov., 1559; Owen Oglesborpe, b. Carlisle, d. 31 Dec., 1559; John White, b. Winchester, d. 12 Jan., 1560; Richard Pate, b. Worcester, d. 23 Nov., 1563; David Poole, b. Peterborough, d. May, 1565; Edmund Bonner, b. London, d. 5 Sept., 1569; Gilbert Bourne, b. Bath and Wells, d. 30 Sept., 1569; Thomas Thirby, b. Ely, d. 26 Aug., 1570; James Turberville, b. Exeter, d. 1 Nov., 1570; Nicholas Heath, Archbishop of York, d. Dec., 1578.

Ennodius, MAGNUS FELIX, rhetorician and bishop, b. probably at Arles, in Southern Gaul, in 473; d. at Pavia, Italy, 17 July, 521. When quite young he went to Pavia, where he was educated, was betrothed, and eventually became a priest; his fiancée at the same time becoming a nun. It does not appear certain that he ever married. Shortly after the death of his benefactor, Epiphanius (496), he received minor orders at Milan, attracted thither no doubt by his uncle Laurentius, bishop of that city. Soon he was ordained deacon and taught in the schools. About this time (488), two pious women, Elisabeth and Eliza, took the name Symmachus and the archpriest Laurentius. King Theodoric was in favour of the former, and convened a council at Rome in 501, the famous Synod of Pampel (3), to settle this question and put an end to much scandal. On this occasion Ennodius acted as secretary to Laurentius of Milan, who was the first to sign the decrees of the council. The adherents of the archpriest Laurentius, who was rejected by the council, wrote against the decisions of the latter. Ennodius answered them and defended the synod in a still extant work entitled "Libellus adversus eos qui contra synodum scribere praesumpturum." After referring to the objections urged against the incompetency and irregularity of the council, he attacks the enemies of Symmachus and predominant the false conciliar validity. In a letter to his confessor, an episcopate pertaining to popes: "God no doubt consented to the affairs of men being settled by men; He reserved to Himself the passing of judgment upon the pontiff of the supreme see." (Libellus, §93). In 513 Ennodius was still at Milan, but shortly afterwards he was made Bishop of Pavia. In 515 and 517 he headed two successive embassies which Pope Hormisdas sent to Emperor Anastasius at Constantinople, both of which, however, were barren of results. The unrelenting enmity of the emperor endangered the lives of the envoys in 517. Of the remaining years of his episcopate nothing is known. His epitaph, found by accident, gives the date of his death.

The works of Ennodius consists of poems for special occasions and particularly inscriptions for churches or other religious monuments. His defence of the synod of 502, often known as "Libellus pro Synodo", its autobiography (Eucharistieum), his panegyric on King Theodoric, and the biographies of his predecessor Epiphanius of Milan, and a monk, Antonius of Lérins, are interesting from an historical point of view; the first especially. As much can be said of his numerous letters, addressed to various correspondents. Notwithstanding their verbosity, they contain much useful information concerning the addresses and the customs of the time. Ennodius is the last representative of the ancient schools of rhetoric. His "Parenesis didascalica" (511) celebrates
the wonderful power of that foremost of the liberal arts, by which a guilty man is made to appear innocent, and vice versa. He illustrates his own method in a few declaratory exercises called "Dictiones," they deal with themes since the death of Theocritus on the division of the copiousy of Achilles; Menelaus contemplating the ruins of Troy; the lament of Dido forsaken by Eneas, etc. Again, with all the resources of his rhetoric he denounces a man who placed a statue of Minerva in a place of ill-repute; a player who gambled away the field in which his parents lay buried; etc. He shared the passions, e.g. grief of Theocritus on the death of the Roman Empire under the control of men of letters. Ennoadius remained to the end faithful to the academic traditions of the Roman schools, whose mythological apparatus he was the last to retain; thus in an epithalamium he describes the beauty of the nude Venus, and makes love argue against virginity. Nevertheless, he refrains elsewhere from the fables of the poets and points out that the understanding of the Christian Scriptures is the highest intellectual ideal. In him are visible the two tendencies whose conflict is never quite absent from Christian life; outwardly he remains true to classic tradition. His diction is exuberant and florid, but occasionally manifests vigour. The best editions of his writings are those of his contemporaries who saw in the reign of Theodoric a renewal of the Roman Empire—G. C. de Clesiacisorum Virorum (Vienna, 1881), and of Vogel in "Monumenta Germaniae Hist.: Auct." (Berlin, 1885), VII.

Entablature.—A superstructure which lies horizontally upon the columns in classic architecture. It is divided into three parts: the architrave (the supporting member carried from column to column); the frieze (the decorative portion); and the corona (the enclosing member projecting in every column). The orders have their own entablature, of which both the general height and the subdivisions are regulated by a scale of proportion derived from the diameter of the column. It is occasionally used to complete, architecturally, the upper portion of a wall, even when there are no columns, and in the case of pilasters or detached or engaged columns is sometimes profiled round them.

Thomas II. Poole.

Enthronization (from Greek enthronizetai, to place on a throne).—This word has been employed in different meanings: (1) formerly, it meant the solemn placing of the relics upon the altar of a church which was to be consecrated, hence a newly consecrated church was called mons enthroneumns (mona enthronizetos). (2) In the Middle Ages we find the inthronization matrimoni, or enthronization of marriage, which was nothing else than the blessing in the nuptial Mass (benedictiona nuptiarum). (3) In the East it was employed, but seldom, to denote the induction into a patriarchal dignity: the patriarch employed this order to designate the ceremony of enthronization which accompanies the consecration of a bishop. After receiving episcopal consecration, the newly consecrated bishop was solemnly conducted to the episcopal throne, of which he took possession. He received the kiss of peace and listened to the reading of a passage of Holy Scripture, whereupon he pronounced an address or enthronismos. The letters which it was customary for him to send to the other bishops in token of his being in communion with them in the same faith, were called littere inthronisticæ, or syllabae inthronisticiæ (συλλαβαί ἐνθρωνιστικαί), and the gifts which it was customary for him to present to the bishops who had consecrated him, and which were given in the ceremonies, were called the inthronizetos (ἐνθρωνιστευο). At present, after the consecration has taken place, the new bishop is conducted by the consecrating bishop and one of the assistants to the throne occupied by the consecrating during the ceremony, or to the seat usually taken by the bishop, if the consecration has taken place in the cathedral church. The enthronization can also take place independently of the consecration; in this case, the bishop, after taking his seat upon the throne, receives there the homage of all ecclesiastics present in the cathedral. These ceremonies have no longer the
slightest juridical importance (see Brshor). (5) The enthronization of the pope in the Chair of St. Peter, Cathedral Peter, was formerly a very important ceremony, which took place at St. Peter's in Rome, or, exceptionally, in the church of St. Peter ad Vincula, where there was also a Cathedral Petri. This ceremony was performed immediately after the election, if the latter had taken place in the church of St. Peter, or before the coronation. Its object was to proclaim to the Christian world that the newly elected pope was the lawful successor of St. Peter. Before this ceremony had taken place, he was forbidden to take part in the administration of the Church. In 1039 Pope Nicholas II declared that the omission of the enthronization did not prevent the pope from administering the Church. This custom disappeared in the thirteenth century, owing to the fact that in that period the popes seldom resided in Rome.

(6) The Roman Pontifical mentions enthronement amongst the ceremonies which accompany the solemn consecration of a king. It is still practised in the Anglican Episcopal Church at the coronation of the King of England (see Coronation).

Eoghan. Saints.—(1) Eoghan of Ardsraw was a native of Leinster, and, after presiding over the Abbey of Kilhamanagh (Co. Wicklow) for fifteen years, settled in the country of Mourne (Co. Tyrone), his mother's country, about the year 576. He was followed by many disciples including St. Kevin of Glendalough, who completed his studies under this saint. As a boy he had been carried off to Britain, and subsequently he was taken captive to Brittany, together with St. Tighearnach, whom he later set free. He went to the Abbey of Clones, Co. Monaghan. So great was the fame of the sanctity and learning of St. Eoghan, at Mourne, that he was consecrated first Bishop of Ardsraw about the year 581. It is difficult to give his chronology with any degree of exactness, but the Irish annalists give the date of his death as 23 Aug., 618. His name is generally latinized as Eugenius, but the Irish form is Eoghan (Owen), hence Tuir Eoghan, or Tyrone.

Ardsraw continued as an episcopal see until 1150, when it was translated to Rathlure and subsequently to Maghera, but in 1254 it was definitely removed to Derry. In all these changes St. Eoghan was regarded as the clan patron, and hence he is the tutelary guardian of Derry to this day. His feast is celebrated on 23 August.

(2) Eoghan of Clonculleen, Co. Tipperary, has been identified with Eoghan, son of Saran of Clonculleen, for whom St. Albe of Emly composed a rule. He is entered in the Martyrologies of Tallaght and Donegal, and is venerated on 15 March.

(3) Eoghan, Bishop, is commemorated in the Martyrology of Tallaght on 18 April, and is included by the Bollandists under that date, but the particulars of his life are scanty in the extreme.

(4) Eoghan the Sage (Sapiens) finds a place in the Irish martyrologies, and he is also included in the "Acta Sanctorum", but no reliable data as to his life is forthcoming.

(5) Eoghan of Cranfield (Co. Antrim) has been described as Abbot of Moville, but there is reason to believe that he is to be identified with the preceding saint of the same name, especially as the Bollandists style him *Episcopis et Sapiens de Magh-cremhcaille*. A St. Ernan of Cranfield (Cranfield) is honoured on 31 May, but this is also the feast day of St. Eoghan. However, "Eoghan" may be a scribal error for "Eogan", and this would account for the seeming mistake of name in regard to the patron of Cranfield.

There are other Irish saints of this name, but their history is somewhat obscure, and it is not easy to reconcile their chronology.

A. W. Grattan-Flood.

Eo-lact (Gr. έολακτος ήμερας; Lat. dies adventi), the surplus days of the solar year over the lunar year; hence, more freely, the number of days in the age of the moon on 1 January of any given year. The whole system of eocata is based on the Melonic Lunar Cycle (otherwise known as the Cycle of Golden Numbers), and serves to indicate the days of the year on which the new moons occur.

The Church Lunar Calendar.—It is generally held that the Last Supper took place on the Jewish Feast of Passover, the fourteenth day of the fourteenth day of the Hebrew month of Nisan, the first month of the old Jewish calendar. Consequently, since this month always began with that new moon of which the fourteenth day occurred on or next after the vernal equinox, Christ arose from the dead on Sunday, the seventeenth day of the so-called paschal moon. It is evident, then, that an exact anniversary of Easter is impossible except in those years in which the fourteenth day of the paschal moon falls on Sunday. In the early days of Christianity there existed a difference of opinion between the Eastern and Western Churches as to the day on which Easter ought to be kept, the former keeping it on the fourteenth day and the latter on the Sunday following. To secure uniformity of practice, the Council of Nicaea of 325 decreed that Easter be observed on the Sunday after the fourteenth day of the moon should be adopted throughout the Church, believing no doubt that this mode fitted in better with the historical facts and wishing to give a lasting proof that the Jewish Passover was not, as the Quartodecimans heretics believed, an ordinance of Christianity. As in the Julian calendar the months had lost all their original reference to the moon, the early Christians were compelled to use the Metonic Lunar Cycle of the Greeks to find the fourteenth day of the paschal moon. This cycle in its original form continued to be used until 1582, when it was revised and embodied in the Gregorian calendar. The Church claims no astrological connexion for the date of Easter, and there is no longer any need for the lunation calendar to prevent the confusion which would necessarily result from an extreme adherence to precise astronomical data in determining the date of Easter. She wishes merely to ensure that the fourteenth day of the calendar moon shall fall on or shortly after the real fourteenth day but never before it, since it would be chronologically absurd to keep Easter on or before the Passover. Otherwise, as Clavius plainly states (Gregorian Calendarii a Gregorio XIII P.M. restituti explicatio, cap. V, § 13, p. 85), she regards with indifference the occurrence of the moons on the days before or after their proper seats and cares much more for peace and uniformity than for the equinox and the new moon. It may be seen here that Clavius's estimate of the accuracy of the calendar, in the compilation of which he took such a leading
part, is extremely modest, and the seats assigned by him to the new moons tally with strict astronomical findings in a degree which he seems never to have anticipated. The impossibility of taking the astronomical moons as our sole guide in finding the date of Easter will be best understood from an example: Let us suppose that Easter is to be kept (as is at least implied by the British Act of Parliament regulating its date) on the Sunday after the astronomical full moon, and that this full moon, as sometimes happens, occurs just before midnight on Saturday evening in the western districts of London or New York. The full moon will therefore happen a little after midnight in the eastern districts of London or New York. The month by the paschal full moon, must be kept on one Sunday in the western and on the following Sunday in the eastern districts of the same city. Lest it be thought that this is carrying astronomical exactness to extremes, we may say that, if Easter were dependent on the astronomical moons, the feast could not always be kept on the same Sunday in England and America. Seeing, therefore, that astronomical accuracy must at some point give way to convenience and that an arbitrary decision on this point is necessary, the Church has drawn up a lunar calendar which maintains as close a relation with the astronomical moons as is practicable, and has decreed that Easter is to be kept on the Sunday after the fourteenth day of the paschal moon as indicated by the computators.

Metonic Lunar Cycle or Cycle of Golden Numbers.—In the year now known as 432 B.C., Meton, an Athenian astronomer, discovered that 235 lunations (i.e. lunar months) correspond with 19 solar years, or, as we might express it, that after a period of 19 solar years, the new moons occur again on the same dates as on the solar year. He therefore divided the periods of the moon by the numbers 1, 2, 3, etc. to 19, and assumed that the new moons would always fall on the same days in the years indicated by the same number. This discovery found such favour among the Athenians that the number assigned to the current year in the Metonic Cycle was henceforth written in golden characters on a pillar in the temple, and, whether owing to this circumstance or to the importance of the discovery itself, was known as the Golden Number of the year. As the 19 years of the Metonic Cycle were purely lunar (i.e. each contained an exact number of lunar months) and contained in the aggregate 235 lunations, it was clearly impossible that all the years should be of equal length. To twelve of the 19 years 12 lunations were assigned, and to the other seven 13 lunations, the latter being known as the embolismic or intercalary month.

Length of the Lunations.—The latest calculations have shown that the average duration of the lunar month is 29 days, 12 hours, 44 mins., 3 secs. To avoid the difficulty of reckoning fractions of a day in the calendar, all computators, ancient and modern, have assigned 30 days to 290 lunations, or to the lunar year, and regarded the ordinary lunar year of 12 lunations as lasting 354 days, whereas it really lasts some 8 hours and 48 mins. longer. This under-estimation of the year is compensated for in two ways: (1) by the insertion of one extra day in the lunar (as in the solar) calendar every fourth year, and (2) by assigning 30 days to six of the seven embolismic lunations, although the average lunation lasts only about 29 days. As a comparison of the solar and lunar calendars for 76 years (one cycle of 19 years is unsuitable in this case, since it contains sometimes 4, sometimes 5, leap years) will make this clearer:—76 solar years = 76 × 365 + 19, i.e. 27,759 days. Therefore 910 calendar lunations (since 19 years equal 235 lunations) contain 27,759 days (20 yrs. 12 hrs. 7 mins.). But 940 lunations averaging 29 days equal only 27,730 days. Consequently, if we assign 30 and 29 days uninterruptedly to alternate lunations, the lunar calendar will, after 76 years, anticipate the solar by 29 days. The intercalation of the extra day every fourth year in the lunar calendar reduces the divergence to 10 days in 76 years, i.e. 2 1/3 days in 19 years. The divergence is removed by assigning to the seven embolismic months (which would otherwise have contained 7 × 30, or 2061 days) 209 days, 30 days being assigned to each of the first six and 29 to the seventh.

Manner of Insertion of the Embolismic Months.—As the Gregorian and Metonic calendars differ in the manner of inserting the embolismic months, only the former is spoken of here. It has just been said that seven of the 19 years contain an embolismic month, consisting in six cases of 30 days, and in the seventh of 29 days. Granted that the first solar and lunar years begin on the same day (i.e. that the new moon occurs on 1 January), it is evident that, as the ordinary lunar year of 12 lunations is 11 days shorter than the solar, the lunar calendar will, after three years, anticipate the solar by 33 days. To the third lunar year, then, is added the first embolismic month of 30 days, reducing the divergence between the calendars to three days. After three further years, i.e. at the end of the sixth year, the divergence will have mounted to 36 (3 × 11 + 3) days, but, by the insertion of the second embolismic lunation, will be reduced to six days. Whenever, then, the divergence between the two calendars has reached six days, an embolismic month is added to the lunar year; at the end of the nineteenth lunar year, the divergence will be 29 days, and, as the last embolismic month consists of 29 days, it is clear that after the insertion of this month the nineteenth solar and lunar years will end on the same day and that the first new moon of the twentieth (as of the first) year will occur on January 1. The divergence, therefore, at the end of 19 successive years of the lunar cycle is: 11, 22, 3, 11, 25, 6, 17, 28, 9, 20, 1, 12, 23, 4, 15, 26, 7, 18, and 0 days.

Cycle of Epacts.—We have defined an epact as the age of the moon on 1 January, i.e. at the beginning of the year. If, then, the new moon occurs on 1 January in the first year of the Lunar Cycle, the Epact of the year is 0, and, as it is more usually expressed, 19, and, since the year 19 years before the new moon, it is clear that the divergence between the solar and lunar calendars, of which we have just been speaking, gives the Epacts of the succeeding years. Thus, after the first year, the divergence between the calendars amounts to 11 days; therefore, the new moon occurs 11 days before 1 January of the second solar year, which is expressed by saying that the Epact of the second solar year is XI. Granted, then, that the new moon occurs on 1 January in the first year of the Lunar Cycle, the epacts of the 19 years are as follows:

INACCURACY OF THE METONIC CYCLE.—Meton's theory, as adopted by the Church during the year 1582, might be briefly expressed as follows:—

The average Lunar Cycle consists of 19 lunar years averaging 354 1/4 days, i.e. 365 1/4. 6 extra, or embolismic, months of 30 days, i.e. 180 1/4 1 embolismic month of 29 days. Total 6939 1/4 days.
19 solar years averaging 365\(\frac{3}{4}\) days equal \(\cdots \cdots \cdots \cdots \cdot 6939\frac{1}{4}\)
But later computers found that the average lunar month lasts 29 days, 12 hours, 44 minutes, 3 seconds, consequently:

235 calendar lunations (one Lunar Cycle) equal \(\cdots \cdots \cdots \cdots \cdot 6939\) d. 18 h. 0 m. 0 s.
235 astronomical lunations equal \(\cdots \cdots \cdots \cdots \cdot 6939\) d. 16 h. 31 m. 43 s.

Difference \(\cdots \cdots \cdots \cdots \cdot 1\) Th. 28 m. 15 s.

We thus see that the average lunar Cycle is about \(\frac{1}{2}\) hour too long and that, though the new moons occur on the same dates in successive cycles, they occur, on an average, \(\frac{1}{2}\) hour earlier in the day. The astronomers with the reform of the calendar calculated that after a period of 312 years (310 years according to our figures a closer approximation) the new moons occur on the day preceding that indicated by the Lunar Cycle, that is, that the moon is one day older at the beginning of the year than the Metonic Cycle, if left unaltered, would show, and they removed this inaccuracy by adding one day to the age of the moon (i.e. to the Epacts) every 300 years seven times in succession and then one day after 400 years (i.e. eight days in \(8 \times 312\frac{1}{2}\) or 2500 years). This addition of one to the Epacts is known as the Lunar Equation, and occurs at the beginning of the years 1500, 1700, 1900, 2100, 2300, 2700, 3000, 3300, 3600, 3900, 4300, 4600, etc. Another disturbance of the Epacts is caused by the occurrence of the non-bissextile centuries. We have seen above that the assigning of 6939\(\frac{1}{4}\) days to 19 lunar years leads to an error of one day every 312 years, and that within these limits the lunar calendar must not be disturbed; but the assigning of 6939\(\frac{1}{4}\) days to every 19 solar years amounts to an error of 3 days every 400 years, and it is therefore necessary to omit one day from the solar calendar in every century year not divisible by 400. Consequently, since this extra day in February every fourth year is an essential part of the lunar calendar, the new moons will occur one day later in the non-bissextile centuries than indicated by the Lunar Cycle (e.g. a new moon which under ordinary circumstances would have occurred on 29 February will occur on 1 March), and the age of the moon will, after the omission of the day, be one day less on all succeeding days of the solar year. As the fact that the January and February moons are not properly indicated is immaterial in a system whose sole object is to indicate as nearly as practicable the fourteenth day of the moon after 21 March, the subtraction of one from the Epacts takes place at the beginning of all non-bissextile century years and is known as the Solar Equation. In the following table, +1 is written after the years which have the Lunar Equation, and −1 after those which have the Solar:

Clavius continued this table as far as the year 300,000, inserting the Lunar Equation eight times every 2500 years and the Solar three times every 400 years. As he thus treats the year 5200 as a leap year his table is untrustworthy after 5199.

Indication of New Moons.—Before proceeding further, it will be convenient to consider the method devised by Lilio of indicating the new moons of the year in the Gregorian calendar. As the first lunation of the year consists of 30 days, he wrote the Epacts *, XXIX, XXVIII, …, III, I opposite the thirty days of January; then continuing, he wrote * opposite the thirty-first, XXIX opposite the first of February and so on to the end of the year, except in the case of the lunations of 29 days he wrote the two Epacts XXV, XXIV opposite the same day (cf. 5 Feb., 1 April, etc. in the Church calendar). From this arrangement it is evident that, for example, the Epact if X, the new moons will occur in that year on the days before which the Epact X is placed in the calendar. One qualification must be made to this statement. According to the Metonic Cycle, the new moon can never occur twice on the same date in the same nineteen years (the case is exceedingly rare even in the purely astronomical calendar); consequently, whenever the two Epacts XXV and XXIV opposite the first day of January are the same nineteenth years, the new moons of the year whose Epact is XXV are indicated in the months of 29 days by Epact XXVI, with which the number 25 is for this object associated in the Church calendar.

How to Find the Epact.—We have already seen that the Church used the Metonic Cycle until the year 1582 as the only practical means devised of finding the fourteenth day of the paschal moon. Now, this cycle has always been regarded as starting from the year 1 B.C., and not from the year of its introduction (432 B.C.), probably (although all the authors we have seen appear to have overlooked the point) because such change was found necessary if the leading characteristics of the Metonic Cycle were to be retained in changing from a lunar to a solar calendar, viz., that the first lunar and solar years of the cycle should begin on the same day. That two nations with calendars so fundamentally different as those of the Greeks and the Romans should regard the solar year as beginning with the same phases of the sun would be highly improbable, even if there were no direct evidence that such was the case. But we have seen that the solar and lunar years begin on the same day, the Epacts of the successive years of the cycle are:

<td>XXIX</td>
</tr>
</tbody>
</table>

Consequently, if we divide the calendar into cycles of 19 years from 1 B.C., the first year of each cycle will have the Epact *, the second the Epact XI and so on, or, in other words, the Epact of any year before 1582 depends solely on its Golden Number. The Golden Number of any year may be found by adding 1 to the year and assigning by 19, the quotient showing the number of complete cycles elapsed since 1 B.C., and the remainder (or, if there be no remainder, 19) being the Golden Number of the year. Thus, for example, the Golden Number of 1484 is 3, since \(1484 + 1 = 78\) with 3 as remainder; therefore the Epact of the year 1484 is XXII.

In the course of time it was found that the paschal moon of the Metonic Cycle was losing all relation to the real paschal moon, and in the sixteenth century (c. 1570) Gregory XIII entrusted the task of reforming the calendar to a small body of astronomers, of whom Lilio and Clavius are the most renowned. These astronomers having drawn up the table of equations to show the changes in the Epacts necessary to preserve the relations between the calendar and astronomical calendars, proceeded to calculate the
proper Epacts for the years of the Lunar Cycle after 1582. These they found to be as follows:—

Golden Numbers ........................ 1 2 3 4
Epacts ................................. i xii xxiii iv
5 6 7 8 9 10
XV XVII XIX

Golden Numbers ........................ 11 12 13 14
Epacts ................................. xi xii xiii xxiv
15 16 17 18 19
V XVI XVII XVIII

Now the essential difference between the Metonic Cycle and the Gregorian system of Epacts lies in this, that, whereas the sphere of application of the former was held to be unlimited, that of the latter is bounded by the Lunar and Solar Equations. Since, then, a Solar Equation occurs in 1700, the Cycle of Epacts just given holds only for the period 1582–1699, after which a new cycle must be formed. To understand the reason of the changes we must remember (1) that by treating 365 days as equivalent to one solar year and to 12 lunations plus 11 days, we under-estimate the fifth day of the calendar moon. But, since no extra day could be inserted in February, 1700, the twenty-fourth and twenty-fifth of this month had to be treated as the sixth day of the moon, and the age of the moon on every subsequent day of the year 1700 was one day less than indicated by the Epact X. As the moons of January and February are of very secondary importance in the Church calendar, we may say that the age of the moon in 1700 and all subsequent years was one day less than indicated by the above Cycle of Epacts, and thus the Epacts for the years of the Lunar Cycle after 1700 are:—

Golden Numbers ........................ 1 2 3 4
Epacts ................................. xi xii xiii xxiv
5 6 7 8 9 10
XV XVII XVIII

Golden Numbers ........................ 11 12 13 14
Epacts ................................. xx i xii xxiii
15 16 17 18 19
V XVI XXVI XXVII

In the year 1800, both the Lunar and Solar Equations (i.e. the addition and subtraction of 1) occur and no

*This table may, with the help of the table of equations, be continued to 5199."

---

the solar year by about 5½ hours and the lunations by 8½ hours; (2) that in consequence of this under-estimation of the solar year, one day must be inserted in every fourth solar year except in the case of the centennial years not divisible by 400; and (3) that the under-estimation of the lunations by 6 hours every year (the additional 24 hours are compensated for in the embolismic months and by the Lunar Equation) necessitates the insertion of one extra day in the lunar calendar every fourth year without exception. To take an example: the Epact of 1696 (its Golden Number being 6) is XXVI, and since this Epact is found opposite 4 February in the Church calendar we know that in 1696 the new moon happened on that date and that consequently 23 February was the twelfth day of the calendar moon. But since the under-estimation of the lunations amounts to one day in every four years, the following day (our 24 Feb.) was only nominally the twenty-first day of the moon and the proper twenty-first was our 25 February. The Church therefore inserted an extra day after 23 February and treated this and the real 24 Feb. (our 21 and 25) as one continuous day in both the solar and lunar calendars, and consequently 25 February (our 26) was again legitimately regarded as the twenty-second day of the moon and the fifty-sixth day of the astronomical solar year. Coming now to the year 1700, we find its Epact to be X, consequently the new moon occurred on 19 February and 23 February was change of Epacts takes place. In 1900 the Solar Equation occurs and we must again subtract 1 from the Epacts. No change takes place in 2000 or in 2100, the former being a leap year and the latter having both equations. In 2200 and in 2300, we must again subtract 1, while in 2400, in which the Lunar Equation occurs and is not neutralized as usual by the Solar Equation, we add 1 to all the Epacts. The accompanying table gives the Epact of every year from 1 b.c. to A. D. 3099.

Examples.—(1) To find the Epact of the year 3097. 3097 + 1 = 163, with 1 as remainder. Epact corresponding to Golden Number 1 after 2000 is XXV; therefore the Epact of 3097 is XXV.

(2) On what Sunday will Easter fall in the year 2459? Golden Number of 2459 is 9, and Epact of ninth year of Lunar Cycle after 2400 is XXVI. Since the Epact of 2459 is XXVI, the new moons of this year will occur on the days before which XXVI is placed in the Church calendar (e.g. in the Breviary). Now, since the paschal moon is that whose fourteenth day falls on or next after 21 March, the paschal new moon can never happen before 8 March. The first day after 8 March to which the Epact XXVI is prefixed in the Church calendar is 4 April; consequently the paschal new moon in the year 2459 will occur on 4 April.
Counting 14 days from 4 April, which we include in our reckoning, we find the fourteenth day of the paschal moon to be 17 April. In 2459, therefore, Easter will be kept on the Sunday after 17 April, which with the help of the Dominical Letters is found to be 20 April. (See DOMINICAL LETTER.)

For bibliography see DOMINICAL LETTER.

THOMAS KENNEDY.

Eparchy (ἐπαρχία) was originally the name of one of the divisions of the Roman Empire. Diocletian (284–305) and Maximian divided the empire into four great Prefectures (Gaul, Italy, Illyricum, and the East). Each was subdivided into (civil) Dioceses, and these again into Eparchies under governors (praesides, also archons). The Church accepted this division as a convenient one for her use. The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate; the Prefecture of the East was divided (in the fourth century) between the Patriarchs of Alexandria and Antioch and three exarchies. The Diocese of Egypt was the Patriarchate of Alexandria, the Diocese of the East (not to be confused with the Prefecture of the East) became that of Antioch. Asia was under the Exarch of Ephesus, Pontus under Cappadocia, and Thrace under Heraclea. Under these patriarchates and exarchates came the eparchies under metropolitan;

they had under them the bishops of the various cities. The original ecclesiastical eparchies then were provinces, each under a metropolis. The First Council of Nicaea (325) accepts this arrangement and orders that: "the authority (of appointing bishops) shall belong to the metropolitans in each eparchy" (can. iv). That is to say that in each such civil eparchy there shall be a metropolitans bishop who shall have authority over the others. This is the origin of our provinces. Later in Eastern Christendom the use of the word was gradually modified and now it means generally the diocese of a simple bishop. The name Eparchy is, however, not commonly used except in Russia. There it is the usual one for a diocese. The Russian Church now counts eighty-six eparchies, of which three (Kiev, Moscow, and St. Petersburg) are ruled by bishops who always bear the title "Metropolitan", and fourteen others are under archbishops.

ADRIAN FORTESCUE.

Epée, Charles-Michel de L', a philanthropic priest and inventor of the sign alphabet for the instruction of the deaf and dumb; was b. at Versailles, 25 November, 1712; d. at Paris, 23 December, 1780. He studied theology, but, having refused to sign a condemnation of Jansenism, was denied ordination by Christophe de Beaumont, Archbishop of Paris. He then studied law, but no sooner had he been admitted to the Bar than the Bishop of Troyes consorted to ordain him. This bishop died shortly afterwards, whereupon the Abbé de l'Épée returned to Paris, and began to occupy himself with the education of two deaf and dumb sisters who had been recommended to him by Father Vanin, of the Congregation of the Christian Doctrine. He endeavoured to develop the minds of his pupils by means of certain conventional signs constituting a complete alphabet. Succeeding in this attempt, he resolved to devote himself to the education of the deaf and dumb, and founded a school for their instruction at his own expense. His method is based on the principle that "the education of deaf mutes must teach them through the eye what other people acquire through the ear". Several other methods had been tried, previous to this time, to enable the deaf and dumb to communicate with one another and with the rest of mankind, but there can be no doubt that he attained far greater success than Pereira, Bulver, Dalgarne, Dr. John Wallis, or any of his predecessors, and that the whole system now followed in the instruction of deaf mutes virtually owes its origin to his ingenuity and devotion. His own system has, in its turn, been replaced by a newer method, which teaches the pupils to recognize words and, in time, to utter them, by closely watching, and afterwards imitating, the motions of the lips and tongue in speech, the different portions of the vocal organs being shown by means of diacrons. Excellent results have thus been attained, deaf and dumb persons acquiring the ability to converse fluently. This method has of late increased in favour. But it remains true that the Abbé de l'Épée by his sign system laid the foundations of all systematic instruction of the deaf and dumb, a system which was further developed by his pupil and successor, the Abbé Sicard. The Abbé de l'Épée became known all over Europe. The Emperor Joseph II himself visited his school. The Duke of Penthièvre, as well as Louis XVI, helped him with large contributions. In 1791, two years after his death, the National Assembly decreed that his name should be enrolled among the benefactors of mankind, and undertook the support of the school he had founded. In 1838 a bronze monument was erected over his grave in the church of Saint-Roch in Paris. He published in 1776 "Institution des sourds-muets par la voie des signes méthodiques"; in 1794, "La véritable manière d'instruire les sourds et muets, confirmée par une longue expérience". He also began a "Dictionnaire général des signes", which was completed by the Abbé Sicard. (See EDUCATION OF THE DEAF AND DUMB.)

JEAN LEGRAS.

Eperies, Diocese of (EPIERENSIUS RUTHENORUM), of the Greek Ruthenian Rite, suffragan to Gran. De-
tached in 1818 from the Diocese of Munkac, this diocese had the following bishops: Gregory Tarkovics (1818-41); Joseph Garnages (1843-75); Nicholas Toth (1876-81); John Valyi (1882). The city of Eperjes, called by the Slovaks Pressova, was founded by a German colony in the twelfth century on the Tareza, a tributary of the Danube, and is now the capital of the county of Sisos, Hungary, with a population of 11,000. It is famous for its sugar factories, its mineral waters, and the rock salt mines situated at Sovar, several miles distant. The diocese contains 160,000 Ruthenian Catholics; 212 priests (nearly all married); 190 parishes scattered over the territory of six counties; 100 churches, 25 chapels, 24 parochial schools, with 28,000 pupils, a college for boys, 2 convents of Basilians, and a theological seminary with 40 students. The episcopal residence, the seminary, and most of the diocesan institutions are situated at Eperjes.

S. Valiié.

Ephesians. Epistle to the.—This article will be treated under the following heads: I. Analysis of the Epistle; II. Special Characteristics: (1) Form: (a) Vocabulary; (b) Style; (c) Doctrines; III. Object: IV. To Whom Addressed; V. Date and Place of Composition; VI. Occasion; VI. Authenticity: (1) Relation to other books of the New Testament; (2) Difficulties arising from the form and doctrines; (3) Tradition.

1. Analysis of the Epistle.—The letter which, in their own words, the Ephesians write to the Ephesians of St. Paul, comprises two parts distinctly separated by a doxology (Eph., iii, 20 sq.). The address, in which the Apostle mentions himself only, is not followed by a prologue; in fact, the entire dogmatic part develops the idea which is usually the subject of the prologue in the letters of St. Paul. In a long sentence that reads like a hymn (Eph., i, 3-14), Paul praises God for the Ephesians of St. Paul, beholding them as the deposit of all the faithful in accordance with the eternal plan of His will, the sublime plan by which all are to be united under one head, Christ, a plan which, although heretofore secret and mysterious, is now made manifest to believers. Those to whom the Epistle is addressed, having received the Gospel, have, in their turn, been converted, and are all standing in the fulness and purity of the service which the Ephesians of St. Paul have been developing. The couples which the Apostle does not mention, in order to give thanks to the same (Eph., i, 15, 16) and that, above all, he prays for them. The explanation of this prayer, of its object and motives, constitutes the remainder of the doxastic part (cf. Eph., iii, 1, 14). Paul asks God that his readers may have a complete knowledge of the hope of their calling, that they may be fully aware both of the riches of their inheritance and the greatness of the Divine power which guarantees the inheritance. This Divine power manifests itself first in Christ, Whom it raised from the dead and Whom it exalted in glory above all creatures and established head of the Church, which is His body, present and future. The mystery was revealed in the readers, whom it rescued from their sins and raised and exalted with Christ. But it shone forth, above all, in the establishment of a community of salvation welcoming within its fold both Jews and Gentiles without distinction, the Death of Christ having broken down the middle wall of partition, i.e., the Law, and both sections of the human race having thus been reconciled to God so as thereafter to form but one body, one house, one temple, of which the apostles and Christian prophets are the foundation and Christ Himself is the chief cornerstone. (Eph., i, 16-ii, 20.) Paul, as his readers must have heard, was the minister chosen to preach to the Gentiles of this sublime mystery of God, hidden from all eternity and not revealed even to the angels, according to which the Gentiles are made coheirs with the Jews, constitute a part of the same body, and are joint partakers in the same promises (Eph., iii, 1-13). Deeply imbued with this mystery, the Apostle pours the Father to lead his readers to the perfection of the Christian state and the complete knowledge of Divine charity (Eph., iii, 14-19), continuing the same prayer with which he had begun (Eph., i, 16 sq.).

Having laid the ground in the previous doxology (Eph., iii, 20 sq.), Paul passes on to the moral part of his letter. His exhortations, which he bases more than his wont on dogmatic considerations, all reverts to that of chapter iv, verse 1, wherein he entreats his readers to show themselves in all things worthy of their vocation. First of all, they must labour to preserve the unity described by the author in the first three chapters and here again brought to prominence: One Spirit, one Lord, one faith, one baptism, one God. There is, of course, a diversity of ministries, but the respective offices of apostles, prophets, etc. have all been instituted by the same Christ exalted in glory and all tend to the perfection of the society of saints in Christ (Eph., iv, 2-16). From these great social associations, Paul deduces the same ecclesiastical ones. He contrasts the Christian life that his readers are to lead, with their pagan life, insisting above all on the avoidance of two vices, immodesty and covetousness (Eph., iv, 1-7, v, 3). Then, in treating of family life, he dwells on the duties of husbands and wives, whose union he likens to that of Christ with His Church, and the duties of children and servants (v. 21-vi, 9). In order to carry out these duties and to combat adverse powers, the readers must put on the armour of God (vi, 10-20).

The Epistle closes with a short epilogue (vi, 21-24), wherein the Apostle tells his correspondents that he has sent Tychicus to give them news of him and that he wishes them peace, charity, and grace.
treated than on the author himself; in fact, even in the dogmatic expositions in the great Epistles, St. Paul's language is frequently involved (cf. Rom., ii, 13 sq.; iv, 16 sq.; v, 12 sq.; etc.). Moreover, it must be observed that all these peculiarities spring from the same cause: they all indicate a certain redundancy of ideas surging in upon a deep and tranquil meditation on a sublime subject, the various aspects of which simultaneously appear to the author's mind and evoke his admiration. Hence also the lyric tone that pervades the first three chapters, which constitute a series of praises, benedictions, thanksgivings, and prayers. A sort of rhythmical composition has been pointed out in chapter ii, with the forms "Deus gratia (16 sq.) in Zeitschrift für katholische Theologie" (1904, 612 sq.), and in chapter iii traces of liturgical hymnology have been observed (Eph., iii, 20), but they are no more striking than in 1 Cor. and are not to be compared with the liturgical language of 1 Clement.

(2) Doctrines.—The doctrines on justification, the Law, faith, the flesh, etc., that are characteristic of the great Pauline Epistles are not totally lacking in the Epistle to the Ephesians, being recognizable in chapter ii (1-16). However, the writer's subject does not lead him to develop these particular doctrines. On the other hand, he clearly indicates, especially in chapter i, the supreme place which, in the order of nature and grace, is allotted to Christ, the author and center of salvation. Some of the doxological notions which are developed and converted, the source of all grace, etc. Although, in his great Epistles, St. Paul sometimes touches upon these doctrines (cf. I Cor., viii, 6; xv, 45 sq.; II Cor., v, 18 sq.), they constitute the special object of his letter to the Colossians, where he develops them to a much greater extent than in that to the Ephesians. In fact this Epistle treats more of the Church than of Christ. Among all the letters of St. Paul, the Epistle to the Ephesians seems to have that of Cerritan in "Revue biblique" 1895, pp. 343 sq., and W. II. Griffith Thomas in the "Expositor", Oct, 1906, pp. 318 sq.) The word church no longer means, as is usual in the great Epistles of St. Paul (see, however, Gal., i, 13; I Cor., xii, 28; xv, 9), some local church or other, but the one universal Church, one and indivisible, in which each of the faithful keeps his place in one body of which Christ is the head. Here we find the systematized development of elements insinuated from time to time in the letters to the Galatians, Corinthians, and Romans. The author who has declared that there is now neither Jew nor Greek but that all are one in Christ Jesus (Gal., iii, 28); that in each Christian the life of Christ is manifested (Gal., ii, 20; II Cor., i, 11 sq.), that all are led by the Spirit of God and of Christ (Rom., viii, 9-14); that each one of the faithful has Christ for head (I Cor., xi, 3), could, by combining these elements, easily come to consider all Christians as forming but one body (Rom., xii, 5; I Cor., xii, 27), animated by one spirit (Eph., iv, 4), a single body having Christ for head. To this body the Great High Priest longs by the same right of ancient consecration, and, Thaddaeus this tender manifestation of Providence was, according to the Epistle to the Ephesians, made manifest to all the Apostles, a declaration which, moreover, the Epistle to the Galatians does not contradict (Gal., ii, 3-9); however, this revelation remains, as it were, the special gift of St. Paul (Eph., iii, 3-8). The right of pagans seems to be no longer questioned, while slavery is only defended as to be able to lead a useful life. At the death of Christ the wall of separation was broken down (cf. Gal., iii, 13), and all have since had access to the Father in the same spirit. They do not meet on the Jewish ground of the abolished Law but on Christian ground, in the edifice founded directly on Christ. The Church being thus constituted, the author complements it just as it appears to him. Moreover, if in the extension of the Church he beholds the realization of the eternal decree by which all men have been predestined to the same salvation, he is not obliged to repeat the religious history of mankind in the way he had occasion to describe it in the Epistle to the Romans; neither is he constrained to explain the historical privileges of the Jews, to which he nevertheless alludes (Eph., ii, 12), nor to connect the new economy with the old (see, however, Eph., iii, 6), nor indeed to introduce, at least not into the doctrinal exposition, the sins of the pagans, whom he is satisfied to accuse of having lacked intimate communion with God (Eph., ii, 12). For the time being all these points are not his main subject of meditation. It is rather the recent, positive fact of the union of all men in the Church, the body of Christ, that he brings into prominence; the Apostle confutes the gentile doctors' pretense, that they were more excellently treated among the Gentiles than among the Jews, and their negation of the influence over this body and over each of its members; hence it is only occasionally that he recalls the redemptive power of Christ's Death. (Eph., i, 7; ii, 5, 6.) From heaven, where He has been exalted, Christ bestows His gifts on all the faithful without distinction, commanding, however, that in His Church certain offices be held for the common welfare. The hierarchical terms used, in substantially later or (εὐίς, πρεσβύτεροι, διάκονοι) are not met with here. The apostles and prophets, always mentioned together, in the Epistle to the Ephesians, play a like part, being the founders of the Church (Eph., ii, 20). Thus placed on an equality with the prophets, the apostles are not the chosen Twelve but, as indicated in the prologue of the book, the dispensers of the gifts which are allotted, the source of all grace, etc. Although, in his great Epistles, St. Paul sometimes touches upon these doctrines (cf. I Cor., viii, 6; xv, 45 sq.; II Cor., v, 18 sq.), they constitute the special object of his letter to the Colossians, where he develops them to a much greater extent than in that to the Ephesians. In fact this Epistle treats more of the Church than of Christ. Among all the letters of St. Paul, the Epistle to the Ephesians seems to have that of Cerritan in "Revue biblique" 1895, pp. 343 sq., and W. II. Griffith Thomas in the "Expositor", Oct, 1906, pp. 318 sq.) The word church no longer means, as is usual in the great Epistles of St. Paul (see, however, Gal., i, 13; I Cor., xii, 28; xv, 9), some local church or other, but the one universal Church, one and indivisible, in which each of the faithful keeps his place in one body of which Christ is the head. Here we find the systematized development of elements insinuated from time to time in the letters to the Galatians, Corinthians, and Romans. The author who has declared that there is now neither Jew nor Greek but that all are one in Christ Jesus (Gal., iii, 28); that in each Christian the life of Christ is manifested (Gal., ii, 20; II Cor., i, 11 sq.), that all are led by the Spirit of God and of Christ (Rom., viii, 9-14); that each one of the faithful has Christ for head (I Cor., xi, 3), could, by combining these elements, easily come to consider all Christians as forming but one body (Rom., xii, 5; I Cor., xii, 27), animated by one spirit (Eph., iv, 4), a single body having Christ for head. To this body the Great High Priest longs by the same right of ancient consecration, and, Thaddaeus this tender manifestation of Providence was, according to the Epistle to the Ephesians, made manifest to all the Apostles, a declaration which, moreover, the Epistle to the Galatians does not contradict (Gal., ii, 3-9); however, this revelation remains, as it were, the special gift of St. Paul (Eph., iii, 3-8). The right of pagans seems to be no longer questioned, while slavery is only defended as to be able to lead a useful life. At the death of Christ the wall of separation was broken down (cf. Gal., iii, 13), and all have since had access to the Father in the same spirit. They do not meet on the Jewish ground of the abolished Law but on Christian ground, in the edifice founded directly on Christ. The Church being thus constituted, the author complements it just as it appears to him. Moreover, if in the extension of the Church he beholds the realization of the eternal decree by which all men have been predestined to the same salvation, he is not
this leads us first of all to try to ascertain the object of the letter to the Ephesians.

III. OBJECT.—It has been said that St. Paul combated immoral doctrines and an antinomian propaganda that especially endangered those to whom the letters were addressed (Pleiderer), but this hypothesis would not explain the dogmatic part of the Epistle, and in the hortatory part nothing betokens a polemical preoccupation. All the warnings administered are called forth by the pagan origin of the readers, and when the author addresses his prayers to Heaven in their behalf (Eph., i, 17 sqq.; iii, 14 sqq.) he does not mention any particular peril from which he would have God deliver their Christian life. Kloppenborg (ibid., p. 59) has given an explanation of the still denying converted pagans their full right in the Church, and Jacquier gives this as an additional motive. Others have said that the Gentile-Christians of the Epistle had to be reminded of the privileges of the Jews. But not one word in the letter, even in the section containing exhortations to unity (Eph., iv, 2 sq.), reveals the existence of any antagonism among those to whom the Apostle writes, and there is no question of the reproduction or re-establishment of unity. The author never addresses himself to any save converted pagans, and all his considerations tend solely to provide them with a full knowledge of the blessings which, despite their pagan origin, they have acquired in Christ and of the greatness of the love that God has shown to such a people. To what special duties of his personal Apostleship, it is not by way of defending it against attacks but of expressing all his gratitude for having been called, in spite of his unworthiness, to announce the great mystery of which he had sung the praises. Briefly, nothing in the letter allows us to suspect that it responds to any special need on the part of any to whom it is addressed, nor that they, on their side, had been put in the situation of writing it. In so far as either its dogmatic or moral part is concerned, it might have been addressed to any churches whatever founded in the pagan world.

IV. TO WHOM ADDRESSED.—To whom, then, was the Epistle addressed? This question has evoked a variety of theories. The general and traditional opinion that the Epistle was written to the Ephesians exclusively (Danko, Cornely), but the greater number consider it in the light of a circular letter. Some maintain that it was addressed to Ephesus and the churches of which this city was, so to speak, the metropolis (Michelis, Harless, and Henle), while others hold that it was sent to the seven Churches of Asia Minor (Von Soden). The question can only be solved by comparing the Epistle with the knowledge possessed of the life and literary activity of St. Paul up to that point in time. It must certainly be true that the pseudo-Paul (i, 1) was careful to conform to literary and historical probabilities; and if not, since the letter vouchsafes no direct indication as to the correspondents whom he supposed the Apostle to be addressing, it would be idle to imagine who they were.

The words καὶ πασιν ἐν Χριστῷ Ἰησοῦ (i, 2) refer to the primitive text. St. Basil attests that, even in his day, they were not met with in the ancient MSS.; in fact they are missing from the Codices B and S (first hand). Moreover, the examination of the Epistle does not warrant the belief that it was addressed to the church in which the Apostle had sojourned longest. When St. Paul writes to one of his churches, he constantly alludes to his former relations with it (see Thess., Gal., Cor.); but here there is nothing personal, no greeting, no special recommendation, no allusion to the author's past. Paul is unacquainted with his correspondents, although he has heard them spoken of (Eph., i, 15), and they have heard of him (Eph., iii, 2; cf. iv, 21). When addressing himself to any particular church, even be it at the time still a stranger to him as, for instance, Rome or Colossae, the Apostle always assumes a personal tone; hence the abstract and general manner in which he treats his subject from the beginning to the end of the Epistle to the Ephesians can best be accounted for by beholding in this Epistle a circular letter to a group of churches still unknown to Paul. But this explanation, founded on the encyclical character of the Epistle, loses its value if the Church of Ephesus is numbered among those addressed, and this is not the case. This is the argument of this city, the Apostle had had frequent intercourse with the neighbouring Christian communities, and in this case he would have had Ephesus especially in view, just as in writing to all the faithful of Achaia (II Cor., i, 1) it was chiefly to the Church of Corinth that he addressed himself.

Nevertheless, it was to a rather restricted circle of Christian communities that Paul sent this letter, as Tycheicus was to visit them all and bring them news of him (Eph., vi, 21 sq.), which fact precludes the idea of all the churches of Asia Minor or of all the Gentile-Christian churches. Moreover, since Tycheicus was bearer of the Epistle to the Colossians and that to the Ephesians at one and the same time (Col., iv, 7 sq.), this was really to be considered an official letter addressed, which is very far from Colossae, and we have every reason to suppose them in Asia Minor. However, we do not believe that the Epistle in question was addressed to the churches immediately surrounding Colossae, as the perils that threatened the faith of the Colossians virtually endangered that of the neighbouring communities, and wherewith, then, two letters differing in tone and subject of course, have been written? Nay, there is no connection between the Epistle and the Colossians, the Apostle would have been satisfied to address to them and their Christian neighbours an encyclical letter embodying all the matter treated in both Epistles. Hence it behooves us to seek elsewhere in Asia Minor, towards the year 60, a rather limited group of churches still unknown to St. Paul. Now, in the course of his three journeys, Paul had traversed all parts of Asia Minor except the northern provinces along the Black Sea, territory which he did not reach prior to his captivity. Nevertheless, the First Epistle of St. Peter shows us that the Faith had already penetrated these regions; hence, with the historical data at our disposal, it is in this vicinity that it seems most reasonable to seek those to whom the letter was written. It is at this period that the name of Ephesus seems to have been named in the authentic text of the inscription of this Epistle, as they are in all of St. Paul's letters. Now, whenever the substantive participle appears in one of these inscriptions, it serves the sole purpose of introducing the mention of locality. We are therefore authorized to believe that, in the address of the Epistle, St. Paul means simply to indicate to his readers the churches to whom this letter is addressed, and that the idea of the singular possessive case καὶ πασιν ἐν Χριστῷ Ἰησοῦ, this participle, so difficult to understand in the received text, originally preceded the designation of the place inhabited by the readers. One might assume that the line containing this designation was omitted owing to some distraction on the part of the first copyist; however, it would then be necessary to admit that the mention of locality, now in the insertion, was originally the result of the adjectives applied by the Apostle to his readers (ἀγαθὸς τῶν οἰκίων . . . τῶν τισιν καὶ . . . τῶν τισιν κατ᾽ Ἰησοῦν ἐν Χριστῷ Ἰησοῦ), and this is something that is never verified in the letters of St. Paul. Hence we may suppose that, in this address, the indication of place was corrupted rather than omitted, and this paves the way for conjectural restorations. We may add that τῶν οἰκίων κατ᾽ Ἰησοῦν ἐν Χριστῷ Ἰησοῦ is Ladeuze in Revue biblique, 1902, pp. 573 sqq.) Grammati-
cally, this phrase corresponds perfectly with the Apostle’s style (cf. Gal., i, 22; 1 Cor., i, 2; Phil., i, 1) and palaeographically, if transcribed in ancient capitals, it readily accounts for the corruption that has certainly been produced in the text. The Epistle to the Ephesians was, therefore, written to distant churches, located perhaps in various provinces [Pontus, Galatia, Ptolemais, Polemonium (the kingdom of Polemon)] and, for this reason, requiring to be designated by a general term, but all situated along the River Ister.

The north coast of Asia Minor played rather an obscure part in the first century. When the first collection of the Apostle’s letters was made, a collection on which the entire textual tradition of these letters depends (cf. Zahn, Geschichte des N. T. Kanons, i, ii, p. 829), it was Ephesus that furnished the copy of this Epistle, having obtained it when Tychicus landed at that port, thence to set out for Colossae and in the direction of Pontus, and in this copy the text of the address had already been corrupted. Having come from Ephesus, this letter quickly passed for one to the Ephesians, the more so as there was no other written by the Apostle to the most celebrated of churches. This explains why, from the beginning, all except Muratori, those who did not receive it with the hand of faith, have been disposed to question these evangelisation traditions. Moreover we believe with Godet that: “It is more natural to think that, of these two mutually complementary letters, the one provoked by a positive request and a definite need [Col.] came first, and that the other [Eph.] was due to the greater solicitude evoked by the composition of the former.”

How, then, admitting that St. Paul wrote the Epistle to the Ephesians, shall we explain the origin of this document? The Apostle, who was a captive at Rome, was informed by Epaphras of the dogmatic and moral errors that had come to light in Colosse and the neighbouring cities, in churches of which he was not the founder. He also learned that he had been censured for not bringing to the perfection of Christianity those some years before he had proposed to them (St. Clement), look upon this letter as an Epistle to the Ephesians, and why, in all MSS., it is transcribed under this title.

V. DATE AND PLACE OF COMPOSITION; OCCASION.—Like the Epistles to the Colossians, to the Philippians, and to Philemon, that to the Ephesians was written during the lifetime of the apostle. Of this there is no doubt (Eph., iii, 1; iv, 1; v, 20), when he had but little reason to resort to the services of a disciple to write in his name (De Wette, Ewald, and Renan). Lisco (Vincula Sanctorum, Berlin, 1900) is the only one nowadays who claims that these letters antedate the great captivity of St. Paul, maintaining that the Apostle must have written them while a prisoner in Ephesus; but this does not correspond to the manner of the Corinthians and Romans. But we are not acquainted with any of the details of this captivity at Ephesus. Moreover, the doctrine set forth in the letters in question belongs to an epoch subsequent to the composition of the Epistle to the Romans (58); hence they were not written previously to the captivity in Cæsarea (58–60). On the other hand, they are anterior to the Ephes. iv, 7 verse is admitted, and that is that they were written at the last captivity. It consequently remains for them to be ascribed to a period between 58 and 63, but whether they were produced in Cæsarea or in Rome (61–63) is still a much mooted question. The information gleaned here and there is very vague and the arguments brought forward are very doubtful. However, the freedom allowed Paul, and the evangelical activity he displays at the time of writing these letters, would seem more in keeping with his captivity in Rome (Acts, xxviii, 17–31) than in Cæsarea (Acts, xxiii, sq.). One thing, however, is certain, once the authenticity of the Epistle to the Ephesians is admitted, and that is that they were written at the same time. They both show fundamentally and formally a very close connexion of which we shall speak later on. Tychicus was appointed to convey both Epistles to those to whom they were respectively addressed and to fulfil the same mission in behalf of them (Col., iv, 7 sq.; Eph., vi, 21 sq.). Verse 16 of chapter iv of Colossians does not seem to allude to the letter to the Ephesians, which would need to have been written first; besides, the Epistle here mentioned is scarcely an encyclical, the context leading us to look upon it as a special letter of the same nature as that sent to the Colossians. If, moreover, Paul knew that, before reaching Colossae, Tychicus would deliver the Epistle to the Ephesians to the Christians at Laodicea, there was no reason why he should insert greetings for the Laodiceans in his Epistle to the Colossians (Col., iv, 17). It is probable that the Epistle to the Ephesians was written in the second place. It would be less easy to understand why, in repeating to the Colossians the same exhortations that he had made to the Ephesians, for instance, on remarriage (Eph., v, 22 sqq.), the author should have completely suppressed the substructure of dogmatic considerations on which these exhortations had been based. Moreover we believe with Godet that: “It is more natural to think that, of these two mutually complementary letters, the one provoked by a positive request and a definite need [Col.] came first, and that the other [Eph.] was due to the greater solicitude evoked by the composition of the former.”

VI. AUTHENTICITY.—If one would only remember to whom the Epistle was addressed and on what occasion it was written, there would be no doubt against its Pauline authenticity could be readily acknowledged. We shall now try to examine it more closely. (1) Relation to Other Books of the New Testament.—The letter to the Ephesians bears some resemblance to the Epistle to the Hebrews and the writings of St. Luke and St. John, in point of ideas and mode of expression, but no such resemblance is traceable in the great Pauline Epistles. Of course one of the Apostles’ words might have been utilized in these later documents but these similarities are too vague to establish a literary relationship. During the four years intervening between the Epistle to the Romans and that to the Ephesians, St. Paul had changed his headquarters and his line of work, and we behold him at Rome and Cæsarea connected with new Christian centres. It is therefore natural that such a manifestly dogmatic style should savour of the Christian language used in these later books, when we recall that their object has so much in common with the matter treated in the Epistle to the Ephesians. Whatever may now and then have been said on the subject, the same phenomenon is noticeable in the Epistle to the Colossians.

If, indeed, the Epistle to the Ephesians agrees with the Acts in more instances than does the Epistle to the Colossians, it is because the two former have one identical object, namely, the constitution of the Church by the calling of the Jews and Gentiles.

The relationship between the Epistle to the Ephesians and 1 Peter is much closer. The letter to the Ephesians, unlike most of the Pauline Epistles, does
not begin with an act of thanksgiving but with a hymn similar, even in its wording, to that which opens I Peter. Besides, both letters agree in certain typical expressions and in the description of the duties of the domestic life, which terminates in both with the same exhortation to combat the devil. With the majority of critics, we maintain the relationship between these letters to be literary. But I Peter was written last and consequently depends on the Epistles to the Ephesians; for instance, it alludes already to the persecution, at least as impending. Sylvanus, the Apostle's faithful companion, was St. Peter's secretary (I Peter, v, 12), and it is but natural that he should make use of a letter, recently written by St. Paul, on questions analogous to those which himself had to treat, especially in regard to prayer, the problem addressed in both of these Epistles are, for the greater part, identical (cf. I Peter, i, 1).

The attacks made upon the authenticity of the Epistle to the Ephesians have been based mainly on its similarity to the Epistle to the Colossians, although some have maintained that the latter depends upon the former (MayerhofT). In the opinion of Hitzig and Harnack, the author of the Epistle to the Ephesians and already imbued with Gnosticism used an authentic letter, written by Paul to the Colossians against the Judeo-Christians of the Age, in composing the Epistle to the Ephesians, in conformity to which he himself subsequently revised the letter to the Colossians, giving it the form it has in the canon. De Wette and Ewald left the letter to the Colossians (Eph., iii, 1–9 and Col., i, 23–27; Eph., v, 21–vi, 9 and Col., iii, 18–iv, 1) and that still more frequently the later author follows a purely mechanical process by taking a single verse from the letter to the Colossians and using it to introduce and conclude, and serve as a frame, so to speak, for a statement of his own. Thus, he may have used, in Eph., iv, 25–31, the beginning of Col., iii, 18–20, and in Eph., v, 22 sqq. of Col., iii, 12 sq, and where verses 15, 16, are like Col., ii, 19.

In fact, throughout his entire exposition, the author of the Epistle to the Ephesians is constantly repeating ideas and even particular expressions that occur in the letter to the Colossians, and yet neither a servile imitation nor any one of the well-known omissions that plagiarists are liable to be proved against the Colossians, ii, 19, but in these verses there is no comparison whatever between Christian marriage and that union of Christ with His Church such as characterizes the same exhortation in Eph., v, 22 sq.; consequently, it would be very arbitrary to maintain the latter text to be a vulgar paraphrase of the former.

In comparing the texts quoted, the phenomenon of framing, to which von Soden called attention, can be verified in a single passage of the Epistle to the Ephesians: Eph., iii, 12 sq. and where verses 15, 16, are like Col., ii, 19.

Moreover, it is chiefly in their Hortatory part that these two letters are so remarkably alike and this is only natural if, at intervals of a few days or hours, the same author had to remind two distinct circles of readers of the same common duties of the Christian life. In the dogmatic part of these two Epistles there is a change of subject, treated with a different intention and in another tone. In the one instance we have a hymn running through three chapters and celebrating the call of both Jews and Gentiles and the union of all in the Church of Christ; and in the other, an exposition of Christ's dignity and of the adequacy of the means He vouchsafes us for the obtaining of our salvation, as also thanksgiving and especially prayers for those readers who are liable to misunderstand this doctrine. However, these two objectives, Christ and the Church, are closely akin; possibly if his letter to the Ephesians, St. Paul reproduces the ideas set forth in that to the Colossians, it is certainly less astonishing than to find a like phenomenon in the Epistles to the Galatians and to the Romans, as it is very natural that the characteristic expressions used by the Apostle in the Epistle to the Colossians appear to him, in the letter to the Ephesians, since they were written at the same time. In fact it has been remarked that he is prone to repeat typical expressions he has once coined (cf. Zahn, Einleitung, I, p. 363 sqq.). Briefly, we conclude with Sabatier that: "These two letters come to us from one and the same author, who, when writing the one, had the other in mind and, when composing the second, had not forgotten the first. Indeed, it is quite possible that the letter to the Ephesians to some of the doctrinal questions treated in the Epistle to the Colossians, can be accounted for in this manner, even though these questions were never proposed by those to whom the former Epistle was addressed."

(2) Difficulties Arising from the Form and Doctrine. The external and the Pauline authenticity of the Epistle to the Ephesians is based on the special characteristics of the Epistle from the viewpoint of style as well as of doctrine, and, while differing from those of the great Pauline Epistles, these characteristics although more marked, resemble those of the letter to the Colossians. But we have already dwelt upon them at sufficient length.

The circumstances under which the Apostle must have written the Epistle to the Ephesians seem to account for the development of the doctrine and the remarkable change of style. During his two years' captivity in Caesarea, Paul could not exercise his Apostolic functions, and in Rome, although allowed more liberty, he could not preach the Gospel outside the house in which he had lived. Hence he must have made up for his loss of external activity by a more profound meditation on "his Gospel". The theology of justification, of the Law, and of the conditions essential to salvation, he had already brought to perfection, having systematized it in the Epistle to the Romans and, although keeping it in view, he did not require to develop it any further. In his Epistle to the Romans (viii–xi, xvi, 25–27) he had come to the investigation of the eternal counsels of Providence concerning the salvation of men and had expounded, as it were, a philosophy of the religious history of mankind of which Christ was the centre, as indeed He had always been the central object of St. Paul's faith. Thus, it was on Christ Himself that the solitary meditations of the Apostle were concentrated; in the quiet of his house, he could sit down to intellectual labour and with the aid of new revelations, this first revelation received when "it pleased God to reveal His Son in him". He was, moreover, urged by the news brought him from time to time by some of his disciples, as, for instance, by Epaphras, that, in certain churches, errors were being propagated which tended to lessen the rôle and the dignity of Christ by setting up against Him other intermediaries in the work of salvation. On the other hand, separated from the faithful and having no longer to travel constantly from one church to another, the Apostle was able to embrace in one sweeping glance all the Christians scattered throughout the world. While he resided in the centre of the immense Roman Empire which, in its unity, comprised the world, it was the one
universal Church of Christ, the fulfilment of the mys-
terious decrees revealed to him, the Church in which it had been his privilege to bring together Jews and pagans, that presented itself to him for contemplation.

These subjects of habitual meditation are naturally introduced in the letters that he had to write at that time. To the Colossians he speaks of Christ's dignity; to the Ephesians, and we have seen why, of the unity of the Church. But in these Epistles, Paul addresses those who are unknown to him; he no longer needs, as in preceding letters, to combat theo-
rical errors; he has already explained the mystery for them and is now engaged in explaining his work and to refute enemies who, in their hatred, attacked him personally. Accordingly, there is no further occasion to use the serried argumentation with which he not only overthrew the arguments of his ad-
versaries but turned them to the letter's confusion.

There is more question of setting forth the sublime considerations with which he is filled than of discussions. Then, ideas so crowd upon him that his pen is overtaxed; his sentences teem with synonyms and qualifying epithets and keep taking on new proposi-
tions, thus losing the sharpness and vigour of contro-
versy and assuming the ample proportions of a hymn of adoration. Hence we can understand why, in these letters, Paul's style grows dull and sluggish and why he does not use the same initial formality as in that of the first Epistles. When writing to the Colos-
sians he at least had one particular church to deal with and certain errors to refute, whereas, in the Epistle to the Ephesians, he addressed himself at one and the same time to a group of unknown churches of which he had received but vague information. There was need to be mentioned in the letter the Apostle's commit-
tment to himself and to his own meditations. This is the reason why the special characteristics already indi-
cated in the Epistle to the Colossians appear even more pronounced in that to the Ephesians, particu-
larly in the dogmatic part.

(3) Tradition.—If we thus keep in mind the circum-
stances under which Paul wrote both of these letters, their peculiar character seems no obstacle to their Pauline authenticity. Therefore, the testimony which, in their inscriptions (Col., i, 1; Eph., i, 1), they themselves render to this authenticity and the very ancient tradition which unanimously attributes them to the Apostle preserve all their force. From the tra-
ditional viewpoint the Epistle to the Ephesians is in the Epistle to the Colossians.

Used in the first Epistle of St. Peter, in the Epistle of St. Polycarp, in the works of St. Justin, perhaps in the Didache and I Clement, it appears to have been already well known towards the end of the first century. Marcion and St. Ireneus ascribe it to St. Paul and it seems that St. Ignatius, when writing to the Ephesians, had already made use of it as Pauline. It is also to be noted in the 6th century that a copy of the Epis-
tle has been denied by most of the liberal critics since Schleiermacher's day, it is nevertheless conceded by many modern critics, Protestants among them, and held at least as probable by Harnack andJulicher. In fact the day seems to be approaching when the whole world will recognize as the work of St. Paul, this Epistle which St. Ignatius was the first to quote.Chrysostom admired the sublime sentences and doctrines: οἱ μαθητές μου εἰς τὴν . . . θυσίαν καὶ δογμάτων. Consult the Introduction to the New Testament. We shall con-
tent ourselves here with indicating the latest commentaries, in which the substantially new opinion is mentioned.

Catholic Commentaries: Bonnig, Erklärung der Briefe an die Epheser, Philippus und Kolosser (Münster, 1886); Henne, Der Brief an die Epheser (Romanisch, 1908); Heise, Der Brief an die Epheser (Kampen, 1908); Beiler, Der Epheserbrief übersetzt und erklärt (Freiburg im Br., 1908); Maunoury, Commentary on the \epsilonεpecta apote\- kate, aus Ephesien, etc. (Paris, 1851).

Non-Catholic Commentaries: Ortlamare, Commentaire sur les épîtres de S. Paul aux Colossiens, aux Ephesiens et à Phile-
mon (Paris, 1801); Von Soest, Die Briefe an die Kolosser, Epheser, Philonem in Hand-Commentar zum N. T., ed. Holtz-

P. Ladeuze.

Ephesians, a titular archiepiscopal see in Asia Minor, said to have been founded in the eleventh century B.C. by Androcles, son of the Athenian King Codrus, with the aid of Ionian colonists. Its coinage dates back to 700 B.C., the period when the first money was struck. After belonging successively to the kings of Lydia, the Persians, and the Syrian successors of Alexander the Great, it passed, after the battle of Magnesia (190 B.C.), to the kings of Pergamum, the last of whom, Attalus III, bequeathed his kingdom to the Roman people (133 B.C.). It was at Ephesus that Mithradates (88 B.C.) signed the decree ordering all the Romans in Asia to be put to death, in which massacre there perished 100,000 persons. Four years later Sulla, again master of the territory, slaughtered at Ephesus all who had adhered to the rebellion. From 27 B.C. till a little after A.D. 217, Ephesus was the most important port and com-
mercial centre of Asia, a direct dependency of the Roman Senate. Though unimportant politically, it was noted for its extensive commerce. Many illustrious persons were born at Ephesus, e. g. the philosophers Hermarchus and Hermodorus, the poet Hipponax, the painter Parrhasius (all in the sixth or fifth century B.C.), the astronomer Aratos, the astrologer and charlatan, both in the second century of the Christian Era, and the historian and essayist, Xenophon. Ephesus owed its chief renown to its temple of Artemis (Diana), which attracted multitudes of visitors. Its first architect was the Cretan Chersiphron (seventh to sixth century B.C.) but it was afterwards enlarged. It was situated on the bank of the River Salmus and its precincts had the right of asylum. This building, which was looked upon in antiquity as one of the marvels of the world, was burnt by Herodotus (356 B.C.) the night of the birth of Alexander the Great, and was afterwards rebuilt, almost in the same proportions, by the architect Di-
nocrates. Its construction is said to have lasted 120 years. According to Pausanias it was 297 feet in length and 200 feet in breadth, and rested upon 128 pillars of about sixty feet in height. It was stripped of its riches by Nero and was finally destroyed by the Goths (A.D. 262).

It was through the Jews that Christianity was first intro-
duced into Ephesus. The original community was under the leadership of Apollo (1 Cor., i, 12). They were known as the Ephesians, and were converted by Aquila and Priscilla. Then came St. Paul, who lived three years at Ephesus to establish and organize the new church; he was wont to teach in the scholae or lecture-hall of the rhetorician Tyrammus (Acts, xix, 9) and performed there many miracles. Eventu-
ally he was obliged to depart, in consequence of a plot contrived by Scevola, a temple servant, and other makers of ex-votoe for the temple of Diana (Acts, xviii, 24 sqq.; xix, 1 sqq.). A little later, on his way to Jerusalem, he sent for the elders of the commu-
nity of Ephesus to come to Miletus and bade them there a touching farewell (Acts, xx, 17–35). The Church of Ephesus was committed to his disciple, St. Timothy, a native of the city of Lystra (Tatian's Treatise, 18; iv, 12). The Epistle of St. Paul to the Ephesians was not perhaps addressed directly to them; it may be only a circular letter sent by him to several churches. The sojourn and death of the Apostle St. John at Ephesus are not mentioned in the New Testament.
but both are attested as early as the latter part of the second century by St. Irenaeus (Adv. Haer., III, iii, 4), Polycrates, Bishop of Ephesus (Eusebius, Hist. Eccl., V, xxii), Clement of Alexandria, the "Acta Ioannis", and a little earlier by St. Justin and the Montanists. Byzantine tradition has always shown at Ephesus the tomb of the Apostle. Another tradition, which may be trustworthy, though less ancient, makes Ephesus the scene of the death of St. Mary Magdalen. On the other hand the opinion that the Blessed Virgin died there rests on no ancient testimony; the often quoted but ambiguous text of the Council of Ephesus (431), manifesting a tradition that was at Ephesus the church of the Virgin. (See Ramsay in "Expositor", June, 1905, also his "Seven Cities of Asia.") We learn, moreover, from Eusebius (Hist. Eccl., V, xxiv) that the three daughters of the Apostle St. Philip were buried at Ephesus.

About 110 St. Ignatius of Antioch, having been greeted at Smyrna by messengers of the Church of Ephesus, sent to it one of his seven famous epistles. During the first three centuries, Ephesus was, next to Antioch, the chief centre of Christianity in Asia Minor. In the year 190 its bishop, St. Polycrates, held a council to consider the paschal controversy and declared himself in favour of the Quartodeciman practice; nevertheless the Ephesian Church soon conformed in this matter to the practice of the great Church of Alexandria. It seems certain that the sixth canon of the Council of Nicæa (325), confirmed for Ephesus its ecclesiastical jurisdiction over the whole "diocese" or civil territory of Asia Minor, i.e., over eleven ecclesiastical provinces; at all events, the second canon of the Council of Constantinople (381) formally recognized this authority. But Constantinople was already claiming the first rank among the churches of the province, and was trying to annex the Churches of Thrace, Asia, and Pontus. To resist these encroachments, Ephesus made common cause with Alexandria. We therefore find Bishop Mennon of Ephesus siding with St. Cyril at the Third Ecumenical Council, held at Ephesus in 431 in condemnation of Nestorianism, and another bishop, St. Epiphanius, composing the so-called Robber Council (Leitrotinum Ephesinum) of 419, which approved the heresy of Eutyches. But the resistance of Ephesus was overcome at the Council of Chalcedon (451), whose famous twenty-eighth canon placed the twenty-eight ecclesiastical provinces of Pontus, Asia, and Thrace under the jurisdiction of the Patriarch of Constantinople. Henceforth Ephesus was one of the suffragan sees of the Patriarch of Constantinople, nor did it ever recover its former standing, despite a council of 474 in which Paul, the Monophysite Patriarch of Alexandria restored its ancient rights. Egyptian influence was responsible for the hold which Monophysites gained at Ephesus during the sixth century; the famous ecclesiastical historian, John of Asia, was then one of its bishops. The metropolis of Ephesus in those days ruled over thirty-six suffragan sees. Justianim, who imitated Constantine in stripping the city of many works of art to adorn Constantinople, built there a magnificent church consecrated to St. John; this was soon a famous place of pilgrimage.

Ephesus was taken in 717 by the Arabs. Later it became the capital of the theme of the Theme of the Thracians. During the Iconoclastic period two bishops of Ephesus suffered martyrdom, Ἰπάτιος in 735 and Θεοφύλακτος in the ninth century. In the same city the fierce general Lachanodraco put to death thirty-eight monks from the monastery of Prionon in Bithynia and other partisans of the holy icon. The capture of the city by the Turks in 1453, and the destruction of the church of St. Mary Magdalen to Constantinople. The city was captured in 1090 and destroyed by the Seljuk Turks, but the Byzantines succeeded in retaking it and rebuilt it on the neighbouring hills around the church of St. John. Henceforth it was commonly called Hagia Theologou (the holy theologian, i.e. St. John the Divine), or in Turkish Aydınlı Soluk (to the Greeks the Apostle St. John is the Theologian); the French called the site Aléthe and the Italians Alto. At the beginning of the thirteenth century its metropolis, Nicholas Mesarites, had an important rôle at conferences between the Greeks and the Latins. The city was again plundered by the Turks in the first years of the fourteenth century, then by the Catalonian mercenaries in the pay of the Byzantines, and once more by the Turks. The church of St. John was transferred to the site of Ioannina, and was ruled by a Turkish ameer, who carried on a little trade with the West, but it could no longer maintain its Greek bishop. A series of Latin bishops governed the see from 1318 to 1411. The ruin of Ephesus was completed by Timur-Leng in 1403 and by nearly a half-century of civil wars among its Turkish masters.

When at the Council of Ephesus in 1453 Mark of Ephesus (Marcus Eugenius) showed himself so haughtily towards the Latins, he was the pastor of a miserable village, all that remained of the great city which Pliny once called alteram lumen Asia, or the second eye of Asia (Hist. nat., V, xxix; also Apoc., ii, 5; cf. W. Brockhoff, "Ephesus vom vierten christl. Jhdlt. bis seinem Untergang", Jena, 1906).

We may therefore consider Ephesus, along with all the other metropolises of Asia Minor, one of the most famous seats of Christianity in the first millennium. It was a city of great influence, held for a long time the highest degree of ecclesiastical dignity, and was considered a metropolis by the clergy of the Orient. Ephesus was not simply a city of commerce, but also a city of ecclesiastical influence. It was the seat of a bishop, who was considered the archbishop of all Asia Minor. The bishop of Ephesus was regarded as the spiritual leader of all the churches of Asia Minor.

Ephesus was also known for its many churches. The most famous of these was the Church of the Virgin Mary, which was believed to be the place where the Virgin Mary had lived after the death of Jesus. The church was also considered to be the burial place of the Virgin Mary. The Church of St. John was also important in Ephesus, as it was believed to be the place where St. John the Apostle had lived and passed away.

In the Middle Ages, Ephesus was considered to be a place of pilgrimage. It was visited by many pilgrims who came to pray and seek the blessings of the Virgin Mary. The city of Ephesus was also known for its many monasteries and convents. These were centers of learning and spirituality, and many monks and nuns lived and worked in these establishments.

Despite its importance, Ephesus was destroyed in the 13th century, and its ruins were largely left untouched until the 19th century. The ruins of Ephesus are now a popular tourist destination, attracting thousands of visitors each year. The city is also known for its many ancient ruins, including the ruins of the ancient city walls, the ancient theatre, and the ancient stadium.

Ephesus was also known for its many historical events. The city was the site of the Council of Ephesus, which was held in 431 to condemn the heresy of Nestorius. The council was presided over by St. Cyril of Alexandria, and it was attended by bishops from all over the East. The council was a significant event in the history of the Eastern Church, as it determined the course of the development of Christian doctrine in the region.

In addition to its historical and religious significance, Ephesus was also known for its natural beauty. The city was located in a region with a mild climate, and it was surrounded by beautiful landscapes. The city was also known for its many gardens and parks, which were popular among both locals and tourists.

In conclusion, Ephesus was a city of great importance in the history of the Eastern Church. Its ruins continue to attract visitors from around the world, and they serve as a reminder of the city's rich cultural and historical heritage.
Patriarch of Alexandria and himself, and he worked so well that the letters of convocation were issued by the emperor to all metropolitans on 19 November, some days before the messengers of Cyril arrived. The emperor was able to take this course without seeming to favour Nestorius too much, because the monks of the capital, whom Nestorius had excommunicated for their opposition to his heretical teaching, had also appealed to him to call together a council. The emperor considered that he could not take the personal ultimatum, and refused to be guided by the advice to submit which his friend John, the Patriarch of Antioch, volunteered.

The pope was pleased that the whole East should be united to condemn the new heresy. He sent two bishops, Arcadius and Projectus, to represent himself and his Roman council, and the Roman priest, Philip, as his personal representative. Philip, therefore, takes the first place, though, not being a bishop, he could not preside. It was probably a matter of course that the Patriarch of Alexandria should be president. The legates were directed not to take part in the discussions, but to give judgment on them. It seems that Chaledon, twenty years later, set the precedent of having the bishops be technically presiden
ts at an oecumenical council, and this was henceforth looked upon as a matter of course, and Greek historians assumed that it must have been the case at Nicea.

The emperor was anxious for the presence of the most venerated prelate of the whole world, Augustine, and had thought to send him, to be seated on the council, in honourable terms. But the saint had died during the siege of Hippo in the preceding August, though the troubles of Africa had prevented news from reaching Constantinople. Theodosius wrote an angry letter to Cyril, and a temperate one to the council. The tone of the latter epistle and of the instructions given to the imperial commissioner, Chrysanthus, are described by the Coptic Acts to the influence exercised on the emperor by the Abbot Victor, who had been sent to Constantinople by Cyril to act as his agent at the Court on account of the veneration and friendship which Theodo
tius was known to feel for the holy man. Nestorius, with sixteen bishops, and Cyril, with fifty, arrived before the council, and on the twenty-sixth of December the two parties arrived on the same day, and that in the evening Nestorius proposed that all should join in the Vesper service together. The other bishops refused. Memnon, Bishop of Ephesus, was afraid of violence, and sent his clergy only to the church. The mention of a Flavian, who seems to be the Bishop of Philipi, casts some doubt on this story, for that bishop did not arrive till later. Memnon of Ephesus had forty suffragans present, not counting twelve from Pamphylia (whom John of Antioch calls heretics). Juvenal of Jerusalem, with the neighbouring bishops whom he looked upon as his suffragans, and Flavian of Philipi, with a contingent from the countries which looked to Thessalonica as their metropolis, arrived simultaneously. But Peter, Bishop of Apamea, with an old friend of Nestorius, wrote to explain that his suffragans had not been able to start till after the Octave of Easter. (The Coptic Acts say that there was a famine at Antioch.) The journey of thirty days had been lengthened by the death of some horses; he would accomplish the last five or six stages at leisure. But he did not arrive, and it was said that he was loitering because he did not wish to join in condemning Nestorius. Meanwhile the heat was great. Many bishops were ill. Two or three died. Two of John of Constantinople's metropolitan, those of Apamea and Hierapolis, arrived and declared that John did not wish the opening of the council to be deferred on account of his delay. However, these two bishops and Theodoret of Cyrus, with sixty-five others, wrote a memorial addressed to St. Cyril and Juvenal of Jerusalem, begging that the arrival of John should be awaited. Count Candidian arrived, with the imperial decree, and he took the same view. But Cyril and the majority determined to open the council on 22 June, sixteen days having passed since John had announced his arrival in five or six. It was clear to the majority that this delay was intentional, and they were probably right. Yet it is regrettable that all these excesses were not made, especially as no news had yet come from Rome.

For Cyril had written to the pope with regard to an important question of procedure. Nestorius had not recanted within the ten days fixed by the pope, and he was consequently treated as excommunicate by the majority of the bishops. Was he to be allowed a fresh trial, although the pope had already condemned him? Or, on the other hand, was he to be merely given the opportunity of explaining or excusing his contumacy? One might have presumed that Pope Celestine, in approving of the council, intended that Nestorius should have a full trial, and in fact this was declared in his letter which was still on the way. But as no reply had come to Cyril, that saint considered that he had no right to accept such a sentence. He therefore wrote to the pope of the further discussion, and no doubt he had not much wish to do so. The council assembled on 22 June, and St. Cyril assumed the presidency both as Patriarch of Alexandria and "as filling the place of the most holy and blessed Archbishop of the Roman Church, Celestine", in order to carry out his original commission, which he considered, in the absence of any reply from Rome, to have been impossible. But a hundred and sixty bishops were present, and by evening one hundred and ninety-eight had assembled. The session began by a justification of the decision to delay no longer. Nestorius had been on the previous day invited to attend. He had replied that he would come if he chose. To a second summons, which was now repeated, he said that he had come from his house, he was surrounded with armed men, that he would appear when all the bishops had come together. Indeed only some twenty of the sixty-eight who had demanded a delay had rallied to Cyril, and Nestorius's own suffragans had also stayed away. To a third summons he gave no answer. This attitude corresponds with his original attitude to the condemnation of his bishop; he would not acknowledge Cyril as a judge, and he looked upon the opening of the council before the arrival of his friends from Antioch as a flagrant injustice.

The session proceeded. The Nicene Creed was read, and then the second letter of Cyril to Nestorius, on which the bishops at Cyril's desire, severally gave their judgement that it was in accordance with the Nicene faith, one hundred and twenty-six speaking in turn. Next the reply of Nestorius was read. All then cried Anathema to Nestorius. Then Pope Celestine's letter to St. Cyril was read, and after it the third letter of Cyril to Nestorius, with the anathematizations which the hetereic was to accept. The bishops who had served this ultimatum on Nestorius deposed that they had given him the time he had promised. On the following day, but had not given any, and did not even admit them. Then two friends of Nestorius, Theodotus of Ancyra and Acacius of Mytilene, were invited by Cyril to give an account of their conversations at Ephesus with Nestorius. Acacius said that Nestorius had repeatedly declared διηγηματα δυναμεων μη δει λεγεσθαι Ουδενας ουδενως ενθυμησεν i.e. his "Apology" (Bethune-Baker, p. 71) shows that this phrase is to be translated thus: "We must not say that God is two or three months old." This is not so shocking as the meaning which has usually been ascribed to the words in modern as well as ancient times (e.g. by Socrates, VII, xxxiv): "A baby of two or three months old ought not to be called God." The former sense agrees with the accu
sation of Acacius that Nestorius declared "one must
either deny the Godhead [δημητρίων] of the Only-begotten to have become man, or else admit the same of the Father and of the Holy Ghost.” (Nestorius means that the Divine Nature is numerically one and if Nestorius really said δημητρίων, and not βρασμα, he was right, and Aeneas was wrong.) Aeneas further accused him of uttering the heresy that the Son who died is to be distinguished from the Word of God. A series of extracts from the holy Fathers was then read, Peter I and Athanasius of Alexandria, Julius and Felix of Rome (but these papal letters were Apollinarian forgeries), Theophilus, Cyril’s uncle, Cyprian, Ambrose, Gregory Nazianzen, Basil, Gregory of Nyssa, Atticus, Amphilochius. After these, contrasting passages of Nestorius, were of course πεποιθήσεις brought forward by Cyril, and necessary to inform the council as to the question at issue. Hefele has wrongly understood that the bishops were examining the doctrine of Nestorius afresh, without accepting the condemnation by the pope as necessarily correct. A fine letter from Capreolus, Bishop of Carthage, and primate of a greater number of bishops than any of the Eastern patriarchs, was next produced. He writes in the midst of the devastation of Africa by the Vandals, and naturally could neither hold any synod nor send any bishops. No discussion followed (and Hefele is wrong in suggesting an omission in the Acts, which are already of extraordinary length for a single day), but the bishops accepted both reports of Capreolus against novelty and in praise of ancient faith, and all proceeded to sign the sentence against Nestorius. As the excommunication by St. Celestine was still in force, and as Nestorius had contumaciously refused to answer the threefold summons enjoined by the canons, the sentence was worded as follows:—

The holy synod said: ‘Since in addition to the real sin of Nestorius, the former... the Holy Church, with many tears have arrived at the following grievous sentence against him: Our Lord Jesus Christ, Who has been blasphemed by us, has defined this holy synod that the same Nestorius is exalted from all episcopal dignity and from every assembly of bishops.’

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to ‘the new Judas’ was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business had been brought to a successful conclusion when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the notices of the deposition torn down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out. The latter letter to the Egyptian bishops in the same city and to the Abbot Dalmatius (the Coptic substitutes Abbot Victor), Cyril asks for their vigilance, as Candidian was sending false reports. Sermons were preached by Cyril and his friends, and the people of Ephesus were much excited. Even before this, Nestorius, writing, with ten bishops, to the emperor to complain that the council was to begin without waiting for the Antiochenes and the Westerners, had spoken of the violence of the people, egged on by their bishop Menmon who (so the heretic said) had shut the churches to him and threatened him with death.

Five days after the first session John of Antioch arrived. The party of Cyril sent a deputation to meet him honourably, but John was surrounded by soldiers, and complained that the bishops were creating a disturbance. Before he would speak to them, he held an assembly which he designated “the holy synod.” Candidian deposed that he had disapproved of the assembly of the bishops before John’s arrival; he had attended the session and read the emperor’s letter (of this not a word in the Acts, as Candidian wanted to throw John’s Johannes, Bishop of Euphrasius, his quantities of violence, and Cyril of Arian, Apollinarian, and Eunomian heresy. These two were deposed by forty-three bishops present; the members of the council were to be forgiven, provided they would condemn the twelve anathematisms of Cyril. This was absurd, for most of these could not be understood in anything but a Catholic sense. But John, who was not a bad man, was in a bad temper. It is noticeable that not a word was said in favour of Nestorius at this assembly. The party of Cyril was now complaining of Count Candidian and his soldiers, as the other side did of Menmon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the division, and wrote that a collective session must be held. This was arranged, and the Emperor, Palladius who brought this epistle took back with him many letters from both sides. Cyril proposed that the emperor should send for him and five bishops, to render an exact account.

At last on 10 July the papal envoys arrived. The second session assembled in the episcopal residence. The legate Philip opened the proceedings by saying that the first session had been already read, in which he had decided the present question; the pope had now sent another letter. This was read. It contained a general exhortation to the council, and concluded by saying that the legates had instructions to carry out what the pope had formerly decided; doubtless the council would agree. The Fathers then cried: ‘This is a just judgment. To Celestine, the guardian of the Faith! To Celestine agreeing with the Synod! The Synod gives thanks to Cyril. One Celestine, one Cyril!’ The legate Projectus then says that the letter enjoins on the council, though they need no instruction, to carry into effect the sentence which the pope had pronounced. Hefele wrongly interprets this: ‘That is, that all the bishops should accede to the papal sentence’ (vol. III, 136). Firmus, the Exarch of Cæsarea in Cappadocia, replies that the pope, by the letter which he sent to the Bishops of Alexandria, Jerusalem, Thessalonica, Constantinople, and Antioch, had long since given his sentence and decision; and the synod—the ten days having passed, and also a much longer period—having waited beyond the thirty days of the sentence, “necessarily obliged by the canons”, and Apostolic to the words “and by the letter of the bishop of Rome”. The legate Arcadius expressed his regret for the late arrival of his party, on account of storms, and asked to see the deers of the council. Philip, the pope’s personal legate, then thanked the bishops for adhering by their acclamations as holy members to their holy head. “For your blessedness is not unaware that the Apostle Peter is
the head of the Faith and of the Apostles." The Metropolitan of Ancyra declared that God had shown the justice of the synod's sentence by the coming of St. Celestine's letter and of the legates. The session closed with the reading of the pope's letter to the emperor.

On the following day, 11 July, the third session took place. The legates had read the Acts of the first session and now demanded only that the condemnation of Nestorius should be formally read in their presence. When this had been done, the three letters written by Cyril, and the will of Nestorius, were read. The Acts of 335, the pope's name. The exordium of the speech of Philip is celebrated: "It is doubtful to none, nay it has been known to all ages, that holy and blessed Peter, the prince and head of the Apostles, the column of the Faith, the foundation of the Catholic Church, received from our Lord Jesus Christ, the Saviour and Redeemer of the human race, the keys of the Kingdom, and that to him was given the power of binding and loosing sins, who until this day and for ever lives and judges in his successors. His successor in order and his representative, our holy and most blessed Pope Celestine ..." It was with words such as these before their eyes that Greek Fathers and councils spoke of the Council of Ephesus as celebrated "by Cyril and Nestorius, and the Church of Ephesus."

A tractate of three sessions was read, for Cyril then rose and said that the synod had understood them clearly; and now the Acts of all three sessions must be presented to the legates for their signature. Arcadius replied that they were of course willing. The synod ordered that the Acts should be set before them, and they signed them. A letter was sent to the emperor telling him how St. Celestine had held a synod at Rome and had sent his legates, representing himself and the whole of the West. The whole world has therefore agreed; Theodosius should allow the bishops to go home, for many suffered from being at Ephesus, and their dioceses also must suffer. Only a few friends of Nestorius held out against the world's judgment. A new bishop must be appointed for Constantinople.

On 16 July a more solemn session was held, like the first, in the cathedral of the Theotokos. Cyril and Memnon presented a written protest against the concilium of John of Antioch. He was cited to appear, but would not even admit the envoys. Next day the fifth session was held in the same church. John of Antioch, on April 14, 431, had called the synod of the Apollinarian heresy. He is again cited, and this is counted as the third canonical summons. He would pay no attention. In consequence the council suspended and excommunicated him, together with thirty-four bishops of his party, but refrained from deposing them. Some of John's party had already deserted him, and he had gained only a few. In the letters to the emperor and the pope which were then dispatched, the synod described itself as now consisting of two hundred and ten bishops. The long letter to Celestine gives a full account of the council, and mentions that the pope's decrees against the Pelagians had been read and confirmed. At the end of the sixth session, which dealt only with the case of two minor clerics, the council made the famous declaration that no one must produce or compose any other creed than (φαστα, πράτερ, "beyond"—"contrary to"?) the Nicene, and that anyone who should propose any such to pagans, Jews, or heretics, who wished to be converted, should be deposed if a bishop or cleric, or anathematized if a layman. This decision became later a fruitful source of objections to the decrees of later councils. The ad hoc description of the so-called Constantinopolitan Creed; but that creed itself would be abolished by this decree if it is taken too literally. We know of several matters connected with Pamphylia and Thrace which were treated by the council, which are not found in the Acts. St. Leo tells us that Cyril reported to the pope the intrigues by which Juvenal of Jerusalem tried at Ephesus to carve himself a patriarchate out of that of Antioch, in which he was to lay his hands on his title later, at Chalcedon. In the seventh and last session on 31 July (it seems) the bishops of Cyprus persuaded the council to approve their claim of having been anciently and rightly exempt from the jurisdiction of Antioch. Six canons were also passed against the adherents and supporters of Nestorius.

The history of the intrigues by which both parties tried to get a footing in the council could not be detailed here. The orthodox were triumphant at Ephesus by their numbers and by the agreement of the papal legates. The population of Ephesus was on their side. The people of Constantinople rejoiced at the deposition of their heretical bishop. But Count Candidian and his troops were on the side of Nestorius, whose friend, Count Ireneus, was a bishop, working for him. The emperor had always championed Nestorius, but had been somewhat shaken by the reports of the council. Communication with Constantinople was impeded both by the friends of Nestorius there and by Candidian at Ephesus. A letter was taken to Constantinople at last in a hollow cane, by a messenger disguised as a beggar, in which the council's decree and the acts of the council were described, save a day passing without a funeral, and entreaty was made that they might be allowed to send representatives to the emperor. The holy abbot, St. Dalmatius, to whom the letter was addressed, as well as to the emperor, clergy, and people of Constantinople, left his monastery in obedience to a Divine voice, and, in the name of all the bishops, thousand monks of the city, all chanting and carrying tapers, made his way through enthusiastic crowds to the palace. They passed back right through the city, after the abbot Dalmatius had interviewed the emperor, and the letter was read to the people in the church of St. Mocius. All shouted "Anathema to Nestorius!"

Eventually the pious and well-meaning emperor arrived at the extraordinary decision that he should ratify the depositions decreed by both councils. He therefore declared that Cyril, Memnon, and John were all deposed. Memnon and Cyril were kept in close confinement. But in spite of all the extortions of the Antiochian party, the representatives of the envoys whom the council was eventually allowed to send, were not sent. The legates and the synod were to see the emperor accept the great council as the true one. Nestorius anticipated his fate by requesting permission to retire to his former monastery. The synod was dissolved about the beginning of October, and Cyril arrived amid much joy at Alexandria on 30 October. St. Celestine was now dead, but his successor, St. Sixtus III, confirmed the council.

The Acts of the synod, together with other documents connected with it, will be found in Greek and Latin in Mansi, IV, Harrassowitz, i, and the other Collections of Councils. Another Latin translation in Vincent de Fonvielle, 1771; Codex diplomaticus, 1772; and 27 documents in a Latin translation (Mansi, V, 752) were published by BAILLON, under the title "Les Actes de l'Empereur Julien contre l'Irapiod, ou l'E affairs de耐us, prince, de l'empereur Julianus Imperator, because it embodies and replies to a collection called "Pragmata" made in his own defence by Count Ireneus, the viceroy of Nestorius, and contained much information. Some documents see QUEINTIN, J. D. Mansi et les grandes collections conciliaires (Paris, 1900). The fragmentary Coptic Acts were published with a French translation by BOURJANT, in Memoires publiés par la Mission Archéologique française au Caire (Paris, 1892), VIII—see a short account by AMELINEAU in Revue des études orientales, XI, 1899; and CHURCH QUART. REV., OCT., 1901; they had been signalized earlier by ZEGKA, Catalogue des Copt. MSS. Mus. Volter. et de la Bibliothèque de la Sorbonne; the latter has been published (1853), XIX, 2, 301. A German translation with careful discussion, by Krauz, Koptische Akten zum Eph. Konkl. in Texte und Aufs. (1901), new ed. by B. HEYNE (1907) holds one of the five documents which are not known in Greek or Latin to be spurious. The rest of the fragments are so dependent on the influence of Abbot Victor that it is of little value. But this judgment is perhaps too severe. — On the council, TILLEMONT, XIV; HEYNE, History of the Councils, III; a new French edition by LECLERCQ (Paris, in progress), II; Leo Allatius, Vindiciae synod. Ephesini et Sanetì Cyrilli de processione Spiritus ex
Ephesus, Robber Council of (Laotocinum).—The Acts of the first session of this synod were read at the Council of Chalcedon, 431, and have thus been preserved to us. The remainder of the Acts (the first session being wanting) are known only through a Syriac translation by a Monophysite monk, published from the British Museum MS. Add. 11, 530, written in the year 335. On the events which preceded the opening of the council, 8 August, 449, see Dioscorus. The emperor had convoked it, the pope had agreed. No time had been left for any Western bishops to attend, except a certain Julius of an unknown see, who, together with a Roman priest, Renatus (he died on the way), and the deacon Hilarus, afterwards pope, represented St. Leo. The Emperor Theodosius II gave to Dioscorus, Patriarch of Alexandria, the presidency—

τὴν ἀριθμησιν καὶ τὰ πρωτεία

The legate Julius is mentioned next, but when this name was read at Chalcedon, the bishops cried: "He was cast out. No one represented Leo." Next in order was Jerusalem, above both the Patriarchs of Antioch, Domnus, and St. Flavian of Constantinople. The number of bishops present was 127, with eight representatives of absent bishops, and lastly the deacon Hilarus with his deaconary. The question before the council by order of the emperor was whether St. Flavian, in a synod held at Constantinople in November, 448, had justly deposed and excommunicated the Archimandrite Eutyches for refusing to admit two natures in Christ. Consequently Flavian and six other bishops, who had been present at his synod, were not allowed to sit as judges in the council. The brief of convocation by Theodosius was read, and then the Roman legates explained that it would have been contrary to faith for him at Constantinople to have endorsed the proceedings in November, 448, but he had sent a letter by them. In this letter St. Leo had appealed to his dogmatic letter to Flavian, which he intended to be read at the council and accepted by it as a rule of faith. But Dioscorus took care not to have it read, and instead of it a letter of the emperor, ordering the presence at the council of the fanatic Eunostius and the Nestorian monk Barsamus, was presented. The question of faith was then dealt with. Dioscorus declared that this was not a matter for inquiry: they had only to inquire into the recent doings. He was acclaimed as a guardian of the Faith. Eutyches then was introduced, and declared that he held the Nicene Creed, to which nothing could be added, and from which nothing could be taken away. He had been condemned by Flavian for a mere slip of the tongue, though he had declared that he held the faith of Nicene and Ephesians, and had appealed to the present council. He had been in danger of his life. He now asked for judgment against the calumnies which had been brought against him. The accuser of Eutyches, Bishop Eusebius of Dorylaeum, was not allowed to be heard. The bishops agreed that the Act of the condemnation was the next thing. At a council held at Constantinople in November, 448, should be read, but the legates asked that the pope's letter might be heard first. Eutyches interrupted with the complaint that he did not trust the legates: they had been to dine with Flavian, and had received much courtesy. Dioscorus decided that the Acts of the trial should have precedence, and so the letter of St. Leo was never read at all. The Acts were then read in full (for an account of them see Eutyches), and also the account of an inquiry made on 13 April into the allegation of Eutyches that the synodal Acts had been incorrectly taken down, and of another inquiry on 27 April into the accusation made by Eutyches that Flavian had drawn up the sentence against him beforehand. While the trial was being related, Eutyches repeated his belief in nature, that two natures meant Nestorianism, of "burn Eusebius," and so forth. St. Flavian rose to complain that no opportunity was given him of defending himself. The Acts of the Robber Council now give a list of 114 votes in the form of short speeches absolving Eutyches. Even three of his former judges joined in this, although by the emperor's order they were not to vote. Barsamus added his vote in the last place. A petition was read from the monastery of Eutyches, which had been excommunicated by Flavian. On the assertion of the monks that they agreed in all things with Eutyches, and with the holy Fathers, the synod absolved them.

Next in order to establish the true Faith an extract was read from the Acts of the first session of the Council of Ephesus of 431. Many of the bishops, say the deacon Hilarus, expressed their assent, some adding that nothing beyond this faith could be allowed. Dioscorus then spoke, declaring that it followed that Flavian and Eusebius must be deposed. No less than 101 bishops gave their votes orally, and the signatures of all the 135 bishops follow in the Acts. Flavian and Eusebius had previously interposed an appeal to the people and to the end of the session. Formal letters of appeal have been recently published by Amelili. The evidence given at Chalcedon is conclusive that the account in the Acts of this final scene of the session is not to be trusted. The secretaries of the bishops had been violently prevented from taking notes. It was declared that both Barsamus and Dioscorus were shown this subscription, and therefore they may be excommunicated. But we must believe that many bishops threw themselves on their knees to beg Dioscorus for mercy to Flavian, that the military were introduced and also Alexandrian Parabolani, and that a scene of violence ensued; that the bishops signed under the influence of bodily fear, that some signed a blank paper, and that others did not sign at all, the names being afterwards filled in at will, though this may be exaggeration. The papal legate Hilarus uttered a single word in Latin, Contradictor, annulling the sentence in the pope's name. He then escaped with difficulty. Flavian was deported into exile, and died a few days later in Lydia. No more of the Acts was read at Chalcedon. But we learn from Theodoret, Evagrius, and others, that the Robber Council deposed Theodoret himself, Dioscorus, and their deacons. We must proceed to a story where the Chalcedonian Acts break off. Of the first session only the formal documents, letters of the emperor, petitions of Eutyches, are known to be preserved in Syriac, though not in the same MS. It is evident that the Monophysite editor thoroughly disapproved of the first session, and purposely omitted it, not because of the high-handed proceedings of Dioscorus, but because the Monophysites as a general rule condemned Eutyches as a heretic, and did not wish to remember his rehabilitation by a council which they considered to be ecumenical.

In the next session, according to the Syriac Acts, 113 were present, including Barsamus. Nine new names appear. The legates were sent for, as they did not appear but only the emperor's orders were read; and he was unwilling. The legates had shaken off the dust of their feet against the assembly. It was a charge against Dioscorus at Chalcedon that he "had held an (ecumenical) council without the Apostolic See, which was never allowed". This manifestly refers to his having continued the council after the departure of the legates. The first case was that of Hilarus, Bishop of Edessa. This famous champion of the Antiochian party had been accused of eresms before Domnus, Bishop of Antioch, and had been acquitted, soon after Easter, 448. His accusers had gone to Constantinople and obtained a new trial from the emperor. The bishops Photius of Tyre, Eustathius of
Berythus, and Uranis of Imeria were to examine the matter. These bishops met at Tyre, removed to Berythus, and returned to Tyre, and eventually acquitted Ibas once more, together with his fellow-accused, Daniel, Bishop of Harran, and John of Theodosianopolis. This was in February, 449. The bishops had been too kind, Cheraacs. Governor of Orthoeone was now ordered to go to Edessa to make a new inquiry. He was received by the emperor, who showed (the detailed summary of which took up some two or three pages of his report), in honour of the emperor, the governor, the late Bishop Rabulla, and against Nestorius and Ibas. Cheraacs sent to Constantinople, with two letters of his own, an elaborate report, detailing all the accusations he could manage to rake together against Ibas. The emperor ordered that a new bishop should be chosen. It was this report, which provided a history of the whole affair, that was now read at length by order of Dioscorus. When the famous letter of Ibas to Maris was read, cries arose such as "These things pollute our ears... Cyril is immortal.

... Let Ibas be burnt in the midst of the city of Antioch... Exile is of no use. Nestorius and Ibas should have saved their lives. The court was written a speech by a priest of Edessa named Eulogius. Sentence was finally given against Ibas of deposition and excommunication, without any suggestion that he ought to be cited or that his defence ought to be heard. It is scandalous to find the three bishops who had acquitted him but a few months previously, only anxious to show their concurrence. They even pretended to forget the Dogma of the former time. In the next case, that of Ibas's nephew, Daniel of Harran, they declared that at Tyre they had clearly seen his guilt, and had only acquitted him because of his voluntary resignation. He was quickly deposed by the agreement of all the council. He was, of course, not present and could not defend himself.

Ibas was a man of influence. He was as an influential layman at the former Council of Ephesus, he had shown much favour to Nestorius. He had later become Bishop of Tyre, but the emperor had deposed him in 418, and the miserable Photius, already mentioned, had succeeded him. The synod made no difficulty in ratifying the deposition of Irenaeus as a bigamist and a blasphemer. Another Synod of Bishop Irenaeus, which he had presided over, was deposed by Irenaeus and was his friend, was next deposed. Sophronius, Bishop of Tella, was a cousin of Ibas. He was therefore accused of magic, and his case was reserved for the judgment of the new Bishop of Edessa—a surprisingly mild decision. The council turned to higher game. The great Theodore, whose learning and eloquence in the pulpit and with the pen were the terror of the party of Dioscorus, had been confined by the emperor within his own diocese in the preceding year, to prevent his preaching at Antioch; and Theodosius had twice written to prevent his coming to Ephesus to the council. It was not difficult to find reasons for deposing him in his absence. Far as he was from being a Nestorian, he had been a friend of Nestorius, and for 10 years he had been one of the most formidable among the St. Cyril. But the two great theologians had come to terms and had celebrated their agreement with great joy. Theodore had tried to make friends with Dioscorus, but his advances had been rejected with scorn. A monk of Antioch now brought forward a volume of extracts from the works of Theodore. First was read Theodore's letter to the monks of the East (see Mansi, V, 1023), then some extracts from a lost "Apology for Dioscorus and Theodore"—one of the most remarkable and controversial of St. Cyril. But the two great theologians had come to terms and celebrated their agreement with great joy. Theodore had tried to make friends with Dioscorus, but his advances had been rejected with scorn. A monk of Antioch now brought forward a volume of extracts from the works of Theodore. First was read Theodore's letter to the monks of the East (see Mansi, V, 1023), then some extracts from a lost "Apology for Dioscorus and Theodore"—the very name of this work sufficed in the eyes of the council for a condemnation to be pronounced. Dioscorus pronounced the sentence of deposition and excommunication.

When Theodore in his remote diocese heard of this absurd sentence on an absent man against whose reputation not a word was uttered, he at once appealed to the pope in a famous letter (Ep. cxiii). He wrote also to the legate Renatus (Ep. cxvi), being unaware that he was dead. The council had a yet bolder task before it. Domnus of Antioch is said to have agreed in the first session to the acquittal of Eutyches. But he refused, on the plea of illness, to appear any more at the council. He seems to have been disgusted, or terrified, or both, at the tyranny exercised by Dioscorus at Constantinople. The council repeated an account of the actions, and he replied (if we may believe the Acts) that he agreed to all the sentences that had been given and regretted that his health made his attendance impossible.

It is almost incredible that immediately after receiving this message, the council proceeded to hear a number of petitions from monks and priests against Domnus himself. He was accused of friendship with Theodoret and Flavian, of Nestorianism, of altering the form of the Sacrament of Baptism, of intruding an immoral bishop into Emesa, of having been uncanonicaly appointed himself, and in fact of being an enemy of Dioscorus. Several pages of the MS. are unfortunately lost; but it does not seem that the unfortunate Domnus proved his innocence, and he was eventually deposed and his see deprived of his bishop, and his property and church goods were to be distributed among his accusers. The bishops shunted that he was worse than Ibas. He was deposed by a vote of the council, and with this final act of injustice the Acts came to an end. The council wrote the usual letter to the emperor (see Perry, trans., p. 431), who was charmed with the result of the council and confirmed it with a letter to him (see VII, 406). He sent Domnus a conciliatory letter, and a council was held in the East, with a form of adhesion to the council which they were to sign (Perry, p. 375). He went to Constantinople and appointed his secretary Anatolius bishop of that great see. Juvenal of Jerusalem had become his tool, he had deposed the Patriarchs of Antioch and Constantinople; but one powerful adversary, the Emperor, yet remained against him. He sent upon the Ephesus a form of excommunication to bishops (no doubt the ten Egyptian metropolitans whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour"—in the words of the bishops at Chalcodon—and excommunicated the pope himself. The synod of Ephesus was attended by Theodoret and Flavian (of whose death he was unaware), and had written to them and to the emperor and empress that all the Acts of the council were null. He excommunicated all who had taken part in it, and absolved all whom it had condemned, with the exception of Domnus of Antioch, who seems to have had no wish to resume his see and retired into the monastic life which he had left many years before with regard. (For the results of the Robber Council, or Latrocinium, the name given to it by St. Leo—see Chalcodon, Eutyches, and Leo I, Pope.)

The Acts of the first session of the council will be found in those of the Council of Chalcedon, in灾害, and the other collections. The Syriac Acts were published in the original by Perry, Secundum Synodum Ephesinum, nunc per se purgat ad evanescant Acta Concilii Ephesini from Syriac MSS. (Dartford, 1851). For French and German versions and other literature, see Dioscorus.

John Chapman.

Epheus, The Seven Sleepers of.—The story is one of the many examples of the legend about a man who falls asleep and years after wakes up to find the world changed. It is told in Greek by Symeon Metaphrastes (q. v.) in his "Lives of the Saints" for the month of July. Gregory of Tours did it into Latin. There is a Syriac version by James of Sarug (d. 521), and from the Syriac the story was done into other Eastern languages. There is also an Anglo-Norman poem, "Li set dormanz", written by a certain Chardry, and it occurs again in Jacobus de Voragine's "Golden Legend" (Legenda aurea) and in an Old-Norse fragment. Of all these versions and re-editions
it seems that the Greek form of the story, which is the basis of Symeon Metaphrastes, is the source. The story is this: Decius (249–251) once came to Ephesus to enforce his laws against Christians—a gruesome description of the horrors he made them suffer follows—here he found seven noble young men, named Maximilian, Jambliehos, Martin, John, Dionysios, Exakodes, and Antonius (so Metaphrastes); the names vary considerably; Gregory of Tours has Achilides, Diomedes, Diogenus, Probatus, Stephanus, Sambatus, and Quiriacus, who were Christians. The emperor tried them and then gave them a short time for consideration, till he came back again to Ephesus. They gave their property to the poor, took a few coins only with them, and fasted twenty days. Under the name of a prayer, they prepared and built a cave; then they entered and inquired after these seven men. They heard of his return and then, as they said their last prayer in the cave before giving themselves up, fell asleep. The emperor told his soldiers to find them, and when found asleep in the cave he ordered it to be closed up with huge stones and sealed; thus they were buried. This is a Christian version and wrote on the outside the names of the martyrs and their story. Years passed, the empire became Christian, and Theodosius [either the Great (379-395) or the Younger (408-450), Koch, op. cit. infra, p. 12] reigned. In his time some heretics denied the resurrection of the body. While this controversy went on, a rich landowner named the Segalls, a Christian, and an adept in magic, went in the evening with a horse and stallion, and sat down on the rock. Then they awake, thinking they have slept only one night, and send one of their number (Diomedes) to the city to buy food, that they may eat before they give themselves up. Diomedes comes into Ephesus and the usual story of cross-purposes follows. He is amazed to see crosses over churches, and the people cannot understand whence the name has come. He then went to the chaste, and at last it comes out that the last thing he knew was Decius's reign; eventually the bishop and the prefect go up to the cave with him, where they find the six others and the inscription. Theodosius is sent for, and the saints tell him their story. Every one rejoices at this proof of the resurrection of the body. The sleepers, having returned to the presence of God by this sabbath course, then present him with the great tomb. The emperor wants to build golden tombs for them, but they appear to him in a dream and ask to be buried in the earth in their cave. The cave is adorned with precious stones, a great church was built over it, and every year the feast of the Seven Sleepers is kept.

Koch (op. cit) has examined the growth of this story and the spread of the legend of miraculously long sleep. Aristotle (Phys., IV, xi) refers to a similar tale about sleepers at Sardes; there are many more examples from various countries (Koch, pp. 24–40, quotes German, British, Slav, Indian, Jewish, Chinese, and Arabian versions). Frederick Barbarossa and Rip van Winkle are well-known later examples. The Ephesian ephod, which the story shows has had a long history and further developments in Islam (Koch, 123–152), as well as in medieval Christendom (ib., 153–183). Baronius was the first to doubt it (Ann. Eccl. in the Acta SS., July, 386, 48); it was then discredited till modern study of folk-lore gave it an honoured place again as the classical example of a widely spread myth. The Seven Sleepers have feats in the Byzantine Calendar on the 12th day of November; in the Roman Martyrology they are commemorated as Sts. Maximianus, Malechus, Martinianus, Dionysius, Joannes, Serapion, and Constantinus on 27 July.

Adrian Fortescue.

Ephod (Heb. יְפֹד or יָפֹד; Gr. ἔφοδος, εφώδος, Lat. superhumerale) is a kind of garment mentioned in the O. T., which differed according to its use by the high-priest, by other persons present at religious services, or as the object of idolatrous worship. Ephod of the High-Priest.—Supplementing the data contained in the Bible those gleaned from Josephus and the Egyptian monuments, we may distinguish in the ephod three parts: a kind of waistcoat or bodice, two shoulder-pieces, and a girdle. The first of these pieces constituted the main part of the ephod; it is described by some writers as resembling the form of the chasuble, by others as being an oblong piece of cloth bound round the body under the arm-armpit and fastened there. Its material was fine-twisted linen, embroidered with violet, purple, and scarlet twice-dyed threads, and interwoven with gold (Ex., xxviii, 6; xxxix, 2). The ephod proper must not be confounded with the "tunic of the ephod" (Ex., xxviii, 31–35), nor with the "rational of judgment" (Ex., xxviii, 15–20). The tunic was worn bare; it was a sleeveless frock, made "all of violet," and was put on by being drawn over the head, something in the manner of a cassock. Its skirt was adorned with a border of pomegranates "of violet, and purple, and scarlet twice dyed, with little bells set between," whose sound was to be heard while the high-priest was ministering. The "rational of judgment" was a broad one upon which were sewn the symbols while it resembled in material and workmanship. It was a span in length and width, and was ornamented with four rows of precious stones on which were inscribed the names of the twelve tribes. It held also the Urim and Thummim (doctrine and truth) by means of which the high-priest consulted the Lord. The second part of the ephod consisted of a pair of shoulder-pieces, which, when put on, fell over the shoulders front and back, and over the shoulders. Each of these straps was adorned with an onyx stone engraved with the names of six of the tribes of Israel, so that the high-priest while ministering wore the names of all the tribes, six upon each shoulder (Ex., xxviii, 9–12; xxvii, 6; xxxv, 9; xxxix, 16–19). The third part of the ephod was the ephrinth; it was the ordinary garb of the high-priest; he wore it while performing the duties of his ministry (Ex., xxviii, 4; Lev., vii, 7; I K., ii, 28) and when consulting the Lord. Thus David learned through Abiathar's ephod the disposition of the people of Cedia (I K., xxiii, 11 sq.) and the best plan of campaign against the Amalecites (I K., xxx, 7 sqq.). In I K., xiv, 3, 7, the Ark is described as having a girt ephod. So David was permitted to consult the Lord by means of the Ark; but the Septuagint reading of this passage, its context (I K., xiv, 3), and the text of Josephus (Ant. Jud., VI, vi, 3) plainly show that in I K., xiv, 18, we must read "take the ephod" instead of "bring the ark." The Common Ephod.—An ephod was worn by Samuel when serving in the tabernacle (I K., ii, 18), and the eight- or five-pieces slay by Dase in the sanctuary of Nobal (I K., xxii, 18), and by David dancing before the Ark (II K., vi, 14). This garment is called the linen ephod; its general form may be supposed to have resembled the ephod of the high-priest, but its material was not the celebrated fine white linen, nor does it appear to have been adorned with the variegated colours of the high-priest's ephod. The Septuagint translators seem to have intended to emphasize the difference between the ephod of the high-priest
and that worn by David, for they call this latter the idolatrous ephod.

The Idolatrous Ephod.—According to Judges, viii, 26 sq., Gideon made an ephod out of part of the spoils taken from the Midianites, their golden carlets, jewels, purple raiment, and golden chains. All Israel paid idolatrous worship to this ephod, so that it became a ruin to Gideon and all his house. Some writers, following the Syriac and Arabic versions, have explained this ephod as denoting a gold casing of an oracle image. But there is no other instance of such a figurative use of ephod; besides, the Hebrew verb used to express the placing of the ephod on the part of Gideon denotes in Judges, vi., 57, the spreading of the fleece of wool. The opinion that Gideon placed his ephod as a sign that like that of the high-priest, is, therefore, preferable.

Ephraem (Ephraem, Ephraim), Saint, b. at Nisibis, then under Roman rule, early in the fourth century; d. June, 374. The name of his father is unknown, but he was a pagan and a priest of the goddess Abnîl or Abîzal. His mother was a native of Amid. Ephraem was instructed in the Christian mysteries by St. James, the famous Bishop of Nisibis, and was baptized at the age of eighteen (or twenty-eight). Thenceforth he became more intimate with the holy books, read them, and in order to renew the moral life of the citizens of Nisibis, especially during the sieges of 335, 346, and 350. One of his biographers relates that on a certain occasion he cured from the city walls the Persian hosts, whereupon a cloud of flies and mosquitoes settled on the army of Sapor II and compelled it to withdraw. The tendency of Ephraem’s life was to found houses for the salvation of souls, especially in Persia. Persia, however, was not the only new foundation. Under the influence of St. James, Ephraem, who had made his home at Amid, finally retired to Edessa, the capital of Osrhoene, where he spent the remaining years of his life in Ede. sa. He lived a long and holy life, both as a hermit and as a deacon; he was finally acknowledged as the first bishop of the city.

Ephraem’s efforts were directed to the spiritual rejuvenation of the population he had come to save. He established four houses, of which three were at Amid, and one at Nisibis, at a time when the Per- sian Christians were suffering from the persecution of the Persians. Ephraem was himself a victim of this persecution, and, as a result, he withdrew to the desert, where he led the life of a hermit. He was a skilful writer, and the majority of his works are in Syriac. His writings, however, have been translated into the Greek and Armenian languages, and have been preserved in manuscripts, one of which dates from the fifth century. Through much transcription, however, his writings, particularly those used in the various liturgies, have suffered no little interpolation. Moreover, many of his exegetical works have perished, or at least have not yet been found in the libraries of the Orient. Numerous versions, however, console us for the loss of the originals. He was still living, at least not long dead, when the translation of his writings into Greek was begun. Armenian writers seem to have undertaken the translation of his Biblical commentaries. The Mechitarists have edited in part these commentaries and hold the Armenian version as very ancient (fifth century). The Monophysites, it is well known, were wont from an early date to translate or adapt many Syriac works. The writings of Eph- raem were eventually translated into Arabic and
Ephraem (transliterations as yet unedited). In medieval times some of his minor works were translated from the Greek into Slavonic and Latin. From these versions were eventually made French, German, Italian, and English adaptations of the ascetic writings of St. Ephraem. The first printed (Latin) edition was based on a translation from the Greek done by Abagro Traversari (St. Ambrose of Camaldoli), and issued from the press of Bartholomew Guldenbeck of Sultz, in 1475. A far better edition was executed by Gerhard Vossius (1589–1619), the learned provost of Tongres, at the request of Gregory XIII. In 1709 Edward Thwaites edited, from manuscripts in the Bodleian Library, the Greek text, with interlinear glosses. In the early 19th century the British Museum was notably enriched by similar fortunate discoveries of Lord Prudhol (1828), Curzon (1832), and Tatton (1839, 1841). All recent editions of the Syriac original of Ephraem’s writings are based on these manuscripts. In the Bibliothèque Nationale (Paris) and the Bodleian (Oxford) there are a few Syriac fragments. Joseph Assemani hastened to make the best use of his newly found manuscripts and proposed at once to Clement XIII a complete edition of the writings of Ephraem in the Syriac original and the Greek versions, with a new Latin version of the entire material. He took for his own share the edition of the Greek text. The Syriac text was entrusted to the Jesuit Peter Mobarak (1678–1748). After the death of Mobarak, his labours were continued by Stephanus Evodius Assemani. Finally this monumental edition of the works of Ephraem appeared at Rome (1732–46) in six folio volumes. It was completed by the labours of Overbeck (Oxford, 1865) and Bickell (Carmina Nisibena, 1860), while other savants edited newly found fragments. Among these (first half of Martin, Rubehn century). A splendid edition (Meghilin, 1882–1902) of the hymns and sermons of St. Ephraem is owing to the late Monsignor T. J. Lumy. However, a complete edition of the vast works of the great Syriac doctor is yet to be executed.

(2) Ecclesiastical Writings.—Ephraem wrote commentaries on the entire Scriptures, both the Old and the New Testament; on the first, at least, at any rate, his commentators are lost. There is extant in Syriac his commentary on Genesis and on a large portion of Exodus; for the other books of the Old Testament we have a Syriac abridgment, handed down in a catena of the ninth century by the Syriac monk Severus (851–61). The commentaries on Ruth, Esdras, Nehemiah, Esther, the Psalms, the Canticles, and the Writings, respectively, are lost. Of his commentaries on the New Testament there has survived only an Armenian version. The Scriptural canon of Ephraem resembles our own very closely. It seems doubtful that he accepted the deuterocanonical writings; at least no commentary of his on these books has reached us. On the other hand he accepted as canonical the apocryphal Testaments, which serve as commentaries on the Old Testament. The Syriac text used by Ephraem is the Syriac Peshito, slightly differing, however, from the printed text of that very ancient version. The New Testament was known to him, as to all Syrians, both Eastern and Western, before the time of Rabula, in the harmonized “Diatessaron” of Tatian; it was also this text which served him as a basis for his commentaries. His text of the Acts of the Apostles appears to have been one closely related to that called the “Occidental.” (J. R. Harris, “Fragments of the Commentary of Ephraem Syrus upon the Diatessaron,” London, 1905; J. H. Hill, “A Dissertations on the Gospel Commentary of St. Ephraem the Syrian,” Edinburgh, 1806; F. C. Burkitt, “St. Ephraem’s Quotations from the Gospel, Corrected and Arranged,” in “Texts and Studies,” Cambridge, 1901, VII, 2.) The exegesis of Ephraem is that of the Syriac writers generally, whether hellenized or not, and is closely related to that of Aphraates, being, like the latter, quite respectful of Jewish traditions and often based on them. As an exegete, Ephraem is sober, exhibits a preference for the literal sense, is discreet in his use of allegory; in a word, he inclines strongly to the Antiochene style and presents us in particular of Theodoret. He admires in Scripture few metaphorisms and a great deal more the literal sense, many more, however, prophetic of Christ in the typological sense, which here is to be carefully distinguished from the allegorical sense. It is not improbable that most of his commentaries were written for the Christian Persian school (Schola Persarum) at Nisibis; as seen above, he was one of its founders, also one of its most distinguished teachers.

(3) Poetical Writings.—Most of Ephraem’s sermons and exhortations are in verse, though a few sermons in prose have been preserved. If we put aside his exegetical writings, the rest of his works may be divided into homilies and hymns. The homilies (Syriac mena, i. e., discourses) are written in seven-syllable lines, (four-syllable and six-syllable lines being used for the first three and the last four verses respectively) and are generally few. He celeb...
EPICUREANISM

Bardenhewer, would an contained the physite. An Anastasius lost. LXXXVI, by the Conspectus Hymni the play they in influenced the most. Their repetition of the same thought in slightly altered form; they delight in pretty verbal niceties, in the manifold play of rhythm and accent, rhyme and assonance, and acrostic. In this respect it is scarcely necessary to remind the reader of the well-known peculiarities and qualities of Arabic poetry.

As stated above there is no complete edition of the works of St. Epicurus; nor is there any satisfactory life of the great doctor. Mention has been made of the Assemani edition of his works: On the supreme issue of life in the treatise (Rome, 1732–40). It is considered imperfect from the textual standpoint, while the Latin translation is rather a paraphrase. See, Lucretius: Opera et opera, Philo (Leipzig, 1866); Bickell, Catonis Vindemia (Leipzig, 1866); Lamy, Hymni et Sermones (Mechlin, 1882–86 and 1902). Among the various modern editions of the Arnaemin Liber, the most recent is that by the Mercatiens (Venice, 1856, 1893). Jérôme Labourt.

Ephraim of Antioch (Epiphanes), one of the defenders of the Faith of Chalcedon (451) against the Monophysites, b. at Amida in Mesopotamia; d. in 545. He was Count of the East (Comes Orientis) under Justinian I. In 527 he succeeded Euphrasius as Patriarch of Antioch. Most of his many works are lost. We know the titles of them, however, from Anastasius Sinaita (c. 700), St. John Damascene (d. about 754) or whoever was the author of the “Sacra Parallela” of Leontius (591–611). Anastasius (P. G., LXXXIX, 1185–1188) quotes passages from a work of Ephraim against Severus, the Monophysite Patriarch of Antioch (512–519). The “Sacra Parallela” give a short passage from “St. Ephraim, Archbishop of Antioch”, taken from a work “On John the Grammarian and the Synod” (Tit. J., cfr. P. G., LXXXVI, 2104–2109). Photius (P. G., CIII, 92–102) speaks of four books of Ephraim. The first consisted of sermons and letters, the second and third contained a treatise against Severus in three parts and an answer to five questions about Genesis addressed to the author by a monk named Anatolius. The fragments quoted by Photius represent practically all that is left of Ephraim’s writings. Cardinal Mai was able to add a few more from a Ms. in the Vatican library (P. G., LXXVI, 6, loc. cit.). Krumheber (Byz. Litt., loc. cit.) mentions a few other fragments in the Paris library, etc., and considers that Ephraim would deserve the same reputation as Leontius Byzantius if more of his work had been preserved. He had an extensive knowledge of Greek Fathers and followed St. Cyril of Alexandria in his chrism. Krumheber, Byzantinische Literatur (Munich, 1897), 57; Bardenhewer, Patrology, tr. Shahen (St. Louis, 1908), 551.

Adrian Fortescue.

Epicureanism.—This term has two distinct, though cognate, meanings. In its popular sense, the word stands for a refined and calculating selfishness, seeking not power or fame, but the pleasures of sense, particularly of the palate, and those in company rather than solitude. An epicure is one who is extremely choice and delicate in his viands. In the other sense, Epicureanism signifies a philosophical system, which includes a theory of conduct, of nature, and of mind.

History.—Epicurus, from whom this system takes its name, was a Greek, born at Kroton 341 B.C., who, in 307 B.C., founded a school at Athens, and died 270 B.C. The Stoic School, diametrically opposite to this, was founded about the same time, probably 310 B.C. Thus these two systems, having for their respective watchwords Pleasure and Duty, sprang up within the first generation after Aristotle (d. 322 B.C.), each of them holding forth an idea of life and exegation turning it into falsehood. The Epicureans were rather a practical discipline than a habit of speculation. The master laid down his principles dogmatically, as if they must be evident as soon as stated, to any one not foolish. His disciples were made to learn his maxims by heart; and they acquired a spirit of unity more akin to that of a political party, or of a sect, than to the mere intellectual agreement of a school of philosophers. About a century and a quarter after the death of its founder, the system was introduced into Rome, and there, as well as in its native country, it attracted in the course of time a number of adherents such as moved the astonishment of Cicero. It had the fortune to be adopted by the finest of didactic poets, Lucretius (c. 71–54 B.C.), and was expounded by him (De Rerum Natura) as a doctrine of the beauty of expression and a fervour of eloquence worthy of a noble theme. In the latter half of the second century, when Marcus Aurelius was founding chairs of philosophy at Athens, that emperor, himself a Stoic, recognized the Epicurean (together with his own, and the Platonie, and the Aristotelie systems) as one of the four greatest philosophies. He seem to have aimed at reforming the moral theory so as to make it tolerable to a Christian. The numerous editions of the poem of Lucretius which the present age is producing may be taken to indicate a sympathy with the philosophy expounded in it.

Epicurean Ethics.—Philosophy was described by Epicurus as “the art of making life happy”; and he says that “prudence is the noblest part of practical virtue, and virtue itself. Moreover, this pleasure is sensitive, for it is such only as is attainable in this life. This pleasure is the immediate purpose of every action, “Habitate yourself”, he says, “to think that death is nothing to us; for all good and evil is in seeing; now death is the privation of feeling. Hence, the right knowledge that death is nothing to us makes us enjoy what there is in this life, and adding to it continually, but eradicating the desire of immortality.” His idea of the pleasurable differs from that of the Cyrenaic school which preceded him. The Cyrenaics looked to the momentary pleasures of gaiety and excitation. The pleasure of Epicurus is a state, equably diffused, “the absence of [bodily] pain and [mental] anxiety”. “That which begets the pleasurable life is neither indulgence, but a sober reason which searches for the grounds of choosing and rejecting, and which ban-
ishes those doctrines through which mental trouble, for the most part, arises. "The wise man will accordingly desire "not the longest life, but the most pleasureable."

It is for the sake of this condition of permanent pleasure, or tranquillity, that the virtues are desirable. "We cannot live pleasantly without living prudently, gracefully, and justly; and we cannot live prudently, gracefully, and justly, without living pleasurably," in consequence; for "the virtues are by nature united with a pleasurably life; and a pleasurably life cannot be separated from these." The virtues, in short, are to be practiced not for their own sake, but solely as a means of pleasure, "as medicine is useful for the sake of health." In accordance with this view, he says that "friendship is to be pursued by the wise man only for its utility; but he will begin, as he sows the field in order to reap." "The wise man will not take any part in public affairs; moreover, "the wise man will not marry and have children." But "the wise man will be humane to his slaves." "He will not think all sinners to be equally bad, nor all philosophers to be equally good." That is, apparently, he will not have any very exacting standard, and will neither believe very much in human virtue, nor be very much surprised at the discovery of human frailty. In this system, "prudence is the source of all pleasure and of all virtue."

The defects of this theory of life are obvious. In the first place, the matter of fact, experience shows that happiness is not best attained by directly seeking it. The selfish are not more happy, but less so, than the unselfish. In the next place, the theory altogether destroys virtue as virtue, and eliminates the idea and sentiment expressed by the words "ought", "duty", "right", and "wrong". Virtue, indeed, tends to produce the truest and highest pleasure. But friendship, the foundation of ourselves, depends upon virtue. But he who practises virtue for the sake of the pleasure alone is selfish, not virtuous, and he will never enjoy the pleasure, because he has not the virtue. A similar observation may be made upon the Epicurean theory of friendship. Friendship for the sake of advantage is not true friendship in the proper sense of the word. External advantage apart from affection cannot constitute friendship; that affection no one can feel merely because he judges it would be advantageous and pleasureable; in fact he cannot know the pleasure until he first feels the affection. If we consider the Epicurean condemnation of patriotism and of the family life, we must pronounce a still severer censure. Such a view of friendship was the form of selfishness least general to vice. Epicurus, perhaps, was better than his theory; but the theory itself, if it did not originate in coldness of heart and meanness of spirit, was extremely well suited to encourage them. If sincerely embraced and consistently carried out, it undermined all that was chivalrous and heroic, and even all that was ordinarily virtuous. Fortitude and justice, as such, ceased to be objects of temerity or of disad- vantage sank into a mere matter of calculation. Even prudence itself, dissociated from all moral quality, became a mere balancing between the pleasures of the present and of the future.

Theology.—Epicurus said that "it was not impiety to deny the gods of the multitude, but it was impious to think that the mighty god of the multitude was the right", a principle, but one which he wrongly applied, since he got rid of what was true as well as of what was corrupt in the vulgar religion. Fear of the gods was an evil to be eradicated, as incompatible with tranquillity. As to their nature, the gods are immortal, but material, like every other being. He seems to have held that there was one supreme being; but this god was not the creator, scarcely the ordering, of the universe, the gods being only a part of the All. Nor is there a Providence, for an interest in human affairs would be inconsistent with perfect happiness. In short, the gods are magnified Epicurean philosophers.

Natural Philosophy.—The physics of Epicurus are in a general sense atomic. He claimed originality for his theory, asserting that it began with his reflections upon a passage in Hesiod. As he read in school that all things come from chaos, he asked, What is chaos? —a question which his teacher could not answer. It is generally held, however, that he really learned his atomism from the Democritean philosophy, modifying it in one important respect; for he supposes that the atoms in falling through empty space collide by virtue of a self-determining power, or rather an indetermination owing to which it is possible for them by chance to conserve a little from the loss of arrangement.

Biology. In this Epicurus simply followed the views of Empedocles, that, first, all sorts of living things and animals, well or ill organized, were evolved from the earth and that those survived which were suited to preserve themselves and reproduce their kind.

Anthropology.—The anthropology of Lucretius may be supposed to have been derived, like his physics and biology, from Epicurus. According to the Lucretian theory men were originally savage; the primitive condition was one of mutual war; in this condition men were like the wild beasts in strength and cunning; civil society was formed under the pressure of the evils of anarchy. The reader recognizes here the ideas indicated by the eighteenth-century phrases "state of nature" and "social contract". The "golden age" is a dream.

Logic.—The Epicurean logic is criterional. The test of truth practically is the pleasant and the painful belief. Theoretically, their criterion is sensation. Sensation never is deceptive; the error lies in our judgment. Dreams, the ravings of fever or lunacy, the fables and the fictions are all true in their own way. Besides sensation the human mind has certain anticipations (προθεσησ), as when, seeing an object at a distance, one wonders whether it is a man or a tree. These notions are the results left by previous sensations. The notion does not appear to differ from the internal sense of a brute, such as enables a dog, for example, to welcome strangers belonging to the species, to know a stranger belonging to another species, and to make ourselves slaves to the Fate of the natural philosophers." Fatalism, which to minds of a stoical disposition seemed a source of strength, was to those of an Epicurean temper simply a source of unpleasantness and helplessness. The freedom asserted by the Epicureans is not rational freedom in the true sense of the word, but freedom and liberty, and the union in the will. It is little better than physical contingency, and may be described as Casualism. The whole philosophy may well be described in a trenchant phrase of Macaulay as "the silliest and meanest of all systems of natural and moral philosophy".

The Volumina Herculanensia first series, Naples, 1793-1853; and second series, Naples, 1854-1870; have been published by Casaubon.  Epiklesis (Gr. ἐπίκλησις; Lat. invocatio) is the name of a prayer that occurs in all Eastern liturgies (and originally in Western liturgies also) after the words of Institution, in which the celebrant prays that God may send down His Holy Spirit to change this bread and wine into the Body and Blood of His Son. This form has given rise to one of the chief controversies between the Eastern and Western Churches, inasmuch as all Eastern schismatics now believe that the Epiklesis, and not the words of Institution, is the essential form (or at least the essential complement) of the sacrament.

Form of the Epiklesis.—It is certain that all the old liturgies contained such a prayer. For instance, the Liturgy of the Apostolic Constitution of St. Photius (I, 247) is precisely the same as the Introit of St. Photius (I, 247). But after the recital of the words of Institution, goes on to the Anamnesis—"Remembering therefore His Passion...

—in which occur the words: "Thou, the God who lackest nothing, being pleased with them (the Offerings) for the honour of Thy Christ, and sending down Thy Holy Spirit on this sacrifice, the witness of the Holy and Living God, Lord Jesus, to manifest (ἐμφανίσας) this bread as the Body of Thy Christ and this chalice as the Blood of Thy Christ..." (Brightman, Liturgies Eastern and Western, I, 21).

So the Greek and Syrian Liturgies of St. James (ibid., 54, 88–89), the Alexandrine Liturgies (ibid., 134, 170), the Byzantine Rite (ibid., 233), those of the Nestorians (ibid., 257) and Armenians (ibid., 430). The Eastern and, according to the Liber Pontificalis of St. Chrysostom is said thus: "We offer to Thee this reasonable and unbloody sacrifice; and we beg Thee, we ask Thee, we pray Thee that Thou, sending down Thy Holy Spirit on us and on these present gifts" (the Deacon says: "Bless, Sir, the holy bread") " make this bread into the Precious Body of Thy Christ" (Deacon: "Amen. Bless, Sir, the holy chalice") "and that which is in this chalice, the Precious Blood of Thy Christ" (Deacon: "Amen. Bless, Sir, both") "changing [μεταβαλέω] them by Thy Holy Spirit" (Deacon: "Amen, Amen, Amen."). (Brightman, op. cit., I, 386–387.)

Nor is there any doubt that the Western rites at one time contained similar invocations. The Gallican Liturgy of St. Isidore of Seville (De eccles. offic. 1, 15, etc.) and the Roman Rite too at one time had an Epiklesis after the words of Institution. Pope Gelasius I (492–496) refers to it plainly: "Quammodum ad divinam mysterii consecrationem caelestis Spiritus advenit, ut eccedesset... erosionis plenius actionibus reprobetur?" ("Epp. Fragm.", vii, in Thiel, "Epp. Rom. Pont.", I, 486.) Wetterich (Der konsekrationis momentum in h. Abendmahl, 1896, pp. 133 sq.) brings other evidences of the old Roman Invocation. He (p. 166) and Drews (Entstehungsgesch. des Kanons, 1903, p. 28) think that several secrets in the Leonine Sacramentary were originally invocations (see article Canon or the Mass). Of this Invocation we have now only a fragment, with the essential clause left out—our prayer: "Supplie
tes te rogamus" (Duchesne, op. cit., 173–5). It seems that an early insistence on the words of Institution as the form of Consecration (see, for instance, Ps.-Ambrose, "De Mysteriori", IX, 52, and "De Sacramentis", IV, 14; 15; 23; St. Augustine, De bapt. iv; Optatus of Mileve ("De schism. Dom. III, iii, in "Corp. Script. eccl. Latin.", vol. XXVI, 109, 118, 119), St. Jerome (Contra Lucif. vi, vii), St. Augustine (De bapt. V, xx, xxviii), in the West; and St. Basil (De Spirit. Sancto, xv, 35), St. Gregory of Nyssa (Orat. cat. magn. xxxiii), and St. Cyril of Jerusalem (Cat. iii, 1), in the East, refer to it. In Egypt especially, Epikleses were used to bless the Invocation. In the Mass (including that of the Holy Eucharist) the idea of invoking the Holy Ghost to sanctify is a natural one derived from Scripture (Joel, iii, 2; Acts, vii, 2: ἐπικλήσεται τὸ ὄνομα κυρίου...; cf. Rom. x, 13; I Cor. 1, 2). That in the Liturgy the Invocation should occur after the words of Institution is only one more indication of their ancient meaning. In any case, there was a concern about the exact instant at which all the essence of the sacrament was complete. They looked upon the whole Consecration-prayer as one simple thing. In it the words of Institution always occur (with the doubtful exception of the Nestorian Rite); they believed that Christ would, according to His promise, do the rest. But they did not ask at which instant, and in whose name all the essence of Institution there are many other blessings, prayers, and signs of the cross, some of which came before and some after the words, and all, including the words themselves, combine to make up the one Canon of which the effect is Transubstantiation. So also in our baptism and ordination services, part of the forms and prayers whose essence is the sacramental grace realized. In order of time, after the essential words of Institution was not till Scholastic times that theologians began to discuss the minimum of form required for the essence of each sacrament.

The Controversy.—The Catholic Church has decided the question by making us kneel and adore the Holy Eucharist immediately after the words of Institution, and by leaving to the people the right of invoking the Holy Ghost. On the other hand, Orthodox theologians all consider the Epiklesis as being at least an essential part of the Consecration. In this question they have two schools. Some, Peter Moglias, for instance, consider the Epiklesis alone as consecrating (Kinnel, Monumenta fidei eccl. orient. Jena, 1850, I, 180), so that presumably the words of Institution do not bear any weight in determining the validity of the sacrament. But the greater number, and now apparently all, require the words of Institution too. They must be said, not merely historically, but as the first part of the essential form; they show as it were the seed that comes forth and is perfected by the Epiklesis. Both elements, then, are essential. This is the theory defended by the theologians at the Council of Florence (1439). A deputation of Latins and Greeks was appointed then...
to discuss the question. The Greeks maintained that both forms are necessary, that Transubstantiation does not take place till the second one (the Epiklesis) is pronounced, and that the Latin "Supplices te rogamus" is a true Epiklesis having the same effect as theirs. On the other hand the Dominican John of Torquemada defended the Western position that the words of Institution alone and at once consecrate (Hardouin, IX, 977 sqq.). The decree of the council eventually defined this ("quod illa verba divina Salvatoris omnem virtutem transsubstantiationis habent"), ibid.; see also the decree for the Armenians: "forma huius sacramenti sunt verba Salvatoris" in Denziger, 10th ed., no. 698—old no. 593). Cardinal Bessarion afterward ordered the words of the Holy Ghost to be inserted atlius verbis Christus corpus confictur, 1462, in P. G., CLXI, 491—525), to whom Marcus Eugenius of Ephesus answered in a treatise with a long title: "That not only by the sound of the Lord's words are the divine gifts sanctified, but (in addition) by the prayer after these and by the consecration of the priest in the strength of the Holy Ghost."

The official Euchologion of the Orthodox Church has a note after the words of Institution to explain that: "Since the demonstrative pronouns: This is my body, and again: This is my blood, do not refer to the Offerings that are present, but to those which Jesus, taking in His hands and blessing, gave to His Disciples; therefore those words of the Lord are repeated as a narrative [ἀναπαράστασιν], and consequently they are consecrated by the invocation of the Offerings (by an elevation) and indeed contrary to the right mind of the Eastern Church of Christ" (ed. Venice, 1898, p. 63). This would seem to imply that Christ's words have no part in the form of the sacrament. On the other hand Dositheus in the Synod of Jerusalem (1672) apparently requires both words of Institution and Epiklesis: "It [the Holy Eucharist is consecrated, and the word [ἀρτον] becomes the Offertory, i.e. Christ's word) and sanctified by the invocation of the Holy Ghost" (Conf. Dosithei, in Kimmel, op. cit., I, 451), and this seems to be the common theory among the Orthodox in our time. Their arguments for the necessity of the Epiklesis as at any rate the perfecting part of the form are: (1) that the context shows the words of Institution to be declarative, as the invoked words here would be superfluous and deceptive: its very form shows that it consecrates; (2) tradition. The first and second points are not difficult to answer. The words of Institution are certainly used historically ("qui pridie quanm pateretur, sumptam panem . . . ae dixit: hoc est enim corpus meum") as well as at all Eastern forms, is an historical account of what happened at the Last Supper: but this is no proof that they may not be used effectively and with actual meaning too. Given the intention of so doing, they necessarily would be so used. The second point is already answered above: the succession of time in sacramental prayers necessarily involves nothing but a dramatic representation of what presumably really takes place in consecration (this claim is usually made by the term "The Ort. Eastern Church", pp. 387 sq.). As for tradition, in any case it is only a question of Eastern tradition. In the West there has been a great unanimity in speaking of the words of Institution as consecrating, especially since St. Augustine; and the disappearance of any real Epiklesis in our Liturgy confirms this. Among Eastern Fathers there is less unanimity. Some, e.g. St. Cyril of Jerusalem, refer the consecration to the action of the Holy Ghost in a way that seems to imply that the Epiklesis is the moment (St. Cyril, Cat. xix, 7; xxi, 3; xxiii, 7, 19; cf. Basil, "De Spir. Sancto", xxvii sqq.;) others, as St. John Chrysostom (Hom. i, De prod. Iudei, 6: "He [Christ] says: This is my body. This word changes the offering"); cf. Hom. ii, in II Tim., 1), quite plainly refer Consecration to Christ's words. It should be noted that these Fathers were concerned to defend the Real Presence, not to explain the moment at which it began, that they always thought of the whole Eucharistic prayer as one form, containing both Christ's words and the Invocation, and that a statement that the change takes place by the power of the Holy Ghost does not necessarily show that the writer attaches that change to this special prayer. For instance St. Ireneus says that "the bread which receives the Invocation of God is not common bread, but a Eucharist" (Adv. haer., IV, xviii, 3), and, yet immediately before (IV, xviii, 4), he explains that that bread is the Body of Christ over which the earlier part of the Anaphora is said. The final argument against the Epiklesis is that Constan丁us no supposed Eucharist at the Last Supper in the Gospels. We know what Christ did then, and that He told us to do the same thing. There is no hint of an Epiklesis at the Last Supper.

It may finally be noted that later, in the West too (since the sixteenth century especially), this question aroused some not very important discussion. The Dominican Ambrose Catharinus (sixteenth century) thought that our Consecration takes place at an Epiklesis that precedes the recital of Christ's words. This Epiklesis he thinks to be the prayer "Quam oblationem". A few others (including Renaudot) more or less shared his opinion. Against these Hoppe (op. cit. infra) showed that in any case the Epiklesis always follows the words of Institution and that our "Quam oblationem" is already invoked by the consecrating words; rather that He may sanctify our reception of the Holy Eucharist. This is a theoretical explanation sought out to account for the fact of the Epiklesis, without giving up our insistence on the words of Institution as alone consecrating. Historically and according to the text of the old invocations they must rather be looked upon as dramatically pointed expressions. There are many like cases in our rite (examples quoted in "The Ort. Eastern Church", loc. cit.).

Epiphania, a titular see in Cilicia Secunda, in Asia Minor, suffragan of Anazarbus. This city is mentioned by many ancient geographers, Ptolemy, Pliny, and others. Epiphania Bybus and Epiphania Oinops are further named onwards, but afterwards Epiphania, after Antiochus IV Epiphanes, King of Syria (175-164 B.C.), Cicer once encamped there, and Pompey settled there some of the pirates he had subdued. The city had a special era beginning in A.D. 37 (Barthelmeum, Numismatique ancienne, 247). Seven bishops of Epiphania are known, from 325 to 692 (Lequien, Orient christian., 504). The first, Cyril of Epiphania, suffered during the persecution of Diocletian and was present at the Council of Nicea (325). Epiphania was the birthplace of George, the usurping Bishop of Alexandria in the fourth century. Its ruins stand near Piyas, in the sanjak of Djebel-i-Bereket, vilayet of Adana; there are remains of walls, a temple, an aeroplis, an aqueduct, and many houses, built by basilisks. Nearby are the celebrated "Cilician Gates" and the battle-
field of issue (Ramsay, Asia Minor, 386; Alishan, Sis- 
souan, Venice, 1896, 475).

Another Epiphanius was a suffragan of Damasus. It is the modern Hanah, on the Orontes (about 60,000 inhabitants). Jesuits and native Mariamite sisters care for its Catholic population, who are, for the most part, Greek Melchites. For these and for Catholic Syrians, Hanah is united with Emessa (q. v.).

S. VAILHÉ.

Epiphanius, surnamed Scholasticus, or in modern terms, the Philologist, a translator of various Greek works in the middle of the sixth century of the Christian Era. He prepared for Cassiodorus the text of the "Historia Tripartita", a compilation of the works of Socrates, Sozomen, and Theodoret. We also have his translation of the commentary of Diodorus on the Seven Catholic Epistles and that of the "Codex eycucylicus", a list of the adhesions of the bishops of the East to the decrees of the Council of Chalcedon, a list drawn up in 455 by order of the Emperor Leo I. Epiphanius made several additions to it. He also translated the commentary of Diodorus on the Book of Proverbs and that of Epiphanius of Salamis on the Canticle of Canticles. These works are either lost or as yet undiscovered. "He belongs", says Julicher, "to the group who, like Dionysius Exiguus, Mutianus, and many unknown others, satisfied the needs of the Latins for translations of Greek theologians.

PAUL LEJAT.

Epiphanius of Constantinople, d. 535. Epipha- nius succeeded John II (518-20) as Patriarch of Constan- tinople. It was the time of the reaction against Monophysitism in the Eastern Empire that followed the accession of Justin I (518-27). Justin was Catholic; he let the Henoticon (421) of his predecessor Zeno (471-91) quietly drop, and very soon after his accession he caused a synod of forty bishops to meet under John II at the capital, in order to proclaim a general acceptance of the decrees of Chalcedon throughout the empire, the restoration of Catholic, and the deposition of Monophysite, bishops (P. G., LXXXVI, 1, 785). The act of the patriarch was not repeated, even by the Roman See after the schism of Aeaces (484-519). The reigning pope was Hormisdas (514-23), and it was on this occasion that he composed his famous formula. On Easter Day, 24 March, 519, the reunion was proclaimed. Severus of Antioch and the other Monophysite leaders fled to Egypt. The papal legates remained at Constantinople till 520. In that year the Patriarch John died, and Epiphanius was elected as his successor. He was then given authority from the pope to reconcile all schismatics and Monophysites who retracted their errors and signed the formula. Epiphanius signed it himself in the first place (Mansi, VIII, 502 sqq.).

Four letters from Epiphanius to Hormisdas are trea- ted of in the first letter to him, P. L., xxvii, 8. In the first, from Hormisdas to Epiphanius (col. 193), the pope complains that he has received as yet no letter and no legate to announce the patriarch's accession. In the second letter (l. c.) the pope requires that three repentant Monophysite bishops, Elias, Thomas, and Nicostratus, should be restored to their sees, and he appoints Epiphanius to restore them. Epiphanius then writes to Hormisdas (col. 494-95) to announce his succession to the See of Constantinople, as the pope had demanded. He excuses himself for his delay by explaining the difficult circumstances and the disorder that still remain since the Monophysite troubles, and protests his exceeding desire for communion with the Roman See: "It is my special prayer, most blessed Father, to be united to you and to embrace the Divine dogmas which were left by the holy Apostles especially to the holy See of Peter, chief of the Apostles; for I count nothing more precious than them" (l. c.). He then draws up a very orthodox profession of faith according to the decrees of Ephesus and Chalcedon; he accepts all the dogmatic letters of St. Leo I, and declares that he will never name in his diptychs anyone who is condemned by the pope. His second letter (col. 497-99) to Hormisdas praises the emperor's zeal for the Faith, explains the council passed on Potius, Asia, and the (civil) "diocese" of the East, whom Epiphanius wishes to receive back into communion now that they have renounced Monophysitism, and mentions a jewelled chalice and other gifts he sends to the pope (this letter is dated 520). Hormisdas answers (col. 503-6), exhorting the patriarch to persevere in reconquering Monophysitism and thanking him for his presents. Epiphanius' third letter relates that a number of Eastern bishops have petitioned the emperor for union with Rome (col. 506-7), and the fourth (col. 507) praises Paulinus, whom the pope had sent to Constantinople as his legate. Migne (P. G., LXXXVI, Pt. I, 783-80) gives the text of the condemnation of Severus and Peter of Antioch, made by a synod of Constantinopolitan patriarchs, on the advice of Assemani (Bibl. Orient., I, 619) a list of forty-five canons drawn up by this same synod. Epipha- nius was succeeded by Anthimus I.

Epiphany, known also under the following names: (1) τά ἑορτά, or ἡ ἑορτά, sc. ἡμέρα (rarely ἡ ἑορτά: though, e. g., in Athanasius, ἡ σωματική ἑορτά occurs); ἑορτάσω: dies epiphaniarum; festas dedicationis, manifestationes; apparitio; occurrence. (2) ἡμέρα τὰς ὀψιν: dies lumenum; dies lacerati. (3) Ἕλληνσις; Epiphania; etc. can be used with τὸν τρίτον ἰησοῦ: whence the Dutch Driekoningendag, Danish Hellig-tre-kongersdag; etc. (5) Twelfth Day, Swedish Trettontedag; etc.—The meaning of these names will be explained below. The feast was called among the Syrians denho (up-going), a name to be connected with the notion of rising light expressed in Latin as "diem soli". The feast was always celebrated with great fair held at that season in Rome; it is difficult to say how closely the practice then observed of buying all sorts of earthenware images, combined with whistles, and representing some type of Roman life, is to be connected with the rather similar custom in vogue during the December feast of the Saturnalia. For the earthenware or pastry sigillaria thus sold all over Rome, see Marcellus; s. i, xxiv, ii, xlix; and Brand, "Pop. Ant.", 180, 183.

I. History.—As its name suggests, the Epiphany had its origin in the Eastern Church. There exists indeed a homily of Hippolytus to which (in one MS. only) is affixed the lemma εἰς τὰ ἐγκαί θεόφησις [not ἑορτά: Kellner]; it is throughout addressed to those who have been baptized and admitted to the Sacrament of Baptism. It was edited by Bonwetsch and Achelis (Leipzig, 1897): Achelis and others consider it spurious. The first reference about which we can feel certain is in Clement (Strom., 1, xxii, 45, in P. G., VIII, 888), who writes: "There are those, too, who over-curious assign to the Birth of Our Saviour not only its year but its day, which they say to be on 25 Paehou (20 May) in the twenty-eighth year of August. But the followers of Bosiddles celebrate the day of His Baptism too, spending the previous night in readings. And they say that it was the 15th of the month Tybi of the 15th year of Tiberius Cesar. And some say that it was observed the 11th of the same month." Now, 11 and 15 Tybi are 6 and 10 January, respectively. The question at once arises: did these
Basilians celebrate Christ's Nativity and also His Baptism on 6 and 10 January, or did they merely keep His Baptism on these days, as well as His Nativity on another date? The evidence, if not Clement's actual words, suggests the former. It is certain that the Epiphany festival in the East very early admitted a more or less marked commemoration of the Nativity, or at least of the Angeli ad Pastores, the most striking "manifestation" of Christ's glory on that occasion. Moreover, the first actual reference to the ecclesiastical feast of the Epiphany (Ammanius Marcellinus, XXI, 2), in 481, appears to be the only instance of any relation to the same festival as that of Christ's Nativity. Moreover, Epiphanius (Herr, li, 27, in P. G., XLI, 936) says that the sixth of January is ημέρα γενέθλην τω τουτεστι Επιφανίας, Christ's Birthday, i.e. His Epiphany. Indeed, he assigns the Baptism to 12 Athyr, i.e. 6 November. Again, in chapters xxviii and xxix (P. G., XL, 940 sq.), he asserts that Christ's Birth, i.e. Theophany, occurred on 6 January, as did the miracle at Cana, in consequence of which water, in various places (Cybara, for instance), was then yearly by a miracle turned into wine, of which he had himself drunk. It will be noticed, first, that Clement does not expressly deny that the Church celebrated the Epiphany in his time at Alexandria, he at least implies that she did not. Nevertheless, he can with certainty be strong in his assertion of the Church as holy. Moreover, Origine, in his list of festivals (Contra Celsum, VIII, xxii, P. G., XI, 1549), makes no mention of it.

Owing no doubt to the vagueness of the name Epiphany, very many differentations of Christ's glory and Divinity were celebrated in this feast quite early in its history, especially the Baptism, the miracle at Cana, the Nativity, and the visit of the Magi. But we cannot for a moment suppose that in the first instance a festival of manifestations in general was established, into which popular local devotion read specified meaning as circumstances dictated. It seems fairly clear that the Baptism was the event predominantly commemorated. The Apocryphal Constitutions (VIII, xxxiii; cf. V, xii) mention it. Kellner quotes (cf. Selden, de Synedriis, III, xv, 204, 220) the oldest Coptic Calendar for the feast Dies baptismi sanctificati, and the later for that of Immerse Dominii as applied to this feast. Gregory of Nazianzus identifies, indeed, τὰ θεόφανα with ἡ ἀγα τοῦ Χριστοῦ γένεσις, but this sermon (Orat. xxxviii in P. G., XXXVI, 312) was delivered on the sixth of January, in commemoration of Christ's Birth, he assures his hearers (P. G., 329) that they shall shortly see Christ baptized. On 6 and 7 Jan., he preached orations xxxix and xl (P. G., loc. cit.) and there declared (col. 349) that the Birth and the leading of the Magi by a star having been already celebrated, the commemoration of His Baptism would now take place. The first of these two sermons is headed ὡς τὰ ἐνα κόσμῳ, referring to the lights carried on that day to symbolize the spiritual illumination of baptism, and the day must carefully be distinguished from the Feast of the Purification, also called Festum luminum for a wholly different reason. Chrysostomus, however, in 356 (see Cunstmas) preached "Hom. vi in B. Philogonion" where (P. G., XLIX, 877) he calls the Nativity the parent of festivals, for had not Christ been born, neither would He have been baptized, θεόφανον. This shows how loosely this title was used. (Cf. Chrys., "Hom. in Bapt. Chr.", c. ii, in P. G., XLI, 363; a. d. 387). Cassian (Coll., X, 2, in P. G., LIX, 820) says that even in his time (418-127) the Egyptian monasteries still celebrated the Nativity and Baptism.

At Jerusalem the feast had a special reference to the Nativity owing to the neighbourhood of Bethlehem. The account left to us by Etheria (Silvia) is mutilated at the beginning. The title of the subsequent feast, Quadragesima de Epiphania (Peregrin. Silvius, ed. Geyer, c. xxxv), leaves us, however, in no doct as to what she is describing. On the vigil of the feast (5 Jan.) a procession left Jerusalem for Bethleem, and returned in the morning. At the second hour the services were held in the splendidly decorated Golgotha church, after which that of the Anastasis was visited. On the second and third days this ceremony was repeated; on the fourth the service was offered on Mount Olivet; on the fifth at the grave of Lazarus at Bethany; on the sixth on Sott; on the seventh, in the church of the Holy Cross. The procession to Bethlehem was nightly repeated. It will be seen, accordingly, that this Epiphany octave had throughout so strong a Nativity colouring as to lead to the exclusion of the commemoration of the Baptism in the year 385 at any rate. It is, however, by way of actual baptism on this day that the West seems to enter into connexion with the East. St. Chrysostomus (Hom. in Bapt. Chr. in P. G., XLIX, 363) tells us how the Antiochians used to take home baptismal water consecrated on the night of the festival, and that it remained for a year without corruption. To this day, the blessing of the waters by the dipping into river, sea, or lake of a crucifix, and by other complicated ritual, is a custom peculiar to the East. Indeed, it is generally held by Neale ("Holy Eastern Church", Introduction, p. 754; cf. the Greek, Syriac, Coptic, and Russian versions, edited or translated from the original texts by John, Marquess of Bute, and A. Wallis Budge). The people consider that all ailments, spiritual and physical, can be cured by the application of the water to which it is consecrated. This is a mystery of such rare, however, as to be originally connected rather with the miracle of Cana than with the Baptism. That baptism on this day was quite usual in the West is proved, however, by the complaint of Bishop Himerius of Tarragona to Pope Damasus (d. 384), that baptisms were being celebrated on the feast of the Epiphany. Pope Siricius, who answered him (P. L., XIII, 1131), identifies the feasts of Nativity Christi and His Apparition, and is very vigilant at the extension of the period for baptisms beyond that of Easter and that of Pentecost. Pope Leo I ("Ep. xvi ad Sicil. episcopos", c. i, in P. L., LIV, 701; cf. 696) denounces the practice as an irrationabilis novitas; yet the Council of Gerona (can. iv) condemned it in 517, and Victor Vitensis alludes to it as the regular practice of the Romans (De locis, 38). Then De Gregorio (P. L., LVIII, 216). St. Gregory of Tours, moreover (De gloriam martyrum in P. L., LXXI, 783; cf. cc. xvii, xix), relates that those who lived near the Jordan bathed in it that day, and that miracles were then wont to take place. St. Jerome (Comm. in Ez., 1, i, on verse 3 in P. L., XXV, 18) definitely asserts that it is for the baptism and opening of the heavens that the dies Epiphaniarum is still venerable and not for the Nativity of Christ in the flesh, for then abscnditit est, et non apparuit—"He was hidden, and did not appear." That the Epiphany was of later introduction in the West than the Christmas festival of 25 December, has been made clear in the article Cunstmas. It is not contained in the Philocalian Calendar, while it seems most likely that 25 December was celebrated before the sermon of Pope Liberius (in St. Ambrose, De virg., iii, i, in P. L., XVI, 231) which many assign to 25 Dec., 334. St. Augustine clearly observes Oriental associations in the Epiphany feasts: "Rightly", says he (Serm. cccii, 2, in Epiph. Domini, 4, in P. L., XXXVIII, 1035), "have the heretic Donatists always maintained that Jerusalem was visited on 6 January; and as we love unity, nor are they in communion with the Eastern Church, where that star appeared." St. Philastrius (Harr., e. cxxl, in P. L., XII, 1273) adds that certain heretics refuse to celebrate the Epiphany, regarding it, apparently, as a needless duplication of the
Episcopacy. See Hierarchy.

Episcopal Church. See Anglicanism; Protestant Episcopal Church of America.

Epistemology (ἐπίστημον, knowledge, science, and μὴν, speech, thought, discourse), in a most general way, is that branch of philosophy which is concerned with the value of human knowledge. The name epistemology is of recent origin, but especially since the publication of Ferrier's "Institutes of Metaphysics: The Theory of Knowing and Believing" (1851), it has come to be used currently instead of other terms, still sometimes met with, like applied logic, material or
THE ADORATION OF THE MAGI—GHIRLANDAIO

OSPIZIO DEGLI INNOCENTI, FLORENCE
critical logic, critical or initial philosophy, etc. To the same part of philosophy the name criterionology is given by a number of books written by the Louvain School. The exact province of epistemology is as yet but imperfectly determined, the two main views corresponding to the two meanings of the Greek word ἔπιστημή. According as this is understood in its more general sense of knowledge, or in its more special sense of scientific knowledge, epistemology is the theory of the origin, nature and limits of knowledge (Baldwin, "Dict. of Philos. and Psychol."). New York, 1901, s.v. "Epistemology", I, 333; cf. "Gnosiology", I, 141); or "the philosophy of the sciences", and more exactly, "the critical study of the principles, hypotheses and results of the various sciences, designed to determine their logical (not psychological) origin, their value and objective import." (Bulletin de la Société française de Philos., June, 1903, fasc. no. 7 of the Vocabulaire philosophique, s.v. "Épistemologie") 221; cf. Aug., 1906, fasc. 9 of the Vocabul., s.v. "Gnosologie", 332). The Italian usage agrees with the French. According to Ranziolli ("Dizionario di scienze filosofiche", Milan, 1905, s.v. "Epistemologia", 226; cf. "Gnosologia", 286) epistemology "determines the objective value of universals by the testing of their theoretical characteristics, their relations and common principles, the laws of their development and their special methods". Here we shall consider epistemology in its first and broader meaning, which is the usual one in English, as applying to the theory of knowledge, the German Erkenntnistheorie, i.e., "that part of philosophy which, in the first place, describes, analyses, examines, determines, the facts of knowledge as such (psychology of knowledge), and then tests chiefly the value of knowledge and of its various kinds, its conditions of validity, range and limits (critique of knowledge)" (Eisler, Wörterbuch der Philos. Begriffe, 2d ed., Berlin, 1904, I, 285). In that sense epistemology does not merely deal with certain assumptions of science, but undertakes to test the cognitive faculty itself in all its finite and conditioned activity.

HISTORICAL OUTLINE.—The first efforts of Greek thinkers centre around the study of nature. This early philosophy is almost exclusively objective, and supposes, without examining it, the validity of knowledge. Doubt arose later chiefly from the disagreement of philosophers in determining the primordial elements and the ultimate facts and conditions of reality. Parmenides holds that it is unchangeable; Heraclitus, that it is constantly changing; Democritus endows it with an eternal inherent motion, while Anaxagoras requires an independent and intelligent motor. This led the Sophists to question the possibility of certitude, and prepared the way for their sceptical tendencies. With Socrates, Plato, and Aristotle, who oppose the Sophists, the power of the mind to know truth and reach certitude is vindicated, and the conditions for the validity of knowledge are examined. But epistemological questions are not yet treated on their own merits, nor kept sufficiently distinct from purely logical and metaphysical inquiries. The philosophy of the Stoics is primarily practical, the Stoics regarding knowledge as a means of living well and as a condition of happiness. As man must act according to guiding principles and rational convictions, human action supposes the possibility of knowledge. Subordinating science to ethics, the Epicureans admit the necessity of knowledge for conduct. And since Epicurean ethics rests essentially on the experience of pleasure and pain, these sensations are ultimately the practical criterion of truth. The conflict of opinions, the impossibility of demonstrating everything, the relativity of perception, became again the main arguments of scepticism. Pyrrho claims that the nature of things is unknowable, and consequently we must abstain from judging; herein consist human virtue and happiness. The representatives of the Middle Academy also are sceptical, although in a less radical manner. Thus Aenesidamus, while denying the possibility of certitude and claiming that the duty of a wise man is to refuse his assent to any proposition, admits nevertheless that a degree of probability sufficient for the conduct of life is attainable. Carneades develops the same doctrine and emphasizes its sceptical aspect. Later sceptics, Anesidamus, Agrippa, and Sextus Empiricus, make no essential addition. In the Fathers of the Church a large number of debates were held defending Christian dogmas, and these indirectly in showing the harmony of revealed truth with reason. St. Augustine goes farther than any other in the analysis of knowledge and in the inquiry concerning its validity. He wrote a special treatise against the sceptics of the Academy who admitted no certain, but only probable, knowledge. What is probability, he asks in an argument ad hominem, but a likely or certain approach to truth and certitude? And then how can one speak of probability who does not first admit certitude? On one point at least, the existence of the thinking subject, doubt is impossible. Should a man doubt everything or be in error, the very fact of doubting or being deceived implies existence. First logical paradoxes, notions of absolute and relative, concepts of sure and uncertain knowledge, are not untrustworthy, perfect knowledge is intellectual knowledge based on the data of the senses and rising beyond them to general causes. In medieval philosophy the main epistemological issue is the objective value of universal ideas. After Plato and Aristotle the Scholastics hold that there is no science of the individual as such. As science deals with general properties of classes of things, the lists to be considered in forming an estimate it is necessary to know first the value of general notions and the relations of the universal to the individual. Does the universal exist in nature, or is it a purely mental product? Such was the question raised by Porphyry in his introduction to Aristotle's "Categories". Up to the end of the twelfth century, the answers are limited to two, corresponding to the two possible and independent modes of being. If one may speak of Realism at that period, it does not seem altogether correct to speak of Conceptualism or Nominalism in the well-defined sense which these terms have since acquired (see De Wulf, Hist. de la phil. médiévale, 2d ed., Louvain, 1903). Later, a distinction is introduced which St. Thomas formulates: the essence of concepts is in the mind. The universal as such does not exist in nature, but only in the mind. Yet it is not a mere product of mental activity; it has a basis in really existing things; that is, by their individual and by their common features, existing things offer to the mind a basis for the exercise of its functions of abstraction and generalization. This moderate Realism, as it is called in opposition to Conceptualism on the one side, and, on the other, to exaggerated, or absolute Realism, is also essentially the doctrine of Duns Scotus; and it prevailed in the School till the period of decadence when Nominalism or Terminism was introduced by Ockham and his followers.

In modern times Descartes may be mentioned for his mediecal doubt and his solution to it in the Cosmological Argument. In the Enquiry about Human Understanding, Locke in his "Essay concerning Human Understanding", is the first to give a clear statement of epistemological problems. To begin with, ontological discussions is to begin "at the wrong end" and to take "a wrong course". Hence "it came to my thoughts that . . . before we set ourselves upon inquiries of that nature, it was necessary to examine our own faculties, and to see what objects our understandings were, or were not fitted to deal with." (Epistle to the Reader). Locke's purpose is to discover "the certainty, evidence and extent" of human knowledge (1, 1, 3), to find "the horizon which sets the bounds between the enlightened and dark parts of things,
between what is, and what is not comprehensible by us" (I, 1, 7), and "to search out the bounds between opinion and knowledge" (I, 1, 3). One who reflects on the contradictions among men, and the assurance with which every man maintains his own opinion "may perhaps have reason to suspect that either there is no such thing as truth at all, or that man kind hath no sufficient means to attain a certain knowledge of it" (I, 1, 2). This investigation will prevent us from undertaking the study of things that are "beyond the reach of common sense" (I, 3, 1), even of skepticism and triviality" (I, 1, 6). Such is the problem; among the main points in its solution may be mentioned the following: "We have the knowledge of our own existence by intuition; of the existence of God by demonstration; and of other things by sensation" (IV, ix, 2). The nature of the soul cannot be known, nor does the trustworthiness of the senses extend to "secondary qualities"; a fortiori, substance and essences are unknowable. These and other conclusions, however, are not reached by a truly epistemological method, i.e., by the criticism of the processes and postulates of knowledge, but almost exclusively by the psychological method of mental analysis. Following in Locke's footsteps and processes, and even adopting the doctrine of primary qualities of matter, and Hume held a universal and radical phenomenonalism. Aroused from his "dogmatic slumber" by the scepticism of Hume, Kant took up again the same problem of the extent, validity, and limits of human knowledge. This is the task of criticism, not the criticism of books and systems, but of reason itself in the whole range of its powers, in order to attain knowledge transcending experience. Briefly stated, the solution reached by Kant is that we know things-as-they-appear, or phenomena, but not the noumena, or things-in-themselves. These latter, precisely because they are outside the mind, are also outside the possibility of knowledge. Kant's successors, identifying the theoretical basis of the thing-in-itself, have orated his "Critique" into a system of metaphysics in which the very existence of things-in-themselves was denied. After Kant we reach the present period in the evolution of epistemological problems.

Problems.—To-day epistemology stands in the foreground of philosophical sciences. The preceding outline, however, shows that it was the last to be considered, like all other sciences, in the need of special systematic treatment. In older philosophers are found partial discussions, not yet co-ordinated and regarding only special aspects of the problem. The problem itself is not formulated before Locke, and no true epistemological solution attempted before Kant. In the beginning of philosophical investigation, as well as in the beginning of cognitive life in the individual, knowledge and certitude are accepted as self-evident facts needing no discussion. Full of confidence in its own powers, reason at once rises to the highest metaphysical considerations regarding the nature, essential elements, and origin of matter and of the human soul. But contradiction and conflict of opinions obliges the mind to turn back upon itself, to reflect on its own qualities; the standards of knowledge are revised its conclusions; for contradictions cause doubt, and doubt leads to reflection on the value of knowledge. Throughout history, also, interest in epistemological questions is aroused chiefly after periods characterized by ontological investigations implying the assumption of the validity of knowledge. As such, epistemology developed in the 18th century as a whole science in the 19th century. Problems of epistemology grow more numerous, and their solutions more varied. Originally the choice was almost exclusively between affirming the value of knowledge and denying it. For one who looks upon knowledge as a simple fact, these are the only two possible alternatives. After psychology has shown the complexity of the knowing-process, pointed out its various elements, examined its genesis, and followed its development, knowledge is no longer deemed either valid or invalid in its totality. Certain forms of knowledge must be rejected and others retained; or knowledge may be held as valid up to, but not beyond, a certain point. In fact, at present, one would look in vain for absolute and unlimited dogmatism as well as for pure and complete scepticism. Opinions vary between these two extremes; and hence comes, partly at least, the confusion of terminology. We are in a labyrinth in which even the most experienced can hardly find their way. Here a few systems only will be mentioned, and their names used in their most general and obvious sense.

The main problems of epistemology may be conveniently reduced to the following. Starting from the fact of spontaneous certitude, the first question is: Does reflection also justify certitude? Is certain knowledge within man's power? In a general way Dogmatism gives an affirmative, Scepticism a negative answer. Modern Agnosticism (q.v.) attempts to indicate the limits of human knowledge and concludes that the ultimate reality is unknowable. This leads to a second problem: How does knowledge arise, and why need it ever be subject to criticism? Hume's (q.v.) admits no other trustworthy information than the data of experience, while Rationalism (q.v.) claims that reason as a special faculty is more important. A third question presents itself: What is knowledge? Cognition is a process within the mind with the special feature of referring to something without the mind, of representing some extramaterial reality. What is the value of this representation, or knowledge? Is it the result of the mind's inner activity, as Idealism (q.v.) claims? Or is the mind also passive in the act of knowing, and does it in fact reflect some other reality, as Realism asserts? And if there exist such realities, can we know anything about them in addition to the fact of their existence? What is the relation between the idea in the mind and the object of knowledge? And if even if knowledge is valid, the fact of error is undeniable; what then will be the criterion by which truth may be distinguished from error? What signs decide whether certitude in any case is justified? Such systems as Intellectualism, Mysticism, Pragmatism, Traditionalism, etc., have attempted to answer these questions in various ways. In all the main problems, epistemology should start from self-evident facts, namely the facts of knowledge and certitude. To begin, as Descartes did, with a universal doubt is to do away with the facts instead of interpreting them; nor is it possible consistently to emerge out of such a doubt. Locke's principle that "knowledge is conversant only with our ideas" is contrary to experience, since in fact it is for the psychologist alone that ideas become objects of knowledge. First to isolate the mind absolutely from external reality, and then to ask how it can nevertheless come into contact with this reality, is to propose an insoluble problem. As to the Kantian attitude, it has been criticized repeatedly for examining the validity of knowledge with the knowing faculty, for making reason its own standard. It is not for the psychologist to examine and judge are still held in doubt. Epistemology, the science of knowing, is closely related to metaphysics, the science of being, as its necessary introduction, and as gradually leading into it. The main epistemological issues cannot be met without stepping almost immediately on metaphysical ground, since the faculty of knowledge cannot be examined apart from its exercise and therefore from the contents of knowledge. Logic in its strict sense is the science of the laws of thought; it is concerned with the form, not the matter of knowledge, and in this it differs from epistemology. Psychology deals with knowledge as a mental fact, apart from its truth or falsity; it endeavors to deter-
mine the conditions, not only of cognitive, but of all mental processes and to discover their relations and the laws of their sequence. Thus logic will complement the work of psychology in two different directions, and epistemology forms a transition from psychology and logic to metaphysics. The importance of epistemology can hardly be overestimated, since it deals with the ground-work of knowledge itself, and therefore of all scientific, philosophical, moral, and religious principles. At the present time especially is it highly necessary for apologists, for the very foundations of religion are precisely the doctrines most frequently looked upon as beyond the reach of human intelligence. In fact much recent discussion concerning the value of knowledge has taken place on the ground of apologetics, and for the distinct purpose of testing the value of religious beliefs. If, contrary to the definitions of the Council of the Vatican, the existence of God and some at least of His attributes cannot be demonstrated, it is evident that there is no possibility of revelation and supernatural faith. As Plus X expresses it (Encycl. "Pascendi", 8 Sept., 1907), to confine reason within the field of phenomena and give it no right and no power to go beyond these limits is to make the infinite void of life and God, and recognizable His existence by means of visible things. And then all will readily perceive what becomes of natural theology, of the motives of credibility and of external revelation. (See SCEPTICISM; CERTITUDE; DOUBT.)

Epistle (in the Mass). See LESSONS.

Epistle (in Scripture). Lat. epistola; Gr. ἐπιστολή; in Hebrew, at first only the general term meaning "book" was used, then certain transitional expressions signifying "writing", and finally ה’מ’ (Assyrian or Persian origin), and ה’מענ/ nishkhtevan (of Persian derivation), which the Septuagint always retained, was applied in the study of the epistle. It will be found convenient to distinguish between the Old Testament and the New.

The Old Testament exhibits two periods in its idea of an epistle: first, it presents the epistle under the general concept of a book or a writing; secondly, it regards the epistle as a distinct literary form. It may be difficult to point out the dividing line between these two periods with accuracy; in general it may be maintained that the Hebrews developed their notion of epistle as a specific form of writing during the time of the captivity. The first instance of a written Biblical message is found in II K., xi, 14-15, where we are told about David's letter to Joab concerning Urias; there was need for secrecy in this case as well as in that to which reference is made in the 8th and 9th chapters of the city in the matter of Naboth (III K., xx, 8-9), and of Jehu's commands sent to Samaria (IV K., x, 1-6). It may have been in order to avoid the danger of a personal interview that the Prophet Elias (Eliasæ?) wrote to King Joram concerning his impending punishment (11 Par., xxi, 12-15). The desire to be emphatic and peremptory, the principle of the King's right to the life of his subjects, the rule of Israel, bringing for the cure of Naaman's leprosy (IV K., v, 5-7), and Sennacherib's open letter to Ezecias (IV K., xix, 14; Is., xxxvii, 14; II Par., xxiii, 17) the wish to be courteous seems to have inspired the letter of Merodach Baladon to Ezecias after the latter's recovery from sickness (IV K., xx, 12; Is., xxxix, 1). Similar to the foregoing authoritative letters is the message addressed by Jere- mis to the exiles in Babylon (Jer., xxxix, 1 sq.); these are called epistles to letters sent by a pseudo-prophet from Babylon to Jerusalem with the purpose of undermining Jeremia's authority (ibid., 25, 29).

Thus far, letters are of relatively rare occurrence in the Bible, and they are not regarded as constituting a distinct class of literature. Hereafter they become more frequent, and both their name and their form are marked by similarity. Their subsequent frequency may be inferred from their repeated occurrence in the Books of Esther, Esdras, and Nehemias: Esth., i, 22; ii, 13; vi, 5 sq.; ix, 20, 29; xi, 1-7; xvi, 24-1; I Esdr., iv, 7, 11 sq.; v, 6; vii, 11; Neh., ii, 7; vi, 17, 19. Their general name "book" gives way first, to that of "writing" (I Par., ii, 11; xii, 12; Esth., ii, 13-14; viii, 10, 13), and then to that of "Epistle" (I Par., xxx, 1, 6; I Esdr., iv, 7 sq.; v, 3 sq.; Neh., ii, 7-9, vi, 17, 19; Esth., ix, 26, 29). Their form begins to be marked by a formal address and a distinctively epistolary ending. Instances of such explicit addresses may be seen in Estdr., v, 7: "To Darius the king all peace"; Esth., xiii, 1: "Artaxerxes the great king who reigneth from India to Ethiopia, to the seven provinces, that are subject to his empire, greeting"; I Mach., x, 30: "King Demetrius to his brother Jonathan, and to the nation of the Jews, greeting". An instance of an epistolary conclusion occurs in II Mach., xi, 33: "Fare ye well. In the year one hundred and forty-eight, the fifteenth day of the month of Xanthicus"; a similar example may be seen, ibid., 88.

But the most striking instance of this pre-literary form of private correspondence between Hebrews.

The New Testament presents us with a very highly developed form of epistle. Recent writers on the subject have found it convenient to follow Professor Deissmann in his distinction between the letter and the epistle. The letter is a private and confidential conversation, as is also shown during the course of the writing; the epistle is general in its aim, addresses all whom it may concern, and tends to publication. The letter is a spontaneous product of the writer, the epistle follows the rules of art. If publication be regarded as an essential condition of literature, the letter may be described as a "pre-literary form of self-expression". In order to apply the term "Biblical epistles" to the epistles, with the messages contained in, or referred to by, the New Testament Books, we shall group the relevant data as pre-Pauline, Pauline, and post-Pauline.

Pre-Pauline.—The Book of Acts (ix, 2; xxiii, 5; xxviii, 21) shows that the Jews of Jerusalem sent occasional letters to the synagogues of the Dispersion; Acts, xv, 22-25, gives another parallel instance of a letter written by the Apostles from Jerusalem to the churches in Antioch, Syria, and Gilead. We may also infer from the testimony of the New Testament (I Cor., xvi, 3; II Cor., iii, 1; Rom., xvi, 1-2; Acts, xvii, 27) that letters of commendation were of common occurrence. I Cor., vii, 1, informs us that the Corinthian Christians had applied to St. Paul in their difficulties by way of letter.

Pauline.—The Pauline Epistles form a collection which was formerly called ἐπιστολαί. They are called "epistles", though that addressed to the Hebrews hardly deserves the name, being really a theological homily. The Epistles mentioned in I Cor., v, 9, and Col., iv, 16, have not been preserved to us; their accidental loss or deliberate purpose may have perished. The peculiar form and style of the Pauline Epistles are studied in their respective introductions and commentaries; but we may add here that I Tim., II Tim., and Tit. are called Pastoral Epistles; owing to its peculiar style and form, it is supposed by some writers that the Epistle to the Hebrews was not even dictated by the Apostle, but
only expresses his doctrine. Only the three Pastoral Epistles and Philemon are addressed to individuals; all the others are directed to churches, most of which, however, were well known to the writer. They exhibit more of their author's personal character than most profane letters do.

Post-Pauline.—Generally speaking, we may describe the so-called Catholic Epistles as Post-Pauline. We need not note here that these Epistles are not named after the addressee, as happens in the case of the Pauline Epistles, but after the inspired author. The Epistle of St. James has no final greetings; it was most probably a letter to persons known to the writer. In 1 John we have a sermon rather than a letter, though its familiarity of language indicates that the readers were known to the writer. The following two Epistles of St. John are real letters in style and form. St. Peter's first Epistle supposes some familiarity with his readers on the part of the writer; this can hardly be said of St. Peter or of the Epistle of Jude. What has been said sufficiently shows that Professor Deissmann's distinction between the artistic epistle and pre-literary letter cannot be applied with strict accuracy. Quite a number of the New-Testament Epistles contain those touches of intimate familiarity which are supposed to be the essential characteristics of the letter.

Epping, Joseph, German astronomer and Assyriologist, b. at Neuenkirchen, near Rheine in Westphalia, 1 Dec., 1815; d. at Exeter, Holland, 22 Aug., 1891. His parents died while he was very young and he owed his early education to the fostering care of relations. After completing the usual gymnasium course at Rheine and at Munster he matriculated at the academy in Munster, where he devoted himself particularly to mathematics. In 1830 he entered the novitiate of the Society of Jesus in Munster and after his philosophical studies was appointed professor of mathematics and astronomy at Maria-Laach. He spent the years from 1837 to 1871 in the study of theology and was ordained priest in 1870. At that time Garcia Moreno, the bishop of Huelva, offered him the presidency of the Jesuits in the early seventies for members of the Society to form the faculty of the Polytechnicum at Quito, which he had recently founded. A number of German Jesuits responded to the call, among them Epping, who set out in June, 1872, for Quito to become professor of mathematics. He quickly learned Spanish and was made a member of the faculty of mathematics.

The political disturbances which followed the assassination of Moreno (6 Aug., 1875) made it necessary for the Jesuits to return to Europe, and Epping arrived in Holland in the fall of 1876. He spent the remaining years of his life at Blijenbeek, and later at Exeter. Epping was universally admired for his knowledge of mathematics by the younger members of his order, devoting his leisure to research and literary work.

Epping's first published volume, "Der Kreislauf im Kosmos", appeared in 1882. It was an exposition and critique of the Kant-Laplace nebular hypothesis and a refutation of the pantheistic and materialistic conclusions which had been drawn from it. This was an important work, however, was begun in collaboration with Father Strassmayer who, in connexion with his own studies in Assyriology, had induced him to undertake a mathematical investigation of the Babylonian astronomical observations and tables. After considerable labour the key was found. He discovered the table of differences for the new moon in one of the tablets and identified Guttu with Mars, Sukku with Saturn, and Tesis with Jupiter (Epping and Strass- mayer in "Studien aus Maria-Laach," vol. XXI, pp. 277-292). Eight years later he published "Astronomisches aus Babylon oder das Wissen der Chaldäer über den gestirnten Himmel" (Freiburg in Br., 1889). This work was of much importance both from the standpoint of astronomy and chronology. It contains an exposition of the astronomy of the ancient Babylonians, worked out from their Ephemerides of the moon and the planets. This was supplemented by "Die babylonische Berechnung des Neumonds" (Stimmen aus Maria-Laach, vol. XXXIII, pp. 223-240). He was also the author of a number of articles in the "Zeitschrift für Assyriologie". Father Epping suffered much from ill-health during the last years of his life. He was none the less a man of unriveting activity and combined geniality and a keen sense of humour with a deep and simple piety.

Erasmus, Desiderius, the most brilliant and most important leader of German humanism, b. at Rotterdam, Holland, 28 October, probably in 1466; d. at Basle, Switzerland, 12 July, 1536. He was the illegitimate child of Gerard, a citizen of Gouda, and Margaretha Rogers, and at a later date baptized in his name as Desiderius. When he was six years old, his mother came a priest. Erasmus and an elder brother were brought up at Gouda by their mother. When nine years old he was sent to the school of the celebrated humanist Hegius at Deventer, where his taste for humanism was awakened and his powers of mind received their bent for life. The most brilliant qualities of his intellect, a wonderful memory and an extraordinary quick power of comprehension, showed themselves even in this his earliest training. His mother died when he was thirteen years old, and a little later his father also; he was now sent by his guardians for two years, which he afterwards called two lost years, to the monastery school of Hertogenbosch. Then, after wandering aimlessly about for a time, he was found by through the kindness of a friendly priest, a fellow- guardian, to enter in 1486 the monastery of Emus, near Gouda, a house of Canons Regular. He felt no true religious vocation for such a step, and in later years characterized this act as the greatest misfortune of his life. As a matter of fact the beginnings of his religious indifferentism and of his weakness of character are to be sought in his joyless youth and in the years spent under compulsion in the monastery. He was left free, however, to pursue his studies, and devoted himself mainly to the ancient classics, whose content and formal beauty he passionately admired. His religious training was obtained from the study of St. Jerome and Lorenzo Valla. In 1491 a lucky accident freed him from monastic life. The Bishop of Vercelli was in Italy to mind his wife and the two sons, inviting him to the post of secretary and travelling companion, attracted by the young man's linguistic attainments; he also ordained him priest in 1492. The journey was never made, but Erasmus remained in the service of the bishop, who, in 1496, sent him to Paris to complete his studies. The scholastic method of instruction then current was not to his taste. His attention was drawn to astronomy, and he spent much of his time travelling through France and the Netherlands, receiving occasionally friendly help; he was also for a while at Orleans, where he worked at his collection of proverbts, the later "Adagia".

The
money for a trip to England he earned by acting as tutor to three Englishmen, from whom he also obtained valuable letters of introduction. During his stay in England (1498–99), he made the acquaintance at Oxford of Colet, Thomas More, Latimer, and others, with all of whom acquaintance ripened into lifelong friendship. Colet showed him how to reconcile the ancient faith with humanism by abandoning the scholastic method and devoting himself to a thorough study of the Scriptures. Consequently, on his return to the Continent he took up with ardour the study of Greek at Paris and Louvain. The first publications of Erasmus occurred in this early period. In 1500 was issued the "Adagia", a collection of Greek and Latin proverbs, and in 1504 another greatly enlarged edition of the same; in 1502 appeared the "Enchiridion militis christiani", in which he advocated the hope of true religion and true piety, but with comments that were biting and antagonistic to the Church; in 1505 Lorenzo Valla's "Annotaciones" to the New Testament, the manuscript of which he had found in a monastery at Brussels. His introduction to this work is important, for in it occurred his first utterance concerning the Scriptures, laying especial stress on the necessity of a literal translation of the original text, and respect for the literal sense.

In 1506 he was finally able, by the aid of his English friends, to attain his greatest desire, a journey to Italy. On his way thither he received at Turin the degree of Doctor of Divinity; at Bologna, Padua, and Venice, the academic centres of Upper Italy, he was greeted with enthusiastic honour by the most distinguished humanists of the time, and was sent on his way by them to his native city. At Venice he formed an intimate friendship with the famous printer Aldus Manutius. His reception at Rome was equally flattering: the cardinals, especially Giovanni de' Medici (later Leo X), and Domenico Grimani, were particularly gracious to him. He could not, however, be persuaded to fix his residence at Rome, and refused all offers of ecclesiastical promotion. Henry VIII had just reached the throne of England, and thus awakened in Erasmus the hope of an advantageous appointment in that country, for which he accordingly set out. On his way out of Italy (1509) he wrote the satire known as "The Praise of Folly" ("Moriae Encomium"; or "Laus Stultitiae"), which in a few months went through seven editions. Originally intended to be a satire on the abuses and follies of the various classes of society, especially of the Church. It is a cold-blooded, deliberate attempt to discredit the Church, and its satire and stinging comment on ecclesiastical conditions are not intended as a healing medicine but a deadly poison.

Erasmus may now be said to have reached the acme of his fame; he was in high repute throughout all Europe, and was regarded as an oracle both by princes and scholars. Every one felt it an honour to enter into correspondence with him. His inborn vanity and self-complacency were thereby increased almost to the point of becoming a disease; at the same time he sought, often by the grossest flattery, to obtain the favour and material support of patrons or to secure the courtiers' approval. His principal work was the "Adagia", his "Enchiridion militis christiani", his "Laus Stultitiae", which in a few months went through seven editions. Originally intended to be a satire on the abuses and follies of the various classes of society, especially of the Church. It is a cold-blooded, deliberate attempt to discredit the Church, and its satire and stinging comment on ecclesiastical conditions are not intended as a healing medicine but a deadly poison.

It is a cold-blooded, deliberate attempt to discredit the Church, and its satire and stinging comment on ecclesiastical conditions are not intended as a healing medicine but a deadly poison.

The literary works issued by Erasmus up to this time made him the intellectual father of the Reformers. What the Reformation destroyed in the organic life of the Church Erasmus had already openly or covertly subverted in his moralising satires, his "Adagia", his "Enchiridion militis christiani", his "Laus Stultitiae", which in a few months went through seven editions. tim of hair-splitting philosophy, which culminated in Scholasticism. With the latter there appeared in the Church that Phthisical lesion of which the moral good works and monastic sanctity, and on a ceremonialism beneath whose weight the Christian spirit was stifled. Instead of devoting itself to the eternal salvation of souls, Scholasticism repelled the religiously inclined by its hair-splitting metaphysical speculations and its over-curious discussion of unsolvable mysteries. Even where it set store by the truth, it furthered no end by discussions concerning the procession of the Holy Ghost, or the causa formalis efficiens, and the character indebelle of baptism, or gratia gratis data or acquisitio; of just as little consequence was the doctrine of original sin. Even his concept of the Blessed Eucharist was quite rationalistic and resembled the later teaching of Zwingle. Similarly he rejected the Dogma of the Immaculate Conception of the Virgin, the indissolubility of marriage, and other fundamental principles of Christian life and the ecclesiastical constitution. He would replace these traditio nula and constitutione 11 hominum by the simple words of the Scriptures, the interpretation of which should be left to the individual judgment. The disciplinary ordinances of the Church, the idolatries and grinnages, veneration of saints and their relics, the prayers of the Breviary, celibacy, and religious orders in general he charged among the perversities of a formalistic Scholasticism. Over against this "holiness of good works" he set the "philosophy of Christ", a purely natural ethical ideal, guided by human sagacity. Of course all this was not obliterated in the book, which, more or less, was almost entirely all differences between heathen and Christian morality, so that Erasmus could speak with perfect seriousness of a "Saint" Virgil or a "Saint" Horace. In his edition of the Greek New Testament and in his "Paraphrases" of the same he forestalled the Protestant view of the Scriptures.

Concerning the Scriptures, Luther did not express himself more rationalistically than Erasmus; nor did he interpret them more rationalistically. The only difference is that Luther said clearly and positively what Erasmus often merely suggested by a doubt, and that the former sought in the Bible, above all other things, the certainty of justification by Christ, while the latter, with an almost Pelagian definition of the religious life, held, was not furthered by discussions concerning the procession of the Holy Ghost, or the causa formalis efficiens, and the character indebelle of baptism, or gratia gratis data or acquisitio; of just as little consequence was the doctrine of original sin. of a court of arbitration. He also defended with great earnestness his own orthodoxy against Stunica, who wrote the treatise "Erasmian Latitudinarii Despaciae et impiates" (Rome, 1522), to prove that Lutheran errors were to be found in the aforesaid "Annotations" to the New Testament. The same year (1522) the fugitive Von Hutten, on his way to Zurich, attempted, but in vain, to meet at Basle his former friend. Von Hutten revenged himself in his "Expositio cum commentary ad textum V. Pauli" (1523), with particular violence all the weaknesses, all the "parvitas et imbecillitas animi" of his former patron. Erasmus replied from Basle with his "Spongia Erasmi adversus adserpentes Hutteni", in which, with equal violence, he attacked the character and life of his opponent, and defended himself against the reproach of duplicity. He had envisaged, so he wrote, to hold aloof from all parties; he had, indeed, attacked Roman abuses, but he had never attacked the Apostolic See or its teaching.

All sympathetic association of Erasmus with the Reformers now ceased, though Melanchthon tried to stay the final rupture. One after another, the leaders of the religious anti-Roman movement withdrew from the famous humanist, especially Zwingle, Oecolampadius, and Calvin. These three Erasmus expressed at last to heed the many appeals made to him, especially by Adrian VI and Henry VIII, to write against Luther. For the first time he took a decided stand, moved, no doubt, by the fear of losing the confidence of both parties. He chose with skill the point on which he would attack Luther. Erasmus had complained much earlier that "popes" had led the religious movement by "concupiscentia, moral disorderization, and the interruption, if not the complete ruin, of learned studies. These abuses he traced to Luther's denial of free will. He wrote, therefore, in defence of the freedom of the will, an attack on Luther, entitled: "De tribute di libero arbitrio" (1524). The work, it may be said, was couched in a calm and dignified style. Though by no means sufficiently profound in its theological reasoning, the proofs are drawn with skill from the Bible and from reason. Luther's reply was the "De servo arbitrio" (1524), henceforth the official programme of the new movement. Starting from the third chapter of the Epistle to the Romans, it teaches the absolute incompetency of man in his fallen state to perform moral acts; no frank antithesis to the humanistic idea of the individual; no appeal to a work of God, entitled "Hyperaspistes" (1526), but without effect. Luther ignored this reply, except in private letters, in which he showed much irritation. Some years later, however, when the "Explanatio Symboli" of Erasmus appeared (1533), Luther attacked him once more in a public letter, to which Erasmus replied in his "Adversus calumnia hosios epistolam Martini Lutheri". These passages at arms brought on Erasmus the violent hatred of the Wittenberg reformer, who now called him nothing but a sceptic and an Epicurean. Catholics, however, considered that Erasmus had somewhat rehabilitated himself, although the more extreme still disbelieved in him. He had not ceased to insist on the need of reforms, though he now spoke more commonly of "episcopal" than of "monastic" abuses. In his later years, it may be said, he held aloof from all religious conflicts, devoted to his humanistic studies and to an intimate circle of such friends as Boniface Anemar, Beatus Rhenanus, and Glaeranus. Nor was he indifferent to contemporary efforts at conciliation; he was in favour of ecclesiastical reunion. Meantime, the Reformation made rapid progress in Italy, where it took the form, greatly detested by Erasmus, of a violent destruction of images. He removed, therefore (1529), to Freiburg in the Breisgau, not far from Basle, in which city he could still find congenial Catholic surroundings. He did not relax his efforts for religious peace, in favour of which he exerted all his influence, especially at the imperial court. He also wrote at the request of Melancthon and Julius von Pflug, his "De arbitrio Ecclesiae concordiae" (1533), in which he advocates the removal of ecclesiastical abuses in concord with Rome and without any changes in the ecclesiastical constitution. Notwithstanding his rupture with Luther, an intense distrust of Erasmus was still widespread; as late as 1527 the Paris Sorbonne censured thirty-two of his publications. Erasmus' answer to the report of the unpopularity of the pope towards Erasmus was never inimical; on the contrary, they exhibited at all times the most complete confidence in him. Paul III even wanted to make him a cardinal, but Erasmus declined the honour, alleging his age and ill-health. Naturally weak and sickly, and suffering all his life from calculi, his strength in the end failed completely. Under these circumstances he decided to accept the invitation of Mary, regent of the Netherlands, to live in Brabant, and was preparing at Basle for the journey when a sudden attack of dysentery caused his death. He died with composure and with all the signs of a devout trust in God; he did not receive the last sacraments, but why cannot now be settled. He was buried with great pomp in the cathedral of Freiburg, and his heart, with which he heard the sorrowful news of the execution of two of his English friends, Sir Thomas More and Bishop Fisher.

Editions of the classics and the Fathers of the Church kept Erasmus fully employed during the later period of his life at Basle. In his editions of the Fathers Erasmus formed a means of realizing the theological and ethical ideas of humanism. He studied the original sources of ecclesiastical and theological development and thus to popularize the historical concept of the Church as against the purely speculative viewpoint of Scholasticism. As early as 1516–18 Erasmus had published in nine volumes the works of St. Jerome, a theologian to whom he felt especially drawn. In 1523 appeared his edition of St. Hilary of Poitiers; in 1527 that of St. Isidore, who, in his turn, censured; in 1528 St. Ambrose; in 1528, St. Augustine; in 1529 the edition of Epiphanius; in 1530, St. Chrysostom; his edition of Origen he did not live to finish. In the same period he issued the theological and pedagogical treatises: "Eclesiastes sive Conciliorum evangeli" (1535), a greatly admired homiletic work; "Modus confinendi" (1526), a guide to right confession; "Res gestae divi haec Christiana"; "De civitate morum pauperilium"; "De preperatione ad mortem"...

Opinions concerning Erasmus will vary greatly. No one has defended him without reserve, his defects of character being too striking to make this possible. His vanity and egotism were boundless, and to gratify them he was ready to pursue former friends with defamation and invective; his flatness, where favour and material advantages were to be had, was often repulsive, and he lacked straightforward speech and decision in just those moments when both were necessary. His religious ideal was entirely humanistic: reform of the Church on the basis of her traditional constitution, the introduction of humanistic "enlightenment" into ecclesiastical doctrine, without, however, breaking with any scholastic character, he had no real interest in uncongenial questions and subjects, above all no living affectionate sympathy for the doctrines and destinies of the Church. Devoid of any power of practical initiative he was constitutionally unfitted for a more active part in the violent religious movements of his day, or even to sacrifice himself for the defence of the Church. His bitter venom had, indeed, done much to prepare the way for the Reformation; it spared neither the most sacred elements of religion nor his former friends. His was an absolutely unspeculative brain, and he lacked entirely all power of acute philosophical definition; we need not wonder, therefore, that on the one hand he
was unable to grasp firmly ecclesiastical doctrine or deal justly with its scholastic formulation, while on the other he inveighed with extreme injustice against the institutions of the Church. It must not be forgotten that the grave defects of his character were compensated by brilliant qualities. His splendid gifts explain the universal European fame of the man through several decades, a public esteem and admiration far exceeding in degree and extent the lot of any scholar since his day. He had an unequalled talent for form, great journalistic power, surpassing powers of expression; for strong and moving discourses to keep irony, covert sarcasm, he was unsurpassed. In him the world beheld a scholar of comprehensive and mani- sided learning, though neither profound nor thorough, a man of universal observation, a writer whose diction was brilliant and elegant in the highest degree. In a word, Erasmus exhibits the quintessence of the Renaissance spirit; in him are faithfully mirrored both its good and bad qualities.

It cannot be denied that Erasmus was a potent factor in the educational movement of his time. As the foremost of the German humanists, he laboured constantly and effectively for the spread of the new learning, which imparted to the education of the Re- naissance the most potent and most far-reaching course with scholars and students, his published satires on existing institutions and methods, and especially his work in editing and translating the Greek and Latin authors, he gave a powerful impetus to the study of the classics. But his more direct contributions to education are marked by the inconsistency which appears in his whole career. Some of his writings, e. g. his "Order of Studies (De ratione Studii, 1516) and his "Liberal Education of Children" (De pueris statim ac liberaliter instituendis, 1529), contain excellent advice to parents and teachers on the care of children, development of individuality, training in virtue and in the practice of religion, with emphasis on the moral qualifications of the teacher and the judicious choice of subjects of study. In other writings, as in the "Colloquia", the tone and the language are just the opposite, so offensive in fact that even Luther in his "Table Talk" declares: "If I die I will forbid my children to read his Colloquies... See now what poison he scatters in his Colloquies among his made-up people, and goes craftily at our youth to poison them." It is not surprising that this work was condemned as obscene (1526) and finally burned and was eventually placed on the Index. That in most works on the history of education Erasmus occupies so large a place, while others who contributed far more to the development of educational method (e. g. Vives) are not mentioned, is perhaps due to sympathy with the anti-ecclesiastical attitude of Erasmus, rather than to the intrinsic value of his constructive work (see Stöckl, Gesch. d. Pedagogik, Mainz, 1876).

A complete edition of the works of Erasmus, to which a life of him was added, was issued by Beatus Rhenanus (Basle, 1540-41) in 9 vols.; an edition was also published by Le Clerc (Leyden, 1703-06), 10 vols.; Ruelens, "Erasm Roffa. Silva eraminum" (Brussels, 1864); The editions of the letters of Erasmus have been collected as "Epistulae Familiaris" (Basle, 1518); Herzog, "Epistulae famili. ac. Bon. Amerbachianum" (Basle, 1779); Horowitz, "Erasmiana" in the Transactions of the philosophical-historical section of the Academy of Vienna, vols. XC and XCY (1878-85); Horowitz, "Erasmus and Martin Lipsius" (1882); F. M. Nicholls, "The Epistles of Erasmus" (London, 1901-04), 2 vols.; von Maslowski, "Lebensgeschichte des Erasmus" (Bres- lau, 1901). Selections from his pedagogical writings were published by Reichling, "Ausgew. pädagogische Schriften des Erasmus" (Freiburg, 1890).

Information about the life of Erasmus is obtained from his letters to Servatius and Granius. Durand de Lauz, Erasme de Rotterdam., prêtre curé et initiateur de l’esprit moderne (Paris, 1872); H. H. J. de la Tour, Adduction d’information sur la vie et les ouvrages de Erasme (Paris, 1874); G. F. E. Gilly, Erasme (Augs., 1879); Richter, Eras- musstudien (Dresden, 1881); F. Seel, Die Reforma- toren: John Colet, Erasmus, and Thomas More (London, 1887); Froude, Life and Letters of Erasmus (London, 1894, 1895); Kopp, Erasmus von Rotterdam. Erasmus (London, 1901); Carey, Erasmus (London, 1902), with a good bibliography, pp. 196-239, concerning the policy of education of Erasmus. See also: D. Hoffmann, "Erasmus und die Stellung zu Luther" (Leipzig, 1870); Herellinck, Die reformatorischen Reformanstrengungen des deutschen Humanismus (Tübingen, 1878); P. Stiacke, "Erasmus zum Orte der Kirche und zu den regel. Bewegung seiner Zeit" (Leipzig, 1907); Scholl, Die pädagogischen und didaktischen Grundstüke des Erasmus (1850); Becher, Die Anwesen des Erasmus über die Erziehung und den ersten Untericht der Kinder (1890); Gnecker, Das Ideal der Bildung und Erziehung bei Erasmus (1890); Hoffmann, Erasmus und die Stellung zu Luther (1879).
council proceeded to excommunicate Erastus on the ground of his alleged Unitarianism. After a long further controversy, he succeeded in convincing them that this allegation was false; and the excommunication was removed in 1575; but his position had become a difficult one, and five years later he resigned his office. He returned to Basle, where he taught ethics for a short time, until his death. On his tomb in St. Martin's church he is described as "an acute philospher, a clever physician, and a sincere theologian". He left behind him the reputation of an upright life, with great amiability of character, coupled with rare learning, and for being an active part in combating the superstitions of astrology; but he showed that he was not free from the prejudices of his day by advocating the killing of witches.

The great work by which Erastus is known is his "Seventy-five Theses", to which we have already alluded. They were never printed in his lifetime, but during his last illness he expressed a desire that they should be published, and Castelvetro, who married his widow, carried out his wishes. The "Theses" and "Confirmanum thesium" appeared together in 1589, the printer's name and place being suppressed from motives of prudence. The central question about which the "Theses" turned was that of excommunication. The term is not, however, used by Erastus in the Catholic sense, which is that of the exclusion from society or membership of the Church. The excommunication to which he alludes was the exclusion of those of bad life from participation in the sacraments. He explains what he means in the introduction to the "Theses" which he wrote at the end of his life. "It is about sixteen years ago", he writes, "since some men according to the idea that they became apostates from the Church took measures for being excluded from the sacraments of the Church, and that the name of the whole Church and should judge who were worthy or unworthy to come unto the Lord's Supper." The first eight theses are devoted to a detailed explanation of the various senses in which the word excommunication is used, and in the ninth Erastus defines the issue with which he is concerned: "This, then, is the question, whether any command or any example can be produced from Holy Scriptures requiring or intimating that such persons [i.e. sinners] should be excluded from the sacraments." In the following thesis (x) he says: "Our answer is that none such can be found, but rather that many, as well examples as precepts, have been given for admission to the sacraments in the Bible." The following twenty-eight theses are devoted to developing and maintaining his conclusions, before proceeding in the last half of his work to answer possible objections.

The chief argument on which Erastus bases his whole system is an analogy between the Jewish and Christian Dispensations, and it is exactly here that the fallacy of his conclusions becomes manifest. A Catholic, indeed, would be less likely to fall into the error of looking upon the Sacrament of the Eucharist and the Sacrifice of the Mass as in any close way analogous to the Sacrifices of the Old Law, and the slaying of the paschal lamb; or the relation of the ceremonial law to the religious law of the Jews. In this Erastus, indeed, was nearly as nearly realized in the most Christian of states. To a Protestant who looked upon the Bible as the sole source of Revelation this was different. Erastus argued that by the Law of Moses no one was excluded from the offering of the paschal sacrifice, but every male was commanded to observe it under pain of death; and with respect to the ordinary sacrifices in the Temple, not only was no one excluded from it, but there was a positive command for all to assist at least three times a year, on the chief feasts, viz. Pasch, Pentecost, and Tabernacles. In illustration of the Jewish tradition, he also pointed to the conduct of St. John, who administered his baptism to all, good and bad indiscriminately. He laid great stress also on Christ Himself having admitted Judas to the participation of the Holy Communion at its institution; though he grants that this is not certain, as some commentators are of opinion that the traitor had already gone out, at any rate Judas was never publicly or even privately excluded; and, in any case, he shared in the celebration of the pasch, showing that Christ promulgated no law of exclusion.

A further argument is drawn from the nature of the sacraments themselves, again bringing into prominence the claim of the Church to the double allegiance of orthodox Protestants and Catholics; for Erastus looked upon the "preaching of the Word" as equal in sacredness with the sacraments. "I ask", he said, "are the sacraments superior in authority and dignity to the Word? Are they more useful and necessary? None of those who have been saved were saved without the Word; but without sacraments, especially without the Lord's Supper, there doubtless might be, and there have been many saved who, however, did not despise these ordinances. So seems the Apostle to have judged when he wrote that he was not sent to baptize but to preach the Word. Do not all these hold the sacraments to be visible words and to exhibit to the eyes what the Word expressed in thought? Do we not also wish to exclude nobody from the Word, while from the sacraments, especially the Lord's Supper, we would exclude some, and that contrary to, or without, the express command of God?" (thesis xxxviii).

He deals at some length (thesis xv) with the Jewish law as to the "unclean", contending that uncleanness was by no means intended to typify sin; for in that case he argues, every thesis of Eras tus, from sacrifice while the sinful were not, it would follow that those who were blameless—for legal uncleanness was incurred by such acts as contact with the dead, etc.—were, from being types of sinners, punished more severely than sinners themselves; this he considers a reductio ad absurdum. He contended that uncleanness was a figure, "not of a work, but of a quality even our depraved nature"; and he adds, "neither did it presignify in what manner this ought to be punished [in the Church on earth], for Moses taught this in plain and explicit terms, but what should be our condition in a future life." In meeting the question of the expulsion from the synagogues alluded to by Christ, Erastus contended (thesis xxvii) that this was a merely civil act; for the synagogues had no civil law power; and only seven Jews expelled from the synagogues were not excluded from the Temple. He added also that he would see no difficulty, even otherwise, in admitting that abuses might have crept into the Jewish as into the Christian Church, and that the Pharisees might have acted in a spirit out of keeping with the true and proper interpretation of the Law. One of the chief errors here to which his opponents cling is, that seventy-two are devoted to the question of excommunication; it is only in the last three that the general relation of the Church to the State, which comes as a corollary to his theory, is discussed. This can be given in his own words, "See no reason", he says, "why the Christian magistrate at the present day should not possess the power to ordain which of God's enemies may or may not be excluded from the exercise in the Jewish commonwealth. Do we imagine that we are able to continue a better constitution of Church and State than that?" (thesis lxxxiii). He then proceeds to discuss the position of the magistrate in the Jewish nation, and argues in the following thesis (lxxxiv) that "if that Church and State were most wisely founded, arranged, and approved, any other must mortally approach, which as it approaches to its form as nearly as present times and circumstances will permit. So that wherever the magistrate is godly, there is no need of any other authority under any other pretension or title to rule or
punish the people—as if the Christian magistrate differed nothing from the heathen. . . . I allow indeed the magistrate ought to consult, when doctrine is concerned, those who have particularly studied it; but that there should be any such ecclesiastical tribunal to take cognizance of men's conduct, we find no such thing anywhere appointed by the Holy Scripture. It may reasonably be asked how the system of Erasmus could work in a state which is professedly un-Christian, and the last thesis is devoted to answering that question.

"But in those churches, the members of which live under an ungodly government (for example Popish or Mohammedan); grave and pious men should be chosen according to the precept of the Apostle, to settle disputes by the judgment of their spiritual heads. This is to carry on the offices of that sort. These men ought also, in conjunction with the ministers, to admonish and reprove them who live unholy and impure lives; and if they do not succeed, they may also punish, or rather recall them to virtue, either by refusing to hold private intercourse with them or by a public rebuke, or by any other such mark of disapprobation. But from the sacraments which God has instituted, they may not debar any who desire to partake."

The full system of Erasmus was never accepted or promulgated by any definite sect or band of followers; but the influence of his opinions was very considerable, both in Germany and in Great Britain. The Presbyterians of course have always vigorously repudiated his doctrine of Erastianism. As a matter of fact, during the period (1643-7) there was a strong Erastian party. After a long controversy, a definite resolution, affirming that the Church has its own government distinct from the civil power, was carried almost unanimously, the sole dissentient being the well-known divine, John Lightfoot. On the general questions of the relation between Church and State, his views were more or less carried. But his opinions popularly denoted by the word Erastian have had an unmistakable influence on the Established Church of England, though there has always been a party resisting the encroachments of the civil power. We can, perhaps, take Hooker's 'Ecclesiastical Polity' as an authoritative exposition of this phase of Anglicanism. Hooker was a contemporary of Erasmus, and in his polemics his hostility to the claims of the Church of Rome to come after the latter with Beza. The eighth volume, however, in which he deals with the question before us did not appear until 1648, many years after his death. Its authenticity has been questioned; but it is now generally conceded that it is based on rough notes made during his lifetime. He adopts the analogy of Erasmus; not to the Jewish nation but to the temporal government of states when the principles of religion are at stake. On the other hand, any interference on the part of the State with ecclesiastical appointments, as, for example, by nomination of bishops or by veto on such nomination, or even on the election of the pope, such as has sometimes existed in the case of some Catholic powers, is conceded by courtesy, in consideration of services rendered and by no means acknowledged as a right. See Hergenhrother, "Catholic Church and Christian State" (tr. London, 1876).

The "Theses of Erasmus" and the "Confirmation of the Thes" were reprinted at Amsterdam in 1649. An English translation of the "Theses", without the "Confirmation", appeared in London in 1650—-a very literal rendering, in places hardly intelligible. A new translation of the "Theses", by Dr. Robert Lee, with a valuable preface, was published at Edinburgh in 1858 and is in the standard edition.

Ercilla y Zúñiga, Alonso de, Spanish soldier and poet, b. in Madrid, 7 August, 1533; d. in the same city, 29 Nov., 1594. After his father's death, his mother became lady-in-waiting to the Infanta Maria and made young Alonso a page to Prince Philip. Ercilla received a very thorough education for a prince, having the most learned teachers, he enjoyed the advantages of very extensive travelling and of living at court where he came in contact with high personages. When he was only fifteen he accompanied Philip through Italy and Germany; and their travels lasted three years. Later, Ercilla accompanied his mother to Bohemia where he left her and then visited Austria, Hungary, and Poland. After travelling in Russia, he soon started out again with Philip. In London he made the acquaintance of Jerónimo de Alderete (1553), whose stories of his thrilling adventures in the New World so fired Ercilla's imagination that he determined to accompany Alderete to the New World. He therefore obtained leave from Philip, and they set sail for America, 15 Oct., 1555. Soon after their arrival, however, Alderete died (near Panama, April, 1556). Ercilla continued on his way to Peru, and in 1557 joined the forces of García Hurtado de Mendoza, who
had recently been appointed Governor of Chile. During the succeeding two or three years he played a brilliant part in combating an insurrection among the natives of Arauco, a province of Chile, suffering great hardships, and distinguishing himself several times in battle. After a severe illness he returned to Spain in 1562, and for a time resumed his travels through Europe. In 1570, he married Doña María de Bazán, a woman of illustrious family and of intellectual attainments. He died at Madrid neglected and in great poverty.

Ercilla's great work is "La Araucana", an epic poem of thirty-seven cantos, describing the difficulties encountered by the Spaniards during the insurrection in Arauco, and the heroic deeds of the natives as well as his companions. The epic partakes of the character of history, and the author adheres with such strict fidelity to the truth, that subsequent historians characterize his work as thoroughly trustworthy. In it the difficult art of story-telling is carried to perfection. Places are admirably described, dates are given with accuracy, and the customs of the natives faithfully set forth, giving to the narrative animation and colouring. The poem was published in three parts, the first at Antwerp in 1569, the second in 1575, and the third in 1590. The best editions are those published by the Spanish Academy in 1776 and 1828.

Erconwald, Saint, Bishop of London, d. about 690. He belonged to the princely family of the East Anglian Offa, and dedicated a considerable portion of his patrimony to founding two monasteries, one for monks at Chertsey, and the other for nuns at Westwell, near Harlow, in Essex. Over the latter he placed his sister, St. Ethelburga, as abbess. He himself discharged the duties of superior at Chertsey. Erconwald continued his monastic life till the death of Bishop Wini in 673, when he was called to the See of London, at the instance of King Sebili and Theodore, Archbishop of Canterbury. As monk and bishop he was renowned for holiness of life, and miracles were wrought in attestation of his sanctity. The sick were cured by contact with the litter on which he had been carried; this we have on the testimony of Venerable Bede. He was present in 686 at the reconciliation between Archbishop Theodore and Wilfrith. King Ina in the preface to his laws calls Erconwald "my bishop". During his episcopate he enlarged his church, augmented its revenues, and obtained for it special privileges from the king.

According to an ancient epitaph, Erconwald ruled the Diocese of London for eleven years. He is said to have eventually retired to the convent of his sister at Barking, where he died 30 April. He was buried in St. Paul's, and his tomb became renowned for miracles. The citizens of London had a special devotion to him, and they regarded with pride the magnificence of his shrine. During the burning of the cathedral in 1867 it is related that the shrine and its silken coverings remained intact. A solemn translation of St. Erconwald's body took place 14 Nov., 1148, when it was raised above the choir; the shrine was robbed of its jewels and ornaments in the sixteenth century; and the bones of the saint are said to have been then buried at the east end of the choir. His feast is observed by English Catholics on 14 November. Prior to the Reformation, the anniversaries of St. Erconwald's death and translation of his relics were observed at St. Paul's as feasts of the first class, according to the Instructions for the Observance of Mass in 1384.

Columba Edmonds,

**ERDING**

Erdery. See Transylvania.

Erdeswicke, Sampson, antiquarian, date of birth unknown; d. 1603. He was born at Sandon in Staffordshire, his father, Hugh Erdeswicke, being descended from Richard de Vernon, Baron of Shipbrook, in the reign of William the Conqueror. The family continued to reside at Barston, and afterwards at Leighton and finally in the reign of Edward III settled at Sandon. Hugh Erdeswicke was a staunch Catholic who suffered much for the Faith. In 1582 he was reported to the Privy Council by the Anglican Bishop of Coventry as "the sorest and most dangerous papist, one of them in all England", and Erdeswicke, born 23 April, 1524, entered Brasenose College, Oxford, as a gentleman-commoner in 1553. Leaving Oxford, he returned to Sandon where he spent the rest of his life as a country gentleman under the usual disabilities of a recusant. He devoted himself to antiquarian studies, particularly to the thorough "Survey of Staffordshire". By this work his name is chiefly remembered, but it was published in 1584. Other unpublished MSS. by Erdeswicke are in the British Museum and the College of Arms. Latterly he employed himself for the house of William Wrylly, a youth whom he had educated and who afterwards published writings of his own. One of these, "The True Use of Armorie", was claimed by Erdeswicke as his own work, but he told William Burton the antiquary, that he had given Wrylly leave to publish it under his own name; but Anthony Wood, in adding that "Erdeswicke being oftimes crossed, especially in his last day, and fit then for no kind of serious business, would say anything which came into his mind, as 'tis very well known at this day among the chief of the College of Arms" (Ath. Oxon., Bliss ed., II, 217–18). Erdeswicke married first Elizabeth Dixter; secondly Mary Digby (24 April, 1593). He died in 1603, being the date of his death erroneously added, as his will is dated 15 May. He is buried in Sandon Church, beneath an elaborate monument representing his own recumbent figure. Camden and other antiquaries praise his knowledge and industry, and he is believed to have been elected a member of the Society of Antiquaries founded by Archbishop Parker in 1572.

Edwin Burton.

**ERDINGTON**

Erdington Abbey, situated in a suburb of Birmingham, Warwickshire, England, belongs to the Benedictine congregation of St. Martin of Tours, Burgen, and is dedicated to St. Thomas of Canterbury. Driven from Germany by the Falk laws, four of these exiled monks went to Erdington at the request of Bishop Ullathorne, O.S.B., and of the Rev. Daniel Haigh, M.A., a convert Anglican clergyman who gave them the splendid Gothic church which he had built and embellished out of his private fortune, and encouraged them in offering to Almighty God for the gift of the true Faith. Father Haigh's modest presbytery was the first monastery, and here Dom Placid Waler, Arch-Abbot of the Beuron Congregation, Dom Hildebrand de Hemptine, later Abbot Primate of the Benedictine Order, Dom Leo Linke, afterwards Abbot of Fort Augustus in...
Scotia, Dom Leodgar Stocker, and a lay brother took up their abode in October, 1876. Dom Placid was the first prior. Two years later, Dom Hildebrand succeeded Dom Placid, and at once set about building a monastery that would be large enough to chancel the Divine Office in choir. It was finished in 1880, when the number of monks was increased to eleven with three lay brothers.

Meanwhile Father Haigh had found his last resting-place in the Blessed Sacrament chapel, so the untenanted presbytery was converted into a Catholic grammar school. In the first year of its history, 1885, with Dom Wilfrid Wallace, an English priest who had lately joined the community, as head master. Dom Leo Linse became prior in 1882, and was succeeded in 1886 by Dom Boniface Wolff, who was followed, in turn, by Dom Silvester Schlecht in 1893. On the feast of the Assumption, 1890, the priory was transformed into an abbey by a Brief of Leo X111, though three years elapsed before it received an abbot. These were years of spiritual and material development. A novitiate was opened and a school for oblates, several members were added to the community, and a large addition made to the monastic buildings. These comprised the abbots' apartments and chapel, rooms for guests, entrance hall, parlours, novitiate, etc. The buildings were completed and blessed in 1898. In July, 1899, Dom Ansgar Hockelmann was appointed its first abbot, and he was blessed in the abbey church on 3 Sept., by Bishop Isley of Birmingham. Since then a spacious refectory and library have been built, and the community continues to grow.

The Church and Abbey of Erie, A Record of fifty years, 1850-1900 (Birmingham, 1900); BAXTER, Eriored Abbey in the Catholic Fireside (London, 27 Dec., 1902).

PETER NUGENT.

Erhard of Ratisbon, Saint, bishop of that city in the seventh century, probably kinsman with an Abbot Erhard of Ebersheimmünster mentioned in a Merovingian diploma of 684. Ancient documents call him also Erard and Herhard. The legendary account of his life offers little that is historically certain. The following, however, seems reliable. Erhard was born in Ireland, then known as "Scotia". Like many of his countrymen he went to the Continent as missionary bishop or chorosbishop, and coming to the Vosges met there St. Hildulf, said to have been Archbishop of Trier, and who lived there as a hermit (666-671). He is said to have wished to establish a bishopric there, but his brother's rich relations in Ireland was meant. It is said that each of them founded seven monasteries. Thence Erhard went to Ratisbon and founded the monastery of Niedermünster. By Divine inspiration he was recalled to the Rhineland to baptize St. Odilia, blind from her birth, but who received her eyesight at her baptism. He sent a messenger to her father, Duke Attilich, and reconciled him with his disowned daughter. According to another account, St. Odilia was baptized by Hildulf. Erhard acting as her sponsor. The year of his death is not known. He was interred in the still-extant Erhard-crypt at Niedermünster, and miracles were wrought at his grave, that was guarded in the Middle Ages by "Erhardinnen", a religious community of women who observed the same discipline, but not the same worship. Otto II, in 974, made donations of properties in the Danube valley to the convent "where the holy confess Erhard rests". On 7 Oct., 1052, the remains of the holy bishops Erhard and Wolfgang were raised by Pope St. Leo IX in presence of Emperor Henry III and many bishops; a ceremony which was at that time equivalent to canonization. Rather numerous documents, however, mention only the raising of Wolfgang, not that of Erhard. At the close of the eleventh century, Paul von Bernried, a monk of Fulda, at the suggestion of Abbess Helilka of Niedermünster, wrote a life of Erhard and added a second book containing a number of miracles. The learned canon of Ratisbon, Conrad of Megenberg (d. 1374), furnished a new edition of this work. The church in Niedermünster, now a parish church, still preserves the cressor of the saint, made of black buffalo-horn. A bone of his skull was enclosed in a precious receptacle in 1866 and is placed upon the heads of the faithful on his feast day, 8 Jan. Three ancient Latin lives of the saint are found in the Acta Sanctorum (8 Jan). The beautiful reliquary is reproduced in Jakob, "Die Kunst im Dienste der Kirche" (Illust. 10).

GABRIEL MEIER.

Eric the Red.

See America, Pre-COLUMBIAN DISCOVERY OF.

Erie, Diocese of (ERIENSIAS), established 1853; it embraces the thirteen counties of North-Western Pennsylvania, U. S. A.: Erie, Crawford, Warren, McKean, Potter, Mercer, Venango, Forest, Elk, Cameron, Clarion, Jefferson, and Clearfield, an area of 10,027 square miles. This territory enjoys the distinction of having been under three different national and ecclesiastical governments: under the French flag and the See of Quebec from 1753 to 1758; under the English flag and the Vicariate Apostolic of London from 1758 to the Treaty of Paris, 3 September, 1783, and the erection of the See of Baltimore in 1789; under the American flag since the Treaty of Paris and a part of the See of Baltimore until the establishment of the Diocese of Philadelphia in 1808. In August, 1843, when the Diocese of Pittsburg was formed, it included all that part of the State of Pennsylvania west of a line running along the eastern border of Bedford, Huntingdon, Clearfield, Elk, McKean, and Potter counties, and consequently, the territory of the present Diocese of Erie.

In 1853 the Right Rev. Michael O'Connor, the first Bishop of Pittsburg, petitioned the Holy See, through the Fifth Provincial Council of Baltimore, for a diocesan of his diocese, and took for himself the poorest part, and thus became the first Bishop of the Diocese of Erie. When Bishop O'Connor assumed the government of the diocese, 29 July, 1853, there were only twenty-eight churches with eleven secular priests and three Benedictine Fathers to attend to the wants of the Catholics scattered throughout the thirteen counties. At the urgent request and petition of the priests and people of Pittsburg, Bishop O'Connor was restored to them, having governed the Diocese of Erie for the short period of seven months.

His successor at Erie was the Rev. Josue Mood Young, a member of an old Puritan, New England family, born 29 Oct., 1808, at Shapleigh, Maine. He became a convert from Congregationalism, and was baptized in October, 1828, by the famous New England missionary, Father Charles D. Firench, O.P., when he then changed the Moody of his name to Maria. He was ordained priest 1 April, 1838, and consecrated second Bishop of Erie, in Cincinnati, by Archbishop
Purcell, on 23 April, 1854. The outlook at his accession was gloomy. Many of the priests who were affiliated with Pittsburg before the division, returned there with Bishop O'Connor. Among those who cast their lot with the new diocese the most noteworthy were the Very Rev. John D. Cosdy, Revs. Anthony Reek, Joseph Hartman, M. A. De La Roque, John Berbegger, Andrew Skopez, Kieran O'Branagian, and also Mervis, John Koch and Thomas Lonnergan, at that time studying for the priesthood. There were but two churches in Erie city, St. Patrick's, the pro-cathedral, and St. Mary's, built for a German congregation by Rev. Joseph Hartman. Outside the city there were twenty-eight churches, with eleven secular priests and the same number of parochial. To this was added a Cathedral of 12,000 seers. The church buildings outside the city of Erie were mostly wooden structures. There was only one Catholic school. The discovery of petroleum on Oil Creek, 28 August, 1859, gave a great impetus to both secular and religious progress throughout the diocese. To accommodate the settlers that located in the valleys of Oil Creek and the Allegheny River, where towns sprang up as by magic, churches were hastily erected, but the number of priests was still inadequate. As there were no railroads Bishop Young's labours were in the beginning very heavy. He died suddenly 18 September, 1866. At his death the Catholic population had more than doubled, and several new churches and schools had sprung into existence.

The Very Rev. John T. Conley, O. C. D., governed the diocese during the interregnum until the third bishop, the Rev. Tobias Mullen, was consecrated, 2 August, 1868. He was born in the County Tyrone, Ireland, 4 March, 1818, and was ordained priest at Pittsburg, 1 Sept., 1844, having gone there with Bishop O'Connor from Maynooth the previous year as a volunteer for the American mission. Under Canon Law, an Irish priest ordained in Ireland, was entitled to be created priests, new parishes sprung up, churches and schools were built, regular conferences for the clergy were held. Religious orders were introduced and new institutions arose for the maintenance and spread of religion, and for the enlightenment, and comfort, and shelter of suffering humanity. The frame churches gave place to brick and stone structures. The Rev. John H. Bates, of Overbrook, Philadelphia, was chosen by the Holy See and consecrated titular Bishop of Amiusis with right of succession in Philadelphia, 24 February, 1898. Bishop Mullen resigned, 10 August, 1899, and died, 22 April, 1900. Bishop Fitz Maurice succeeded as fourth bishop of the diocese, on 19 September, 1899, and the good work inaugurated under the late bishop was carried forward. The Rev. John Mullen, O. C. D. of New Town-Sandes, County Kerry, Ireland, 9 Jan., 1810, and ordained priest in Philadelphia, 21 Dec., 1862. After officiating in several parishes he was appointed rector of the diocesan seminary in 1886.

The religious orders in the diocese are the Benedictines, the Redemptorists, the Brothers of Mary, the Benedictine Nuns, the Sisters of Mercy, the Felician Sisters. At one time the Franciscans, the Bridgettines, and the Sisters of the Humility of Mary had houses in the diocese. The Benedictines settled at St. Mary's, Elk county, under Bishop O'Connor and in 1858 took charge of St. Mary's, Erie. The Redemptorists in 1875 began their foundation, purchasing a Presbyterian college—at Northeast—which they made a seminary and college for young men who intended to join their order. They have 142 students.

The Sisters of St. Joseph entered the diocese in 1860, and have charge of the orphan asylum, the home for the aged, the two hospitals, the Academy of Villa Maria, the mother-house in the diocese, and of fifteen parochial schools. The Sisters of Mercy, who entered the diocese 24 September, 1876, besides the academy in Titusville, the mother-house, have charge of eight parochial schools. The Sisters of St. Benedict (St. Mary's, Penn.) (22 July, 1852) have St. Benedict's Academy, the mother-house at St. Mary's, and teach seven schools. The ( Erie) Sisters of St. Benedict, besides the academy and school of St. Mary's Church, teach five parochial schools, and also conduct an academy in Sharon. The Felician Sisters teach St. Stanislaus' Polish school, in the city of Erie.

There are in the diocese 100 churches, with resident priests, 46 missions with churches, and 11 chapels; 160 priests—135 secular, 25 regular; 45 parochial schools, 3 academies for young ladies, 1 orphan asylum with 216 orphans, making a total of young people under the care of the Church, 10,385; two hospitals, one an orphan asylum. The Catholic population of the diocese is estimated at 121,108.

**James J. Dunn.**

**Eriuigena, John Scottus, an Irish teacher, theologian, philosopher, and poet, who lived in the ninth century.**

**Name.**—Eriuigena's contemporaries invariably refer to him as Joannes Scottus or Joannes Scottigena. In the MSS. of the tenth and subsequent centuries the forms Eriugenæ, Iovenæ, and Eriugena occur. Of the names, Eriuigenæ is the most satisfactory. Of the others, the most satisfactory is Eriugena, which, as it was perhaps sometimes written Eriugena, was changed into Eriugena. It means "a native of Ireland." The form Eriuigenæ is evidently an attempt to connect the first part of the name with the Greek word ἥψις, and means "a native of the Island of Saints"; the combination Joannes Scottus Eriugenæ cannot be traced beyond the sixteenth century, and the affirmation that Eriugena was a matter of dispute. Eriugenæ in Wales and Ayre in Scotland claimed the honour, and each found advocates. Nowadays, however, the claim of Ireland to be considered the birthplace of John is universally admitted. All the evidence points that way, and leads us to conclude that when his contemporaries taunted him with the idea that Ireland meant not only that he was educated in the Isle of Saints but also that Ireland was his birthplace. Whatever doubt there may have been about the meaning of Scottus, there can be none as to the signification of the surname Eriugena.

**Life.**—What is known of the life of Eriugena is very soon told. About 817 he appeared in France at the court of Charles the Bald, and was held in special favour by that prince, appointed head of the palace school, which, however, had been thought fit to send to various parts of the empire for the education of the Frankish princes. It was at Charlemagne's order that Eriugena was sent to Ireland to bring back the works of Pseudo-Dionysius into Latin. This translation brought him into prominence in the world of letters and was the occasion of his entering into the theological controversies of the day, especially into those concerning predestination and the Enchiridion. His knowledge of
Greek is evident from his translations, and is also proved by the poems which he wrote. It is doubtful, on the other hand, whether he possessed the knowledge of Hebrew and other Oriental languages which is sometimes ascribed to him. In any case there is no evidence of his having travelled extensively in Greece and Asia Minor. After leaving Ireland he spent the rest of his days in France, probably at Paris and Laon. There was, as we know from the MSS., an important edition of the works of Dionysius, which was the basis of the Latin translations. The tradition that after the death of Charles the Bald he went to England at the invitation of Alfred the Great, that he taught a school at Malmesbury, and was there put to death by his pupils, has no support in contemporary documents and may well have arisen from some confusion of names on the part of later historians. It is probable that he died in France, but the date is unknown. From the evidence available it is impossible to determine whether he was a cleric or a layman, although it is difficult to deny that the general conditions of the time made it more than probable that he was a cleric and perhaps a monk.

**Writings.**—1. Translations of the works of Pseudo-Dionysius: "De Coelesti Hierarchia"; "De Ecclesiasticis Ordinibus"; "De Divinorum Nominationis Ecclesiasticâ Theologia"; "Epistolæ"; translations of the "Ambiguar" of St. Maximus.—2. Commentaries: "Homilia in prologum S. Evangeli sec. Joannem", and a commentary on the Gospel of St. John, of which a few fragments only have come down to us; commentaries on the "Celestial Hierarchy" and the "Ecclesiastical Hierarchy" of Pseudo-Dionysius; glosses on this pseudo-hierarch, on the "Hierarchia" of Martianus Capella, and on the "Divine Comedy" of Dante. A translation of the "Hierarchia" was made by Balianus de Houry, and also by the theological opuscula of Boethius (Rand ed., Munich, 1906), with which is connected a brief "Life" of Boethius (Pieper ed., "Consaltio Philos.", Leipzig, 1871).—3. Theological works: "Liber de Predestinatione", and very probably a work on the Eucharist, though it is certain that the tract "De Corpore et Sanguine Domini", referred to as the work of Paschasia Radbertus, is philosophical works: "De Divisione Naturae", his principal work, and a treatise, "De Egressu et Regressu Animæ ad Deum", of which we possess only a few fragments.—5. Poems: These are written partly in Latin and partly in Greek. Many of them are dedicated to Charles the Bald. The most complete edition of Eriugena's works is that of the Annales de la Faculte des Lettres of Migne's P. L. A new edition embodying the results of recent discoveries of manuscripts is often spoken of, and will doubtless be forthcoming before long.

**Doctrines.**—Although the errors into which Eriugena fell both in theology and in philosophy were many and serious, there can be no doubt that he himself abhorred heresy, was disposed to treat the heretic with no small degree of harshness (as is evident from his strictures on Gotteschalk), and all through his life believed himself an unwaveringly loyal son of the Church. Taking for granted the authenticity of the works ascribed to Dionysius the Areopagite, he considered that the doctrines he discovered in them were not only philosophically true, but also morally acceptable, since they carried with them the authority of the distinguished Athenian convert of St. Paul. He did not for a moment suspect that in those writings he had to deal with a loosely articulated system of thought in which Christian teachings were mingled with the tenets of a subtle but profoundly anti-Christian pantheism. To this remany we should add another in order that we may fully understand Eriugena's attitude towards orthodoxy. He was accused by his contemporaries of leaning too much towards the Greeks. And, in fact, the Greek Fathers were his favourite authors, especially Gregory the Theologian, and Basil the Great. Of the Latins he prized Augustine most highly. The influence of these on the temperament of the venturesome Celt was towards freedom and not towards restraint in theological speculation. This freedom he reconciled with his respect for the teaching authority of the Church as he understood it. However, in the actual exercise of the freedom of speculation which he allowed himself, he fell into many errors which are incompatible with orthodox Christianity.

The "De Prædestinatore" seems to have been written on the initiative of the works of Pseudo-Dionysius. Nevertheless there is in it not only one appeal to the authority of the Greek Fathers and very little of the obstruction of Greek words and phrases which so abound in the later works. It deals with the problem raised by Gotteschalk regarding the doctrine of predestination, and, more specifically, undertakes to prove that predestination is single, not double—in other words, that there is no predestination to sin and punishment but only to grace and eternal happiness. The authority of Augustine is used very extensively. In the philosophical setting of the problem, however—namely, the discussion of the true nature of evil—Eriugena appears to go back farther than St. Augustine and to hold the radical neo-Platonic view that man's mind is a gift of God. He is thus compelled to go even farther than St. Augustine in rejecting the word "predestination" in a double predestination. That he exceeded the bounds of orthodoxy is the contention of Prudentius of Troyes and Florus of Lyons who answered the "Liber de Prædestinatore" in works full of bitter personal attacks on Eriugena. Their views prevailed in the Councils of Valence (855) and Langres (859), in which Eriugena's doctrine was condemned.

While the "De Corpore et Sanguine Domini" is not Eriugena's, though ascribed to him, there can be no doubt that in some work, now lost, on that subject he maintained doctrines at variance with the Catholic doctrine of Transubstantiation. From the fragment which has come down to us of his commentary on St. John, we infer that he was a realist, that is, that the work of Paschasia Radbertus is the work of Eriugena. A type or figure. At least he insists on the spiritual, to the exclusion, apparently, of the physical, "eating of the Flesh of the Son of Man".

In the "De Divisione Naturae", his most important and systematic work, Eriugena treats in the form of a dialogue the principal problems of philosophy and theology. The meaning of the title is evident from the fact that the purpose of his book is to "prove" that the world is a type or figure. At least he insists on the spiritual, to the exclusion, apparently, of the physical, "eating of the Flesh of the Son of Man".

(1) "Natura", he says, "is divided into four species": (1) "Natura which creates and is not created"—this is God, the Source and Principle of all things; (2) "Natura which is created and creates"—this is the world of primordial causes or (Platonic) ideas; (3) "Natura which is created and does not create"—this is the world of phenomena, the world of contingent, sense-perceived things; (4) "Natura which neither creates nor is created"—this is God, the Term to which all things are returning.

(1) "Natura", then, is synonymous with reality, and also with God. For, whatever reality the world of ideas and the world of phenomena possess, is, in the true and most literal sense, the reality of God in all the 'being of God' (esse Omnium est suprema Divinitatis) is a saying which he never tires of quoting from the works of Pseudo-Dionysius. So supremely perfect is the essence of the Divinity that God is incomprehensible not only to us but also to Himself. For if He knew Himself in any adequate sense He should place Himself in some category of thought, which would be to limit Himself. God is above all categories. When, therefore, we speak about Him we are safer in using the negative (δραμάκτης) than the positive (κερατιστής) mode of predication. That is, we are safer in predicating what He is not than in venturing to predicate what He is. If we have recourse to positive predication, we must use the prefix hyper and say God is hyper substantia, i.e. more than-
substance, etc. Similarly, when we say that God is the "Creator" of all things we should understand that 
predicate in a sense altogether distinct from the mean-
ing which we attach to the predicate "maker" or
"producer" when applied to finite agents or causes.
The "creation" of the world is in reality a *thepophania*,
or showing forth of the Essence of God in the things
created. Just as He reveals Himself to the mind and
the soul in higher intellectual and spiritual truth, so
He reveals Himself in the separate instances of creation.
Creation is, therefore, a process of unfolding of the
Divine Nature, and if we retain the word
*Creator* in the sense of "one who makes things out of
nothing", we must understand that God "makes"
the world out of His Own Essence, which, because of
its incomprehensibility, may be said to be "nothing".

(2) Nature in the second sense, "Nature which creates
and is created", is the world of primordial causes,
or ideas, which the Father "created" in the Son, and
which in tura "create", that is, which determine the generic
and specific natures of concrete visible things. These,
says Eriugena, were called "prototypes", ἢ αὐτὴ ἡ ἄρχα, or "ideas",
by the Greeks. Their function is
that of exemplar and efficient causes. For since they are,
truth created, identical with God, and since they
are the idea of God and of the Blessed Trinity, they are operative causes and not
merely static types. They are coeternal with the
Word of God. From this, however, it is not necessary
to infer, as some critics have done, that according to
Eriugena the primordial causes are identical with the
Word. As examples of primordial causes Eriugena
enumerates, gold, silver, iron, time, wisdom, reason (διά
comprehension, understanding, virtue, greatness, power, etc.
These are united in God, partly separate or scattered in the
Word, and fully separate or scattered in the world
of phenomena. For there is underlying all Eriugena's
doctrine of the origin of things the image to which he
often referred, namely, that of a circle, the radii of
which are united at the centre. The centre is God, the
radii at a point near the centre are the primordial
causes, the radii at the circumference are phenomena.

(3) These phenomena are "Nature" in the third
sense, "which is created and does not create". The
stream of reality, setting out from the centre, God,
passing through the ideas in the Word, passes next
through all the *genera suprema*, media, and *infima* of
logie, then enters the region of number and the realm of
numbers, where they are subject to change, multiplicity, change, imperfectness, and decay. In
this last stage they are no longer pure ideas but only the
appearances of reality, that is, phenomena. In the
region of number the ideas become angels, pure incor-
porated spirits. In the realm of space and time the
ideas take on the burden of matter, which is the source
of suffering, sickness, and sin. The material world,
therefore, of our experience is composed of ideas
clothed in matter—here Eriugena attempts a rapprochement of Platonism with Aristotelian notions. Man,
too, is composed of idea and matter, soul and body.
He is the culmination of the process of things from
God, and with him, as we shall see, begins the process
of return of all things to God. He is the image of the
Trinity in so far as he unites in one soul being, wisdom,
and love. In the state of innocence in which he
was created, he was perfect in body as well as in soul,
indeed, of bodily needs, and without differentiation
of sex. The dependence of man's mind on the
body and the subjection of the body to the world of
sense, as well as the distinction of male and female in
the human kind, are all the results of original sin. The
human nature in his dependence towards the
conditions of animal existnace has only one remedy.
Divine grace. By means of this heavenly gift man is
enabled to rise superior to the needs of the sensuous
body, to place the demands of reason above those of
bodily appetite, and from reason to ascend through
templation to ideas, and thence by intuition to
God Himself. The three faculties here alluded to as
reason, contemplation, and intuition are designated
by Eriugena as internal sense (sensus), ratiocination
(λογισμός), and intellect (νοῦς). These are the three
degrees of mental perfection which man must attain if
he is to free himself from the bondage into which he
was cast by sin, and attain that union with God in
which salvation consists.

(4) Not only does nature, however, but everything else in
nature is destined to return to God. This universal
resurrection of nature is the subject of the last portion
of Eriugena's work, in which he treats of "Nature
which neither creates nor is created". This is God,
the final Term, or Goal, of all existence. When Christ
became man, He took on Himself body, soul, senses,
and intellect, and when, ascending into Heaven, He
took thus with Him, as it were, the whole of the
created things, his body, the animal and the vegetative
natures, and even the elements were redeemed, and the
final return of all things to God was begun. Now, as
Heraclitus taught, the upward and the downward
ways are the same. The return to God proceeds in
the inverse order through all the steps which marked
the downward course, or processes of things from the
creation of the universe to the death, light becomes life, life
becomes sense, sense becomes reason, reason becomes
intellect, intellect becomes ideas in Christ, the Word
of God, and through Christ returns to the oneness of
God from which all the processes of nature began.
This "incorporation" in Christ takes place by means
of Divine grace in the Church, of which Christ is the
mediator between the ideas of God and things. Thus
God shows very clearly the influence of Ori-
gen. In general, the system of thought just outlined is
a combination of neo-Platonic mysticism, emanation-
ism, and pantheism which Eriugena strove in vain to
reconcile with Aristotelian empiricism, Christian cre-
ationalism, and theism. The result is a body of doc-
trines loosely articulated, in which the mystical and
pantheistic elements preponderate, and in which there is
much that is irreconcilable with Catholic dogma.

Influence.—Eriugena's influence on the theolog-
ical thought of his own and immediately subsequent
generations was doubtless checked by the condemna-
tions to which his doctrines of predestination and of
the Eucharist were subjected in the Councils of Val-
enca (855), Langres (890), and Nivelles (901). In the
early Middle Ages, however, as far as it was discern-
bly at the time of his translations of Pseudo-Dionysius,
was referred to with suspicion in a letter addressed
by Pope Nicholas I to Charles the Bald in 850. It
was not, however, until the beginning of the thirteenth
century that the pantheism of the "De Divisione
Nature" was formally condemned. The Council
of Paris (1225) condenmed Eriugena's treatise on
the previous condemnations (1210) of the doctrines of
Amaric of Chartres and David of Dinant, and there can be no doubt that the pantheists
of that time were using Eriugena's treatise. While
the great Scholastic teachers, Abelard, Alexander
of Hales, St. Bonaventure, St. Thomas, and Albert the
GREAT KNEW nothing, apparently, of Eriugena's
work; but certain groups of the monastical theologians,
even as early as the thirteenth century, were
interested in his work and drew their doctrines from it.
The Albigeoses, too, sought inspiration from him.
Later, the Mystics, especially Meister Eckhart, were
influenced by him. And in recent times the great
transcendental idealists, especially the Germans, rec-
ognised in him a kindred spirit and spoke of him in the
highest terms.

WILLIAM TURNER.

ERMLAND, or ERMELAND (VARMENSIS, WARMIA), a district of East Prussia and an exempt bishopric. St. Adalbert, of Prague (d. 997) and St. Bruno of Querfurt (d. 1008), converted the early inhabitants of this district to Christianity during the two centuries later Teutonic Knights and members of the Cistercian Order introduced civilization also into the land. Among these latter was the saintly Bishop Christian of Oliva (d. 1245). In 1213 the territorial possessions of the Teutonic Knights were divided into the Dioceses of Culm, Pomesania, Ermland, and Samland. In 1287 Albrecht, who had been Archbishop of Magdeburg, Ireland, was appointed Archbishop of Prussia. In 1231 he took Riga for his see, a choice which was confirmed by Alexander IV, who in 1255 made Riga the metropolitan of the four dioceses just mentioned. A priest of the Order of Teutonic Knights, Heinrich of Strachau, was consecrated as the first Bishop of Ermland, but he was not able to enter upon his office. It was not until 28 August, 1251, that the first actual Bishop of Ermland, Anselm of Meissen, who was also a priest belonging to the Order of Teutonic Knights, was consecrated at Valenciennes by the papal legate Pietro of Albano. The dioceae included the whole of the old Prussian districts of Warmen, Nagaten, Barten, and Galidien; the old diocese of Warmen was divided in halves of Nadianen and Sudawen. The bishop was given one-third of this territory as personal property for his support, and in this district he was the secular ruler and a prince of the Holy Roman Empire; these rights of the bishop were confirmed in the Golden Bull of the Emperor Charles IV. In 1260 Bishop Anselm founded a chapter of sixteen canons attached to the cathedral of the Arch of Brandenburg transferred to the chapter the right of electing the bishop. But Braunsberg was ravaged by the heathen Prussians in 1262, and the second bishop, Heinrich I (1278-1300), was obliged in 1290 to transfer the chapter to Frauenburg where it has remained ever since.

From the thirteenth century to the fifteen the bishopric was one of constant wars. Repeated rebellions of the native Prussians, incursions of the Lithuanians, and frequent wars with Poland, in which the bishop was always the faithful ally of the Teutonic Order, checked the development of Christianity and the cultivation of the soil. To these disorders were added the constant encroachments and violent frontier conflicts of the bishops and burgomeister of Ermland, like the other Prussian dioceses, under the dominion of the order. Ermland, however, defended its rights with great determination against such efforts, and would not allow the order to influence in any way the election of the bishops and the chapter. Yet in everything else the bishops held faithfully to the order, even when its star began to decline, and the whole territory ruled by the knights revolted in the so-called War of the Cities (1454-66). It was in this period that the celebrated Cardinal Enea Silvio Piccolomini (Enea Silvio) was elected (1457) Bishop of Ermland; in the following year, however, he ascended the papal throne as Pius II. The Peace of Thorn (1466) removed the diocese from the protectorate of the Teutonic Knights, and Ermland became part of the sovereignty of the King of Poland. This transfer caused the discord to break out afresh, for the King of Poland claimed for himself in Ermland the same right he exercised in the rest of his kingdom, that of naming the bishop. Bishop Nikolaus of Tüngen (1467-80) and especially the determined Lukas Watzelrode (1489-1512) energetically opposed these unjust claims and guarded the right of a free election of the bishop. In 1512 the latter bishop obtained from Pope Julius II the release of his diocese from its sub-fragan connexion, always a loose one, with the metropolitan See of Riga. When this relationship was dissolved Ermland was declared an exempt bishopric and has remained such ever since. Bishop Watzelrode was equally successful in regulating the internal affairs of his diocese. On 20 February, 1497, he held a synod in which the bishop, the canons, and the clergy were represented. This was the last synod held in Ermland until 1500; in 1503 he made trial laws for his domain, reorganized the cathedral school at Frauenburg, selecting for it excellent teachers, among whom was his celebrated nephew Copernicus, published the Breviary (Nuremberg, 1494) and the Missal (Strasbourg, 1497). His weak successor Fabian of Lozainen (1512-12), however, in the Treaty of Piotrkow (7 December, 1512), conceded to the King of Poland a limited influence in the election of bishops. Existing conditions were, however, entirely changed by the defection to Protestantism of Albrecht of Brandenburg, Grand Master of the Teutonic Knights, and the two bishops of the order who ruled Samland and Pomesania, and the secularization of the domain of the order by the decree of Philip the Second of Spain, 1557. In 1559 the former two parishes of Ermland went to the two apostolic vicariates. In these troubled times excellent episcopal rulers saved the diocese from complete defection; among these bishops was the energetic Moriz Ferber (1523-37), who by the ordinances issued in 1526 restored order to his desolated territory; another such bishop was Joannes Dantisce (1537-48), a noted Dominican, who performed the duties of bishop and raised the intellectual life of his clergy (concerning Dantisce cf. Czaplicki, De vita et carminibus J. de Curtiss Dantisce, Breslau, 1855; Geistliche Gedichte des Dantisce übersetzt und herausgegeben von Franz Hipler, Münster, 1867).

But the bishops who deserve the greatest praise for holding the diocese to the Catholic Faith when threatened by the surging tide of Protestantism were Johannes Hosius (1551-70), later a cardinal, who was distinguished for learning and virtue, and Martin Kromer (1579-89), a noted historian. Among the means successfully used for the maintenance of the Faith were the assembling of various diocesan synods, of which the most important was the one held by Hosius in 1563 for the purpose of defending the Roman religion and the Council of Trent; yearly visitsations, and above all the founding of the Jesuit College at Braunsberg in 1565 [cf. Duhr, Geschichte der Jesuiten in den Ländern deutscher Zunge (Freiburg im Br., 1907), 1, 179 sqq., 307 sqq.]. In addition to these the Congregation of St. Catherine (Katharinerinnen), founded at Braunsberg in 1571 by Regina Frohmann, did effective work in the construction of churches and the promotion of the cultivation of the land, while the Congregation of the Sisters of Charity of St. Ursula did much for the education of young girls; the congregation of the Servants of Mary of the Immaculate Heart of the Virgin, founded in 1675, carried away its literary and artistic treasures. At the time of the First Partition of Poland (1772) the whole of Ermland fell to the share of the Kingdom of Prussia. In the Treaty of Warsaw (18 September, 1773), King Friedrich II, it is true, guaranteed the status quo and the free exercise of religion for the Catholics of the annexed provinces, nevertheless all schools and institutions for education and training under religious control were gradually suppressed, and the landed property of the Church secularized.

The Bull "De salute animarum", of 16 July, 1820,
reduced ecclesiastical relations for Ermland as well as for the whole of Prussia. The Diocese of Ermland now received not only the territory which had been formerly taken from it at the time of the Reformation, but also the portions of it still held by the former Diocese of Samland, five deaneries of the former Diocese of Pomescanién, and, in 1854, the country surrounding Marienwerder. Among the more important Bishops of Ermland during the nineteenth century were: Philippus Kremenza (1867-85), later cardinal and Archbishop of Cologne, and the successor of Bishop Kromenz. Andreas Thiel (1885-1908); after the death of Thiel in 1908, Professor August Bludau of Müninger, a native of Ermland, was elected bishop of the diocese (26 Nov., 1908).

Statistics.—The Diocese of Ermland includes the whole province of East Prussia, which is composed of the government districts of Allenstein, Königsberg, and Gumbinnen, but those parts are excepted of the circles (subdivisions of a district) of Neidenburg and Osterode that belong to the Diocese of Cælum; in the province of West Prussia Ermland includes the urban and rural circles of Elbing and the circle of Marienburg, all of which are in the government district of Danzig; also the whole circle of Stuhm and a part of the circle of Marienwerder in the government district of Marienburg. It is also divided in the following sixteen deaneries, each of which is under the direction of an archpriest: Allenstein, Braunsberg, Elbing, Guttstadt, Heilsberg, Littau, Marienburg, Burgis, Mehlisack, Neuteich, Rössel, Samland, Seeburg, Stuhl, Wartenburg, Wormdt. In 1908 there were 141 parishes; 37 curacies and vicarates; 67 chaplaincies; 335 diocesan priests viz.: 171 parish priests and curates, 98 assistants, chaplains, and holders of benefices, 66 priests in other positions. Religious—Sisters of St. Catherine, 4 mother-houses (Braunsberg, Heilsberg, Rössel, Wormdt), 82 branch houses, and 364 religious; Grey Sisters (Sisters of St. Elizabeth), 4 houses and 69 religious; Sisters of St. Vincent de Paul, 2 houses, 17 religious.

The Catholic higher schools of learning are, the Royal Lyceum Hossianum with philosophical and theological faculties, opened in 1818; at the close of 1905 the lyceum had 9 regular professors, 1 adjunct professor, 1 Privatdozent (instructor), 39 students; the seminary for priests at Braunschweig, reorganized in 1832; the gymnasium at Braunschweig, reorganized in 1811; the gymnasia (studies not carried so far as in a gymnasium) at Rössel, founded in 1833, and the episcopal seminaries for priests at Braunschweig and Rössel, 30 of which are carried on in connexion with the last two institutions. The cathedral chapter is established at Frauenburg in the circle (subdistrict) of Braunschweig; since 1800 this city has also been the see of the bishop. The chapter consists of 8 canons, including the two dignitaries, a cathedral provost and a cathedral dean, 4 honorary canons, 5 cathedral vicars. Pope Benedict XIV granted the pallium and the cruz gestatoria to the bishops. In 1901 Dr. Eduard Herrmann, a canon of the cathedral, was appointed auxiliary bishop and titular of the See of Cybistra. The Catholics number 327,567 in a total population of about 2,000,000.

The most important building of the diocese is the Cathedral, a remarkable example of the splendid Gothic structure built of brick and begun by Bishop Heinrich I (1259-34); the choir was consecrated in 1312 and the nave, commenced in 1355, was completed in 1388 when the fine vestibule was finished. The best-known and most visited place of pilgrimage in the diocese is Heiligendanne.

(2) St. Ernan, Abbey of Hind, lived in the sixth century. He was uncle of St. Columba, and one of the twelve who accompanied him from Ireland to Iona. He was brother of Ethnea, St. Columba’s mother, and son of Duna, the son of Noe of the race of Canna in Ireland (Reeyes, notes, p. 263). St. Columba appointed him superior of the community which he himself had established on the island of Inisba. The identity of Hinda has not been established with certainty. It may be Canna, about four miles N. W. of Rum (ibid., p. 264); but more likely it is Eilean-na-Naolain, one of the Gaveloich Isles, between Scarba and Mull (Fowler’s Adaman, p. 57). Hinda was a favourite resort for St. Columba. There he was visited by St. Comgall, St. Canmaich, St. Brendan, and St. Cormac. At the request of these holy men, St. Columba celebrated Mass, during which St. Brendan beheld a luminous globe of fire above St. Columba’s head. It continued burning and rising up like a column of flame, till the Holy Mysteries had been completed (Adaman, III, xvii.). On another occasion the property in Hinda, St. Columba was favoured with heavenly visions and revelations which lasted three days and nights (Adaman, III, xviii.). The death of St. Ernan was tragic. Being seized with an illness, he was carried to be cured into Iona. St. Columba, greatly

Gregor Reinhold.

Ernan, name of four Irish saints. O’Hanlon enumerates twenty-five saints bearing the name Ernan, Ern, or Erin; it is, therefore, not surprising that their Acts have become confused.

At St. Quirin (now in the diocese of Lübeck), there lived, about 640. He is mentioned in the Martyrology of Tallagh on 1 January. He was a nephew of St. Columba, Feilim or Feichlimidh (St. Columba’s father) being his paternal grandfather. Owing to this relationship, some writers have mistaken our saint for Ernan of Hinba, an uncle of St. Columba. His monastery in Ireland was at Druim-Tomna in the district of Drumhorne, County Donegal. Adaman relates the wonderful vision he had on the night St. Columba died (Vit. S. Col., III, 23). Ernan, with some companions, was fishing in the River Finn, in Donegal. Suddenly at midnight he beheld the whole sky brightly illuminated. Looking towards the east he perceived an immense pillar of fire shining as the sun at noontide. The most brilliant light then appeared, and a great darkness followed, as after the setting of the sun. This wonderful occurrence was related to Adaman by Ernan himself, who at the time is described as “a very old man, a servant of Christ, whose name may be rendered Feorcellos, but in Irish Ernene (of the clan Mocuirrioidhe), who, himself also a holy man, is buried in the Rock of Islay.” At certain times the remains of other monks of St. Columba, awaiting the resurrection of the saints”, some writers style this St. Ernan, Abbot of Druim Tonna. It is uncertain whether he visited Scotland, nevertheless he is regarded as patron saint of Killernan, in Ross-shire; and it may be that the dedications of Kilvievein (church of the son of Eogan) in Mull, and of Kilearnadale in Jura, Argyleshire, is in his honour. In the “Scottish Kalendars”, collected by Bishop Forbes, his name appears as Ethneaus, and his commemoration is assigned to 21 and 22 December (pp. 170, 222, 243).

rejoiced at his coming, started to meet him. Ernan likewise hastened, but when he was twenty-four paces from his nephew he fell to the earth and died. Thus was the prophecy of St. Columba fulfilled, that he would never again see Ernan alive (Adamnan, I, xlv).

(3) ST. ERNAN OF CLUVAIN-DEOGHEIRN is Meath (or in County Longford), sixth or seventh century. He is enumerated among the Saints commemorated in the Mass of Tallaght. When St. Fechin visited St. Ernan at Cluvain-Deoghirn the grudging noise of the mill outside the guest-house gave him much annoyance. St. Fechin blessed the mill, and it is said that in consequence thereof the noise ceased to be heard in the guest-house for the future.

(4) ST. ERNAN OF TORASH, d. 17 August, about 650. He was son of Colman of the race of Eogan of Egan, son of Niall, and is numbered by some among the disciples of St. Columba. The latter saint founded a church and monastery on the island of Torash or Togy, off the N. W. coast of Donegal. It is uncertain whether St. Ernan actually accompanied St. Columba thither (the chronology would seem to preclude it), but he was chosen by the local community as their last bishop and is regarded as the local patron. Colgan has erroneously identified him with Ernan of Cluvain-Deogheirn. It has been conjectured that this Ernan is identical with the Ernan whose name appears in the epistle of John, the pope-elect, to the prelates of North Ireland in 640. If this be so, he must have been a person of some importance. The whole question of the separate identity of the last three Ernans, as discussed by Colgan, Langan, and O'Hanlon, is exceedingly complex and obscure.

O'HANLON, Lives of the Irish Saints (Dublin, 1875), I, 174; VIII, 239.

COLMBA EDMUNDS.

Ernina, Saint. See Mernoc.

Ernst of Hesse-Rheinfeils, landgrave, b. 9 Dec., 1623, at Cassel; d. 12 May, 1693, at Cologne. He was the sixth son of Moritz, Landgrave of Hesse-Cassel, after whose resignation of the government in 1627 to his son Wilhelm V, Ernst and his brother Hermann respectively founded the collaterals lines of Hesse-Rheinfeils and Hesse-Rotenburg. He figures prominently in the religious history of his country on account of the controversial literature called forth by his conversion to the Catholic Faith. Under the strict discipline of his mother his instruction in the principles of the Reformed Church received the utmost attention. After the death of his father, in 1631, he entered the military career. In 1642 he entered the Hessian army, proving himself an able commander of the Hessian troops who fought on the side of Sweden during the Thirty Years' War. While visiting the Hessian General Geoysio, who was in prison at Geseeke, he was himself arrested and taken prisoner to Paderborn. His social intercourse with the royal army chaplain laid the foundation of his conversion. After the Peace of Westphalia he took up the government of his portion of Hesse. His desire to establish a collateral line independent of Cassel brought him in 1650 to Vienna, where his conversion to the Catholic Church was effected by the Augustinian Alfonso Stainos. Before his formal reception into the Church, he returned to Paderborn to attend to his theologising, George Calixtus of Helmstadt, Croceus of Marburg, and Haberkorn of Giessen, to a public disputation on certain points of doctrine, with the Capuchin Valerian Magnus. After the disputation the landgrave made a formal profession of the Catholic Faith and gave the reasons for his conversion in the work: "Conversions et Catholique terrae Christi a C. Principis ac Dom. Ernesti Haseis Landgravii" (Cologne, 1652). This work gave rise to a long and bitter controversy in which he himself took an active part, defending fearlessly in various writings against his opponents the course he had taken. His character as a prince is best described by himself in "Pourtraict ou description de la vie du Prince Ernina" (1669).

KoENNEcke in Allgen. deut. Biogr., IV, 254; Hurter, No- minator; the controversial literature is given by Steder in Kirchenz., s. v.

Joseph Schröder.

Ernulf, architect, b. at Beauvais, France, in 1040- d. 1124. He studied under Lanfranc at the monastery of Bec, entered the Benedictine Order, and lived long as a brother in the monastery of St-Lucien, Beauvais. At the suggestion of Lanfranc he went to England, sometime after 1100, and joined the collegiate Church, Canterbury. He was made prior by Arch- bishop Anselm, and in 1107 Abbot of Peterborough; in 1114 he was appointed Bishop of Rochester. While at Canterbury, he had taken down the eastern part of the church which Lanfranc had built, and erected a far more magnificent structure. This included the famous crypt (Our Lady of the Undercroft), as far as Trinity Tower. The church was finished by his successor Conrad. The chapel of St. Andrew is also part of Ernulf's work. At Peterborough and Rochester, Ernulf had the old buildings torn down and erected new dormitories, refectories, chap- ter house, etc. He is the author of "Textus Roffensis" (a large collection of documents relating to the Church of Rochester), "Collectanea di Roffensio" in P. L., CLXIII, 1443 sqq., also of several canonical and theological treatises in D'Achéry, "Spieleg.," III, 404 sqq.

Thomas H. Poole.

Errington, William, priest, founder of Sedgley Park School, b. 17 July, 1716; d. 28 September, 1768. He was son of Mark Errington of Wiltshire, a descendant of the Erringtons of Walwich Grange, Northumberland; his mother's maiden name was Martha Baker. In 1737 he went to Douai, took the mission oath 25 December, 1741, and was ordained a priest in December, 1747. If he acted as professor at Douai after his ordination, as is generally stated, it could only have been for a very short time, as he left there for England, 26 March, 1748 (manuscript list of Douai clergy in the West- mister archives). On his return to Douai, in 1750, he purchased his residence with Bishop Challoner, then coadjutor to Bishop Petre. Kirk states that Dr. Challoner "had a high opinion of Mr. Errington, both as an active and zealous missionary and as a man of business". It was on account of these qualities that when the bishop wished to found a good middle-class school in England he induced Errington to undertake the work. It was a most difficult undertaking, and under his direction the two unsuccessful attempts, the first in Buckinghamshire, the second in Wales, and the third at Betley near New- castle-under-Lyne in Staffordshire, before he suc-ceeded in founding a permanent school at Sedgley Park in the neighbourhood of Wolverhampton. On Lady-Day, 1763, he opened this school with twelve pupils in the house purchased by the bishop at the residence of John, Lord Ward, afterwards Viscount Dudley and Ward. The little foundation was at once attacked in Parliament, but Lord Dudley successfully defended himself. The school was not interfered with; it developed into the famous Sedgley Park School which did good service to the Church for over a century, and is now represented by St. Wilfrid's College, Oakmoor, near Cheadle. Having founded the school, Errington's work there was done, and as soon as he secured the appointment of the Rev. Hugh Kendall as head-master in May, 1763, he returned to
Error, reduplicatively regarded, is in one way or another the product of ignorance. But besides the lack of information which it implies, it adds the positive element of a mental judgment, by which something is held to be false, or sometimes avouched to be false. The subject-matter of error so far as morals go, like that of the want of knowledge whence it proceeds, is either (1) the law itself, or (2) a fact, or circumstance of a fact. In the first instance, one is a straying in affirming or denying the existence of a law, or at any rate the inclusion of some individual case under its operation. In the second, one is labouring under an equal misapprehension, but with regard to some fact or aspect of a fact. Thus, for example, a Catholic, who in some unaccountable way would persuade himself that there was no law of abstinance on Friday, would be in error as to the law. If, although well aware of the precept of the Church, he is under the mistaken impression that a particular day, which happens to be Friday, is not Friday, he is in error as to the fact.

Taking account of the person in whom the error exists, it is said to be either vincible or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's own sentiments, or as to the existence of the sentiment. It is thought that one having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase “moral diligence”. It is not easy to state it in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bestow, in the settlement of like matters. This notion may be set forth more in detail by the following considerations: (1) The moral diligence required does not mean that a person is to have recourse to every conceivable expedient. (2) It does imply that the endeavours made by an agent, to set himself right, should be such as are exacted by the seriousness of the business concerned, as well as bear a proper ratio to his capacity and resources. Error is reckoned morally vincible as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet is held under the conviction of its falsity, or the offspring of sheer unrelieved negligence, it is termed effusus. The influence of error on moral responsibility may be determined as follows. An act done in invincible error, whether the latter regard the fact or the law, is never impeachable as a sin. The reason is that, in this hypothesis, there is no knowledge of the thing unconvulsed, nor any accident of evil. On the contrary, what is done in moral and vincible error is deemed properly imputable to the agent. This is so, because the error itself is then of the agent's own choosing, and he is therefore accountable for its outcome. It is obvious, however, that the moral delinquency which has its rise in vincible error will have various degrees of guilt, in proportion to the greater or lesser culpability of the error itself.
principalties on a firm basis. Von Erthal is the author of a work in German, refuting the revolutionary principles of his age, which is entitled: "Über den herrschenden Geket dieser Zeiten und übr der Verhalten des rechtschaffenen Christen bey der Entstehung des unheiligen Zucht" (Würzburg, 1797).

Erthal, Friedrich Karl Joseph, Freiherr von, last Elector and Archbishop of Mainz, b. 3 Jan., 1719, at Mainz; d. 25 July, 1802, at Aschaffenburg. He was an unworthy brother of Franz Ludwig, the Prince-Bishop of Bamberg and Würzburg, received his education at Regensburg, held prebends in Bamberg and Mainz at an early age, became canon at the cathedral of Mainz in 1733, rector of the university in 1754, president of the Aulic Council in 1758, and custos of the cathedral in 1768. From 1769-1771 he was plenipotentiary of the Electorate of Mainz at the imperial court of Vienna. On 18 July, 1771, he succeeded the deceased von Bredbach as Bishop of Mainz, and eight days later as Prince-Bishop of Worms. He was ordained priest on 11 Sept., 1774, and received episcopal consecration the following year on 14 May. At the beginning of his reign it appeared as if he would try to stem the tide of rationalism which had swept over the Church of Mainz during the weak rule of von Bredbach-revisionist. One of his first acts as bishop was the dismissal of the free-thinking councillors of his predecessor. Soon, however, he became one of the most notable supporters of free-thought in theology and of Febronianism in the government of the Church. George Förster, a Protestant, became his librarian and William Heinze, another Protestant, and author of the lascivious romance "Königskind," was his official librarian. Erthal suppressed the Carthusian monastery and two nunneries at Mainz and used their revenues to meet the expenses of the university, in which he appointed numerous Protestants and free-thinkers as professors. Notorious unbelievers such as Anthony Blau and others were invited to the university in 1784 to supplant the Jesuits in the faculty of theology. The whole was guided by the principles of Febronianism. In union with the Archbishops Max Franz of Cologne, Clemens Wenzeslaus of Trier, and Hieronymus Joseph of Salzburg he convoked the Congress of Em's at which twenty-three antipapal articles, known as the "Punishment of Em's," were drawn up and signed by the plenipotentiaries of the four archbishoprics. The purpose of the Punetion was to lower the papal dignity to a merely honorary primacy and to make the pope a primus inter pares, with practically no authority over the territories of the archbishops. In order to increase his political influence he joined (25 October, 1785) the Confederation of Princes which was established by King Frederick the Great, and participated in the secret position of the Punetion of Em's and applied to Rome for a renewal of his quinquennial faculties and for the approbation of his new coadjutor, Karl Theodor von Dalberg. Somewhat later, however, he resumed his opposition to papal authority and continued to adhere to the Punetion even after the other archbishops had rejected it. His position from the automatic position of the Punetion of Em's and applied to Rome for a renewal of his quinquennial faculties and for the approbation of his new coadjutor, Karl Theodor von Dalberg. Somewhat later, however, he resumed his opposition to papal authority and continued to adhere to the Punetion even after the other archbishops had rejected it. His position from the automatic position of the Punetion of Em's and applied to Rome for a renewal of his quinquennial faculties and for the approbation of his new coadjutor, Karl Theodor von Dalberg. Some of his sermons were collected and published after his death (Bamberg, 1797).

Leitseh, Franz Ludwig von Erthal, Fürstbischof von Bamberg und Würzburg, Herzog von Franken (Bamberg, 1894; Earlier biographies were written by Seyler, 1820; Bernhard (Tübingen, 1852), Rothlauff (Bamberg, 1865), Möller (Passau, 1880).

Michael Ott.

Erwin of Steinbach, one of the architects of the Strasbourg cathedral, date of birth unknown; d. at Strasbourg, 17 January, 1318. According to a tradition which arose in a later age he was called Erwin of Steinbach, and a monument has been erected to him in the village of Steinbach near Baden-Baden. Two of his sons, Erwin von Baden and Werner, were also architects. Erwin came from Steinbach, from 1341-71 and, up to 1382, another secon of the family named Kuntze, were also superintending architects. Hence they were heads of the Strasbourg guild of stonemasons, the influence of which extended as far as Bavaria, Austria, and the borders of Italy. No written account exists as to the training for his work which the elder Erwin received, but he is said to have proved his abilities as a master-builder in other places before he was entrusted with the construction of the facade of the cathedral of Strasbourg about the year 1277. His work on the cathedral shows the influence of the French Gothic. When Erwin took charge of the construction the cathedral was completely except the north transept, the facade, and the metalwork, the development of architectural styles from the first quarter of the eleventh century. As a matter of fact, the west front was now built by three masters, of whom one was Erwin. At the same time a part of the nave that had been badly damaged by fire in 1298 had to be repaired. Three pinnacles of the facade are still in existence; according to Dehio the best design belongs to Erwin, from it, it is customary to ascribe the entire construction. Eichborn, it is true, has tried to prove that Erwin drew the weakest of the three plans. In any case the three master-architects by their joint work deserve the praise that, especially since Goethe, has been assigned to Erwin alone; they are not responsible, however, for the ungraceful central screen of the third story built between the towers and the central tower. This front offers a happy combination of horizontal members in the French style with the German principle of daring height. The rose-window, also French in design and placed in the central one of the nine fields, gives a welcome point of rest to the eye. The somewhat peculiar ornamentation consists of a double treacy of bars and geometrical designs which covers the facade like a net, dividing and filling the large surfaces. By the novelty and the daring of the new style the individual members of this facade are in marked contrast to the older parts of the building; the front, moreover, is connected directly with the body of the cathedral. The ornamental sculpture of the building, which is richer than that ordinarily found in German cathedrals, is partially placed at the facade from which came also the monument to Conrad of Lichtenberg in the chapel of St. John. In this chapel the early Gothic forms correspond to the carving in the chapter-hall. Erwin's last work was the construction of the beautiful chapel of the Blessed Virgin. The legend of the woman sculptor, Savina, who, it is asserted, was a daughter of Erwin, is, however, more a metaphor than a story. The inscription referring to Erwin, which along with tradition are our only sources of information, have also given rise to various doubts.

Erythræ, a titular see in Asia Minor. According to legend the city was founded by colonists from Crete. The name must have been derived from the red stone common in the country. Ruled by kings at first, the city passed through periods of oligarchy and democracy, became tributary to Cæsars and Cyrus, submitted to Athens, then to Sparta, and finally obtained independence. After Alexander, it had various masters until 191 b.C., when it took sides with the Romans, though still preserving its autonomy. Finally it was incorporated with the province of Asia. Erythræ was famous for its Sibyl Herophile and its temples of Hercules, Athena Polias, etc. At an early date it became a suffragan of Ephesus; to the bishops mentioned by Lequien (Or. christ., I, 727); Eutychius (431), Dionysius (533), Eustatius (757), Arsaphius (868), may be added Michael in 1229 (Révue des études grecques, VII, 80). By the sixteenth century the see had disappeared, together with the city and its port. A new village has arisen on its site, Litri or Rithri, not far from Tshesmê, in the vilayet of Aidin or Smyrna. The tombs include walls which are about three miles in circuit, a theatre, aqueducts, columns, and a Byzantine fortress.

S. Vailhée.

Erzerum (Theodosiopolis), Diocese of (Erzurumianis Armeniorum). The name here, Garin (Ar. كٌرَّيْن, Arab. Kalikefah), is still used by the Armenians. The kings of Armenia established here their summer residence. Later Garin fell into the power of the Byzantines, who named it Theodosiopolis (415), under which title it is still a Latin titular see. It became the see of a Greek episcopate, suffragan to Cæsarea of Capadocia. Three bishops are known at this period, Peter (418), Manasses (451), and another Peter (553). (See Lequien, Or. christ., I, 437.) This ecclesiastical situation lasted at least until the ninth century.

In the eleventh century, owing to a communion with another Theodosiopolis in Mesopotamia, the see passed under the jurisdiction of the Patriarch of Antioch. From 1034 to 1053, a great council, which brought about a temporary union of the Armenian and Greek Churches, was held at Garin; the Emperor Heraclius attended at the Armenian and Greek patriarchs and many bishops of both Churches (Hefele, III, 73, 132). In 1201 the city was plundered by the Seljuk Turks, who named it Erzerum, which appears to mean "the city of the Romans", that is to say of the Greeks, though some think that the name is a corruption of Arzen er-Roum, Arzen being a ancient Armenian city in the neighbourhood. Erzerum was captured in 1214 by the sultans of Iconium, in 1387 by Timur-Leng, in 1440 by the Osmanli Turks. In 1440 it fell into the power of local dynasties, which held it under the hegemony of Persia until 1514, when it passed again to the Osmanli. In 1528 and 1578 it was occupied by the Russians. In 1859 it was almost destroyed by an earthquake.

Erzerum is built on an altitude of over six thousand feet on a hill, which is surrounded by mountains of some ten thousand feet in height. The climate is healthful, but rigorous. Winter lasts eight and summer only four months. The Western Euphrates (Kara Su) is about four miles from the city. Garin is the capital of a vilayet and has a population of about 40,000, of whom 27,000 are Turks, the rest Armenians and a few Europeans (about 900 Catholics, mostly Armenians). The city is divided into three parts: the citadel, near the centre of the city, the city proper surrounded by a double wall, and four suburbs. There are 65 mosques, many churches, and several large bazaars. The chief industries are blacksmiths' and copper-smiths' work. Besides the Greek metropolitan, still subject to the Patriarch of Antioch, Gregorian and Catholic Armenian bishops reside at Erzerum. The Diocese of Theodosiopolis (Erzerum) was re-established in 1850 and on 10 July, 1883, divided into the Dioceses of Erzerum and Mush. The former diocese has (1908) 10,000, 38 priests, 30 parishes, 66 churches or chapels, a seminary, 19 schools with about 1000 pupils, and a hospital. Armenian Sisters of the Immaculate Conception have a monastery. Two Capuchins conduct the Latin mission.

Curzon, A Year of Erzerum (London, 1884); Millingen, La Turquie sous Abd-el-Aziz (1884), ch. xvi; Quinet, La Turquie d'Asie (Paris, 1892), I, 180–191; Misions catholiques (Rome, 1907), 753; Weber, Kath. Kirche in Armenien (Freiburg, 1903, 1890), 95. S. Vailhée.

Esau (אֶשָּׁע, hairy), the eldest son of Isaac.

Jacob being blessed by Isaac

Raphael, Vatican Library

and Rebecca, the twin-brother of Jacob. The struggle of the two brothers, when still within Rebecca's womb, was prophetic of the lifelong opposition, deepening at times into hatred, which marked the relations between Esau and Jacob (Gen. xxvi, 22 seq.). Esau, who came forth first, when grown up, became a skilful hunter, and was much loved by Isaac, who ate of his hunting (Gen. xxvii, 24–28). "Coming faint out of the field", and much moved by the sight and savour of the pottage boiled by his brother, Esau said to Jacob, "Give me of this red pottage". No doubt already informed as to the import of this saying, Rebecca took steps to veil her son, Jacob was quick to draw advantage from the greed of his fatigued brother. Conscientious to the condition imposed, Esau not only exchanged his first birthright for the red pottage, but even confirmed the sale by an oath, saying, "Lo, I die; what will the first birthright avail me? . . . And as taking bread and the pottage of his brother, and drank, and went his way; making little account of having sold his first birthright" (Gen., xxv, 29–31). That this transaction was widely known is justly inferred from the very name (Esdom, red), which, though rarely given to Esau himself, is almost universally applied to his descendant. "Esau, being forty years old, married wives, Judith, the daughter of Beeri the
Hethite, and Basemath the daughter of Elon of the same place" (Gen., xxvi, 34). This selection of Chanaanite wives, who "both offended the mind of Isaac and Rebecca" (Gen., xxvi, 35), seemed to have caused peculiar suffering to Rebecca, who, speaking with her husband, declared, "I am weary of my life because of the daughters of Heth; if Jacob take a wife of the stock of this land, I choose not to live" (Gen., xxvii, 46). Old and with eyes so dim he could not see, Isaac ordered Esau to take quiver and bow, so that after having prepared a savoury dish with the fruit of his hunting, he might receive the parting blessing, belonging to the eldest son. Esau, yielding ready obedience, went "into the field to fulfill a father's charge" (Gen., xxvii, 4). Meanwhile, clothed with the very good garments of his older brother, with hands and neck so carefully covered under the tender hides of the kids as to resemble the hairy skin of Esau, Jacob, following in every detail the advice of Rebecca, knelt before Isaac, offered the savoury dish, and begged and obtained the coveted blessing. Great then was the astonishment, and genuine the indignation, of the disappointed Esau, who "roared out with a great cry", on hearing the deceived Isaac declare, "thy brother came deceitfully and got thy blessing". Though sympathizing with his grief-stricken son, Isaac, realizing more fully the import of the oracle communicated to Rebecca, felt impelled to add: "I have blessed him, and shall bless him no more" (Gen., xxvii, 41). That this exclamation revealed a deep-seated prejudice toward the memory of Rebecca, is indicated by the hasty flight of Jacob to Haran, and his long stay with his uncle Laban, clearly demonstrated. (Gen., xxvii, 42-xxxi, 38.) Indeed, even after a self-imposed exile of twenty years, the carefully instructed messengers sent to Esau in the land of Seir (Gen., xxxi, 3), and the strategic division of his household and flocks into two companies clearly indicate Jacob's abiding sense of duty (Gen., xxxii, 4-5).

After extending a cordial welcome to his returning brother, Esau parted from Jacob and "returned, that day, the way that he came, to Seir" (Gen., xxxiii, 1-16), where he and his descendants became exceedingly rich (Gen., xxxvi, 1-8). The very name Edom, and, given to the descendants of Esau (Edom), has served to perpetuate the remembrance of the circumstances attending Esau's birth and the sale of his first birthright. From the noteworthy preference of Jacob to Esau (Gen., xxv, 22 sq.), St. Paul (Rom., ix, 4-16) that in the mystery of election and grace God is bound to no particular nation and is influenced by no prerogative of birth or antecedent merit. When Isaac, old and full of days, had died, we find Esau with the desert hurrying therefor his father in the case of Machpelah (Gen., xxxv, 25-29).

Daniel P. Duffy.

Esch (Eschius), Nicolaus van, a famous mythical theologian, b. in Oisterwijk near Hertogenbosch (Bois-le-Duc), Holland, in 1507; d. 19 July, 1578. After finishing his studies in the classical school of the Hieronymites, he studied philosophy, theology, and canon law at Louvain, but refused to take his doctor's degree. In 1530 he was ordained priest, and then settled in Cologne in the service of the bishop, and afterwards in the monasteries of Trier and Cologne, and devoted his whole life to teaching the doctrine of Christian perfection. At the same time he became the private tutor of a number of young men, mainly university students. Blessed Peter Canisius and Lawrence Sterius are the most celebrated of his pupils. In Cologne, too, he contracted a close friendship with several members of the Carthusian Order, among whom Johann Landseer, Gerhard Hamantamus, and Theodorich and Bruno Lobner were worthy of special mention. Though his feeble health did not allow him to become a member of the order, he lived in the monastery for a time, and then retired as far as possible. In 1538 Nicolaus was appointed pastor of the Beguinage at Diest; after a year he surrendered his charge for a time, but took it up again with such success that after his death he was commonly spoken of as the saintly Father Eschius. He was also instrumental in founding several diocesan orders, and in founding the General Council of Trent. Among his literary works the following are worthy of note: "Introductio in vitam inv.-troversionis", which is really an introduction to a new edition of the "Templum anima" (Antwerp, 1563, etc.); "Exercitatio theologica mystica, seu exeretica quaedam, qua compendio hominem ad vitam perfectam instiuentmandum juvare possint" (Antwerp, 1563); Hurlet, Nomenclator (Antwerp, 1592); Hibbert in Krichel entlektion (Freiburg, 1856), IV, 888.

A. J. Maas.

Eschatology, that branch of systematic theology which deals with the doctrines of the last things (ἐσχατολογία). The Greek title is of comparatively recent introduction, but in modern usage it has largely supplanted its Latin equivalent De Novissimis. As the numerous doctrinal subjects belonging to this section of theology will be treated ex professo under their several proper titles, it is proposed in this article merely to take such a view of the whole field as will serve to indicate the place of eschatology in the general framework of religion, explain its subject-matter and the outlines of its content in the various religions of mankind, and illustrate by comparison the superiority of Christian eschatological teaching. As a preliminary indication of the subject-matter, a distinction may be made between the eschatology of the individual and that of the race and the universe at large. The former, setting out from the doctrine of personal immortality, or at least of survival in some form after death, seeks to ascertain the fate or condition, temporary or eternal, of individual souls, and how far the issues of the future depend on the present life. The latter deals with events like the resurrection and the general judgment, in which, according to Christian revelation, all things, whether in the heavens or the earth, with the signs and portents in the moral and physical order that are to precede and accompany those events. Both aspects—the individual and the universal—belong to the adequate concept of eschatology; but it is only in Christian teaching that both receive due and proportionate recognition. Jewish eschatology only attained its completion in the teaching of Christ and the Apostles. While in the pagan religions eschatology seldom rose above the individual view, and even then was often so vague, and so little bound up with any adequate notion of Divine justice and of moral retribution, that it barely deserves to be ranked as religious teaching.

I. Ethic Eschatologies.—(1) Even among the lower-savage and barbarian—races the universality of religious beliefs, including belief in some kind of existence after death, is very generally admitted by modern anthropologists. Some exceptions, it is true, have been claimed to exist; but on closer scrutiny the evidence for this claim has broken down in so many cases that we are justified in constraining against any exception. Among the lower races the truth and character of religious beliefs and the essential purity of the idea of God and of the moral standards that prevail. Some savages seem to limit existence after death to the good (with extinction for the wicked), as the Nicaraguas, or to men of rank, as the
Tongas; while the Greenlanders, New Guinea negroes, and others seem to hold the possibility of a second death, in the other world or on the way to it. The next world itself is variously located—on the earth, in the sky, in the sun or moon—but most commonly under the earth; while the life left there is conceived either as a dull and shadowy and more or less impotent existence, or as an active continuation in a higher or idealized form of the pursuits and pleasures of earthly life. In most savage religions there is no very high or definite doctrine of moral retribution after death; but it is only in the case of a few of the most degraded races or classes that it is admitted at all. In this respect, then, the notion of retribution is claimed to be altogether wanting. Sometimes mere physical prowess, or bravery or skill in the hunt or in war, takes the place of a strictly ethical standard; but, on the other hand, some savage religions contain unexpectedly clear and elevated ideas of many primary moral duties.

(C) Coming to the higher or civilized races, we shall glance briefly at the eschatology of the Babylonian and Assyrian, Egyptian, Indian, Persian, and Greek religions. Confucianism can hardly be said to have an eschatology, except the very indefinite belief involved in the worship of ancestors, whose happiness was held to depend on the conduct of their living descendants. Mohammedan eschatology contains nothing distinctive except the glorification of barbareous custom.

(a) Babylonian and Assyrian.—In the ancient Babylonian religion (with which the Assyrian is substantially identical) an eschatology never attained, in the historical period, any high degree of development. Retribution is confined almost, if not quite, entirely to the present life, virtue being rewarded by the Divine bestowal of strength, prosperity, long life, numerous offspring, and the like, and wickedness punished by contrary temporal calamities. Yet the existence of an hereafter is believed in. A kind of semi-material ghost, or shade, or double (ekimma), survives the death of the body, and when the body is buried (or, less commonly, cremated) the ghost descends to the underworld to join the company of the departed. In the "Lay of Ishtar" this underworld, to which she descended in search of her deceased lover and of the "waters of life," is described in gloomy colours; and the same is true of the other descriptions we possess. It is the "pit", the "land of no return", the "house of darkness", the "place where dust is their bread", and the "focus of dark and demented spirits", who, at least in Ishtar's case, are empowered to inflict various chastisements on sins committed in the upper world.

Though Ishtar's case is held by some to be typical in this respect, there is otherwise no clear indication of a doctrine of moral penalties for the wicked, and no promise of rewards for the good. Good and bad are separated by a great gulf in the moral consciousness of the region of the dead; and the resurrection of the body of the dead is a subject of controversy among Assyriologists, while the suggestion of a brighter hope in the form of a resuscitation (or rather of a return to earth) from the dead, which some would infer from the belief in the "waters of life" and from references to Mariduk, or Merodach, as one who brings the dead; who is himself a condition of death, is nowhere more. On the whole there is nothing hopeful or satisfying in the eschatology of this ancient religion.

(b) Egyptian.—On the other hand, in the Egyptian religion, which for antiquity competes with the Babylonian, we meet with a highly developed and comparatively elevated eschatology. Leaving aside such difficult questions as the relative priority and influence of different, and even conflicting, elements in the Egyptian religion, it will suffice for the present purpose to refer to what is most prominent in Egyptian eschatology taken at its highest and best. In the first place, then, life in its fullness, unending life with Osiris, the sun-god, who journeys daily through the underworld, even identification with the god, with the right to be called by his name, is what the pious Egyptian looked forward to as the ultimate goal after death. The dead are habitually called the "living"; the coffin is the "chest of the living", and the tomb the "lord of life". It is not merely the disembodied spirit, the soul as we understand it, that continues to live, but the soul with certain bodily organs and functions suited to the conditions of the new life. In the elaborate anthropology which underlies Egyptian eschatology and which is hard to understand, several constituent parts of the human person are distinguished, the most important of which is the Kâ, a kind of semimaterial double; and to the justified who pass the judgment after death the use of these several constituents, separated by death, is restored. This judgment which each undergoes is described in detail in chapter exxv of the Book of the Dead. The examination covers a great variety of personal, social, and religious duties and observances; the deceased must be able to deny his guilt in regard to forty-two great categories of sins, and his heart (the symbol of conscience and morality) must stand the test of being weighed in the balance against the image of Maat, goddess of truth or justice. But the new life that begins when the justified, freed from the obstacles, is rewarded with entrance to the Kâ, or more spiritual than life on earth. The justified is still a wayfarer with a long and difficult journey to accomplish before he reaches bliss and security in the fertile fields of Aalu. On this journey he is exposed to a variety of disasters, for the avoidance of which he depends on the use of his revivified powers and on the knowledge he has gained in life of the directions and manner of his movement. But the justified is also, and perhaps most of all, on the aids provided by surviving friends on earth. It is they who secure the preservation of his corpse that he may return and use it, who provide an indestructible tomb as a home or shelter for his Kâ, who supply food and drink for his sustenance, offer up prayers and sacrifices for his benefit, and aid his memory by inscribing on the walls of the tomb, or writing on rolls of papyrus enclosed in the wrappings of the mummy, chapters from the Book of the Dead. It does not, indeed, appear that the dead were ever supposed to reach a stage in which they were independent of these earthly aids. At any rate they were always considered free to revisit the earthly tomb, and in making the journey to and fro the blessed are furnished with images of various sorts, in the likeness of a log or various animal-shapes. It was this belief which, at the degenerate stage at which he encountered it, Herodotus mistook for the doctrine of the transmigration of souls. It should be added that the identification of the blessed with Osiris ("Osiris N. N.") is a usual form of inscription) did not, at least in the earlier and higher stage of Egyptian religion, imply pantheism, or the denial of individual personal identity. Regarding the fate of those who fail in the judgment after death, or succumb in the second probation, Egyptian eschatology is less definite in its teaching. "Second death" and other expressions applied to them might seem to suggest annihilation; but it is sufficiently clear from the evidence as a whole that the idea of the continued existence of misery was believed to be their portion. And as there were degrees in the happiness of the blessed, so also in the punishment of the lost (see Book of the Dead, tr. Budge, London, 1901).

(c) Indian.—In the Vedic, the earliest historical form of the Indian religion, eschatological belief is simpler and purer than in the later and more complicated forms which succeeded it. Individual immortality is clearly taught. There is a kingdom of the dead under the rule of Yama, with distinct realms for the good and the wicked. The good dwell in a realm
of light and share in the feasts of the gods; the wicked are banished to a place of "nethermost darkness". Already, however, in the later Vedas, where these beliefs find developed expression, retribution begins to be ruled more by ceremonial observances than by strictly moral tests. On the other hand, there is no trace as yet of the dreary doctrine of transmigration, but critics profess to discover the germs of later pantheism.

In Brahminism (q. v.) retribution gains in prominence and severity, but becomes hopelessly involved in transmigration, and is made more and more dependent either on sacrificial observances or on theological knowledge. Though after death there are numerous heavens and hells for the reward and punishment of the deeds of men, these are not final states, but only so many preludes to further rebirths in higher or lower forms. Pantheistic absorption in Brahma, the world-soul and only reality, with the consequent extinction of individual personality—this is the only final solution of the problem of existence, the only salvation to which man may ultimately look forward. But it is a salvation which only a few may hope to reach after the present life, the few who have acquired a perfect knowledge of Brahma. The bulk of men who cannot rise to this high philosophic wisdom may succeed, by means of sacrificial observances, in gaining a temporary heaven, but they are destined to further births and deaths.

Buddhist eschatology still further develops and modifies the Brahmanical Biblical idea of the doctrine of salvation, and culminates in what is, strictly speaking, the negation of eschatology and of all theology—a religion without a God, and a lofty moral code without hope of reward or fear of punishment hereafter. Existence itself, or at least individual existence, is the primary evil; and the craving for extinction, or purification of merits, is the source of all the misery in which life is necessarily involved. Salvation, or the state of Nirvana, is to be attained by the utter extinction of every kind of desire; and this is possible by knowledge—not the knowledge of God or the soul, as in Brahminism, but the purely philosophical knowledge of the real truth of things. For all who do not reach this state of philosophic knowledge, who fail in their requirements—that is to say for the vast bulk of mankind—there is nothing in prospect save a dreary cycle of deaths and rebirths with intercalated heavens and hells; and in Buddhism this doctrine takes on a still more dreadful and inexorable character than in pre-Buddhistic Brahminism. (See BUDDHISM.)

(d) Persian.—In the ancient Persian religion (Zoroastrianism, Mazdanism, Parseism) with what is perhaps, in its better elements, the highest type of ethnic eschatology. But as we know it in the Parsee literature, it contains elements that were probably borrowed from other religions; and as some of this literature is certainly post-Christian, the possibility of Jewish and even Christian ideas having influenced the literature of the Parsees cannot be entirely ruled out. The radical defect of the Persian religion was its dualistic conception of deity. The physical and moral world is the theatre of a perpetual conflict between Ahura Mazda (Ormuzd), the good, and Angra Mainyu (Ahriman), the evil, principle, co-creators of the universe and of man. Yet the evil principle is not eternally evil, but is finally purged, purified, and extirpated. A pure monotheistic Providence promises at times to replace dualism, but never quite succeeds—the latest effort in this direction being the belief in Zvran Akaram, or Boundless Time, as the supreme deity above both Ahriman and Ormuzd. Morality has its sanction not merely in future retribution, but in the present assurance that every good and pious deed is a victory for the cause of Ahura Mazda; but the call to the individual to be active in this cause, though vigorous and definite enough, is never quite free from ritual and ceremonial conditions, and as time goes on becomes more and more complicated by these observances, especially by the laws of purity. Certain elements are holy (fire, earth, water), certain others unholy or impure (dead bodies, the breath, and all that leaves the body, etc.); and to defile oneself or the holy elements by contact with the impure is one of the deadliest sins. Consequendy corpses could not be buried or cremated, and were accordingly exposed on platforms erected for the purpose, so that birds of prey might devour them. When the soul leaves the body it has to cross the bridge of Chinvat (or Kinvad), the bridge of the Gatherer, or Accountant. For three days good and evil spirits contend for the possession of the body, which is then renewed, and the just man is rejoiced by the apparition, in the form of a fair maiden, of his good deeds, words, and thoughts, and passes over safely to a paradise of bliss; while the wicked man is confronted by a hideous apparition of his evil deeds, and is dragged down to hell. If the judgment is neutral the soul is reserved in an intermediate state (so at least in the Pahlavi books) till the decision at the last day. The developed conception of the last days, as it appears in the later literature, has certain remarkable affinities with Jewish Messianic and millennial expectations. A time during which Ahriman will gain the ascendancy is to be followed by two millennial periods, in each of which a great prophet will appear to herald the comings of Soshyant (or Zarathustra), the second coming of the Judge, who will raise the dead to life. The resurrection will occupy fifty-seven years and will be followed by the general judgment, the separation of the good from the wicked, and the passing of both through a purgatorial fire, gentle for the just, terrible for sinners, but leading to the restoration of all. Next will follow the final consummation of the kingdom of evil spirits, in which the latter will perish, all except Ahriman and the serpent Azhi, whose destruction is reserved to Ahura Mazda and Sraosha, the priest-god. And last of all hell itself will be purged, and the earth renewed by purifying fire.

(e) Greek.—Greek eschatology as reflected in the Homeric poems remains at a low level. It is only very vaguely hinted at the two great hopes mentioned in Homer's outlook. Life on earth, for all its shortcomings, is the highest good for men, and death the worst of evils. Yet death is not extinction. The ἐχθρεύσις—survives—not the purely spiritual soul of later Greek and Christian thought, but an attenuated, semi-material ghost, or shade, or image, of the earthly man; and the life of this shade in the underworld is a dull, impoverished, almost functionless existence. Nor is there the any distinction of fates either by way of happiness or of misery in Hades. The judicial office of Mimos is illusory, and has nothing to do with earthly conduct; and there is only one allusion to the Furies suggestive of their activity among the dead (Iliad, XIX, 258-60). Tartarus, the lower hell, is reserved for a few special rebels against the gods, and is the dwelling place for a few special favourites chosen by divine caprice.

In later Greek thought touching the future life there are notable advances beyond the Homeric stage, but it is doubtful whether the average popular faith ever reached a much higher level. Among early philosophers Anaxagoras contributes to the notion of a purely spiritual soul (bipolare); but a more salient contribution is made by the Eleusinian and Orphic Mysteries, to the influence of which in brightening and moralizing the hope of a future life we have the concurrent witness of philosophers, poets, and historians. In the Eleusinian Mysteries there seems to have been no definite doctrinal teaching—merely the promise or assurance for the initiated of the fullness of life hereafter. With the Orphics, on the other hand, the divine origin and pre-existence of the soul, for
which the body is but a temporary prison, and the doctrine of a retributative transmigration are more or less closely associated. It is hard to say how far the common belief of the people was influenced by these mysteries, but in poetical and philosophical literature their influence is unmistakable. This is seen especially in Pindar among the poets, and in Plato among the philosophers. Pindar has a definite promise of a future life of bliss for the good or the initiated, and not merely for a few, but for all. Even for the wicked who descend to Hades there is hope; having purged themselves, they may obtain mercy on earth, and if, during three successive existences, they are able to make themselves worthy of the boon, they will finally attain to happiness in the Isles of the Blest. Though Plato’s teaching is vitiated by the doctrine of pre-existence, metempsychosis, and other serious errors, it represents the highest achievement of pagan philosophic speculation on the subject of the future life. The divine dignity, spirituality, and essential immortality of the soul being established, the issues of the future for every soul are made clearly dependent on its moral conduct in the present life in the body. There is a divine judgment after death, a heaven, a hell, and an intermediate state for penance and purification; and rewards and punishments are graduated according to the merits and demerits of the individual. The wicked are condemned to everlasting punishment in Tartarus; the less wicked or indifferent go also to Tartarus or to the Acheronian Lake, but only for a time; and those eminent for goodness go to a happy home, the highest reward of all being for those who have purified themselves by philosophy.

From the foregoing sketch we are able to judge both of the merits and defects of ethnic systems of eschatology. Their merits are perhaps enhanced when they are presented, as above, in isolation from the other features of the religions to which they belonged. Yet their defects are obvious enough; and even those of them that were best and most promising turned out, historically, to be failures. The precious elements of eschatological truth contained in the Egyptian religion were associated with error and superstition, and were unable to save the religion from sinking to the state of utter degeneration in which it is found at the approach of the Christian Era. Similarly, the still richer and more profound eschatology of the Persian religion, vitiated by dualism and other corrupting influences, failed to realize the promise it contained, and has survived only as a ruin in modern Parseeism. Plato specified in his immortalized myths any plausible degree the popular religion of the Graeco-Roman world; it failed to convert even the philosophical few; and in the hands of those who did profess to adopt it, Platonism, uncorrected by Christianity, ran to seed in Pantheism and other forms of error.

II. Old Testament Eschatology.—Without going into details either by way of exposition or of criticism, it will be sufficient to point out how Old Testament eschatology compares with ethnic systems, and how, notwithstanding its deficiencies in point of clearness and completeness, it was not an unworthy preparation for the fullness of Christian Revelation.

(1) Old Testament eschatology, even in its earliest and most imperfect form, shares in the distinctive characteristics of the religion generally. In the first place, as a negative distinction, we note the absence of certain erroneous ideas and tendencies that have a large place in ethnic religions. There is no pantheism or dualism, no doctrine of pre-existence (Wisdom, vii, 17–20, does not necessarily imply this doctrine, as has sometimes been contended) or of metempsychosis as there has been expected, of Egyptian ideas or practices. In the next place, on the positive side, the O. T. stands apart from ethnic religions in its doctrine of God, and of man in relation to God. Its doctrine of God is pure and un-compromising monothelism; the universe is ruled by the wisdom, justice, and omnipotence of the one, true God. And man is created by God in His own image and likeness, and destined to relations of friendship and fellowship with Him. Here we have revealed in clear and definite terms the basic doctrines which are at the root of eschatological truth, and which, once they had taken hold of the life of a people, were bound, even without new additions to the revelation, to safeguard the purity of an inadequate eschatology and to lead in time to richer and higher developments. Such additions and developments occur in O.-T. teaching; and in course of time the Jewish people have realized the two chief defects, or limitations, which attach to the earlier eschatology and continue, by their persistence in popular belief, to hinder more or less the correct understanding and acceptance by the Jewish people as a whole of the highest eschatological utterances of their own inspired teachers.

(2) The first of these defects is the silence of the earlier and of some of the later books on the subject of moral retribution after death, or at least the extreme vagueness of such passages in these books as might be understood to refer to this subject. Death is not extinction; but Sheol, the underworld of the dead, in early Hebrew thought is not very different from the pre-Christian Aiol or the Homerian Hades, except that in the former it is less clear whether the two chief defects, or limitations, which attach to the earlier eschatology and continue, by their persistence in popular belief, to hinder more or less the correct understanding and acceptance by the Jewish people as a whole of the highest eschatological utterances of their own inspired teachers.

(3) The tendency to sink the individual in the nation and to treat the latter as the religious unit was one of the most marked characteristics of Hebrew faith. And this helped very much to support and prolong the other limitation just noticed, according to which retribution as such was mingled with national and disappointed personal hopes could be solaced by the thought of their present or future realization in the nation. It was only when the national calamities, culminating in the exile, had shattered for a time the
people's hope of a glorious theocratic kingdom that the eschatology of the individual became prominent; and with the restoration there was a tendency to revert to the national point of view. It is true of the O. T., as a whole that the eschatology of the people overshadowed that of the individual, though it is true at the same time that, in and through the former, the latter of a vicarious and definitive assurance of a personal resurrection from the dead, at least for the children of Israel who are to share, if found worthy, in the glories of the Messianic Age.

It is beyond the scope of this article to attempt to trace the growth or describe the several phases of this national eschatology, which centres in the hope of the establishment of a theocratic and Messianic kingdom of that world, which, however, may be found expressed in O. T. prophecies, as we read them now in the light of their progressive fulfilment in the N. T. Dispensation. The Jewish people as a whole clung to a material and political interpretation of the kingdom, coupling their own domination as a people with the triumph of God and the worldwide establishment of His rule. There is much, indeed, to account for in this the obscurity of the prophecies themselves. The Messiah as a distinct person is not always mentioned in connexion with the inauguration of the kingdom, which leaves room for the expectation of a theophany of Yahwe in the character of judge and ruler. But even when the person and place of the Messiah are distinctly foreshadowed, the fusion together in prophecy of what was promised to Abraham and his seed, as a nation, and His second coming tends to give to the whole picture of the Messianic kingdom an eschatological character that belongs in reality only to its final stage. It is thus the resurrection of the dead in Isaias, xxvi, 19, and Daniel, xii, 2, is introduced; and many of the descriptions foretelling 'the day of the Lord', 'the day of judgment', 'the resurrection of the dead' and other phenomena that usher in that day, while applicable in a limited sense to contemporary events and to the inauguration of the Christian Era, are much more appropriately understood of the end of the world. It is not, therefore, surprising that the religious hopes of the Jewish nation should have become so predominantly eschatological, and that the person and form of the heavenly beings during the perspective of Divine Revelation, should have learned to look for the establishment on earth of the glorious Kingdom of God, which Christians are assured will be realized only in heaven at the close of the present dispensation.

(4) Passing from these general observations which seem necessary for the true understanding of O. T. eschatology, a brief reference will be made to the passages which exhibit the growth of a higher and fuller doctrine of immortality. The recognition of individual as opposed to mere corporate responsibility and retribution may be reckoned, at least remotely, as a gain to eschatology, even when retribution is confined chiefly to this life; and this principle is repeatedly recognized in the earliest books. (See Gen. xviii, 25; 1 Kings iv, 12; 2 Kings iv, 22; Zech. xiv, 1; 11 K., xxiv, 17; IV K., xiv, 6; Is., iii, 10 sqq.; xxxiii, 15 sqq.; Jer., xii, 1 sqq.; xv, 5-10; xxxii, 18 sqq.; Ezech., xiv, 12-20; xviii, 1, 18 sqq.; Psalms, passim; Prov., ii, 21 sqq.; x, 2; xi, 19, 31, etc.) It is recognized also in the very terms of the problem dealt with in the Book of Job. Coming to higher things, we find in the Psalms and in Job the clear expression of a hope or assurance for the just of a life of blessedness after death. Here is voiced, under Divine inspiration, the innate craving of the righteous soul for everlasting fellowship with God, the protest of a strong and vivid faith against the popular conception of Sheol. Omitting doubtful passages, it is enough to refer to Psalms xxv (A. V., xxvi), xvi (A. V., xvii), xviii (A. V., xlix), and lxiii (A. V., lxiii). Of these it is not impossible to explain the first two as prayers for deliverance from some imminent danger of death, but the assurance they express is too absolute and universal to admit this interpretation as the most natural. And this assurance becomes still more definite in the other two psalms, by reason of the contrast which death is asserted to introduce between the fates of the just and the impious. The same faith emerges in the Book of Job, first as a hope somewhat obscure and shadowy, and then as an assured conviction. Despairing of vindication in this life and rebelling against the thought that righteousness should remain finally unrewarded, the sufferer seeks consolation in the hope of a renewal of God's friendship beyond the grave: "O that thou wouldst hide me in Sheol, that thou wouldst keep me secret unto the sepulchre; that I may know that my end shall be as my beginning, and that I shall stand up at the last upon the earth [dust]; and after this my skin is been destroyed, yet from [of] without my flesh shall I see God, whom I shall see for myself and my eyes shall behold, and not another" (25-27). In his risen body he will see God, according to the Vulgate (LXX) reading: "and in the last day I shall rise out of the earth. And I shall be clothed again with flesh and skin, and in my flesh I shall see my God" (25-26).

The doctrine of the resurrection finds definite expression in the Prophets; and in Isaias, xxvi, 19: "thy dead shall live, thy dead bodies shall rise again. Awake and sing, ye that dwell in the dust." etc.; and Daniel, xii, 2: "and many of those that sleep in the dust shall awake: some to everlasting life, and others unto everlasting shame and contempt", etc., it is clearly a personal resurrection that is taught—in Isaias a resurrection of righteous Israelites; in Daniel, of both the righteous and the wicked. The judgment, which in Daniel is connected with the resurrection, is also personal; and the same is true of the judgment of the living (Jews and Gentiles) which in the Sibylline books forms the conclusion of the "common history of the Lord''. Some of the Psalms (e. g. xxviii) seem to imply a judgment of individuals, good and bad, after death; and the certainty of a future judgment of "every work, whether it be good or evil", is the final solution of the moral enigma of earthly life offered by Ecclesiastes (xii, 13-14; cf. iii, 17). Coming to the later (deuterocanonical) books of the O. T., we have clear evidence in 11 Mach. of Jewish faith not only in the resurrection of the body (vii, 9-14), but in the efficacy of prayers and sacrifices for the dead who have died in godliness (xii, 43 sqq.). And in the second and first centuries B. C., in the Jewish apocalyptic literature, new eschatological developments appear, chiefly in the direction of a more definite doctrine of the last things. The idea of an eschatological life—commonly understood of the general abode of the departed awaiting the resurrection, this abode having different divisions for the reward of the righteous and the punishment of the wicked; in reference to the latter, Sheol is sometimes simply equivalent to hell. Gehenna is the name usually applied to the final place of punishment of the wicked, whether original or even immediately after death; while paradise is often used to designate the intermediate abode of the souls of the just, and heaven their home of final blessedness (for detailed references to apocalyptic literature see Charles, article "Eschatology" in "Encycl. Biblica", §§ 63, 70). Christ's use of these terms shows that the Jews of His day were sufficiently familiar with their N. T. meanings.

III. CATHOLIC ESCHATOLOGY.—In this article there
as no critical discussion of N.-T. eschatology nor any attempt to trace the historical developments of Catholic teaching from Scriptural and traditional data; only a brief prospectus is given of the developed Catholic system. For critical and historical details and for the refutation of opposing views the reader is referred to the special articles dealing with the various doctrines. The eschatological summary which speaks of the "four last things" (death, judgment, heaven, and hell) is popular rather than scientific. For systematic treatment it is best to distinguish between (A) individual and (B) universal and cosmic eschatology, including under (A): (1) death; (2) the particular judgment, (3) heaven, or eternal happiness (4) purgatory, or the intermediate state; (5) hell, or eternal punishment; and under (B): (6) the approach of the end of the world; (7) the resurrection of the body; (8) the general judgment; and (9) the final consummation of all things. The superiority of Catholic eschatology consists in the fact that, without professing to answer every question that idle curiosity may suggest, it gives a clear, consistent, satisfying statement of all that need at present be known, or can profitably be understood, regarding the eternal issues of life and death for each of us personally, and the final consummation of the cosmos of which we are a part.

(A) Individual Eschatology.—(1) Death, which consists in the separation of soul and body, is presented under many aspects from the viewpoint of the (a) as being actually and historically, in the present order of supernatural Providence, the consequence and penalty of Adam's sin (Gen., ii, 17; Rom, v, 12, etc.); (b) as being the end of man's period of probation, the event which decides his eternal destiny (II Cor., v, 10; John, ix, 4; Luke, xii, 40; xvi, 19 sqq.; etc.), though it does not exclude an intermediate state of the soul, and does not imply judgment of merit, in grace; and (c) as being universal, though as to its absolute universality (for those living at the end of the world) there is some room for doubt because of I Thess., iv, 14 sqq.; I Cor., xiv, 51; II Tim., iv, 1.

(2) That a particular judgment of each soul takes place at death is implied in many passages of the N. T. (Luke, xxii, 29 sqq.; xxiii, 43; Acts, i, 25; etc.), and in the recital of the last supper (Maias, 1 Cor., xv, 51). Enchiridion, no. 588) regarding the speedy entry of each soul into heaven, purgatory, or hell. (See JUDGMENT, PARTICULAR.

(3) Heaven is the abode of the blessed, where (after the resurrection with glorified bodies) they enjoy, in the company of Christ and the angels, the immanence. This place is to be sought not in being supernaturally elevated by the light of glory so as to be without of such a vision. There are infinite degrees of glory corresponding to degrees of merit, but all are unspeakably happy in the eternal possession of God. Only the perfectly pure and holy can enter heaven; but for those who have attained that state, either at death or after a course of purification in purgatory, entry into heaven is not only possible, as has been erroneously held, till after the General Judgment.

(4) Purgatory is the intermediate state of unknown duration in which those who die imperfect, but not in unrepented mortal sin, undergo a course of penal purification, to qualify for admission into heaven. They share in the communion of saints (q. v.) and are benefited by our good works (Prayers for the Dead). The denial of purgatory by the Reformers introduced a dismal blank in their eschatology and, after the manner of extremes, has led to extreme reactions. (See PURGATORY.)

(5) Hell, in Catholic teaching, designates the place or state of men (and angels) who, because of sin, are excluded for ever from the Beatific Vision. In this wide sense it applies to the state of those who, with only original sin on their souls (Council of Florence, Denzinger, no. 588), although this is not a state of misery or of subjective punishment of any kind, but merely implies the objective privation of supernatural bliss, which is compatible with a condition of perfect natural happiness. But in the narrower sense in which the name is ordinarily used, hell is the state of those who are punished eternally for unrepented personal mortal sin. Beyond affirming the existence of such a state, with varying degrees of punishment corresponding to degrees of guilt and its eternal or unending duration, Catholic doctrine does not go. It is a terrible and mysterious truth, but it is clearly and emphatically taught by Christ and the Apostles. Rationalists may deny the eternity of hell in spite of its authoritative teaching, and professors of Christendom, who are unwilling to make a careful and speedy attempt to explain away Christ's words; but it remains as the Divinely revealed solution of the problem of moral evil. (See HELL.)

Rival solutions have been sought for in some form of the theory of restoration or, less commonly, in the theory of annihilation or conditional immortality. The restorationist view, which in its Origenist form was condemned at the Council of Constantinople in 543, and later at the Fifth General Council (see ACROCATANSTASIS), is the cardinal dogma of modern Universalism (q. v.), and is favoured more or less by liberal Protestants and Anglicans. Based on an exaggerated optimism for which present experience offers no guarantee, this view assumes the all-conquering efficacy of the grace of God, but it does not have the perspicacity, propriety and justice, and looks forward to the ultimate conversion of all sinners and the voluntary disappearance of moral evil from the universe. Annihilationists, on the other hand, failing to find either in reason or Revelation any grounds for such optimism, and considering immortality itself to be a grace and not the natural attribute of the soul, believe that the finally impenitent will be consigned to eternal death, and will thus ultimately be compelled to confess the failure of His purpose and power.

(B) Universal and Cosmic Eschatology.—(6) Notwithstanding Christ's express refusal to specify the time of the end (Mark, xiii, 32; Acts, i, 6 sq.), it was a common belief among early Christians that the end of the world was near. This seemed to have some support in certain sayings of Christ and in the predictions of Daniel (e.g., Daniel, 7, Enchiridion, no. 588), or the Apocalypse, which were set down in the Gospels side by side with prophecies relating to the end (Matt., xxiv; Luke, xxii), and in certain passages of the Apostolic writings, which, might, not unnaturally, have been so understood (but see II Thess., ii, 2 sqq., where St. Paul corrects this impression). On the other hand, Christ had clearly stated that the Son of Man would not first announce the tribulation of those days, but would first appear in glory (Matt., xxv, 31 sqq.), at the end of the ages, and in the midst of the fiery persecutions (Matt., xxv, 31 sqq.), great social calamities and terrifying physical convulsions. Yet the end will come unexpectedly and take the living by surprise.

(7) The visible coming (parousia) of Christ in power and glory will be the signal for the rising of the dead (see RESURRECTION). It is Catholic teaching that all the dead, both good and evil, will rise at the same time, as well as the just, and that they will rise with the bodies they had in this life. But nothing is defined as to what is required to constitute this identity of the risen and transformed with the present body. Though not formally defined, it is sufficiently certain that there is to be only one general resurrection, simultaneous for the good and the bad. (See MILLENNIUM.) Regarding the qualities of the risen bodies in the case of the just we have St. Paul's description in I Cor., xv (cf. Matt., xiii, 43; Phil., iii, 21) as a basis for theological
speculation; but in the case of the damned we can only affirm that their bodies will be incorruptible.

(8) Regarding the general judgment there is nothing of importance to be added here to the graphic description of the event given by Christ Himself, who is to be Judge (Matt., xxv.; etc.). (See JUDGMENT, GENERAL.)

B. Eschenbach, a Benedictine monk, was one of the leaders in the movement of the eighteenth century sharing in the general consumption (II Pet., iii.; 13; Rom., viii.; 19 sqq.; Apoc., xxi., 1 sqq.). The present heaven and earth will be destroyed, and a new heaven and earth take their place. But what, precisely, this process will involve, or what purpose the renovated world will serve is not revealed. It may possibly be part of the glorious Kingdom of Christ of which "there shall be no more sea" (Rev., xiv.; 6, 7).

Eschenbach, with the accomplishment of his office as Judge (1 Cor., xv., 21 sqq.), but as King of the elect whom He has saved, will reign with them in glory for ever.

A good bibliography of older works is given in ALGER, A Critical History of the Christian Life with, Index Bibliography by Ezra Abbott (New York, 1871). SALMON, Christian Doctrine of Immortality (5th ed., Edinburgh, 1863)—very concisely; TUCHEL, V., IV. ed., Munich, 1908. For ethic eschatologies the reader is referred for a fuller bibliography to the special articles on the various religious movements; it is enough to refer here, for the lower races, to pertinent sections in LUBROCK, On the Origin of Civilisation and the Primitive Conditions of Man (5th ed., London, 1890; 2nd ed., London, 1891; 3rd ed., London, 1893), and Le Religions des peuples non-civilisés (Paris, 1883); for higher races, to JASTROW, Religion of Babylonia and Assyria (Boston, 1898; London, 1899). AMES, E. A., "How the Western World went from the Med in the Tenth Century to the Balkan War in 1914," Harper's, 1908; (Ind. Soc. 1903-4). In view of this, one may see the list of eschatological doctrines found in ancient Egypt (London, 1898); SALTER, The Religious History of Ancient Egypt and Babylonia (Gifford Lectures, 1903); RHEI-DAVIES, Buddhism (London, 1892); JACKSON, Zara; THE, and the Prophecy of Ancient Iran (New York, 1899); ROHDE, Psyche, Seelencult und Unterbliebeke der Grieche (2nd ed., Freiburg, 1898); besides general works on ancient religions like those of TIEL DE LA SALLE, etc. For biblical eschatology, see DAVIDSON-CHARLES-SALMON in Hast. Dict, of the Bible; and J. A. STURDITWELL in Hastings Dictionary of the Christian Life in Israel, Judaism and in Christianity (London, 1899); 100 YEAR IN ENCYCLOPEDIA BIBLICA, s. v. (this author is to be read with cautionary eye in many of the following sections); AYRER, Die christliche Eschatologie in den Studien ihrer Oberflaucht in den Allten Texten (Freiburg, 1890); W. D. DE LAIJE, De mysticus, Eschatologia in den scheid der Organisation und den Allten Texten (Freiburg, 1890). For modern eschatological problems and controversies see bibliography of the several articles referred to in the last section of this article.

P. J. TONER.

Eschenbach, WOLFRAM VON. See Wolftram.

ESCHENBACH, MARINA DE, VENERABLE, MARE, and foundress of a modified branch of the Brigittine Order b. at Valladolid, Spain, 8 Feb., 1554; d. there 9 June, 1613.

Her father, Inigo de Eschenbach, was prominent in civil and ecclesiastical life for a time and to some degree Osuna, the old man noted for his learning and his saintly life; her mother was Margaret Montane, daughter of Charles V's physician. She was an apt scholar and even in youth showed powers of reflection beyond her age. Until her forty-fifth year her attention was given mainly to her own perfection, then she devoted herself more to the piety of others. At fifty, however, her continual bodily afflictions became so severe that she was confined to her bed for the remainder of her life. Providence provided her with an admirable spiritual guide, in the Venerable Luis de Ponte (1554-1624). The special external work entrusted to her was to establish a branch of the Order of the Holy Saviour or Brigittines in Spain, which met with considerable success in the times and the country. With the revolution of the work came the knowledge that she would not live to see its accomplishment. By divine command, as she believed, she wrote her revelations, and when too feeble they dictated them. Luis de Ponte arranged them and left them for publication after her death. In his preface he declares his belief in their genuineness because she advanced in virtue and was preserved free from temptations against purity, showed no pride, and had peace in prayer, feared deception, desired no

extravagant favours, loved suffering, was zealous for souls and, lastly, was obedient to her confessor. These writings were published in one large volume and are divided into six books containing their remarks and, her own, interspersed between the visions themselves. Book I treats of the extraordinary means by which God had led her; II contains revelations about the mysteries of redemption; III about God and the Blessed Trinity; IV about Guardian Angels and the B. V. Mary's prerogatives; V gives means to help souls in purgatory and to save souls on earth; and VI reveals her perfection as shown under terrible sufferings. The style of the work is free and flowing and she speaks with simplicity and even frankness of visions always grave or purifying or alarming according to their subject, are all instructive and at times distinctly curious; but the descriptions are mere outlines, leaving much to the imagination, and never going into details. Their variety is great. For some the following would have special interest: Daily communion and Satan's objection to it; mystical espистемes; the host of questions about the visions; internal stigmata; some snares with which modern hagiographers have dealt harshly, as St. Christopher. Their brevity of detail may account in part for the oblivion into which they have fallen. Her life, so far as de Ponte had prepared it, was published at Madrid in 1664; the second part appeared there in 1675. It was translated into Latin, abbreviated, and published in 1672-1688, and in an enlarged edition at Naples 1690. All these editions are now very rare. A German translation, in four volumes, appeared in 1861. (See BRIGITTINES.)

ESCORIAL, EDWARD P. GRAHAM.

ESCORIAL y MENDOZA, ANTONIO, b. at Valladolid in 1559; d. there 4 July, 1669. In his sixteenth year he entered the Society of Jesus. Talent and unerring labour won him distinction for scholarship among the leaders of ecclesiastical science in his age. His writings are recognized as classical and challenge criticism as far as their orthodoxy is concerned. For this reason Pascal's efforts (fifth and sixth Provincial Letters) to confute the "cases of conscience" appeared in the "Cases of Conscience", together with his unscrupulous insinuations of adroit hypocrisy on Esco-rial's part, are too base and cowardly to merit serious consideration. At the same time, it is only fair to add that Escorial's writings are not entirely beyond the pale of criticism. Unprejudiced critics find him inept in quotations, dull in doctrine, and lacking in reasoning. Besides the "Manual", Esco-rial's chief works are: "Summula casuum conscientiae" (Pamp- lona, 1626); "Examen et praxis confessiorum" (Lyons, 1617); "Theologia Moralis" (Lyons, 1650; Venice, 1652); "Universe Theologiae Moralis recepta sententia" (Lyons, 1663); "De Tripolli Statu Ecclesiastico" (Lyons, 1663); "De Justitia et de legibus" (Lyons, 1665). Escorial was also a preacher of note. For fifty consecutive years he delivered a series of Lenten sermons with signal success.

ESCORIAL, J. D. O'NEILL.

ESCORIAL, TUIE, a remarkable building in Spain situated on the south-eastern slope of the Sierra Guadarrama about twenty-seven miles north-west of Madrid. Its proper title is El real Monasterio de San Lorenzo del Escoal, Esco-rial being the name of a small town in the vicinity. The structure comprises a monastery, church, pantheon or royal mausoleum, a palace intended as summer and autumn residence for the court, college, library, art-galleries, etc., and is called by Spaniards the eighth wonder of the world. It was begun in 1563, at the order of Philip II, by the
THE ESCORIAL, SITUATED ABOUT TWENTY-SEVEN MILES NORTHWEST OF MADRID
CALLED THE EIGHTH WONDER OF THE WORLD
architect Juan Bautista de Toledo, assisted by Lucas de Escañete and Pedro de Tolosa, and was intended to commemorate the Spanish victory over the French at the battle of St-Quentin in 1557. Probably another reason was that Philip II was obliged by the will of Charles V to erect a royal mausoleum.

Bautista’s plan was ambitious and eccentric; he was influenced by Renaissance ideals and used the Doric style in its severest forms. He died in 1567 and was succeeded by Juan de Herrera and Juan de Minjones. The plan of the building is somewhat in the shape of a gridiron, and is thought to commemorate the fact that its patron, St. Laurence, upon whose feast day, 10 August, the battle of St-Quentin was fought.

The church was consecrated in 1586, and the pantheon was completed in 1654. Charles III built some additions and the building generally was restored under Ferdinand VII. The Escorial has twice been devastated by fire, and in 1867 it was looted by the French troops. It is built of a light-coloured stone resembling granite, for the most part highly polished. The general plan is a parallelogram with a perimeter of 3000 feet; its area is about 500,000 square feet. There are four façades, the finest external aspect being on the southern side. The western or principal front is 744 feet long and 72 feet high, while the towers at each end rise about 200 feet. The main entrance is in the centre of this façade. Monegro’s figure of Saint Laurence is carved in stone, and its height is such that from the slightly elevated position of the church, the bottom of the statue is at an eighty feet wide and leads into the Court of the Kings. To the right are the library, refectory, and convent; the college is on the left. The church is the finest of the several buildings contained within the walls of the Escorial. Its tall towers on either side, the immense dome, with its superimposed massive lantern and cross, and the sober, almost sombre bulk of itsStats, attract attention. The church is of stone throughout, large in plans, and severe in its Doric simplicity. Pompeo Leoni designed and cast the metal statues that ornament the splendid screen. A hall behind the ante-church is known as the library. On the south side of the church is the Court of the Evangelists, a square of 166 feet with two-storied cloisters in the Grecian style. Adjoining it is the monastery of Saint Laurence. Both the monastery and the church were served by Hieronymite monks until 1835; in 1885 Augustinians took charge. The Augustinian monks also conduct the college, the building of which formed an important part of the great structure. On 10 Feb., 1909, it was slightly damaged by fire. The small room which Philip II occupied during the last years of his life and in which he died adjoins the choir of the church, which is a sort of opening in the wall he could see the celebration of the Mass when ill. The corridor of the Hall of the Carvates is supposed to represent the handle of the gridiron.

The Escorial is a treasure-house of art and learning. The civilized world was searched to stock the library with manuscripts from the Arab and Palestinian countries, and the collections at one time the finest in Europe, the Arabic documents being among the most remarkable of the manuscripts. From the Inquisition the library received about one hundred and forty works. It contains 7000 engravings and 35,000 volumes, including 4627 manuscripts; among the last are 1850 Arabic, 582 Greek, and 73 Hebrew manuscripts. Besides, there are many other languages (cf. Casiri, Bibliotheca arab.-hisp. Escur., Madrid, 1760-1770, 2 vols.). Among its manuscript treasures are a copy of the Gospel illuminated in gold on vellum, and the Apocalypse of Saint John richly illustrated. It also contains a large collection of church music, included in which are compositions of the monks, del Valle, Torrese, and Cordeiro, besides the musical works of Antonio Soler. The most important tapestries of the Escorial are in the palace; many of them were designed by Goya and Macilla. The weaving was done chiefly in Madrid, but those designed by Teniers were made in Holland. Since 1837 the finest pictures of the large collection of paintings have been placed in the museum at Madrid. Among the famous artists whose works were or still are in the Escorial are: Carducho, Giordano, Goya, Holbein, Pan- teleon, Reus, Royal, Cordeiro, Tintoretto, Titian, Velázquez, Zucarro, Zurbarán.

**ESDRAS**

ESDRAS 535

ESDRAS

Esdra.—I. A famous priest and scribe connected with Israel’s restoration after the Exile. The chief sources of information touching his life are the canonical books of Esdras and Nehemiah. A group of apocryphal writings is also much concerned with him, but they can hardly be relied upon, as they relate rather to the legendary tales of a later age. Esdras was of priestly descent and belonged to the line of Sadoe (I Esd., vii, 1–5). He styles himself “son of Sareaus” (vii, 1), an expression which is by many understood in a broad sense, as purporting that Sareaus, the chief-priest, spoken of in IV K., xxx, 18–21, was one of Esdras’s ancestors. Nevertheless he is known rather as “the scribe” than as “priest”; he was “a ready scribe and the king’s interpreter” (Haggai, ii, 1), and perhaps especially qualified for the task to which he was destined among his people.

The chronological relation of Esdras’s work with that of Nehemiah is, among the questions connected with the history of the Jewish Restoration, one of the most mooted. Many Biblical scholars still cling to the view that a suggesting order of the sacred text (the allowance being made of a chronological arrangement of the narrative—I Esd., iv, 6–23), and place the mission of Esdras before that of Nehemiah. Others, among whom we may mention Professor Van Hoonacker of Louvain, Dr. T. K. Cheyne in England, and Professor C. F. Kent in America, to do away with the numberless difficulties arising from the interpretation of the main sources of this history, maintain that Nehemiah’s mission preceded that of Esdras. The former view holds that Esdras came to Jerusalem about 458 B.C., and Nehemiah first in 444 and the second time about 430 B.C.; whereas, according to the opposite opinion, Esdras’s mission might have taken place as late as 397 B.C. However this may be, since we are here concerned only with Esdras, we will limit ourselves to summarizing the principal features of his life and work, without regard to the problems involved, which it suffices to have mentioned.

Many years had elapsed after permission had been given to the Jews to return to Palestine; amidst difficulties and obstacles the restored community had settled down again in their ancient home and built a new temple, but the progress, both from the political and the religious point of view, was slow. They chafed under the oppression of the Persian satraps and had grown indifferent and unobservant of the Law. From Babylon, where this state of affairs was well known, Esdras longed to go to Jerusalem and use his authority as a priest and interpreter of the Law to restore things to a better condition. He was in prayer at the top of the temple when a “spectre” clothed him with ample authority to carry out his purpose, and ample support from the royal treasury. The rescript, moreover, ordered the satraps “beyond the river” to assist Esdras liberally and enacted that all Jewish temple officials should be exempt from toll, tribute, or contribution. And thou, Esdras, appoint judges and magistrates, that they may judge all the people, that is beyond the river” (I Esd., vii, 25). Finally, the Law of God and the law of the king were

---

---

**Thomas H. Poole.**
alike to be enforced by severe penalties. The edict left all Jews who felt so inclined free to go back to their own country. Some 1,800 men, including a certain number of priests, Levites, and Nathinites, started with Esdras from Babylon, and after five months the company safely reached Jerusalem. Long-neglected abuses had taken root in the sacred city. These Esdras set himself vigorously to correct, after the silver and gold he had carried from Babylon were brought in and the synagogues were restored. How the work which confronted him was that of dealing with mixed marriages. Regardless of the Law of Moses, many, even the leading Jews and priests, had intermarried with the idolatrous inhabitants of the country. Horror-striken by the discovery of this abuse—the extent of which was very likely unknown heretofore to Esdras—he gave utterance to his feelings in a prayer which made such an impression upon the people that Sekenias, in their names, proposed that the Israelites should put away their foreign wives and the children born of them. Esdras seized his opportunity, and exacted from the congregation an oath that they would comply with this proposition. A general assembly of the people was called by the prince and the Jews, but as Esdras could not be heard easily at such a meeting and a special commission, with Esdras at its head, was appointed to take the matter in hand. For three full months this commission held its sessions; at the end of that time the "strange wives" were dismissed.

What was the outcome of this drastic measure we are not told; Esdras's memoirs are interrupted here. Nevertheless, it is clear that, whereas before, he had returned to Babylon or remained in Jerusalem. At any rate we find him again in the latter city at the reading of the Law which took place after the rebuilding of the walls. No doubt this event had kindled the enthusiasm of the people; and to comply with the popular demand, Esdras brought the Book of the Law. On the first day of the new month, the assembly was held "in the street that was before the watergate", for the purpose of reading the Law. Standing on a platform, Esdras read the book aloud "from the morning until midday". At hearing the words of the Law, which they had so much transgressed, the congregation broke forth into lamentations unsuited to the holiness of the day; Nehemiah then intervened, and thus exulting with the people, the assembly was resumed on the next day by Esdras, and they found in the Law the directions concerning the feast of the Tabernacles. Thereupon steps were at once taken for the due celebration of this feast, which was to last seven days, from the fifteenth to the twenty-second day of Tisri. Esdras continued the public reading of the Law every day of the feast; and two days after its close a strict fast was held, and "they stood and confessed their sins, and the iniquities of their fathers" (II Esd., ix. 2). There was a good opportunity to renew solemnly the covenant between the people and God. This covenant pledged the community to the observance of the Law, the abstention from intermarriage with heathens, the careful keeping of the Sabbath, and the observance of the holy days of the Synagogue. The very existence of which seems to be a myth—and the inventor of the Hebrew vocal signs.

II. Books of Esdras.—Not a little confusion arises from the titles of these books. Esdras A of the Septuagint is III Esdras of St. Jerome, whereas the Greek Esdras B corresponds to I and II Esdras of the Vulgate, which were originally united into one book. Protestant writers, after the Geneva Bible, call I and II Esdras of the Vulgate respectively Ezra and Nehemiah, and III and IV Esdras of the Vulgate respectively I and II Esdras. It would be desirable to have uniformity with the Greek. We shall follow here the termination of St. Jerome.

1 Esdras (Gr. Esdras B, first part; A.V. Ezra).—As remarked above, this book formed in the Jewish canon, together with II Esd., a single volume. But Christian writers of the fourth century adopted the custom—the origin of which is not easy to assign—of considering them as distinct books. This prevailed to such an extent that it found its way even into the Hebrew Bible, where it has remained in use. On the other hand, the many and close resemblances undeniable existing between Esd.-Neh. and Par., and usually accounted for by unity of authorship, have suggested that possibly all these books formed, in the beginning, one single volume, for which the title of "Ecclesiastical Chronicle of Jerusalem" has been pro-
posed as fairly expressing its contents. Should these books be regarded as independent, or as parts of a larger work? There is little discussion as to the union of I and II Esdr., which may well be considered as a single book. As to the opinion holding Esd.—Neh. and Par. to be only one work, although it seems gaining ground among Biblical students, yet it is still strongly opposed by many who deem its arguments unable to outweigh the evidence in the opposite direction. We should not expect to find in I Esd., any more than in II Esd., a complete account of the events connected with the Restoration, even a complete record of the lives of Esdras and Nehemias. The reason for this lies in the author's purpose of simply narrating the principal steps taken in the re-establishment of the theocracy in Jerusalem. Thus, in two parallel parts, our book deals (1) with the return of the Jews under the leadership of Zoroabel; (2) with the return of another band commanded by Esdras. In the former, with the decree of Cyrus (i, 1–4) and the enumeration of the most prominent members of the caravan (ii), we read a detailed account of the rebuilding of the Temple and its successful completion, in spite of bitter opposition (iii–vi). The events therein contained cover twenty-one years (536–515). The latter part deals with facts belonging to a much later date (435 or 397). Opening with the decree of Artaxerxes (vii) and the census of the members of the party, it briefly relates the journey across the desert (viii), and gives all details connected with the enforcement of the law concerning marriages with foreign women (ix–x).

I Esd. is a compilation of the various parts of which differ in nature, in origin, and even in language. At least three of the parts may be recognized: (1) the personal memoirs of Esdras (vii, 27–ix, 15); (2) lists very likely taken from public documents (ii, 1–70; vii, 1–5); (3) Aramaic writings (iv, 7–v, 26), supposing with some scholars to be a portion of “a more comprehensive history of the restored community” (Stade). These the compiler put together into the present shape, adding, of course, now and then some remarks of his own, or some facts borrowed from sources otherwise unknown to us. This compositional character does not, as some might believe, lessen in any way the high historical value of the work. True, the compiler was very likely not endowed with a keen sense of criticism, and he has indiscriminatingly transcribed side by side all his sources "as if all were alike trustworthy" (L. W. Batten); but we should not forget that he has preserved to us pages of the highest value; even those that might be deemed of inferior trustworthiness are the only documents available with which to reconstruct the history of those times; and the compiler, even from the standpoint of modern scientific research, could hardly do anything more praiseworthy than place within our reach, as he did, the sources of information at his disposal. The composition of the work has long been attributed without discussion to Esdras himself. This view, taught by the Talmud, and still admitted by scholars of good standing, however, is refuted by several modern Biblical students, who, although their opinions are widely at variance on the question of the date, fairly agree, nevertheless, that the book is later than 330 B. C.

II Esdars.—See Nehemias.

III Esdars (Gr. Esdras A; Prof. writers, I Esdras)—Although not belonging to the Canon of the Sacred Scripture it has been usually found, ne prosum inter se, in an appendix to the editions of the Vulgate. It is made up almost entirely from materials existing in canonical books. The following scheme will show sufficiently the contents and point out the canonical parallels:

III Esd., i=I Par., xxxv, xxxvi.—History of the Kingdom of Judah from the great Passover of Josiah to the Captivity.

III Esd., ii, 16 (Gr. 15)—31 (Gr. 25)=I Esd., iv, 6—24.—Opposition to the rebuilding of the Temple.

III Esd., v, 7–46 (Gr. 45)=I Esd., ii.—List of those returning with Zoroabel.

III Esd., v, 47 (Gr. 161–73 (Gr. 70)=I Esd., iii, 1–iv, 5.—Altar of holocausts. Foundation of the Temple laid. Opposition.

III Esd., vi, vii–II Esd., v, vi.—Completion of the Temple.

III Esd., ix, 37–56 (Gr. 55)=II Esd., vii, 73–viii, 12.—Reading of the Law by Esdras.

The book is incomplete, and breaks off in the middle of a sentence. True, the Latin version completes the broken phrase of the Greek; but the book in its entirety probably contained also the narrative of the feast of Tabernacles (II Esd., viii). A strange feature in the work is its absolute disregard of chronological order; the history, indeed, runs directly back and forth. The account of Artaxerxes finds a parallel in the story of Darius (iii–v, 6), finally Cyrus (v, 7–73). All this makes it difficult to detect the real object of the book and the purpose of the compiler. It has been suggested that we possess here a history of the Temple from the time of Josias down to Nehemias, and this view is well supported by the subscription of the Old Latin version. Others support that, in the main, the book is rather an early translation of the chronicler's work, made at a time when Par., Esd., and Neh. still formed one continuous volume. Be this as it may, there seems to have been, up to St. Jerome, some hesitation with regard to the reception of the book into the Canon; it was freely quoted by the early Fathers, and included in Origen's "Hexapla". This might be accounted for by the fact that III Esd. may be considered as another recension of canonical Scriptures. Unquestionably our book cannot claim to be Esdras's work. From certain particulars, such as the close resemblance of the Greek with that of the translation of Daniel, some details of vocabulary, etc., scholars are led to believe that III Esd. was compiled, probably in Lower Egypt, during the second century B. C. It is said exact; perhaps, that the above-noted resemblance of style to Dan. might incline one to conclude that both works are possibly from the same hand.

IV Esdars.—Such is the title of the book in most Latin MSS.; the (Prof.) English Apocrypha, however, give it as II Esd., from the opening words: "The second book of Esdras be it written in Amplification of Esdras ..." In later editions, the term Esdras is often called it also the Apocalypse of Esdras. This remarkable work has not been preserved in the original Greek text; but we possess translations of it in Latin, Syriac, Arabic (two independent versions), Ethiopian, and Armenian. The Latin text is usually printed in the appendices to the editions of the Vulgate; but these editions miss seventy verses between vii, 35, and vii, 60. The remaining fragment, which was read in the other versions, was discovered in a Latin MS. by R. L. Bensly, in 1874, and has since repeatedly printed. In the Latin the book is divided into sixteen chapters. The two opening (i, ii) and the two concluding (xiv, xvi) chapters, however, which are not to be found in the Eastern translations, are unhesitatingly regarded by all modern authors as portions of the Fourth Book of Esdras. The body of the Fourth Book, the unity of which appears to be unquestionable, is made up of seven visions which Esdras is supposed to have seen at Baby-
ton, the thirteenth year after the destruction of Jerusalem (the date given is wrong by about a century). In the first vision (iii, 1–v, 20, Esdras is lamenting over the affliction of his people. Why does not God fulfill his promises? Is not Israel the elect nation, and better, despite her "evil heart", than her heathen neighbours? The Angel Uriel chides Esdras for inquiring into things beyond his understanding; the "prophet" is told that the time that is past exceeds the time to come, and the signs of the end are given him.—In another vision (iv, 3–xix, 25) is a glowing picture of the Messianic age. "My son" shall come in his glory, attended by those who did not taste death, Moses, Hoenoch, Elias, and Esdras himself; they shall reign 400 years, then "my son" and all the living shall die; after seven days of the "old silence" the Resurrection and the Judgment.—Next (x, 26–x, 60 Esdras beholds, in the appearance of a woman mourning for her son who died on his wedding day, an apocalyptic description of the past and future of Jerusalem.—This vision is followed by another (xi, 1–xii, 39) representing the Roman Empire, under the figure of an eagle, and by a third (xiii) describing the rise of the Messianic kingdom.—The last chapter (xiii, 40–49) names how Esdras restored the twenty-four books of the O. T. that were lost, and wrote seventy books of mysteries for the wise among the people.

Nothing Book of Esdras is reckoned among the most beautiful productions of Jewish literature. Widely known in the early Christian ages and frequently cited by the Fathers (especially St. Ambrose) it may be said to have framed the popular belief of the Middle Ages concerning the last things. The liturgical use shows its popularity. The second chapter has furnished the verse Requiem aeternam to the Office of the Dead (21–25), the response Lux perpetua lucet sanctitatis of the Office of the Martyrs during Easter time (35), the introit Accipite fœcunditatem for Whitsun (36–37), the words Memento ergo of the Office of the Apostles (45); in like manner the verse Crasitina die for Christmas eve, is borrowed from xvi, 53. However beautiful and popular the book, its origin and chapters, containing evident traces of Christianity, are assigned to the third century (about a. d. 260–270), mainly by the Libri antiqui (ii, 227), an exegetic of the work of a Jew, whether Roman, or Alexandrian, or Palestinian, no one can tell; as to its date, authors are mostly widely at variance, and all dates have been suggested, from 30 B. C. to A. D. 218; scholars, however, seem to rally more and more around the year A. D. 97.

Esquis, Louis-Philippe Mariauchau d', eighth Bishop of Quebec, Canada; b. Quebec, 24 April, 1710; d. 4 June, 1788. After completing his studies at the Quebec Seminary, he was ordained priest in 1734 and appointed pastor of Saint-Pierre-Orleans. After thirty-five years he was called to the episcopal and consecrated coadjutor of Quebec, 12 July, 1772, the first native of Canada to attain to the dignity of bishop. On the resignation of Bishop Briand, he succeeded to the See of Quebec 29 Nov., 1781. In his first pastoral letter he alludes to the appointment of a coadjutor, a precaution justified by age, infirmity, and the necessity of securing a successor. Bishop Jean-François Hubert was nominated coadjutor at that same year; but the approval of the British Government was withheld till 1786. Bishop d'Eskil tried unsuccessfully to supply the dearth of clergy by obtaining priests from France. The British Government favoured preferably the emigration of priests for the settlements in Upper Canada and the Maritime Provinces. Pending the arrival of a missionary for the Acadians, a layman was authorized to baptize and witness marriage contracts. Bishop d'Eskil issued (1787) a pastoral letter to all the faithful declaring himself against exhorting them to union and steadfastness in the faith. He died in the fifty-fifth year of his priesthood and was buried at Saint-Pierre.

LIONEL LINDSAY.

Eskil, Archbishop of Lund, Skane, Sweden; b. about 1100; d. at Clairvaux, 6 (7?) Sept., 1181; one of the most capable and prominent princes of the Church in Scandinavia. A man of profound piety, he was always zealous for the welfare of the church, and was a courageous and unselfish defender of the rights of the See. His policy in the church was to strengthen the clerical ushers. His father Christian was descended from an illustrious dynastic family of Jutland and was related to several royal families. When twelve years of age the young Eskil was received into the renowned cathedral school at Hildesheim. Here, during a dangerous illness, he was honoured by a vision of the bishop of her who, after his death, conducted him, saved him from imminent peril, and restored his health, demanding five measures of different varieties of corn as a thank-offering. This vision was interpreted to mean that Eskil would attain high ecclesiastical dignity and establish five consecrations. In 1151, his uncle, Asser (Asger), the first Archbishop of Lund, nominated him provost of the cathedral. In 1154 he was nominated Bishop of Roskilde, and after Asser's death (1137) succeeded him as archbishop. He successfully defended the metropolitan rights of his see in spite of the protestations of the archbishops of Bremen. He received the pallium from Innocent II through the papal legate, Cardinal Theodigmus, who, with many Scandinavian bishops, was present at the Synod of Hildesheim (1137), and consecrated Eskil to the new cathedral (Romanesque), which he consecrated in 1145. On this occasion he increased the membership and the endowments of the cathedral church, and improved the condition of the cathedral school.

On various occasions Eskil was involved in the internal political disputes of rival kings, even to the extent of being temporarily held captive in his own cathedral, for which he was, however, later indemnified by various land-grants. During the Crusades, Eskil, animated by the example of St. Bernard, also preached a crusade against the pagan Wends, which, unfortunately, proved unsuccessful. He, nevertheless, continued his campaign with youthful ardour, and in his 68th year (1179) the Wends accepted Christianity. In 1152 Cardinal Nicholas Breakspear, as papal legate, was sent to Scandinavia to settle ecclesiastical affairs. Norway was constituted a separate ecclesiastical province with its metropolitan see at Trondhjem (Nidaros). Eskil remained Archbishop of Lund. He was also nominated Primate of Sweden and papal legate for the North. By a proper selection of persons for the higher ecclesiastical offices he effected an immense improvement in the standard of religious life. In 1161 he drew up a code of canon law for Skâne, which, ten years later, was introduced into Seeland. The monastic orders are especially indebted to Eskil. As Bishop of Roskilde he called the Benedictines to Næstved; and the monastery of the Regular Augus-
taminians at Eskilsö near Roskilde most probably traces its origin to him. Later he established the Premonstratensian monastery in Tommerup, Skåne; the Knights of St. John also settled in Lund during his time. There was also, in Zealand, an establishment of Carthusian monks, but only for a short time. The Carthusian monks were special favourites of Eskil, who founded their first monastery in 1144 at Herivadum near Helsingborg, which was soon followed by one at Esrom in North Zealand (1151). From both of these various branches were established. Eskil corresponded with St. Bernard, whom he admired and revered. With a view to being admitted to the Cistercian monastery of St. Mary at Jönköping, his successor, Eskil, faithful to Alexander III, took refuge in foreign parts. Excluding a pilgrimage to Jerusalem, he lived in France (Clairvaux), in close proximity to the pope. In 1164 he consecrated Stephen of Alvastra, a Cistercian monk, first Archbishop of Upsala. After Waldemar's reconciliation with Alexander III, Eskil returned home (1168). Subsequent to the solemn transfer of Skåne, there is an indirect reference to the martyr-duce, Knud Lavard (d. 1131), Waldemar's father, Eskil crowned the king's seven-year-old son at Ringsted, 1170. After another sojourn at Clairvaux (1174-76), the venerable abbot received permission from the pope to resign and to nominate a successor. In the spring of 1177, in the presence of the king and his prelates, Eskil made his辞, and, all consenting, designated Bishop Absalon of Roskilde as his successor. He then retired to Clairvaux, spending his last days as a simple monk. The Cistercians honour him as venerable. The question whether Eskil's testament is a forgery or a genuine document is subject of controversy. Although the celibacy of the clergy did not generally obtain during his time, we may, nevertheless, infer from his strictly religious principles that Eskil did not ignore the provisions of canon law by marrying after his admission to Sacred orders.

PhiliP BaRon voN KeTNENBURG.

Eskimo, a littoral race occupying the entire Arctic coast and outlying islands of America from below Cook Inlet in Alaska to the mouth of the St. Lawrence, a distance of more than five thousand miles, including the coasts of Labrador, Baffin Land, and Greenland, the western and south-east coasts of Greenland, the northern shores of Hudson Bay, and the Aleutian Islands, while one body, the Yuit, has even crossed Bering Strait, and is now permanently established on the extreme point of Siberia. Traditional and historical evidence go to show that the Eskimo formerly extended considerably farther south along Hudson Bay and the St. Lawrence, and perhaps even into New England. With the exception of the Aleut, who differ very considerably from the rest, the various small bands scattered throughout the vast stretch of territory are practically homogeneous, both linguistically and ethnologically, indicating long ages of slow development under similar and highly specialized conditions. In physique they are of medium stature, but strong and hardy, with yellow-brown skin and features, suggesting the Mongolian rather than the Indian, although there is no proof they are of African origin. The only apparent admixture with the Indian occurs on their extreme southern frontier in Alaska. Owing to their constant exposure in the chilling waters, they are not long-lived. In character they are generally peaceable, cheerful, and honest, but with the common savage disregard of morality. The Aleut of the Alaskan peninsula and Bering Island, in particular, have been for a long time, and long been in contact with the Americans, and, therefore, the Eskimo depend entirely upon hunting and fishing for a living, while the seafaring habit has made them perhaps the most expert and daring boatmen in the world. In summer they hunt the caribou and musk-ox on land; in winter they hunt the seal and polar bear in the water or on the ice floes. In travelling by sledge, and to some extent in hunting and sealing, they rely much more upon the dog than upon the canoe. Their houses are grouped into little settlements never more than a day's journey from the ocean. Those for temporary summer use are generally simple tents of deer or seal-skin. Their winter homes are either subterranean excavations roofed over with sod and earth laid upon a framework of timber or whale ribs, or are dome-shaped huts made of driftwood cut from two to three yards high, with passage-ways and smaller rooms of the same material, with sheets of clear ice for windows. The roof of the snow-house is sometimes lined on the inside with skins to prevent dripping from the melting snow. Besides the bed platforms extending around the sides of the rooms, with the spears, harpoons, and other hunting equipment, the most important of which are the snow shoes, are the stone lamps, fed with whale oil, for heating, lighting, and cooking purposes. The characteristic woman's tool is the udu or skin-dressing knife.

Their clothing is of skins with the hair outside, or of the intestinal membranes of the larger sea animals, there being little difference between the costumes of men and women. The men, without exception, wear women, labrets are used in some tribes, but trinkets are seldom worn and the face is not painted. Their food consists of meat and fish, commonly boiled in a stone kettle, with an abundance of blubber and oil, together with berries gathered in the short summer season. From lack of running water, crowded quarters, and greasy environment, they live as a rule extremely frailly, in perycula and huts. They are very ingenious, and expert in the dressing of skins, the shaping of their fishing and hunting implements, and the construction of their skin canoes; they also display great artistic instinct and ability in the carving of designs in walrus ivory. The peculiar Eskimo kiaok or skin boat, made of dressed seal hides stretched around a network of whale ribs or wood, with an arched top only large enough to accommodate the sitting body of one man, is one of the most perfect contrivances in the world for water travel, being light, swift,
and practically unsinkable. It is propelled by means of a double paddle. The sledge is completely a framework of drift-wood, but is sometimes made from the rib bones of whales, or even of a cigar-shaped mass of dried salmon wrapped in skins and frozen solid. The social organization is very simple, each little village community being usually distinct and independent from the others, with little of tribal cohesion or chiefly authority, the head man being rather an adviser than a ruler. Eskimo institutions, like their habits, have all the force of law. The bond of affection between parent and children is very strong, children being seldom corrected or punished, and old people being held in respect. Monogamy is the rule, but polygamy and polyandry are sometimes found. Violations of law, including murder, are punished by the injured individual or his nearest relations.

Their religion, like that of most primitive peoples, is a simple animism, interpreted by the angakoks or medicine-men and enforced by numerous taboos. All the powers of nature, animate and inanimate, on sea and land, are invoked or propitiated as the occasion arises. A special deity in the central region is an old woman of the sea, who presides over storms and sea-animals, flying about among the ships. In the Eskimo districts, some tribes believe in two souls, one of which remains near the dead body until it can enter that of a little child, while the other goes to one of several soul lands, either above or below the earth. There are numerous hunting and eating taboos and ceremonial precautions. Singing, music, story-telling, hand-games, mask-dances, and other competitions may occur, being part of the animal life. A peculiar institution among the central and eastern tribes is that of the so-called "sight song" (Norse nith, contention), or duel of satire, in which two rivals exhaust upon each other their capacity for ridicule until one or the other is declared victor by the company.

The history of the Eskimo goes back beyond the Colunbus voyages, but as far as their first contact with the Scandinavians about the year 1000, almost simultaneously in Greenland and on the coast of Labrador or New England. They do not seem to have approached the neighbourhood of the Scandinavian settlements in South Greenland until about the end of the thirteenth century. In 1379 they made their first attack upon the Greenland colony, and in 1385, a war party, of which ended in the complete destruction of the colony towards the close of the next century, that even the way to Greenland was entirely forgotten, and on the second discovery of the island in 1685, by Davis, it was found occupied only by Eskimo, who remained in sole possession until the second colonization from Denmark in 1721, under the leadership of the missionary Hans Egede. Since then most of the Greenland Eskimo have been gradually civilized and Christianized under Lutheran and Moravian auspices.

In 1732 a Moravian missionary party made a landing on the Eskimo coast of Labrador, but was at once attacked by the natives, who killed six of them. In 1771, however, they attempted a mission settlement at Nain, this time with success, for which ended the complete destruction of the colony towards the close of the next century, that even the way to Greenland was entirely forgotten, and on the second discovery of the island in 1685, by Davis, it was found occupied only by Eskimo, who remained in sole possession until the second colonization from Denmark in 1721, under the leadership of the missionary Hans Egede. ESPEJO

Espejo, Antonio, a Spanish explorer, whose fame rests upon a notable expedition which he conducted into New Mexico and Arizona in 1582-3. According to his own statement, he was b. in Cordova, but the dates both of his birth and of his death are uncertain. Following the reports brought to Mexico from the north by Cabeza de Vaca and the Franciscan monk, Marcos de Nizza, a powerful expedition had been fitted out under the governor, Coronado, in 1540, which after passing through the territories of the Pueblo tribes of the Rio Grande, had penetrated as far as the province of Quivira, probably the country of the Wichita Indians on the Middle Arkansas, returning in the summer of 1542. Two Franciscan volunteers, Father Juan de Padilla and a lay brother, Luis, remained behind, of whom the first was afterwards murdered by the tribe—the first missionary martyr of the United States—while of the fate of the other nothing was ever known.

Forty years later three other Franciscans undertook to repeat the journey. In the summer of 1581, Father Puara, absent from the present Bernallilo, New Mexico, learned from rumours of their death at the hands of the Indians came back to Mexico, and finding the authorities dilatory in the matter, Espejo, a wealthy mining proprietor, offered to equip and lead a search expedition at his own expense. The offer was accepted and, being regularly commissioned, with only fourteen soldiers, a number of Indian Indians and a cavalcade of horses and mules, lie left San Bartolome, Chihuahua, for the north on 10 Nov., 1582. From the junction of the Concho with the Rio Grande he ascended the latter stream, through populous tribes, to the pueblo of Puara, where he learned definitely of the murder of the three missionaries. Fearing punishment, the Indians had deserted their pueblo, and fled to the mountains.

Having accomplished his first purpose, Espejo determined to explore the unknown country beyond. After visiting several of the neighbouring pueblos he crossed over to the Zufi, near the present Arizona line, where he found three Christian Indians of Coronado's earlier expedition. Here several of the party decided to return, and with only nine soldiers and a cavalcade of horses and mules he pushed on to the Hopi (Moqui) villages in northern Arizona, where he met a friendly reception and was given guides to a mountainous country farther on—apparently some fifty miles northward from the site of Prescott—where he procured some rich specimens of silver ore. Returning to the Rio Grande, he visited several other pueblos farther up the river and then went over to the Pecos, noting other mines on the way. In consequence of the threatening attitude of the Tanos tribe he finally decided to return to Mexico, arriving at his starting-point in September, 1583, having accomplished, without bloodshed and with a handful of men, as great results as had been obtained by Coronado with a whole army and at the cost of enormous expense and sacrifice on the Indians. He soon afterwards submitted a report, with a map of the regions explored, but his later proposition to organize a colonizing expedition was defeated by the jealousy of the viceroy.

ESPEZ, ZEGER BERNARD VAN, also called ESPEIUS, a Belgian canonist, b. at Louvain, 9 July, 1616; d. at Amersfoort, Netherlands, 2 Oct., 1728. He completed his higher studies at Louvain, became priest in 1673, and doctor of civil and canon law in 1675. He soon began to teach canon law at the University of Louvain where he was obliged to lecture only for six weeks during the summer vacation; the professor might explain one or other important chapter of the decreets, at his choice. He never accepted any other chair at the university, and he devoted himself entirely to his study. He was consulted by all classes on account of his profound learning in canon law, and his famous work, "Jus canonicum universum", although it raised numerous just criticisms, still remains remarkable. The author is accused, not without reason, of having borrowed considerably from the works of his predecessors, notably from Theodoric.

**Espence (Espenceus), Claude d',** a French theologian, b. in 1511 at Châlons-sur-Marne; d. 5 Oct., 1571, at Paris. He entered the Collège de Navarre in 1536, and four years later was made rector of the University of Paris, before receiving his degree at the Sorbonne, where he was called "d'Espence." He was president of the council of Trent in 1547, having been sent to the council itself, then transferred to Spain, where he lived till 1548, and was then called to the court of Cardinal de Lorraine. Some propositions in his Lenten sermons of 1543 were referred to the Sorbonne, and d'Espence was asked to explain or retract them. He was one of the theologians called to the consultation held at Melun in 1544 in relation to the Council of Trent. In 1547, having been sent to the council itself, he was transferred to the court of Spain, and there he remained until 1548, when he returned to France almost immediately, as the council was again adjourned. He went to another consultation held at Léon in 1560. At the Conference of Poissy (1561) he argued against Beza in favour of tradition, the infallibility of the Church, the Sacrament of Order, etc. The same year an anonymous work was published on the veneration of the Virgin. This work was condemned by the Sorbonne, and as d'Espence was believed to be its author, he was required to subscribe to the sixteenth article of the faculty, which was directed against Protestants.

D'Espence's works, collected in one volume (Paris, 1619), are: "Traité contre l'erreur vieil et renouvelé des Fréres bastides" (Lyons, 1541); "Institution d'un prince chrétien" (1542); "De la vocation du clergé," dedicated to the Duke of Guise; "De clandestinis matrimonis" (Paris, 1561), in which the parents' consent is held to be necessary for the validity of marriage; "Cinq sermons sur traités . . ." (Paris, 1562); "Libellus de privata et publica missâ," a book of 14 sermons, which shows that in the primitive Church Mass was not celebrated unless some of the faithful were present; "De continenta" (Paris, 1563); "De la fidélité" (Brussels, 1570); "Comm. in poster. epist. ad Timotheum" (Paris, 1561); "Comm. in. post. epist. ad Timotheum" (Paris, 1564); "Comm. in epist. ad Titum" (Paris, 1568). To these are added a few works, treatises, discourses, sermons, conferences, and poems.

**Espinel, Vicente, poet and novelist;** b. at Ronda (Malaga), Spain, 1544; d. at Madrid, 1631. He studied at Rome and still younger went as a scholar to Italy and Flanders. Returning to Ronda, he took Holy orders and was made chaplain of the hospital at that place. Later, he went to Madrid, where he lived with Lope de Vega whose friend and teacher he was, and died there in poverty, as we are told by Lope in his "Laurel de Apolo." In 1618 he published at Barcelona a romance description of Spanish habitations, "Relaciones de la Vida y Hechos de el Escondido Marcus de Obregon." The work attracted attention at the time, and afterwards became famous because of several imitations and because of the controversies which it caused. It has been thought that many of the adventures of the hero are to a great extent drawn from those in the life of Espinel himself. The work is admirably written, and the language is pure and simple. Le Sage, the author of "Gil Blas de Santillana," has been accused of borrowing many incidents and characters from Espinel's work. As a poet, Espinel also enjoyed some reputation. He translated Horace's "Art of Poetry", and published his own "Diversas Rimas" in Madrid in 1591. He was the inventor of the measure known at first as the "espinela" and later as the "decima," because it has ten syllables. He was also noted for his musical taste. He added the fifth string to the national guitar. The "Marecos de Obregon" was translated into English by Algernon Langton (London, 1810), into German by Tieck (Breisau, 1827), with a preface and notes, and into French by Vidal d'Audigier (1815).

**VENTURA FUENTES.**

**Espinosa, Alonso de,** Spanish priest and historian of the sixteenth century. Little is known of his early life. He is first heard of towards the end of the sixteenth century in Guatemala where he had become a Dominican. It was while he was in Central America that he first heard of the miracles of Our Lady of Canclaria. This was an image of the Virgin and Child that had been among the Guanches of Tenerife since long before their conversion to Christianity, and had been venerated not only by the Guanches, but later by their conquerors, the Spaniards. Inspired by the fame of this image, Espinosa soon found a member of the fraternity which had possession of it, and resolved to make researches and write a history of the image and its miracles. The result was his "Memorias de Tenerife," published at Seville in 1594. Although the author's main purpose was to record the history of Our Lady of Canclaria, the work is important as being on the whole the best account of the Guanches, a lost race which has left scarcely any remains, even of their language; and also, though less significant, because he gives a good account of the conquest and settlement of the Canary Islands by the Spaniards. The work was divided into four books, in the first of which he describes the Island of Tenerife, gives its early history, and an account of its inhabitants, their customs, food, dress, and marriages, training for war, and mode of interment. The second book gives a detailed history of the image, from its mysterious appearance, on the east coast of the island, to Espinosa's own time. The third book is devoted to the invasion and settlement of the island by the Spaniards. The fourth and last book contains an enumeration of various cures and other miracles performed by the image. A reprint of Espinosa's book appeared at Santa Cruz in 1818, as one of the "Biblioteca Isleflia" series. A translation by Sir Clement Markham was published by the Hakluyt Society in London in 1897.

**Espousals, a contract of future marriage between a man and a woman, who are thereby affiliated. The ecclesiastical law governing this contract was amended by the pontifical decree "Ne Temere", on espousals and marriages, which was published 2 Aug., 1907, and took effect 19 April (Easter), 1908. For the old legislation see BETROTHAL; the present article will be confined to the new. Regarding espousals the decree enact as follows: "Only those espousals are held to be valid and to beget canonical effects which are made in writing, signed by both parties, and either by the parish priest or the ordinary of the place, or at least by two witnesses. In case one or both of the parties be unable to write, this fact is to be noted in the document, and another witness is to add his signature to the contract as above. Together with writing or by the ordinary of the place, or the two witnesses. Until Easter of 1908, there was no written document prescribed for espousals, except for Spain. Like other contracts, the promise of marriage was supposed to bind the parties making it according to prevailing law.
or custom. That caused many difficulties which necessitated this law. Private, clandestine espousals are henceforth of no value in the eyes of the Church. In the United States engagements were, as a rule, not considered effective enough to entail the impediment of public honesty which, unless the engagement were properly revoked, would render null and void the marriage of either allied party with a blood-relation in the first degree of the other allied party, and make any sinful marriage with any other person not so related, unless the engagement had been rightly broken.

These are the canonical effects which are not begotten unless the espousals are made in writing, whether by filling out a blank formula or by writing the document entirely.

As to the obligation of contracting espousals in writing, it is to be noted that the law does not concern itself with the promise of marriage as a matter of conscience; only with establishing the fact that espousals have no legal value and will not be considered in case of contention by ecclesiastical courts, unless they are in writing. Hence, in foro interno the Church leaves the matter to the confessor. The law suggests no particular formula for the contract of espousals, but must, however, express the promise of future marriage. There must be no condition attached contrary to the nature or laws of Christian marriage. No time is assigned by the law within which the promise must be fulfilled; still the time should be reasonable and accord with the common teaching of competent another; the signature of one only is required. By ordinary is meant the bishop of the diocese where the parties happen to be, or his vicar-general, or any one exercising episcopal jurisdiction, as for instance, the administrator when the see is vacant. By parish priest, as used in the present decree, is to be understood not only the priest who legitimately presides over a parish that is in existence, but also the priest who establishes are not canonically erected, the priest to whom the care of souls has been legitimately entrusted in any specified district, and who is equivalent to a parish priest; and also, in missions where the territory has not yet been perfectly divided, every priest generally deputed for the care of souls in any station by the superior of the mission. The ordinary or parish priest cannot depute any other priest to sign in their stead (Reply of S. Congregation of Council, 30 March, 1908). If the signature of the ordinary or of the parish priest cannot be obtained, then at least two witnesses must sign. Their signatures are not needed if either of the foregoing have signed. The witnesses should of course be competent, though they differ in age and sex. The local ecclesiastical authorities must certify that the document is to be deposited. The new law does not provide for the annulment of espousals. The reasons that formerly sufficed to annul them still remain. If espousals were made as prescribed by the new law, their binding force continues until they shall have been dissolven by proof of either or both parties claiming their dissolution.

Joseph Selinger.

Espousals of the Blessed Virgin Mary (Desponsatio Beatae Maril Virginis), a feast of the Latin Church. It is certain that a real marriage was contracted by Joseph and Mary. Still Mary is called "espoused" to Joseph ("his mother Mary was espoused to Joseph", Matt., i, 18) because the matrimony was neverconsummated. The term sponsus is applied to married people until their marriage is consummated (Colveneriis, Cal. Marian., 23 Jan.). Peter d'Ailly, chancellor of the University of Paris (d. 1420), and his famous disciple, Jean Charlier, called Gerson, were the first energetic propagators of the doctrine in Latin Europe. Gerson worked many years to effect the institution of a special votive feast (Thursday of ember week in Advent), the object of which should be the virginal espousal of Mary and Joseph. Gerson's friend, Henry Chicoti, canon of the cathedral chapter of Chartres, had bequeathed a certain sum for the celebration in the cathedral of this feast, and for which he had requested the decree in favor of the institution of the said Office. It seems that Gerson carried out the will of his friend, but tradition does not tell us on what day the feast was celebrated.

The first definite knowledge of a feast in honour of the espousals of Mary dates from 29 Aug., 1517, when with nine other Masses in honour of Mary, it was granted by Leo X to the Nuncio of the Annunciation, Cardinal Giovanni dalle Bande Nere. The feast was celebrated on 22 October as a double of the second class. Its Mass, however, honoured the Blessed Virgin exclusively; it hardly mentioned St. Joseph and therefore did not correspond to the idea of Gerson. Also purely as a feast of Mary it appears in the Missal of the Franciscans, to whom it was granted 21 Aug., by Pius II. In the Missal of the Franciscans it was introduced in 1479. The feast is also celebrated by the Servites and-of the Discalced Carmelites.

The Office of the Nativity of Mary was recited, changing the word Nativitas to Desponsatio. After the religious orders, among the dioceses which adopted the feast of the Espousals of Mary, Arras takes the lead. It has been kept there since 23 Jan., 1556. The first proper Office was composed by Pierre Doré, O.P. (d. 1569), confessor of the Order of St. Francis. By inculcating and following the outlines given by Gerson and commemorated both Joseph and Mary. Pierre Doré in 1546 unsuccesssfully petitioned Paul III to extend the feast of the Desponsatio B.M.V. to the Universal Church. But even without the recommendation of the Apostolic See, the feast was adopted by many Churches. In Moravia it was in the sixteenth century kept on 18 July. In subsequent times Rome did not favour any further extension of the feast, but after it had been refused (1655) to the King of Spain, it was granted to the German Emperor for Austria, 27 Jan., 1678 (23 Jan.); in 1680 it was conceded to Spain, but transferred (13 July, 1682) to 26 Nov., because in Spain the feast of St. Ildefonsus or St. Raymond is kept 23 Jan. In 1680 it was extended to the entire German Empire, 1689 to the Holy Land (double second class), 1702 to the Cistercians (20 Feb.), 1720 to Tuscany, and 1725 to the Pontifical States. In our days it is kept in nearly the entire Latin Church on 23 Jan., in the Spanish-speaking countries on 26 Nov., but it has never been extended to the Universal Church. In Paris the feast was introduced with the Old Mass, when the new Office was introduced, it is again a feast of Mary. The commemoration of St. Joseph in Mass, Vespers, Lauds (decree May 5, 1736) can only be made by a special privilege.

Frederick G. Holweck.

Essence and Existence (Lat. essentia, existentia).—Since they are transcendental, it is not possible to put forward a strict definition of either of the subjects of the present article. Essence, however, is properly described as that whereby a thing is what it is, an equivalent of the τὸ ἐν εἶδος of Aristotle (Metaph. VII, 7). The essence is thus the radical or ground from which the various properties of a thing emanate.
and to which they are necessarily referred. Thus the
notion of the essence is seen to be the abstract counter-
part of the concrete entity; the latter signifying that
which is or may be (ens actus, ens potentia), while the
former points to the reason or ground why it is pre-
cisely what it is. As furnishing in this manner an
answer to the question What? (Quid?)—as, e. g.,
What is man?—essence is equivalent to quiddity; and
thus, as St. Thomas remarks (1, Q. iii, a. 3), the
essence of a thing is that which is expressed by its de-
definition. Essence is the same as essence, and
the compounded of the two points of view as being or acting.
As the essence is that whereby any given thing is that
which it is, the ground of its characteristics and the
principle of its being, so its nature is that whereby it
acts as it does, the essence considered as the founda-
tion and principle of its operation. Hence again St.
Thomas: "Nature is seen to signify the essence of a
thing according as it has relation to its proper opera-
tion" (De ente et essentia, cap. i). Furthermore,
essence is also in a manner synonymous with form,
since it is chiefly by its formal principle that beings
are segregated into one or other of the species. Thus,
while created spiritual things, because they are not
composed of matter and form, are specifically what
they are, essentially, by reason of their essence,
the compounded beings of the corporeal world receive
their specification and determination of nature, or
essence, principally from their substantial forms.
A further synonym of essence is species; but it is to be
carefully noted that essence in this connexion is used
rather with a logical or metaphysical connotation
than with a real or physical one. This is, still more,
true of the compoundable or individual. The real or physical
essence of compound entities consists in, or results
from, the union of the constituent parts. Thus if
we consider man as a being composed of matter and
form, body and soul, the physical essence will be the
body and soul. Apart from any act of abstraction,
body and soul exist in the physical order as the con-
stituent parts, and we may consider man as the result
of a composition of genus proximum and differentia ultima, i. e. of his animality
and his rationality. Here the essence, humanity, is
metaphysical or logical. Thus, while the real es-
ence, to speak still only of composite beings, consists
in the collection of all those physical component parts
that are required to constitute the entity a reality
existing with an anterior existence, without which
it can be neither actual nor potential, the logical
essence is no more than the composition of ideas or no-
tions, abstracted mentally and referred together in
what are known as "second intentions".

This consideration provides a basis for the distinction
of essences according to the degree of physical and
metaphysical complexity or simplicity which they
severally display. The Supreme Being has—or rather
is—a unique and utterly simple essence, free from
all composition, whether physical or metaphysical.
Moreover, in God—otherwise, as we shall see, than in
creatures—there is no distinction of any kind between
His essence and His existence. Spiritual created
beings, however, as we have seen, are essentially
material and form, have physically simple essences;
yet they are composite in that their essences are the
result of a union of genus and differentia, and are not
identical with their existence. In the angel the ess-
ence is the species consequent on this union. Cor-
poral creatures not only share in metaphysical com-
plexity of essence, but have, on account of their
material composition, a physical complexity as well.

The characteristic attributes of the essence are im-
mutability, indivisibility, necessity, and infinity.—
Since the essence of anything is that whereby the thing
is what it is, it follows directly from the principle of
contradiction that essences must be immutable. This,
of course, is not true in the sense that physical essences
cannot be brought into being or cease to exist, nor
that they cannot be decomposed into their constituent
parts, nor yet that they are not subject to accidental
modification. The essence of God alone, as stated
above, is so entirely free from any sort of composition
that it is in the strictest sense immutable. Every
essence, however, is immutable in this, that it cannot
be changed or broken up into its constituent parts and
yet remain the same essence. The attribute is tran-
scendental and is applied to essence precisely as is
rationality. Thus the essence of man may be broken up
into body and soul, animality and rationality, man as
man and humanity as humanity is changeless. One
individual ceases to exist; the essence itself, whether verified or not in concrete ac-
tuality, persists. The definition, "man is a rational
animal", is an eternally immutable truth, verifiable
whenever and wherever the subject man is given,
either as a concrete and existent entity, or as a mere
potentiality. Similarly, essences are said to be in-
divisible; that is to say, an essence ceases to be what
it is when it is broken up into its constituents. Neither
body nor soul alone is man. Neither animality nor
rationality, taken separately, is humanity. There-
fore, precisely as essence, it is indivisible, and
would remain so even if the essences were not separated
in such a manner or had not to be applied with
regard to the region of purely mental phenomena; or, what
practically amounts to the same thing, that fact is
judged to be doubtful and consequently irrelevant;
or again, while the fact itself may be fully admitted,
essence is declared to be unknowable, except in so far
as we may be said to know that it is a fact. Of those
who take up the question of essence, in other words, the region
the essence of things, the most prominent may be cited.
Hobbes and Locke, Mill, Hume, Reid, and
Bain, the Positivists and the Agnostics generally,
together with a considerable number of scientists of
the present day, would not improperly be described as
either doubtful or dogmatically negative as to the
reality, meaning, and cognoscibility of essence. The
proponents and defenders of such a position are by no
means always consistent. While they make state-
ments of their case, based for the most part on purely
subjective views of the nature of reality, that the
essences of beings are nonentities, or at least unknow-
able, and, as a consequence, that the whole science
of metaphysics is no more than a jargon of meaningless
terms and exploded theories, they, on the other hand, express opinions and make implicit admissions that tell strongly against their own thesis. Indeed, it would generally seem that these philosophers, to some extent at least, misunderstand the position which they attack, that they combat a sort of intuitive knowledge of essences, erroneously supposed by them to be claimed by Scholastics, and do not at all grasp the theory of the natures of things as derived from a pain-taking consideration of their characteristic properties. Thus even Bain admits that there may in all probability be some one fundamental property to which all the others might be referred; and he even uses the words "real essence" to designate that property. Mill is pledged to the more hidden agreement on which these more or less superficial officials (the differential leading to the greatest number of interesting properia) depend, is often one of the most difficult of scientific problems. And as it is among the most difficult, so it seldom fails to be among the most important.  

Father Rickaby in his "General Metaphysics" (I, 7, 2, 1, 6) gives the citations from both Mill and Bain, as well as an important admission from Comte, that the natural tendency of man is to inquire for persistent types, a synonym, in this context, for essences. The philosophical tradition, or school, to which allusion is made—although we have anticipated its assertions by the admissions into which its professors have allowed themselves to be drawn by the exigencies of reason and human language—may be divided roughly in two groups, that of Mill and that of Locke. Lotze, with the majority of Scholastics, maintains that the natural disposition of man is to inquire for a general essence of the things he is dealing with. The natural disposition of man is to inquire for a general essence of the things he is dealing with.

ESSENES 546 ESSENES

ence of creatures differ as different entities. Others, among them Dominicus Soto, Lepidi, etc., seem to prefer a distinction other than real. The Scotists, affirming their "formal distinction", which is neither precisely logical nor real, but practically equivalent to virtual, decide the point against a real distinction. Suarez, with many of his school, teaches that the distinction to be made is a logical one. The principal arguments in favour of the two chief views may be summarized as follows:

Thomists: (a) If essence and existence were but one thing, we should be unable to conceive the one without conceiving the other. But we are as readily able to conceive of essence by itself. (b) If there be no real distinction between the two, then the essence is identical with the existence. But in God alone are these identical.

 Suarez: (a) A real physical essence is actual in the line of being and not merely possible. But this actuality must belong to it, as a physical essence; for it is _ex hypothesi_, neither nothing nor merely possible. And the actuality of an essence is its existence. Cardinal Franzelin cast the argument in this form: "Est omni virtue in re positas extra suas causas, in statu actualitatis, ne ratione quidem abstrahli posse formalem existentiam" (De Verbo Incarnato). (b) It is inconceivable how the existence of a real or physical essence should be identical with the essence existence.

These positions are maintained, not only by argument, but by reference to the authority and teaching of St. Thomas, as to whose genuine doctrine there is considerable difference of opinion and interpretation. It does not, however, appear to be a matter of great moment, as Soto remarks, whether one holds or rejects the doctrine of a real distinction between essence and existence, as long as it is agreed that the essence and His creatures are safe-guarded, in that existence is admitted to be of the essence of God and not of the essence of things. And this would seem to be sufficiently provided for even in the supposition that created essences are not distinct from their existences, as one thing is from another, but as a thing from its mode.

FRANCIS AVELING.

ESSENES, one of three leading Jewish sects mentioned by Josephus as flourishing in the second century B.C., the two others being the Pharisees and the Sadducees. Concerning their origin, history, and tenets there has been much inconclusive controversy. The only ancient authorities we have are a few paragraphs in Josephus, somewhat lengthy description in Josephus, and a scanty notice in Pliny, but a following synopsis is derived mainly from the first two. They are styled _Esseni_ by Philo, who derives it from_ Էւսէ։, "holy," and _Essenes_ and _Essenii_ by Josephus. Their number according to both authors was about 4000 and their chief place of residence along the west side, but away from the shore, of the Dead Sea. They also dwelt in various other cities, and some small towns of Palestine; yet some were found in cities. The sect arose about 150 B.C. (the first-named Essene is Judas, 110 B.C.) and disappeared towards the end of the first century A.D. They worshipped one God, Creator and Ruler of all things, omnipotent and omniscient. Moses was held in very high esteem and to blaspheme his name meant death. The sun was held in such reverence as to awaken a suspicion of idolatry. An all-disposing Fate was admitted, yet free will, apparently, was not denied. They refused to join in the Temple sacrifices, for fear of pollution, though they sent gifts thither; it seems that no blood-sacrifice was offered by them, as they claimed that a reverent mind was the best offering to God. The Sabbath was observed with most rigorous exactitude, not even the calls of nature being answered. Assembled in their meeting-places, where they were known as _Hagiores_, they composed the Essene books and explained, generally in an allegorical manner, by some wise member. They washed frequently, as extreme importance was attached to ceremonial purity, and they followed scrupulously the prescriptions against Levitical defilements; even for a junior to touch a senior was pollution to the latter. What their esoteric doctrines were is not known. Death was welcomed, as they held "that bodies are corruptible and the matter composing them is not lasting, but souls are immortal and live for ever, and proceeding from the most subtle ether have been drawn into bodies as into prisons by some natural longing. But when they are set free from the bonds of the flesh then they rejoice as being freed from a long servitude and mount upwards. Among the Greeks, they declare that the good dwell beyond the ocean in a place which is never oppressed by snow or rain-storms or intense heat, but is always calm and refreshed by a cool breeze breathing from the ocean. To the bad souls they allot a gloomy, tempestuous cave full of never-ending torments" (Jos., Bell. I, III). Some conclude from the words just quoted that the Essenes disbelieved in the resurrection of the body.

Among the virtues the Essenes cultivated especially obedience, truthfulness, continence, justice, and temperance; they paid great attention to the sick, respect to the aged, and showed marked kindness and hospitality to strangers. All men were regarded as equal, and slavery was abhorred as contrary to the law of nature. Those guilty of great crimes were punished by long excommunication or perpetual excommunication which, since they were not allowed to eat anything prepared by outsiders, entailed always great hardship and often death. Philosophy was neglected as useless and beyond man's capacity, but ethics was studied with zeal. They were noted for their medical remedies, as nature, as they devoted special care to them, irrespective of creed, and investigated the properties of minerals. They laid claim to magical powers and ability to predict. For the latter some cases are given by Josephus, among them that of the Essene, Mana- hem, who foretold Herod the Great's kingship when he was but a boy without any royal prospects. All those were held in common, their very houses being their own. They laboured principally at agricultural pursuits or made farm implements and household articles, but never weapons of war, which they were not allowed to carry, except a staff for defence when travelling. Harveses and wages went to the stewards, who gave as each needed. Clothes and shoes worn by them still exist. The usual form of trading was allowed except barley. Anointing with oil was not considered a defilement. Servants were forbidden as tempting men to injustice. Their rulers or presidents were elected, likewise their priests—if they can be so called—and their stewards. In towns an officer was appointed to look after travelling brethren. One hundred members constituted a court of justice whose unanimous decision was irrevocable. The non-members were divided into four classes. The daily routine is given as follows: They were up before daybreak and spoke of no profane subject before the sun, and to it they addressed a prayer as if soliciting it to rise. Each
was sent then to his appointed employment at which he worked until the fifth hour, i. e. eleven o'clock, when all assembled and having bathed in water specially exorcised, and clothed themselves in white, they entered the common dining-room quietly and silently.

Before each were placed some bread and a dish of one sort of food. A priest said grace and then, but not before, they might eat. At the end of the repast the prayer was again said, the white garments laid aside, and resuming their ordinary attire they worked until evening, when they supped in the same manner. At the noonday meal, which was regarded apparently as a sacrificial feast, being prepared by their priests, no stranger was admitted, but at supper it was otherwise. As the meal was served and eaten, little lights were made with which to dig a hole and cover their excrement from the rays of the sun. For one year their temperance was tested by observing outside the community its ascetic rules. Then came a fresh trial of two years, during which they shared in the lustral rites, but not in the meals, of the initiated. If found satisfactory they were chosen full members and bound themselves by oath to be loyal to all, but especially to those in authority, and if ever in authority themselves not to outrage others by dress, to love truth and honesty, to conceal nothing from their fellows, and to reveal nothing to strangers, also to keep secret at all costs their books and the names of their angels. This was the only time when Essenes appeared not to eat. At all other times, and it was so sacred that Herod excused them from the oath of allegiance. Some of them observed the same rules yet married, but merely for the order's sake and only after three years' probation and if the woman appeared healthy and likely to bear children.

The Essenes have received an amount of attention during the last three centuries out of all proportion to their number, and Hellenism-fearing in through Alexandria, and the use of the Greek tongue can amply account for foreign elements. The claim that these elements, if divested of their Grecian appearance, could be proved to have their roots in Biblical ground is not lightly to be set aside. The external cause of attention was the bias of English deists and Continental rationalists who strove to metamorphize the Essenes into predecessors from whom gradually and quite naturally Christians developed; and Freemasons pretended to derive, and reference to such chimeras it is enough to say that between Essenism in certain aspects and Christianity there are some points of resemblance; it could not very well be otherwise because Essenism was Judaic in its foundation and Christianity was not destructive but progressive. On the other hand, the differences are fundamental. That John the Baptist and Christ were Essenes are mere assumptions based on similarities which spring naturally and independently from asceticism and voluntary poverty. So likewise the vaunted dependence between Essenism and monasticism can be resolved into necessary traits of any ascetic, communalistic life (see "WuLi") in "Studien u. Mittheilungen d. Ber. Cist. Ord.," xxxiv, 1, 2280; Bardenhewer: Der Jesus der Zeit d. Apostel, 12, 60, 63. As the attitude of Jesus and His disciples is altogether anti Essenism" (Jewish Encyc.). The strict silence about any Messias is due partly perhaps to the secrecy of the Essenes and mainly no doubt to His rejection by their chronicler, Josephus. In fine, our present knowledge of the Essenes is slight and not all of it trustworthy, as is indicated by the method of publication and the absence of any clear and authentic extracts.

E. P. Graham.

Est (Estus), Willem Hessels van, a famous commentator on the Pauline Epistles, b. at Gorcum, Holland, in 1512; d. at Douai, 20 Sept., 1613. Gorcum at that time contained about 5000 inhabitants, among whom the most illustrious belonged to the family of Est, both on his father's and mother's side. Est was not only the most learned but, as is said, the most pious and virtuous of the reformers' Biblical arguments than Est. He received his early education at home, after which he went to Utrecht, where he studied classics and thence proceeded to Louvain, where he spent about twenty years in the study of philosophy, theology, and Holy Scripture. During the last ten years there he was professor of philosophy in one of the colleges. In 1580 he received the degree of Doctor of Theology. He was throughout distinguished by sincere piety, great ability, and application to study. During this
time he was frequently the bearer of pecuniary aid to his uncle, Nicolas Pieck, O.S.F., who was giving missions in Belgium; but the latter would never accept any help. In 1672, while Est was still at Louvain, a great catastrophe befell his native town, which was captured by the Calvinists. His father, brother, and uncle were made prisoners and were in imminent danger of their lives. The father and brother escaped, but Nicolas Pieck, who was then Superior of the Franciscan convent at Gorecum, and eighteen other ecclesiastics, were taken to Brielle, on the sea-coast, and put to death for the Catholic Faith with revolting brutality. His father was twenty-three, his elder brother, forty, and his younger brother, Loysus, twenty, long lived. In 1652 he was made professor of theology at Douai, a position which he retained for thirty-one years. He was also for many years rector of the diocesan seminary and during the last eighteen years of his life chancellor of the University of Douai. He was noted for his piety, modesty, and compassion for the poor, and greatly admired for his vast learning, sound judgment, and ready wit. He was a sweet-voiced, well-spoken, well-written man, and a learned and valuable work, which Romanists and Protestants alike conceived to recommend as an excellent critical help to the exposition of the Apostolic Epistles. The prefaces of Est are particularly valuable." His other works are: "Commentarii in IV libros Sententiarum Petro Lombardi," (Douai, 1657); "Commentaria et Annotationes in prœcipua et difficilia S. Scripturae loca," (Douai, 1617); "Historia Martyrum Gorcomiensium," (Douai 1603; also in the "Acta SS." for July, 1754-847). He also translated the life of Blessed Edmund Campion, S.J., from French into Latin, and left copious notes for a new edition of the works of St. Augustine, Petrarch, and others. He was a freethinker in matters of religion, and a professor of history at the University of Douai. He died in Paris, April 30, 1741.

C. AHERNE.

Establishment (or Established Church), The. —The union of Church and State setting up a definite and distinctive relation between the two is frequently expressed in English by the use of the word "establishment", applied to such union in both Catholic and Protestant States, in spite of the fundamental differences of principle which characterize them. "The Establishment", or "the Established Church" is often used as a distinctive name for the ecclesiastical system established by the law of the realm, whether it is found especially in England. The pre-Reformation Church of England was the religion of the people and its establishment was the spontaneous act of the people; the distinctive feature of the post- Reformation Church is that it was imposed upon the people by legal enactment, and based upon the principle of royal supremacy. Papal jurisdiction was not recognized in England, even by the Crown. And except for the brief return to Catholic unity under Mary (1553-1558) and during the Commonwealth (1649-1660), the arrangements then made have continued to limit the liberty of action of the Anglican body alike in matters doctrinal and disciplinary. Convocation cannot meet, discuss, or enact new canons without royal permission (25 Hen. VIII, c. 19); the effective nomination of archbishops and bishops, etc., rests with the Crown (25 Hen. VIII, c. 19); supreme spiritual and ecclesiastical jurisdiction is annexed to the Crown (25 Hen. VIII, c. 19, ef. 1 Eliz., c. 1). Moreover, no modification of its formularies or doctrines has been permitted without the sanction of an act of Parliament or of the law established", and applies to the Church of England first met with in the canons of the Convocation of 1604 (c. ii), which declares that "the Church of England by law established under the King's Majesty" is a true and Apostolic Church. It is of frequent occurrence in subsequent statutes. The term "established" was applied to the prescribing and settling by law of the liturgical formularies of the English Church in the Act of Uniformity, 1555 (1 Eliz., c. 2, §27). (See Anglicanism; Convocation of the English Clergy.)

BERNARD WARD.

Estaint Jean-Baptiste-Charles-Henri-Hector, Comte d', Marquis de Stailans, a French admiral, b. at the chateau de Ravel (Auxerre), 28 Nov., 1672. He entered the French navy in 1692, served in the army as a colonel of infantry. In 1757, having obtained the rank of brigadier-general, he went to the East Indies, with Lally-Tollendal. Made a prisoner at the siege of Madras (1759), he was set free
on parole, entered the service of the French East India Company, and (with two vessels) destroyed the British factories in Sumatra and the Persian Gulf. He was on his way to France, in 1700, when he fell into the hands of the English and was sent to Plymouth. Released a second time, he was appointed lieutenant-general of the navy in 1763, and vice-admiral in 1777. One year later, he left Toulon in command of a fleet of twelve battleships and fourteen frigates with the intention of assisting the struggling American colonies against Great Britain. Unfavourable winds delayed him and so Admiral Howe’s fleet escaped his pursuit and d’Estaing took possession of Newport (8 August). A great naval battle was about to take place, when a violent storm arose and dispersed the two fleets. After a short sojourn in Boston harbour, he sailed to the West Indies where he took St. Vincent and Grenada (4 July, 1779) and badly damaged Admiral Byron’s fleet. His attempts to retake Savannah, in concert with the Americans, were unsuccessful; a severe wound obliged him to give up the enterprise. On his return to France, in 1780, he fell into disfavour at the court. Three years later, however, he was placed at the head of the Franco-Spanish fleet assembled before Cadiz, that he gave in the third year of his reign, divorced her and ordered the most attractive maidens of the kingdom brought before him that he might select her successor from among them. Among these was Esther, whose rare beauty captivated the king and moved him to place her on the throne. Her uncle Mardochai remained constantly near the palace so that he might advise and counsel her. While at the gate of the palace he discovered a plot of two of the king’s eunuchs to kill their royal master. This plot he revealed to Esther, who in turn informed the king. The plotters were executed, and a reward of the services of Mardochai was entered in the chronicles of the kingdom. Not long thereafter, Aman, a royal favourite before whom the king had ordered all to bow, having frequently observed Mardochai at the gate of the palace and noticed that he refused to prostrate himself before him, cunningly obtained the king’s consent for a general massacre in one day of all the Jews in the kingdom. Following a Persian custom, Aman determined by lot (πῦρ, pl. πῦρτα), that the massacre should take place in a twelvemonth hence. A royal decree was thereupon sent throughout the Kingdom of Persia. Mardochai informed Esther of this and

but peace was signed and no operations took place. He was then made a grandee of Spain. When the French Revolution broke out, he favoured the new ideas. A member of the Assembly of Notables, he was named commandant of the National Guard at Versailles in 1789, and admiral in 1792. He constantly endeavoured to protect the king and at the trial of Marie Antoinette in 1793 spoke in her favour. He was charged with being a reactionary and was sent to the scaffold, 28 April, 1794. In his moments of leisure, he wrote a poem, “Le Rêve” (1755), a tragedy, “Les Thermopyles” (1789), and a book on the colonies, *Jas., Dictionnaire critique de biographie et d’histoire* (Paris, 1872); *Extrait du journal d’un officier de la marine de l’escadre de M. le Comte d’Estaing* (Paris, 1782); *Levot, Le Comte d’Estaing* (Paris, 1857).

LOUIS N. DELMARRE.

Esther (Heb. אסתר, star, happiness; Sept. 'Bĕṣēn'), Queen of Persia and wife of Assuerus, who is identified with Xerxes (485-465 B.C.). She was a Jewess of the tribe of Benjamin, daughter of Abihail, and bore before her accession to the throne the name of Hadassah (Heb. Ḥadāṣāh, myrtle). Her family had been deported from Jerusalem to Babylon in the time of Jechonias (599 B.C.). On the death of her parents she was adopted by her father’s brother, Mardochai, who then dwelt in Susam, the capital of Persia. King Assuerus being angered at the refusal of his wife Vashti to respond to his invitation to attend a banquet begged her to use her influence with the king and thus avert the threatening danger. At first she feared to enter the presence of the king unsanctioned, for to do so was a capital offence. But, on the earnest entreaty of her uncle, she consented to approach after three days, which with her maids she would pass in fasting and prayer, and during which she requested her uncle to have all the Jews in the city fast and pray. On the third day Esther appeared before the king, who received her graciously and promised to grant her request whatever it might be. She then asked him and Aman to dine with her. At the banquet they accepted her invitation to dine with her again on the following day. Aman, carried away by the joy that this honours and favours heaped upon him gave a gallows on which he purposed to hang the hated Mardochai. But that night the king, being sleepless, ordered the chronicles of the nation to be read to him. Learning that Mardochai had never been rewarded for his service in revealing the plot of the eunuchs, he asked Aman, the next day, to suggest a suitable reward for one "whom the king desired to honour". Thinking it was himself that the king had in mind, Aman suggested the use of the king’s apparel and insignia. These the king ordered to be bestowed on Mardochai. At the second banquet, when the king repeated to Esther his offer to grant her whatever she might ask, she informed him of the plot of Aman which involved the destruction of the whole Jewish
people to which she belonged, and pleaded that they should be spared. The king ordered that Aman should be hanged on the gibbet prepared for Mardochai, and, confiscating his property, bestowed it upon the intended victim. He charged Mardochai to address to all the governors of Persia letters authorizing the Jews to defend themselves and to kill all those who, by virtue of the previous decree, should attack the Jews. During the course of the bloody vengeance on their enemies in Susan and other cities, Mardochai then instituted the feast of Purim (lots) which he exhorted the Jews to celebrate in memory of the day which Aman had determined for their destruction, but which had been turned by Esther into a day of triumph. The foregoing story of Esther is told in the present book. Such similarities to Jewish traditions place the tomb of Esther at Hamadan (Ecbatana). The Fathers of the Church considered Esther as a type of the Blessed Virgin Mary. In her poems have found a favourite subject. (R. Schwartz, Esther im deutschen u. neulateinischen Drama des Reformationzeitalters, Oldenburg, 1891.) Book of Esther.—In the Hebrew Bible and the Septuagint the Book of Esther bears only the abbreviated "Esther" as title. But the Jewish rabbis called it also the "volume of Esther" (or), simply the "volume (megillah) to distinguish it from the other four volumes (megilloth), written on separate rolls, which were read in the synagogues on certain feast days. As this one was read on the feast of Purim and consisted largely of the reasons of the author it was called by the Jews of Alexandria the "Epistle of Purim." In the Hebrew canon the book was among the Hagiographa and placed after Ecclesiastes. In the Latin Vulgate it has always been classed with Tobias and Judith, after which it is placed. The Hebrew text that has come down to us varies considerably from that of the Septuagint in the Vulgate. The Septuagint, besides showing many unusual and many peculiarities, contains several additions in the body of the book or at the end. The additions are the portion of the Vulgate text after ch. x, 3. Although no trace of these fragments is found in the Hebrew Bible, they are most probably translations from an original Hebrew or Haldaiic text. Origen tells us that they existed in these fragments and that the purpose to write the book of Esther was given to him by Josephus in his "Antiquities" (XVI). St. Jerome, finding them in the Septuagint and the Old Latin version, placed them at the end of his almost literal translation of the existing Hebrew text, and indicated the place they occupied in the Septuagint. The chapters being thus rearranged, the book may be divided into two parts: the first relating the events which preceded and led up to the excommunication of the Jews (i—iii, 15; xi, 2; xiii, 7); the second showing how the Jews escaped from their enemies and avenged themselves (iv—v, 8; xiii—xv).

The Book of Esther, thus taken in part from the Hebrew Canon and in part from the Septuagint, found a place in the Christian Canon of the O. T. The chapters that are in the Septuagint are deuterocanonical, and, after St. Jerome, were separated from the ten chapters taken from the Hebrew which were called protocanonical (see CANON OF THE HOLY SCRIPTURES). A great many of the early Fathers clearly considered the entire work as inspired, although no one among them found it to his purpose to put the book on its, or its origin, in some of the early catalogues of the Scriptures was accidental or unimportant. The first to reject the book was Luther, who declared that he so hated it that he wished that it did not exist (Table Talk, 59).

His first followers wished only to reject the deuterocanonical parts, whereon these, as well as other deuterocanonical parts of the Scriptures, were declared by the Council of Trent (Sess. IV, de Can. Scriptura) to be canonical and inspired. With the rise of rationalism the opinion of Luther found many supporters. When modern rationalists argue that the Book of Esther is irreverent in character, unlike the other books of the O. T., and therefore to be rejected, they have in mind only the first or proto-canonical part, not the entire book, which is manifestly religious. But, although the first part is not explicitly religious, it contains nothing unworthy of a place in the Sacred Writ, and any way, as Driver points out (Introd. to the Lit. of the O. T.), there is no reason why every part of the Biblical record should show the "same degree of subordination of human interests to the spirit of God".

As to the authorship of the Book of Esther there is nothing but conjecture. The Talmud (Baba Batra 8a) ascribes it to Mardochai; St. Augustine suggests Esdras as the author. Many, noting the writer's familiarity with Persian customs and institutions and with the character of Assuerus, hold that he was a contemporary of Mardochai, whose memoirs he used. But such memoirs and other contemporary documents showing this familiar knowledge could not have been used by the author; although, although the absence in the text of allusion to Jerusalem seems to lead to the conclusion that the book was written and published in Persia at the end of the reign of Xerxes I (485—465 B. c.) or during the reign of his son Artaxerxes I (465—423 B. c.), the text seems to offer several facts which may be adduced with some degree of probability for a later date, viz., (1) an implied statement that Susan had ceased to be the capital of Persia, and a vague description of the extent of the kingdom (i, 1); (2) an explanation of Persian usages that implies unfamiliarity with them on the part of the readers (i, 13, 19; iv, 11; viii, 8); (3) the revengeful attitude of the Jews towards the Gentiles, by whom they felt they had been wronged, and whom with whom the Jews sympathized (vii, 8 sqq.); (4) a diction showing many late words and a deterioration in syntax; (5) references to "the Macedonians" and to the plot of Aman as an attempt to transfer "the kingdom of the Persians to the Macedonians" (xvi, 10, 14). On the strength of these various modern critics have assigned late date to the book; the latest and most extreme is that of critical, and the majority accept the last opinion. Some of the modern critics who have fixed upon late dates for the composition of the book deny that it has any historical value whatever, and declare it to be a work of the imagination, written for the purpose of popularizing the art of Persia and to do their contention they point out in the text what appear to be historical improbabilities, and attempt to show that the narrative has all the characteristics of a romance, the various incidents being artfully arranged so as to form a series of contrasts and to develop into a climax. But what seem to be historical improbabilities and impossibilities are in the nature of things. The modern critics do not agree as to those which seem quite serious. While some, for instance, consider it wholly improbable that Assuerus and Aman should have been ignorant of the nationality of Esther, who was in frequent communication with Mardochai, a well-known Jew, others maintain that it was quite possible and altogether probable that a young woman, known to have been a Jewess, should be taken into the harem of a Persian king, and that with the assistance of a relative she should avert the ruin of her people, which a high official had endeavoured to effect. The seeming improbability of other passages, if not entirely explained, can be sufficiently explained to destroy the conclusion, on this ground, that the book is not historical. As to artistic contrasts and climax to which appeal is made as evidences that the book is the work
of a mere romancer, it may be said with Driver (op. cit.) that fact is stranger than fiction, and that a conclusion based upon such appearances is precarious. There is undoubtedly an exercise of art in the composition of the work, but no more than any historian may use in accumulating and arranging the incidents of his history. A more generally accepted opinion among contemporaries is that the work was substantially historical. Recognizing the author's close acquaintance with Persian customs and institutions, they hold that the main elements of the work were supplied to him by tradition, but that, to satisfy his taste for dramatic effect, he introduced details which were not strictly historical. But the opinion held by many Catholics and some Protestants is, that the work is historical in substance and in detail. They base their conclusions especially on the following: (1) the vivacity and simplicity of the narrative; (2) the precise and circumstantial details, as, particularly, the naming of unimportant personages, the noting of dates and events; (3) the references to the annals of the Persians; (4) the absence of anachronisms; (5) the agreement of the events of the time in which the story is placed; (6) the confirmation of details by history and archaeology; (7) the celebration of the feast of Purim in commemoration of the deliverance of the Jews by Esther and Mardochoi at the time of the Machabees (II Macc. xv., 37), at the time of Josephus (Antiq. of the Jews, XI, vi, § 13), and similar. The explanation of the ephiphanies (An Outline of the History of Jewish Mysticism, 1886, 248 ft.) with which the story of Esther was engraved on a Jewish feast already existing and probably connected with a Persian festival, is only a surmise. Nor has any one else succeeded better in offering an explanation of the feast than that it had its origin as stated in the Book of Esther.

A. L. MAHER.

ESTIENNOT, Claude, Benedictine of the Congregation of Saint-Maur, b. at Varennes, France, 1639; d. at Rome, 1699. He joined the Benedictines at Vendome and was professed there in 1638. After teaching humanities for a short time to the junior monks at Pontlevoy, he was, at the instance of Dom Luc d'Archéy, sent to the Abbey of St-Germain-des-Prés, Paris, where his aptitude for study and research was quickly discovered by Dom Mabillon, whose intimate friend and fellow-worker he became. Together they journeyed on foot through Flanders, visiting all its chief monasteries, and also Belgium and Holland. Sub-prior of St-Martin's, Pontoise, a history of which abbey, in three volumes, was his first published work. Between 1673 and 1682 he compiled his chief work, entitled "Antiquités Bénédictines", in which the monastic traditions of France are treated under the headings of the different dioceses. In 1684 he was appointed the chief librarian of the Library of St-Denis, which post required his residence in Rome for the remainder of his life. On his way thither from Paris he visited numerous monasteries and collected a great quantity of literary material, which he sent back to Dom Mabillon and most of which found its way into the "Annales O.S.B." or the "Gallia Christiana". During the fifteen years he lived in Italy he laboured fruitfully on behalf of his congregation, and he was also greatly trusted by the French bishops, for whom he acted in many matters of ecclesiastical business. He enjoyed the entire confidence of several popes and other high officials of the Church, and he is described as combining all the qualities of a man of letters with great business ability. Besides the history of Pontoise and the "Antiquités", already mentioned, he collected sixteen volumes of "Fragments historiques", but though he did not publish much under his own names, he was convinced that he was a kind of chief librarian of Christianity, and he placed Italy, all of which were open to him, and the results of his researches he forwarded to Dom Mabillon and others at St-Germain-des-Prés, to whom they were of great service. He was buried in the church of the Minims of SS. Trinité de Monti. (Tassin, Hist. lit. de la cong. de St-Maur (Brussels, 1770).

G. CYPRIAN ALSTON.

Estergom, Diocese of. See Gran.

Eternal Gospel. See Joachim of Floris.

Eternity (aeternum, originally aeternus, aevorum, aon-long) is defined by Boethius (De Consol. Phil., VI, vi) as "possession, without succession and perfect, of immaterial life" (immortalis vitae tota simul et perpetuo constitutio). The etymology of the word is, however, in no way adopted by the Schoolmen, at least as applying to eternity properly so called, that of God, implies four things: that eternity is (1) a life, (2) without beginning or end, (3) or succession, and (4) of the most perfect kind. God not only is or exists, but lives. The notion of life, like all notions however abstract or spiritual, which are not to be considered as mere abstractions, must only do not live precisely as anything else with which we are acquainted; and it does not even exist as anything else outside. Our notions of life and existence are derived from creatures, in which life implies change, and existence is something added to essence, thus involving composition. In God there can be no composition of change or succession; but all is pure act or being. The distinction in principle is not thereby justified in saying that we can know nothing and should predicate nothing of God. It is true that, however we conceive Him or in whatever terms we speak of Him, our ideas and terminology are utterly beneath and unworthy of Him. Yet, even while arguing in this way, the agnostic thinks and speaks of Him as He is found in the universe; he does not feel himself compelled as we are to trace things back to their first cause. Yielding to this necessity, we can both think and speak of Him in the highest and most spiritual terms known to us; not merely as existing, for instance, but as living; correcting at once, as far as we can, the form of our thought and predication, by adding that the Divine is by nature, free of the least trace of defect. That is how and why we represent the Divine existence as a life. It is a life, moreover, not only without beginning or end but also without succession —totai simul, that is without past or future; a never-changing instant or "now". It is not so difficult to form some faint notion of a duration which never began and shall never end. We hope that our own life shall be endless; but this is a finite conception, subject to the notion of a series stretching backward without limit in time, to the notion of a material universe that never came into being but was always there. The Divine existence is that and much more: excluding all succession, past and future time—indeed all time, which is succession—and to be conceived as an ever-existing and unchangeable "now".

In forming this notion of eternity it is well to think of the Divine immensity in its relation to space and extended things. One may conceive first a broken straight line—a line of separate dots; then a continuous line within two limits, beginning and end. The line can be, but is not, divided into parts, shorter lines or dots, and if it is divided in both ways. It is like and yet unlike a finite spirit; like, since it has no actual parts or divisions and is limited; yet unlike since it
may be divided, whereas a spirit cannot be divided. Spirit exists whole and entire wherever it exists at all; and though it may fill the space occupied by a human body, let us say, it is whole and entire in every possible part of it; not quite unlike the continuous line. If we further think of the end or limits of the line as removed, of the earth's axis, for instance, as extending indefinitely into space, the line is not only continuous or unbroken but infinite, without end or beginning, yet still divisible; like, but so unlike, the immensity of God. For God is a spirit, and as the human soul fills the space occupied by the body to which it is united, yet is whole and entire in every possible part of that space, so God fills all space whatsoever, extending with indefiniteness into space, the line is not only continuous or unbroken but infinite, without end or beginning, yet still divisible, in the very loose or improper sense in which we may think or speak of God as being "whole". Even the spatial relations of the soul to the body are coarse as compared to those which God's existence bears to that of creatures and the spaces in which they exist or may exist. For however free from extension created spirits may be, they are not incapable of real internal change, real motion of some kind within themselves; whereas God, filling all space, is incapable of the least change or motion, but is so truly the same throughout that He is best conceived as an infinitely extended point, the same here, there, everywhere.

If, now, we apply to the time-line what we have been attempting to think in that of space, the infinite, unchangeable point, the one and indivisible holiness of God becomes evident. The real succession of separate acts or changes (which is known as "time"); nor even the continuous duration of a being which is changeless in its substance, however it may vary in its actions (which is what St. Thomas understands by an eternity); but an endless line of existence and action which not only is not actually indivisible, but cannot be supposed to be so, or the least change or movement whatsoever. And as, if one instant should pass away and another succeed, the present becoming past and the future present, there is necessarily a change or movement of instants; so, if we are not to be irreverent in our concept of God, but to represent Him as best we can, we must try to conceive Him as excluding all, even the least, change or movement. We conceived of the world as though without even a possible past or future, but a never beginning and never-ending, absolutely unchangeable "now". That is how eternity is presented in Catholic philosophy and theology. The notion is of special interest in helping us to realize, however faintly, the relations of God to created things, especially with regard to the created things conceived as the eternal "now", without even a possible past or future, and therefore no foreknowledge, objectively; the distinction which we are wont to draw between His knowledge of intelligence or science or prescience and His knowledge of vision is merely our way of representing things, natural enough to us, but not by any means objective or real in Him. There is no real objective knowledge of any time, or vision of the same, nor between this and the Divine substance, in which there is no possibility of difference or change. That infinitely perfect substantial intelligence, immense as it is eternal, and withal existing entire and immutable as an indivisible point in space and as an indivisible instant in time, is coextensive, in the sense of being intimately present, with the space-extension and the time-extension of all creatures, in that He is beside them, nor parallel with them, nor before or after them; but present in and with them, sustaining them, co-operating with them, and therefore seeing—nonothing—what they may do at any particular point of the space-extension, or at any instant of the time-extension, in which they may exist or operate. God may be conceived as an immoveable point in the centre of a world which, whether as a more or less closely connected group of granulated individuals, or as an absolutely continuous ether mass, turns round Him as a sphere may be supposed to turn in all directions round its centre (St. Thomas, Cont. Gent., I, c. lxvi). The imagery, however, must be corrected by noting that while in the time-line God's duration is an ever-enduring point or "now", His immensity in the space-line is not at all like the centre of a circle or sphere, but is a point, rather, which is coextensive with, in the sense of being intimately present to, every other point, actual or possible, in the continuous or discontinuous mass that is supposed to move around Him.

Bearing this correcting notion well in mind, we may conceive Him as this immovable point in the centre of an ever-moving, though here and there continuous, sphere; but is a point, rather, which is coextensive with, in the sense of being intimately present to, every other point, actual or possible, in the continuous or discontinuous mass that is supposed to move around Him.

The imagery, however, must be corrected by noting that while in the time-line God's duration is an ever-enduring point or "now", His immensity in the space-line is not at all like the centre of a circle or sphere, but is a point, rather, which is coextensive with, in the sense of being intimately present to, every other point, actual or possible, in the continuous or discontinuous mass that is supposed to move around Him.
ETHELBERT

represented as standing with one foot on sea and one on land, and swearing by Him that liveth forever that time shall be no more. Whatever the meaning of the oath may be, it has found an echo in our religious terminology, and we are wont to think and say that with death, and especially with the Last Judgment, time shall cease. The meaning is not that there will be no more succession of any kind; but that there will be no subsequent continuance of any kind that is in any way connected with death, the soul; or in the body that shall have been raised from the dead; or in the heavens and earth as they shall be renewed after Christ’s second coming.

There is, moreover, an implication or connotation of the doctrine that in the future life of souls, whether in heaven or in hell, succession will be accidental, the act in which their essential happiness or misery will consist being continuous and unbroken vision and love, or blinded wrong vision and hatred, of God. This kind of duration is in our ordinary language spoken of as life or death eternal, by a kind of participation, in a wide or improper sense, in the character of the Divine eternity (Billot, op. cit., 119). Questions of the greatest importance have been raised as to the possibility of an eternal reward, in the present life, or of a kind of reward, such as we know having never had a beginning and therefore not needing a first cause; also as to the possibility of eternal creation, in the sense of a being, with or without succession, having had no beginning of existence and yet having been created by God (see Creation). For other questions as to eternity see Heaven, Hell. Eternal life is a term sometimes used by the ancient writers of the Middle Ages to mean death; this being the initial stage or seed, as it were, of the never-ending life of bliss in heaven, which, by a species of metonymy, is regarded as being present in its first stage, that of grace. This, if we are true to ourselves and to God, is sure to pass into the second stage, the life eternal.

The basis of all later treatises on the question of eternity is that of St. Thomas, I, 9, sqq. For a fuller exposition see Suarez, De Deo, I, iv.; idem, Metaphysica, disp. I, sq. 4 sqq.; Lessius, De perfectionibus divinae, IV. For the teaching of early non-Christian philosophers (Plato, Aristotle, and the Neo-Platonists), as of the Fathers, see Petavius, De Deo, III, iii., iv. In the same chapters he discusses the meaning of the term æternum. For the testimony of the Fathers as to the possibility of creation from non-existent matter, see Petavius, De Deo, III, ii., iv. Their evidence is found in the ordinary handbooks of philosophy, on ontology and natural theology; also in the various treatises De Deo Uno.

WALTER McDoNALD.

ETHELBERT

Saint, date of birth unknown; d. 794; King of the East Angles, was, according to the "Speculum Historiale" of Richard of Cirencester (d. about 1401), the son of King Ethelred and Leucina, a lady of Mercia. Brought up in piety, he was elected king on Ethelred’s death, ruled wisely, and was a man of singular humility. Urged to marry, he declared his preference for a life of celibacy, but at length consented to woo Alfrida (Alfrida), daughter of Offa, King of the Mercians. Leofrada forbade evil and tried to dissuade Ethelbert; but in spite of an earthquake, an eclipse of the sun, and a warning vision, he proceeded to her. In consequence, for Bury St. Edmund to Woburn Abbey, where Offa resided. On his arrival Alfrida expressed her admiration for Ethelbert, declaring that Offa ought to accept him as suzerain. Cynethryth, the queen-mother, urged by hatred of Ethelbert, so poisoned Offa’s mind against him, that he accepted the offer of a certain Grimberth to murder their guest. Ethelbert, having Bury St. Edmunds to Woburn Abbey, where Offa resided, was bound and beheaded by Grimberth. The body was buried ignominiously, but, revealing itself by a heavy weight, was translated to the cathedral at Hereford, where many miracles attested Ethelbert’s sanctity. The head was enshrined at Westminster Abbey.

The "Chronicon" of John Brompton (II. 1347) adds a few particulars: the body with the head was first buried on the banks of the Lugg. On the third night the saint commanded one Britfride, a nobleman, to convey his relics to Stratus-wat. During the journey the head fell out of the cart and healed a man who had been blind for eleven years. Finally the body was entombed at Fernley, the present Hereford. According to Bromton, Alfrida became a recluse at Croyland. Offa repented of his sin (Matthew of Paris speaks of a daughter of Ethelbert’s murder), gave much land to the martyr, "which the church of Hereford holds to the present day", founded St. Albans and other monasteries, and made his heroic pilgrimage to Rome.

St. Ethelbert figures largely in the Missal, Breviary, and Hymnal of the Use of Hereford. His feast is on 20 May. Thirteen English churches, both in Hereford and elsewhere, are dedicated in honour of Ethelbert; and one of the gateways of Norwich cathedral bears his name.

PATRICK RYAN.

ETHELBERT

Saint, King of Kent, b. 532; d. 24 February, 616; son of Eormenric, through whom he was descended from Hengest. He succeeded his father, in 590, as King of Kent and made an unsuccessful attempt to found a church in England under the overlordship of Britain. His political importance was doubtless advanced by his marriage with Bertha, daughter of Charibert, King of the Franks (see Bertha, I). A noble disposal to fair dealing is argued by his giving her the old Roman church of St. Martin in his capital of Cantwaraburh (Canterbury) and endowing it with every kind of luxury and all the necessities of religion, although he himself lived in reared, and remained, a worshipper of Odin. The same natural virtue, combined with a quaint spiritual caution and, on the other hand, a large instinct of hospitality, appears in his message to St. Augustine when, in 597, the Apostle of England landed on the Kentish coast (see Augustine of Canterbury).

The interval between Ethelbert’s defeat by Cæwlin and the arrival of the Roman missionaries, the death of the Wessex king had left Ethelbert, at least virtually, supreme in southern Britain, and his baptism, which took place on Whitsunday next following the landing of Augustine (2 June, 597) had such an effect in deciding the minds of his wavering countrymen that as many as 10,000 are said to have followed his example within a few months. Thenceforward Ethelbert became the watchful father of the infant Anglo-Saxon Church. He founded the church which in after-ages was to be the primatial cathedral of all England, besides other churches at Rochester and Canterbury. But, although he permitted, and even helped, Augustine to convert a heathen temple into the church of St. Pancras (Canterbury), he never compelled his heathen subjects to accept baptism. Moreover, as the lawyer who issued their first written laws to the English people (the ninety "Dooms of Ethelbert", A. D. 604) he holds in English history a place thoroughly consistent with his character as the temporal founder of that see which did more than any other for the upbuilding of his Church and the institution of civil and religious institutions in Christendom. When St. Mellitus had converted Sebert, King of the East Saxons, whose capital was London, and it was proposed to make that see the metropolitan, Ethelbert, supported by Augustine, successfully resisted the attempt, and thus fixed for more than nine centuries the individual character of the English Church. He left three children, of whom the only son, Eadbald, lived and died a pagan.
Etheldreda, Saint, Queen of Northumbria, b. (probably) about 630; d. at Ely, 23 June 679. While still very young she was given in marriage by her father, Anna, King of East Anglia, to a certain Tonber, a husband afterwards to have been a bishop. It is said she received as morning gift a tract of land locally known as the land of Ely. She never lived in well-look with Tonber, however, and for five years after his early death was left to foster her vocation to religion. Her father then arranged for her a marriage of political convenience with Egfrid, son and heir to Oswe, King of Northumbria. From this second bridegroom, who is said to have been her cousin, she received certain lands at Hexham, through St. Wilfrid of York she gave these lands to found the minster of St. Andrew. St. Wilfrid was her friend and spiritual guide, but it was to him that Egfrid, on succeeding his father, appealed for the enforcement of his marital rights as against Etheldreda’s religious vocation. The bishop succeeded at first in persuading Egfrid to consent that Etheldreda should live for a time in peace as a sister of the Coldingham nunnery, founded by her aunt, St. Ebba, in what is now Berwickshire. But at last the imminent danger of being forcibly carried off by the king drove her to wander southwards, with only two women in attendance. They made their way to Etheldreda’s own estate of Ely, not, tradition said, without the help of the saint herself, who, on a spot hemmed in by morasses and the waters of the Ouse, the foundation of Ely Minster was begun. This region was Etheldreda’s native home, and her royal East Anglian relatives gave her the material means necessary for the execution of her holy design. St. Wilfrid had not yet returned from Rome, where he had obtained extraordinary privileges for her foundation from Benedict II, when she died, he is said, had circumstantially foretold. Her body was, throughout many succeeding centuries, an object of devout veneration in the famous church which grew up on her foundation. (See Ely, ANCIENT DIOCESE OF.) One hand of the saint is now venerated in the church of St. Etheldreda, Ely Place, London, which enjoys the dual privilege of being the first—and at present (1909) the only—pre-Reformation church in Great Britain restored to Catholic worship. Built in the thirteenth century as a private chapel attached to the town residence of the Bishop of Ely, the structure of St. Etheldreda’s passed through many vicissitudes during the centuries following its dedication. Lord Nelson, in 1805, it was purchased by Father William Lockhart and occupied by the Institute of Charity, of whose English mission Father Lockhart was then superior.

E. MacPherson.
**ETHELHARD** (Ethelheard, Ethelheard), fourteenth Archbishop of Canterbury, England, date of birth unknown, fl. 12 May, 805. Much obscurity surrounds the details of his life previous to his election. He is described by Symeon of Durham as “Hudonis Monasterii,” but it is uncertain what monastery is thus designated. It has been variously located at Louth in Lincolnshire (the most probable identification), Lydd, and Luddersdown in Kent, and at Malmesbury. William of Malmesbury is certainly mistaken in identifying him with Ethelhard, ninth Bishop of Winchester.

The rise of Offa, King of the Mercians (757–796), had divided England into three great states: Northumbria, Mercia, and Wessex. The king sought to consolidate his kingdom by giving it an independent ecclesiastical organization; for although Northumbria had its own archbishopric at York, Mercia, after conquering Kent, was still ecclesiastically subject to the powerful see of Canterbury, then ruled over by Eadbert (766–791). Offa's scheme was to weaken Canterbury's influence by dividing the southern province, and creating a Mercian archbishopric at Lichfield: this he successfully accomplished when on the occasion of the Legatine visit of George and Theophylact, sent by Pepin of France (752–768) in 786–788, Higbert received the pallium at Lichfield. Lichfield and Canterbury was left with only London, Winchester, Sherborne, Rochester, and Selsey as suffragan sees. On the death of Jaenbert (12 Aug., 791), Ethelhard was raised to the see through the influence of Offa, which makes it likely that he was a Mercian abbot. Although he was elected in 791, his consecration only took place on 21 Aug., 793; this delay being probably due to the unwillingness of the Kentish clergy and people to receive a Mercian archbishop, and to his being consecrated by the Archbishop of Lichfield, Hid Offa's policy of separate ecclesiastical organization prevailed, it would have impeded the attainment of national unity, and its defeat by Ethelhard is an event of the highest importance in the making of the English nation. During Offa's lifetime little could be done to restore Canterbury's rights and prestige. The year 796 was full of incident: the nobles of Kent rose in arms, and rallying round Eadbert Praen, a cleric and a member of their royal house, endeavoured to shake off the yoke of the Mercian Offa. As Ethelhard's difficulties increased Aeluin ex- horted his clergy: Offa is against you, but God is by your side; you must bear patiently the severe ecclesiastical measures against the recalcitrant cleric he was obliged to flee. Offa died on 26 July. His successor Egfrith died after a very short reign, about 13 Dec.; Cenwulf succeeded in Mercia, but the struggle continued in Kent until the capture of Eadbert in 798.

The co-operation of Ethelhard and Cenwulf in deposing Eadbert, and in upholding the Mercian cause in Kent, increased the importance of Canterbury, and the archiepiscopal authority of Higbert waned. Cenwulf restored an estate taken from Canterbury by Offa, and wrote in 798 to Pope Leo asking him to examine into the question of the diminution of the rights of that see, and endorsing a letter from Ethelhard on his sufferings. The change of mind is shown by the fact that he returned to his see, and Aeluin wrote exhorting him to do penance for having deserted it. The success of Abbot Wada's mission to Rome, the tone of the letter of Leo III to Cenwulf, and the successful conference with Eanbald II of York, with reference to the restoration of the rights of his see, determined Ethelhard to set out for Rome in 801. Aeluin's friendship once more stood him in good stead; he sent a servant to meet him at St. Josse-sur-mer, and furnished him with letters of recommendation to Charles the Great. Success attended his efforts in Rome. Pope Leo III (796–816) granted his request, and ended the dispute between Canterbury and Lichfield by depriving Lichfield of its recently acquired honours and powers. The pope's decision was officially acknowledged by the Council of Clovesho on 12 Oct., 803, in presence of Cenwulf and his Witam, and Higbert was deprived of his pallium, in spite of Aeluin's plea that so good a missionary and learned prelate should not suffer so much.

It is during Ethelhard's occupancy of the see of Canterbury that we first meet with official records of the profession of faith and obedience made by the English bishops-elect to their metropolitans. The first document of that type is the profession of obedience to the see of Canterbury made in 796 by Bishop Eadulf of Lempster, who, as a suffragan of Lichfield, ought to have been consecrated by Higbert: it would appear to coincide with the collapse of Higbert's archiepiscopal authority at the death of Offa.

**EDWARD MYERS.**

**ETHELWOLD, Saint**, Bishop of Winchester was born there of good parentage in the early years of the tenth century; but his youth was spent at the court of King Athelstan. Ethelwold was consecrated under Elphege the Bald, Bishop of Winchester, who gave him the tonsure and ordained him priest along with Dunstan, at Glastonbury, where he was dean under Saint Dunstan, he was a mirror of perfection. In 935 he became Abbot of Abingdon; and 29 November, 953, was consecrated Bishop of Winchester by Dunstan, with whom and with Ethelhard he worked zealously in combating the general corruption occasioned by the Danish inroads. At Winchester, both in the old and in his new minister (see SWINN, Saint), he replaced the evil-living seculars with monks and refounded the ancient monastery. His labours extended to Chertsey, Milton (Dorsetshire), Ely, Peterborough, and Thornthwaite; expelling the unworthy, rebuilding and restoring; to the rebellious "terrible as a lion," to the meek "gentler than a dove." The epithets "father of monks" and "benevolent bishop" summarize Ethelwold's character as reformer and friend of Christ's poor. Though he suffered much from ill-health, his life as scholar, teacher, prelate, and royal counsellor was ever austere. He was buried in Winchester Cathedral after his death in 973, and was later by Elphege, his successor. Abingdon monastery in the twelfth century had relics of Ethelwold. He is said to have written a treatise on the circle and to have translated the "Regulairis Concordia." His feast is kept on 1 August.

Not to be confounded with the foregoing are (2) St. Ethelwold, monk of Ripon, anchor of Lindsey, d. about 720; feast kept 23 March; and (2) St. Ethel- wold, Abbot of Melrose, Bishop of Lindsey, d. c. 740; feast kept 12 February.

Primary sources for Ethelwold of Winchester are Chronicon of Abingdon, part II, Rolls Series; his Life, by ELECFAC, II, 255; and the Life ascribed to WULFSTAN, preceptor of Winchester, in Acta SS., August, I, 33 sqq. Cf. also Memorials of the Soxham Family, and Dunstan in Rolle's "Liber Hagiographicus," 1900; Bollandists, Bibli. hagi. lat., 308; CHEVALIER, Répertoire, 1337; STANTON, 375; HUNT, in Dict. Nat. Biog., XVIII, 37. For Ethelwold's Benedictine, see Archaeologia, XXIV, 127.

For (3) Acta SS., Feb., II, 604; STANTON, 63; CHEVALIER.

**PATRICK RYAN.**

**ETHERIANUS, Hugh and Leo, brothers, Tuscans by birth, employed at the court of Constantineople under the Emperor Manuel I (Comnenus, 1143–1180). Their name is spelled in various ways: Etherianus, Hetarianus, Eretrianus, etc. Leo is of little importance. We know from his brother (Adv. Græc., I, 20) that he was "occupied in translating the imperial
letters', evidently an interpreter for Latin correspondence. Hugh, who does not seem to have held any official post at court, but was a very learned theologian, had many opportunities of discussing the questions at issue between the Orthodox and Catholics (so he tells us: Adv. Graec. Pref. I., Migne. P. L., CCII, 165). As a result of these disputes he wrote a work in three books: "De haeresibus quae Graeci in Latinos devolvunt, sive quod Spiritus Sanctus ex utroque Patre et Filio procedit" (P. L., CCII, generally quoted as "Adv. Graecos"). This work, the first existing history of the schism which divided the Fishouque was composed in both languages, Latin and Greek. The author sent copies to the Orthodox Patriarch of Antioch, Aimerikos, and to Pope Alexander III (1159-1181), whose letter of acknowledgment is still extant (Ep. xix, Baromus, an. 1177, n. 37, 38). Hugh Etherianus by this treatise obtains a very important place among Catholic controversialists against the Eastern Church. It appears that the emperor, who was well disposed towards Latinis, had suggested that he should write it, having asked him whether they have "any authorities of saints who say that the Holy Ghost proceeds from the Son" (ib., Pref. I, CCII, col. 165). Hugh had used his knowledge of Greek and his opportunities of studying their Fathers so well that he was able to substitute it for all the theologians of the Latin Church of the time. The philosophy of Sts. Athanasius, Cyril of Alexandria, Basil, Gregory Nazianzen, Chrysostom, John Damascene, etc. From the Latins he produced witnesses from Sts. Augustine, Jerome, Gregory I, Ambrose, Hilary. He was also well acquainted with the writings of his adversaries and quotes Photius, Niceus of Thessalonica, Theophylact of Acre, etc. The Latin version is very corrupt and untrustworthy. There are also some incorrect expressions noted by the later editors, such as that God the Father is the cause of the Son (this is a concession to the Greeks that was, however, never made by the Council of Florence; Denzinger, Enchiridion, n. 850). Nevertheless, since it was written this book has been a source of nearly all Latin controversy with the Greeks. St. Thomas Aquinas used it for his "Opus. I, contra errores Graecorum" and Cardinal Bessarion refers to it with great praise (Ep. ad Alex., P. L., CLXI, 328). Hugh Etherianus also wrote a treatise "De regressu animarum ab inferis", in answer to a petition of the clergy of Pisa, and (probably) a short work "De Graecorum malis in eo que son called A "Liber de immortali Deo," written by him, is lost. Migne. P. L., CCII; Herrngröther, Photius (Ratisbon, 1867-1869). II, 646; III, 173 sqq., 814 sqq., etc.; Werner, Thomas von Auign (Ratisbon, 1888), 731-738.

ADRIAN FORTESCUE.

Ethics. I. Definition.—Many writers regard ethics (Gr. ἔθικς) as any scientific treatment of the moral order and divide it into theological, or Christian, ethics (moral theology) and philosophical ethics (moral philosophy). What is usually understood by ethics, however, is philosophical ethics, or moral philosophy, and in this sense the present article will treat the subject. Moral philosophy is a division of practical philosophy. Theoretical, or speculative, philosophy has to do with being, or with the order of acts which are human and which therefore depend upon reason. It is also divided into logic and ethics. The former is based on intellectual activities and teaches the proper method of the acquirement of truth, while the latter directs the activities of the will; the object of the former is the true; that of the latter, the good. Hence ethics may be defined as the science of the moral rectitude of human acts in accordance with the first principles of natural reason. Logic and ethics are normative and practical sciences, because they prescribe norms or rules for human activities and show how, according to these norms, a man ought to direct his actions. Ethics is pre-eminently practical and directive; for it orders the activities of the will, and the latter it is which sets all the other faculties of man in motion. Hence, to order the will is the same as to order the whole man. Moreover, ethics not only directs a man how to act if he wishes to be morally good, but sets before him the absolute obligation he is under of doing good and avoiding evil.

A distinction must be made between ethics and morals, or morality. Every people, even the most uncivilized and uncultured, has its own morality or sum of prescriptions which govern its moral conduct. Nature has so provided that each man establishes for himself a code of moral concepts and principles which are applicable to practical life, without the necessity of awaiting the conclusions of science. Ethics is the scientific or philosophical treatment of morality. The subject-matter of proper ethics is the deliberate, free actions of man; for these alone are in our power, and concerning these alone can rules be prescribed, not concerning those actions which are performed without deliberation, or through ignorance or impulse. Ethics is the science of the good, of whatever has reference to free human acts, whether as principle or cause of action (law, conscience, virtue), or as effect or circumstance of action (merit, punishment, etc.). The particular aspect (formal object) under which ethics considers free acts is that of their moral goodness or the rectitude of order involved in them as human actions. It is a matter of the most deep and ultimate concern whether the action is only a matter of the good, or, conversely, a morally good man and a poor artist or technician. Ethics has merely to do with the order which relates to man as man, and which makes of him a morally good man.

Like ethics, moral theology also deals with the moral activities of man but is concerned with his morality on the origin in supernaturally revealed truth. It presupposes man’s elevation to the supernatural order, and, though it avails itself of the scientific conclusions of ethics, it draws its knowledge for the most part from Christian Revelation. Ethics is distinguished from the other natural sciences which deal with moral conduct of man, as jurisprudence and pedagogy, in this, that the latter deals only with the seen and the sensible, or what is fundamental in human nature, and are therefore subordinate to it. To investigate what constitutes good or bad, just or unjust, what is virtue, law, conscience, duty, etc., what obligations are common to all men, does not lie within the scope of jurisprudence or pedagogy, but of ethics; and yet these notions and principles must be presupposed by the former, must serve them as a ground-work and guide, hence they are subordinated to ethics. The same is true of political economy. The latter is indeed immediately concerned with man’s social activity inasmuch as it treats of the production, distribution, and consumption of material commodities, but this activity is not independent of ethics; industrial life must develop in accordance with the moral law and must be dominated by justice, equity, and love. Political economy was wholly wrong in trying to emancipate itself from the requirements of ethics. Sociology is at the present day considered by many as a science distinct from ethics. If, however, by sociology is meant a philosophical treatment of society, it is a division of ethics; if the inquiry is confined to the nature of society, it is a division of the sciences which have reference to the social
life of man, it is not a single science but a complexus of sciences; and among these, so far as the natural order is concerned, ethics has the first claim.

II. SOURCES AND METHODS OF ETHICS.—The sources of ethics are partly man's own experience and partly the principles and truths proposed by other philosophical disciplines (logic and metaphysics). Ethics takes its origin from the empirical fact that certain general principles and concepts of the moral order are common to all peoples at all times. This fact has long been disputed, but recent ethnological research has placed it beyond the possibility of doubt. All nations distinguish between what is good and what is bad, between good men and bad men, between virtue and vice; they are all agreed in this: that the good is worth striving for, and that evil must be shunned, that the one deserves praise, the other, blame. Though in individual cases they may not be one in denominating the same thing good or evil, they are nevertheless agreed as to the general principle, that good is to be done and evil avoided. Vice everywhere seeks to hide itself or to put on the mask of virtue; it is a universally recognized principle, that we should not do to others what we would not wish them to do to us. With the aid of the truths laid down in the metaphysics of ethics, and without giving a thorough explanation of this undeniable fact, to trace it back to its ultimate causes, then to gather from fundamental moral principles certain conclusions which will direct man, in the various circumstances and relations of life, how to shape his own conduct towards the attainment of the end for which he was created. Thus the proper method of ethics is at once speculative and empirical; it begins with facts, not to advance any assertion in evident contradiction to the revealed truth of Christianity. God is the fountain-head of all truth; whether natural, as made known by Creation, or supernatural as revealed through Christ and the Prophets. As our intellect is an image of the Divine Intellect, so is all certain scientific knowledge the reflex and interpretation of the Creator's thought, which He has expressed in His eternal wisdom. God cannot reveal supernaturally and command us to believe on His authority anything that contradicts the thoughts expressed by Him in His creatures, and which, with the aid of the faculty of reason which He has given us, we can discern in His works. To assert the contrary would be to deny God's omniscience and vanity, or to suppose that God was not the source of all truth. A conflict, therefore, between faith and science is impossible, and hence the Christian philosopher has to refrain from advancing any assertion which would be evidently antagonistic to certain revealed truth. Should his researches lead to conclusions out of harmony with faith, he is to take it for granted that some error has crept into his deductions, just as the mathematician whose calculations openly contradict the facts of experience must be satisfied that his demonstration is at fault.

After what has been said, the following methods of ethics must be rejected as unsound. (1) Pure Rationalism.—This system makes reason the sole source of truth, and therefore at the very outset excludes every reference to Christian Revelation, branding any such reference as degrading and hampering free scientific investigation. The supreme law of science is not freedom, but truth. It is not derogatory to the true dignity and freedom of science to abstain from asserting what, according to Christian Revelation, is manifestly erroneous. (2) Pure Empiricism, which would erect the entire structure of ethics exclusively on the foundation of experience, must also be rejected. Experience can tell us merely of present or past phenomena; but as to what, of necessity, and universally, must, or ought to, happen in the future, experience can give us no clue without bringing in the aid of necessary and universal principles. Closely allied to Empiricism is Historicism, which considers history as the exclusive source of ethics. What has been said of Empiricism may also be applied to Historicism. History is concerned with facts and with the interpretation of facts, and only too often has to rehearse the moral aberrations of mankind. (3) Positivism is a variety of Empiricism; it seeks to emancipate ethics from metaphysics and base it on facts alone. No science can be constructed on the mere foundation of facts, and independently of metaphysics. Every science must set out from evident principles, which form the basis of all certain cognition. Ethic especially is impossible without metaphysics, since it is according to the metaphysical view that we take of the world that ethics shapes itself. Whoever considers man as nothing else than a more highly developed brute will hold different ethical views from one who discerns in man a creature fashioned to the image and likeness of God, possessing a spiritual, immortal soul, and destined to eternal life. Even the one refuses to recognize the freedom of the will destroys the very foundation of ethics. Whether man was created by God or possesses a spiritual, immortal soul which is endowed with free will, or is essentially different from brute creation, all these are questions pertaining to metaphysics. Anthropology, moreover, is necessarily predicated by ethics; and while the rules prescribed for man's actions, unless his nature is clearly understood. (4) Another untenable system is Traditionalism, which in France, during the first half of the nineteenth century, counted many adherents (among others, de Bonald, Baudain), and which advanced the doctrine that complete certainty in religious and moral questions was not to be attained by the aid of reason alone, but only by the light of revelation as made known to us through tradition. They failed to see that for all reasonable belief certain knowledge of the existence of God and of the fact of revelation is necessarily presupposed, and this knowledge cannot be gathered from revelation. Fideism, or, as Paulsen designated it, the Irrationalism of many Protestants, also relies on revelation as the basis of ethics, but to matters in religion. With Kant, it teaches that reason does not rise above the phenomena of the visible world; faith alone can lead us into the realm of the supersensible and instruct us in matters moral and religious. This faith, however, is not the acceptance of truth on the strength of external authority, but rather consists in certain appreciative judgments, i.e., assumptions or convictions which are the result of each one's own inner experiences, and which have, therefore, for him a precise worth, and correspond to his own peculiar temperament. Since these persuasions are not supposed to come within the range of reason, exception to them cannot be taken on scientific grounds. According to this opinion, religion and metaphysics are pure subjective and lose all their objectivity and universality of value.

III. HISTORICAL VIEW OF ETHICS.—As ethics is the philosophical treatment of the moral order, its history does not consist in narrating the views of morality entertained by different nations at different times; this is properly the scope of the history of civilization, and of ethnology. The history of ethics is concerned solely with the various philosophical systems which in the course of time have been elaborated with reference to the moral order. Hence the opinions advanced by the wise men of antiquity, such as Pythagoras (582-500 B.C.), Heraclitus (535-475 B.C.), Confucius (558-479 B.C.), scarcely belong to the history

ETHICS 557
of ethics; for, though they proposed various moral truths and principles, they did so in a dogmatic and didactic, and not in a philosophically systematic manner. Ethics properly so called is first met with among the Greeks, i. e. in the teaching of Socrates (170–390 b. c.). According to him, the ultimate object of human activity is happiness, and the necessary means to reach it, virtue. Since everybody necessarily seeks happiness, no one is deliberately corrupt. All evil arises from ignorance, and the virtues are one and all but so many kinds of prudence. Virtue can, therefore, be imparted by instruction. The disciple of Socrates, Plato (427–347 b. c.), declares that the summit bonum consists in the perfect imitation of God, which is true and good; and it is through the virtuous that this can be fully realized in this life. Virtue enables man to order his conduct, as he properly should, according to the dictates of reason, and acting thus he becomes like unto God. But Plato differed from Socrates in that he did not consider virtue to consist in wisdom alone, but in justice, temperance, and fortitude as well, these constituting the proper harmony of man’s activities. In a sense, the State is man writ large, and its function is to train its citizens in virtue. For his ideal State he proposed the community of goods and of wives and the public education of children. Though Socrates and Plato had been to the fore in this mighty work and had contributed much valuable material to the building of ethics; nevertheless, Plato’s illustrious disciple, Aristotle (384–322 b. c.), is the real founder of systematic ethics. With characteristical keenness he solved, in his ethical and political writings, most of the problems with which ethics concerns itself. Unlike Plato, who began with ideas as the basis of his observations, Aristotle chose rather to take the facts of experience as his starting-point; therefore he is empirically and scientifically, and in their highest and ultimate essence. He sets out from the fact that all men tend to happiness as the ultimate object of all their endeavours, as the highest good, which is sought for its own sake, and to which all other goods merely serve as means. This happiness cannot consist in external goods, but only in the activity proper to human nature—not indeed in such a lower heat of the body, but in the contemplation of what is good. Happiness, though prepared for by the gods, is the object and the reward of virtue, can be attained only through a man’s own individual exertion. With keen penetration Aristotle thereupon proceeds to investigate in turn each of the intellectual and moral virtues, and their treatment of them must, even at the present time, be regarded as in great part correct. The natural and ethical qualities of the human mind, as explained by him. The only pity is that his vision did not penetrate beyond this earthly life, and that he never saw clearly the relations of man to God.

A more hedonistic (ἡδονή, “pleasure”) turn in ethics begins with Democritus (about 460–370 n. c.), who considers a perpetually joyous and cheerful disposition in itself is the highest good. The means thereto is virtue, which makes us independent of external goods—but so far as that is possible—and which wisely discriminates between the pleasures that are to be sought after and those that are to be shunned. Pure Sensualism or Hedonism was first taught by Aristippus of Cyrene (435–334 n. c.), according to whom the greatest possible pleasure, especially sensual pleasure, is the end and supreme good of human endeavour. Epicurus (341–270 n. c.) differs from Aristippus in holding that the largest sum total possible of spiritual and sensual enjoyments, with the greatest possible freedom from displeasure and pain, is man’s highest good. Virtue is the proper directive norm in the attainment of this end.

The Cynics, Antisthenes (445–369 b. c.) and Diogenes of Sinope (414–324 n. c.), taught the direct contrary of Hedonism, namely, that virtue alone suffices for happiness, that pleasure is an evil, and that the truly wise man is above human laws. This teaching soon degenerated into haughty arrogance and open contempt for law and for the remainder of men (Cynicism). The Stoics, Zeno (336–264 n. c.) and his disciples, Cleanthes, Chrysippus, and others, strove to reduce and nullify the nature and the activity of virtue in their opinion, consists in man’s living according to the dictates of his rational nature, and, as each one’s individual nature is but a part of the entire natural order, virtue is, therefore, the harmonious agreement with the Divine Reason, which shapes the whole course of nature. Whether they conceived this relation of God to the world in a pantheistic or a theistic sense, is not altogether clear. Virtue is to be sought for its own sake, and it suffices for man’s happiness. All other things are indifferent and are, as circumstances require, to be striven after or shunned. The passions and affections are bad, and the wise man is independent of them. Among the Roman Stoics were Seneca (4 b. c.–A. D. 65), Epictetus (born about A. D. 50), and Marcus Aurelius (born 121 a. D.), whom, however, at least upon the latter two, Christian influences had already begun to make themselves felt. Cicero (106–43 n. c.) elaborated no new philosophical system of his own, but chose those particular views from the various systems of Grecian philosophy which appeared best to him. He maintained that man’s good is not to be found in the external virtues, consists in what is becoming to man as a rational being distinct from the brute. Actions are often good or bad, just or unjust, not because of human institutions or customs, but of their own intrinsic nature. Above and beyond human laws, there is a natural law embracing all nations and all times, the expression of the rational will of the Most High God, from whom all order in life proceeds. True law is not exempt us. Cicero gives an exhaustive exposition of the cardinal virtues and the obligations connected with them; he insists especially on devotion to the gods, without which human society could not exist.

Parallel with the above-mentioned Greek and Roman ethical systems runs a sceptical tendency, which rejects every metaphysical undertaking as mere hypothesis. With the entire moral order on custom or human arbitrariness, and frees the wise man from subjection to the ordinary precepts of the moral order. This tendency was furthered by the Sophists, against whom Socrates and Plato arrayed themselves, and later on by Carneades, Theodore of Cyrene, and others.

A new epoch in ethics begins with the dawn of Christianity. The Jews did not however never had a clear and definite concept of the relation between God and the world, of the unity of the human race, of the destiny of man, of the nature and meaning of the moral law. Christianity first shed full light on these and similar questions. As St. Paul teaches (Rom., ii., 24 sq.), God has written His moral law in the hearts of all men, even of those outside the influence of Christian Israel: this law manifests itself in the conscience of every man and is the norm according to which the whole human race will be judged on the day of reckoning. In consequence of their perverse inclinations, this law had to a great extent become obscured and distorted among the pagans; Christianity, however, restored it to its pristine integrity. Too, ethics received its richest and most fruitful stimulus. Proper ethical methods were now unfolded, and philosophy was in a position to follow up and
develop these methods by means supplied from its own store-house. This course was soon adopted in the early ages of the Church by the Fathers and ecclesiastical writers, as Justin Martyr, Ireneaus, Tertullian, Clement of Alexandria, Origen, but especially the illustrious Doctors of the Church, Ambrose, Jerome, and Augustine, who, in the exposition and defence of Christian truth, made use of the principles laid down by the pagan philosophers. True, the Fathers had no occasion to treat more extensively than to show that a purely philosophical standpoint, and independently of Christian Revelation; but in the explanation of Catholic doctrine their discussions naturally led to philosophical investigations; this is particularly true of St. Augustine, who proceeded to thoroughly develop along philosophical lines and to establish from that source the first Christian theology, which reaped abundant fruit from the works of Aristotle, which had until then been a sealed treasure to Western civilization, and were first elucidated by the detailed and profound commentaries of Bl. Albert the Great and St. Thomas Aquinas, and pressed into the service of Christian philosophy. The same is particularly true as regards the whole of the political and ethical writings of the Stagirite, in his "Summa contra Gentiles" and his "Questiones disputate", treated with his wonted clearness and penetration nearly the whole range of ethics in a purely philosophical manner, so that even to the present day his works are an inexhaustible source whence ethics draws its supply. On the former account of St. Thomas Aquinas, among the theologians of succeeding ages have continued to build. It is true that in the fourteenth and fifteenth centuries, thanks especially to the influence of the so-called Nominalists, a period of stagnation and decline in philosophy set in, but the sixteenth century is marked by a revival. Ethical questions, also, though largely treated in connection with theology, are again made the subject of careful investigation. We mention as examples the great theologians Victoria, Dominicus Soto, L. Molina, Suarez, Lessius, and De Dugo. Since the sixteenth century special chairs of ethics (moral philosophy) have been erected in many Catholic universities. The larger, purely philosophical works on ethics, however, do not appear until the second half of the eighteenth centuries, as an example of which we may instance the production of Ign. Schwarz, "Institutiones juris universalis naturae et gentium" (1743).

Far different from Catholic ethical methods were those adopted for the most part by Protestants. With the rejection of the Church's teaching authority, each individual became on principle his own supreme teacher and arbiter in matters appertaining to faith and morals. True it is that the Reformers held fast to Holy Writ as the infallible source of revelation, but as to what belongs or does not belong to it, whether, and how far, it is inspired, and what is its meaning—all this was left to the final decision of the individual. The inevitable result was that philosophy arrogantly threw to the winds all regard for revealed truth, and in many cases became involved in the most pernicious errors. Melanchthon, in his "Elementa philosophiae moralis", still clung to the Aristotelian philosophy; so, too, did Hugo Grotius, in his work, "De jure beli et pacis". But Cumberland and his follower, Samuel Pufendorf, set out along rather deviant paths in matters ethical, as much as they identified moral goodness with the utilitarian interests of human society. Pufendorf, moreover, assumed, with Descartes, that the ultimate good and evil lay in the free determination of God's Will, a view which renders the philosophical treatment of ethics fundamentally impossible. Quite an influential factor in the development of ethics was Thomas Hobbes (1588-1679). He supposes that the human race originally existed in a rude condition, where no natural law restrained them in all their actions, as he pleased, and possessed a right to all things, whence arose a war of all against all. Lest destruction should be the result, it was decided to abandon this condition of nature and to found a state in which, by agreement, all were to be subject to one common will (one ruler). This authority orients, by the law of the State, what is to be considered by all as good and as evil, and only then does there arise a distinction between good and evil of universal binding force on all. The Pantheist Baruch Spinoza (1632-1677) considers the impulse to self-preservation as the foundation of virtue. Every being is endowed with the necessary impulse to assert itself, and, as reason demands nothing contrary to nature, it requires each one to follow this impulse and the agent who acts on this ground is useful to him. And each individual possesses power and virtue just in so far as he obeys this impulse. Freedom of the will consists merely in the ability to follow unrestrainedly this natural impulse. Shaftesbury (1671-1713) bases ethics on the affections or inclinations of man. There are sympathetic, idiosympathetic, and unnatural inclinations. The latter are regarded as evil, and the second the private good of the agent, the third are opposed to the other two. To lead a morally good life, war must be waged upon the unnatural impulses, while the idiosympathetic and sympathetic inclinations must be made to harmonize. This harmony constitutes virtue. In the attainment of virtue the subjective guiding principle of knowledge is the "moral reason," while in the overruling influences which guide the actions of others the principle of society is the subjective guiding principle of knowledge. But this theory was further developed by Hutcheson (1691-1747); meanwhile, "common sense" was suggested by Thomas Reid (1710-1796) as the highest norm of moral conduct. In France the materialistic philosophers of the eighteenth century—as Helvetius, de la Mettrie, Holbach, Condillac, and others—dissimilated the teachings of Sensualism and Hedonism as understood by Epicurus.

A complete revolution in ethics was introduced by Immanuel Kant (1724-1804). From the wreck of pure theoretical reason he turned for rescue to practical reason, in which he found an absolute, universal, and categorical moral law. This law is not to be conceived as an enactment of external authority, for this would be heteronomous, but it is the law of our own reason; it is rather the law of our own reason, which is, therefore, autonomous, that is, it must be observed for its own sake, without regard to any pleasure or utility arising therefrom. Only that will is morally good which obeys the moral law under the influence of such a subjective principle or motive as can be willed by the individual to become the universal law for all men. The followers of Kant have selected now one another doctrine from his ethics and combined therewith various pantheistical systems. Fichte places man's supreme good and destiny in absolute spontaneity and liberty; Schleiermacher, in co-operating with the progressive civilization of mankind. A similar view recurs substantially in the writings of Wilhelm Wundt and, to a certain extent, in those of the pessimist, Ed-
ward von Hartmann, though the latter regards culture and progress merely as means to the ultimate end, which, according to him, consists in delivering the Absolute from the torment of existence.

The system of Spencer, who maintained the common good of mankind to be the end and criterion of moral conduct, was renewed on a positivist basis in the nineteenth century by Auguste Comte and has counted many adherents, e.g., in England, John Stuart Mill, Henry Sidgwick, Alexander Bain; in Germany, G. T. Fechner, F. E. Beneke, F. Paulsen, and others. Herbart and Spencer, who regarded human behavior as the product of the hereditary and social Utilitarianism (Altruism) and private Utilitarianism (Egoism) in accordance with the theory of evolution. In his opinion, that conduct is good which serves to augment life and pleasure without any admixture of displeasure. In consequence, however, of man’s lack of adaptation to the conditions of life, such absolute goodness of conduct is not as yet possible, and hence various compromises must be made between Altruism and Egoism.

With the progress of evolution, however, this adaptability to existing conditions will become more and more perfect, and consequently the benefits accruing to the individual from his own conduct will be most useful to society at large. In particular, sympathy (in joy) will enable us to take pleasure in altruistic and self-sacrificing actions.

The great majority of non-Christian moral philosophers have followed the path trodden by Spencer. Starting with the assumption that man, by a series of transformations, was gradually evolved from the brute, and therefore differs from it in degree only, they seek the first traces and beginnings of moral ideas in the brute. Its preparatory work along these lines, and Spencer did not hesitate to descent de brutes-ethics, on the pre-human justice, conscience, and self-control of brutes. Present-day Evolutionists follow his view and attempt to show how animal morality has in man continually become more perfect. With the aid of analogies taken from ethnology, they trace how mankind originally wandered over the face of the earth in semi-savage hordes, knew nothing of marriage or the family, and only by degrees reached a higher level of morality. These are the merest creations of fancy. If man is nothing more than a highly developed brute, he cannot possess a spiritual and immortal soul, and there can no longer be question of the freedom of the will, of the power of good and evil to work in man in consequence be hindered from ordering his life as he pleases and regarding the well-being of others only in so far as it redounds to his own profit.

As the Evolutionists, so too the Socialists favour the theory of evolution from their ethical viewpoint; yet the latter do not base their observations on scientific principles, but on social and economic considerations. According to K. Marx, F. Engel, and other exponents of the so-called “materialistic interpretation of history,” all moral, religious, juridical, and philosophical concepts are but the reflex of the economical conditions of society in the minds of men. Now these social relations are subject to constant change; hence the ideas of morality, religion, etc., are also continually changing. Hence, the materialistic interpretation of history forms its moral and religious ideas in accordance with its own peculiar economical situation. Hence, no universal code of morality exists binding on all men at all times; the morality of the present day is not of Divine origin, but the product of history, and will soon have to make room for another system of morality.

After this materialistic historical interpretation, though derived from other sources, is the system of Relativism, which recognizes no absolute and unchangeable truths in regard either to ethics or to anything else. Those who follow this opinion aver that nothing objectively true can be known by us.

Men differ from one another and are subject to change, and with them, the manner and means of viewing the world about them also change. Moreover the judgments passed on matters religious and moral depend largely upon the inclinations, interests, and character of the person judging, while these latter in turn are constantly varying. Pragmatism differs from Relativism inasmuch as that only is to be considered true which is proven by experience to be useful; and, since the same thing is not always useful, unchangeable truth is impossible.

The great variety of opinions and systems just described, it need not surprise us that, as regards ethical problems, scepticism is extending its sway to the utmost limits, in fact many exhibit a formal contempt for the traditional morality. According to Max Nordau, moral precepts are nothing but “conventional lies”; according to Max Stirner, that alone is good which serves my interests, whereas the common good, the love for all men, etc. are but empty phantoms. Men of genius and superiority in particular are coming more and more to be regarded as exempt from the moral law. Nietzsche is the originator of a school whose doctrines are founded on these principles. According to him, goodness was originally identified with nobility and gentility of rank. Whatever the essence of rank and power, those who were born, were good. The down-trodden proletariat, on the other hand, were bad, i.e. lowly and ignoble, without any other derogatory meaning being given to the word bad. It was only by a gradual process that the oppressed multitude through hatred and envy evolved the distinction between good and bad, essential to modern life. Hence, if the dictum that “morality and conduct of those in power and rank as bad, and their own behaviour as good. And thus arose the opposition between the morality of the master and that of the slave. Those in power still continued to look upon their own egoistic inclinations as noble and good, while the oppressed populace lauded the “instincts of the common herd,” i.e. all those qualities necessary and useful to its existence—even as patience, meekness, obedience, and love of one’s neighbour. Weakness became goodness, cringing obsequiousness became humility, subjection to hated oppressors was obedience, cowardice meant patience. “All morality is one long and audacious deception.” Hence, the value attached to the prevailing concepts of morality is entirely reversed. The view that “morality is above and beyond good and evil as understood in the traditional sense. There is no higher moral order to which men of such calibre are amenable. The end of society is not the common good of its members; the intellectual aristocracy (the over-man) is its own end; in its behalf the common herd, the “too many”, must be reduced to slavery and decimated. As it rests with each individual to decide who belongs to this intellectual aristocracy, so each one is at liberty to emancipate himself from the existing moral order.

In conclusion, one other tendency in ethics may be noted, which has manifested itself far and wide: namely, the effort to make morality independent of all religion. It is clear that many of the above-mentioned ethical systems stand essentially on religion, and this is true especially of materialistic, agnostic, and, in the last analysis, of all pantheistic systems. Apart, also, from these systems, “independent morality”, called also “lay morality”, has gained many followers and defenders. Kant’s ideas formed the basis of this tendency, for he himself founded a code of morality that excluded all religious views, and this is the basis of the ethical systems of his day, and therefore has no need of religion. Many modern moral philosophers—Herbert, Eduard von Hartmann, Zeller, Wundt, Paulsen, Ziegler, and a number of others—have followed Kant in this respect. For several decades practical attempts have been made
to emanate from morality from religion. In France religious instruction was banished from the schools in 1882 by Jules Ferry; De Maistres, De Bonald, and the other tenden
ty manifest a lively activity in what is known as the "ethical movement", whose home, properly speaking, is in the United States. In 1876, Felix Adler, professor at Cornell University, founded the "Society for Ethical Culture", in New York City. Similar societies were formed in other cities. These were consolidated in 1887 into the "Union of the Societies for Ethical Culture". Besides Adler, the chief propagators of the movement by word of mouth and writing were W. M. Salter and Stanton Coit. The purpose of these societies is declared to be "the improvement of the moral life of the members of the societies and of the community to which they belong, without any regard to theological or philo
sophical opinions". In most of the European coun
tries ethical societies were founded on the model of the American organization. All these were combined in 1894 into the "International Ethical Association". Their purpose, i.e. the amelioration of man's moral condition, is indeed praiseworthy, but it is erroneous to suppose that any such moral improvement can be brought about without taking religion into consider
ation. In fact many minds opposed in the abstract are openly antagonistic to all religions, and would therefore do away with denominational schools and supplant religious teaching by mere moral instruction. Even upon purely ethical considerations such attempts must be unhesitatingly rejected. If it be true that even in the case of adults moral instruction without religious instruction is a nonentity, a meaningless sham, how much more so is it in the case of the young? It is evident that, judged from the standpoint of Christianity, these efforts must meet with a still more decided condemn
ation. Christians are bound to observe not only the prescriptions of the natural law, but also all the precepts given by Christ concerning faith, hope, love, charity, wisdom, and the imitation of His life. The Christian, moreover, knows that without Divine grace and, hence, without prayer and the frequent reception of the sacraments, a morally good life for any con
siderable length of time is impossible. From their earliest years, therefore, the young must not only re
ceive thorough instruction in all the Commandments, but also have a liberal and practical training in the means of grace. Religion must be the soil and atmosphere in which education develops and flourishes. While, among non-Catholics ever since the Reformation, and especially since Kant, there has been an increasing tendency to divorce ethics from religion, and to dissolve it into countless venturesome and frequently contradictory systems, Catholics for the most part have remained free from these errors, be
cause, in the Church's infallible teaching authority, the guardian of Christian Revelation, they have al
ways found secure orientation. It is true that to
wards the end of the eighteenth, and at the beginning of the nineteenth century, Illuminism and Rationalism penetrated here and there into Catholic circles and were for a time reserved for the development of philosophical ethics, and in turn to transform the latter according to the Kantian autonomy. This movement, however, was but a passing phase. With a reawakening of the Church's activity, fresh impetus was given to Catholic science, which was of benefit to ethics also and produced in its domain some excellent fruits. Recourse was again had to the illustrious past of Catholicism, while, at the same time, modern ethical systems gave occasion to a thorough investigation and verification of principles of the moral order. Taparelli d'Azzeglio led the way with his great work "Saggio teoretico di diritto naturale appoggiato sul fatto" (1840-43). Then followed, in Italy, Audisio, Ros
mini, Liberatore, Sanserverino, Roselli, Zighiara, Sig
noriello, Schifini, Ferretti, Talamo, and others. In Spain this revival of ethics was due to, among others, E. de Sabines, Zeh, Zorick and Mendive, R. de Cepeda; in France and Belgium, to de Lehen (Institutes de droit naturel), de Margerie, Oneler
L. de, Vallet, Charles Pépin, Pfat, de Pascal, Moulart, Castelein; in England and America, to Joseph Rickaby, Jouin, Russo, Holland, J. J. Ming. In German-speaking coun
tries the reawakening of Scholasticism in general begins with Kleutgen (Theologie der Vorzeit, Philosopie der Philosophen, etc.), in particular with Th. Meyer (Die Grundsätze der Sittlichkeit und des Rechts, 1868; Institutiones juris naturalis seu philosophiae moralis universae, 1885-1900). After them came A. Stöckel, Ferd. Walter, Moy de Sons, C. Guterlet, Fr. J. Stein, Brandis, Costa-Ros
setti, A. M. Weiss, Renninger, Lehmen, Willems, V. Frins, Heinrich Pesh, and others. We pass over the numerous Catholic writers, who have made a speciality of sociology and political economy.

IV. OUTLINES OF ETHICS.—It is clear that the fol
lowing statement cannot pretend to treat thoroughly all ethical questions; it is intended rather to afford
the reader an insight into the most important pro
blems dealt with by ethics, as well as into the methods of treating them. Ethics is divided into parts: general, or theoretical ethics, and special, or applied ethics. General ethics expounds and verifies the general principles and concepts of the moral order; special ethics applies these general principles to the various relations of man, and determines his duties in particular.

It is evident from the knowledge of the visible creation to the certain knowledge of the exis
tence of God, the origin and end of all things. On this fundamental truth the structure of ethics must be based. God created man, as He created all things else, for His own honour and glory. The ultimate end is the proper motive of the will's activity. If God were not the ultimate object and end of His own activ
ity, He would be denied more than mere existence, and freely not be infinitely perfect. He is, then, the ultimate end of all things, they are created for His sake, not, indeed, that He can derive any benefit from them, which would be repugnant to an infinitely perfect being, but for His glory. They are to manifest His goodness and perfection. Irrational creatures cannot and do not possess the faculty of knowing God. They are intended as means to the end for which rational man was created. The end of man, however, is to know God, to love Him and serve Him, and thereby attain to perfect and unending happiness. Every man has within him an irresistible, indestructible desire for perfect happiness; he seeks to be free from every evil and to possess every obtain
able good. This impulse to happiness is founded on man's nature; it is implanted there by His Maker; and hence will be duly realized, if nothing is wanting on the part of man's own individual endeavour. But perfect happiness is unattainable in the present life, if for no other reason, at least for this, that inexorable death puts an end to all earthly happiness. We must therefore consider, in our present study, how man chooses to glorify God here on earth. It will be the crown of victory to be conferred upon him hereafter, if at present he remains subject to God and keeps His Commandments. Only from the viewpoint of eternity do this earthly life and the moral order acquire their proper significance and value. But how does man, considered in this natural order, or apart from every influence of supernatural revelation, come to know what God requires of him here below, or how he is to serve and glorify Him, in order to arrive at eternal happiness?—By means of the natural law.

From eternity there existed in the mind of God the idea of the world, which He freely determined to cre
ate, as well as the plan of government according to
which He wished to rule the world and direct it to its end. This ordination existing in the mind of God from all eternity, is made the basis of the theoretical relations of rational beings, is the eternal law of God (lex aeterna Dei), the source from which all temporal laws take their rise. God does not move and govern His creatures by a mere external directive impetus, as the archer does the arrow, but by means of internal impulses and inclinations, which He has bound up with their natures. Irrational creatures are urged, by means of external forces or motives which excite their natural instincts, to exercise the activity peculiar to them and keep the order designed for them. Man, on the other hand, is a being endowed with reason and free will; as such, he cannot be led by blind impulses and instincts in a manner conformable to his nature, but must needs depend upon practical principles and judgments, which point out to him how he is to order his conduct. These principles must somehow or other be manifested to him by nature. All created things have implanted in their natures certain guiding principles, necessary to their corresponding activities. Man must be no exception to this rule. He must be led by a natural, inborn light, manifesting to him what he is to do or not to do. This natural light is the natural law, and, whatever has arisen in the world, is as it were, the practical application of the natural light. In brief, the natural light, it is not to be understood in the sense that man has innate ideas. Innate ideas do not exist. It is true, nevertheless, that the Creator has endowed man with the ability and the inclination to form many concepts and develop principles. As soon as he comes to the use of reason, he forms, by a natural necessity, certain ideas or principles, which serve him as a theoretical reason—e. g., those of being and not being, of cause and effect, of space and time—and so he arrives at universal principles, e. g., that “nothing can exist and not exist at the same time”, that “everything has its cause”, etc. As it is in the theoretical, so also in the practical order. As soon as reason has been sufficiently developed, and the individual can understand or, if possible, reason for himself, he begins to separate one thing more than a mere animal, by an intrinsic necessity of his nature he forms the concept of good and evil, i. e., of something which is proper to the rational nature which distinguishes him from the brute, and which is therefore worth striving for, and something which is unbecoming and therefore to be avoided. And the more he is in this point of speculative knowledge, the more he is moved by the good and repelled by what is evil, he naturally forms the judgments, that “good is to be done and evil avoided”, that “man ought to live according to the dictates of reason”, etc. From his own reflections, especially when assisted by instruction from others, he easily comes to the conclusion that in these judgments the will of a superior being, of the Creator and Designer of nature, has its expression. Around about him he perceives that all things are well ordered, so that it is very easy for him to discern in them the handiwork of a superior and all-wise power. He himself has been appointed to occupy in the domain of nature the position of lord and master; he, too, must lead a well regulated life, as befits a rational being, not merely because God has so commanded, but also because it is needful to his existence to his Creator. Man did not give himself his nature with all its faculties and inclinations; he received it from a superior being, whose wisdom and power are everywhere manifest to him in Creation.

The general practical judgments and principles: “Do good and avoid evil.” Lead a life regulated according to reason, etc. From which, all the Commandments of the Decalogue are derived, are the basis of the natural law, of which St. Paul (Rom., ii, 11) says, that it is written in the hearts of all men. This law is an emanation of the Divine law, made known to all men by nature herself; it is the expression of the will of nature’s Author, a participation of the created rational being in the eternal law of God. Hence the obligation it imposes does not arise from man’s own autonomy, as Kant held, nor from any other human source, as the ancient philosophers believed; man cannot violate it without rebelling against his master, offending Him, and becoming amenable to His justice. How deeply rooted among all nations this conviction of the higher origin of the natural law was, is shown by the fact that for various violations of it (as murder, adultery, perjury, etc.) they did their utmost to propitiate the angered deity by means of sacrifices and penances. Hence the deity as the guardian and protector of the moral order, who would not allow the contempt of it to go unpunished. The same conviction is manifested by the value all nations have attached to the moral order, a value far surpassing that of all other earthly goods. The noblest among the nations maintained that it was better to undergo any hardship, even death itself, rather than prove recalcitrant to that duty. They understood, therefore, that, over and above earthly treasures, there were higher and more lasting goods whose attainment was dependent upon the observance of the moral order, and this not by reason of any ordinance of man, but because of the law of God. This being premised, it is clearly impossible to divorce morality from religion. Irrational beings do not require for the maintenance of its sanctity and inviolability and of its importance as transcending every other earthly consideration.

The natural law consists of general practical principles (commands and prohibitions) and the conclusions necessarily flowing therefrom. It is the peculiar function of man to formulate these conclusions himself, and, therefore, in each case that is contrary to his convictions, there rises before his mental vision the general precept of the natural law: “Lying is wrong and forbidden.” Hence he avails himself, at least virtually, of the following syllogism: “Lying is forbidden; what you are about to say is a lie; therefore, what you are about to say is forbidden.” The conclusion is thus arrived at by reason, not by the command of the law, and for this very reason every deliberate infractions of a law or precept binding in conscience is a sin, i. e., the violation of a Divine commandment, a rebellion against God, an offence against Him, which will not escape punishment in this life or in the next, unless duly repented of before death. Indeed, all human laws and precepts are fundamentally the conclusions, or more minute definitions of the general conclusion of the natural law, and for this very reason every deliberate infraction of a law or precept binding in conscience is a sin, i. e., the violation of a Divine commandment, a rebellion against God, an offence against Him, which will not escape punishment in this life or in the next, unless duly repented of before death. The problems which here belong to general, or theoretical, ethics, and their investigations in nearly all cases bear upon the natural law, whose origin, nature, subject-matter, obligation, and properties it is the scope of ethics to explain thoroughly and verify. The general philosophical doctrine of right is usually treated in general ethics. Under no circumstances may the example of Kant and others be imitated in
severing the doctrine of right from ethics, or moral philosophy, and developing it as a separate and independent science. The juridical order is but a part of the moral order, even as justice is but one of the moral virtues. The first principles of right: "Give every man his due"; "Commit no injustice"; and the necessary conclusions from these: "Thou shalt not kill"; "Thou shalt not commit adultery", and the like, belong to the natural law, and cannot be deviated from without violating one's duty and one's neighbour's rights, and staining one's conscience with guilt in the sight of God.

Special ethics applies the principles of general, or theoretical, ethics to the various relations of man, and thus deduces his duties in particular. General ethics teaches that man must do good and avoid evil, and must inflict injury upon no one. Special ethics descends to particulars and demonstrates what is good or bad, right or wrong, and therefore to be done or avoided in the various relations of human life. First of all, he treats of man as an individual in his relations to God, to himself, and to his fellow-men. God is the Creator, Master, and ultimate end of man; from these relations arise man's duties toward God. Presupposing his own individual efforts, he is, with God's assistance, to hope for eternal happiness from Him; he must love God above all else, and in the highest kind of manner, that no creature shall be preferred to Him; he must acknowledge Him as his absolute lord and master, adore and reverence Him, and resign himself entirely to His holy Will. The first, highest, and most essential business of man is to serve God. In ease it is God's good pleasure to reveal a supernatural religion and to determine in detail the manner and means of our salvation, that is, to decide how we are to accept this revelation in a spirit of faith, and to order his life accordingly. Here, too, it is plain that to divorce morality from religion is impossible. Religious duties, those, namely, which have direct reference to God, are man's principal and most essential moral duties. Linked to these duties to God are man's duties toward his fellow-men. Man lives himself by an intrinsic necessity of his nature. From this fact Schopenhauer drew the conclusion that the commandment concerning self-love was superfluous. This would be true, if it were a matter of indifference how man loved himself. But such is not the ease; he must love himself with a well-ordered love. He is to be solicitous for the welfare of his soul and to do what is necessary for his own salvation. Man is not his own master, but was created for the service of God; hence the deliberate arbitrary destruction of one's own life (suicide), as well as the freely intended mutilation of self, is a criminal attack upon the proprietary right God has to man's person. Furthermore, every man is supposed to take a reasonable care to preserve his health. He has certain duties also as regards temperance; for the body must not be his master, but an instrument in the service of the soul, and hence must be cared for in so far only as is conducive to this purpose. A further duty concerns the acquisition of external material goods, as far as they are necessary for man's support and the fulfilment of his other obligations. This again involves the obligation to work; furthermore, God has commanded man by the agency for work in order that he might prove himself a beneficial member of society; for idleness is the root of all evil. Besides these self-regarding duties, there are similar ones regarding our fellow-men: duties of love, justice, fidelity, truthfulness, gratitude, etc. The commandment of the love of our neighbour first received its true appreciation in the Christian Dispensation. Though doubtless contained to a certain extent in the natural law, the pagans had so lost sight of the unity of the human race, and of the fact that all men are members of one vast family dependent upon God, that they looked upon every stranger as an enemy.

Christianity restored to mankind the consciousness of its unity and solidarity, and supernaturally transfigured the natural precept to love our neighbour, by demonstrating that all men are children of the same Father in heaven, were redeemed by the blood of the same Saviour, and are destined to the same supernatural salvation. And, better still, Christianity provided man with the grace necessary to the fulfillment of this precept and thus renewed the face of the earth. In man's intercourse with his fellow-men the precepts of justice and of the other allied virtues go hand in hand with the precept of love. There exists a close parallel between the moral teaching of the church and the law of nature; there is question of his goods or property. He expects his fellow-men to respect what belongs to him, and instinctively resists any unjust attempt to violate this proprietorship. He will brook an injury from no one in all that regards his life or health, his wife or child, his honour or good name; he resents faithlessness and ingratitude on the part of others, and the lie by which they would lead him into error. Yet he clearly understands that only then can he reasonably expect others to respect his rights when he in turn respects theirs. Hence the general maxim: "Do not do to others, what you would not wish them to do to you"; from which are naturally deduced the general commandments known to all men: "Thou shalt not kill, nor commit adultery, nor steal, nor lie", and this, as "the neighbour", etc. In this part of ethics it is customary to investigate the principles of right as regards private ownership. Has every man the right to acquire property? Or, at least, may not society (the State) abolish private ownership and assume possession and control of all material goods either wholly or in part, as it may judge best, in order to satisfy the needs of the community the products of their joint industry? This latter question is answered in the affirmative by the Socialists; and yet, it is the experience of all ages that the community of goods and of ownership is altogether impracticable in larger commonwealths, and would, if realized in any case, involve widespread slavery. The reason is, that of special, or applied, ethics, called by many sociology, considers man as a member of society, as far as this can be made the subject of philosophical investigation. Man is by nature a social being; out of his innate needs, inclinations, and tendencies the family and State necessarily arise. And first of all the Creator had to provide for the preservation and propagation of the human race. Man's life is brief; were not propagation of the human kind protected for the species, the world would soon become an uninhabited solitude, a well-appointed abode without occupants. Hence God has given man the power and propensity to propagate his kind. The generative function was not primarily intended for man's individual well-being, but for the general good of his species, and in its exercise, therefore, he must be guided accordingly. This general good cannot be perfectly realized except in a lasting indissoluble monogamy. The unity and indissolubility of the marriage bond are requirements of the natural law, at least in the sense that man may not on his own authority set them aside. Marriage is a Divine institution, for which God Himself has provided by means of definite laws, and in regard to which, therefore, man has no authority to act. The Creator might, of course, dispense for a time from the unity and indissolubility of the marriage tie; for, though the perfection of the married state demands these qualities, they are not of absolute necessity; the principal end of marriage may be attained to a certain degree without them. God could, therefore, for wise reasons, grant a dispensation in regard to them for a certain length of time. Christ restored marriage to the original perfection concomitant with its nature. Moreover, He raised marriage to the dignity of a sacrament and made it symbolic of His own union with the Church; and He did nothing more in
this respect than restore the natural law to its pristine integrity, mankind would be bound to Him by an eternal debt of gratitude. For it was chiefly by means of the unity and indissolubility of the married life that the sanctuary of the Christian family was established, from which mankind has reaped the choicest blessings, and compared with which polygamy has no equivalent to offer. This exposition of the nature of marriage from a theistic standpoint is diametrically opposed to the views of modern Darwinists. According to them, the marriage is the result of gradual development, woman was originally the centre about which the family crystallized, and from this latter circumstance there arises an explanation of the fact that many savage tribes reckon heredity and kinship between families according to the lineal descent of the female. We cannot dwell long upon these fantastic speculations, because they do not consider man as essentially different from the brute, but as gradually developed from a purely animal origin. Although marriage is of Divine institution, not every individual is obliged, as a human being, to embrace the married state. God intends marriage for the propagation of animal life, and moral reason teaches that it is by no means necessary for each and every member of the human family to enter upon marriage, and this particularly at the present time, when the question of over-population presents so many grave difficulties to social economists. In this connexion certain other considerations from a Christian point of view arise, which do not, however, belong to this place. The whole of the marriage is the procreation and education of children, it is incumbent upon both parents to co-operate according to the requirements of sex in the attainment of this end. From this it may readily be gathered what duties mutually exist between husband and wife, and between parents and their children.

The second logical and necessary outcome of the family is the logical and necessary outcome of the family. A completely isolated family could scarcely support itself, at all events it could never rise above the lowest grade of civilization. Hence we see that at all times and in all places, owing to natural needs and tendencies, larger groups of families are formed. A division of labour takes place. Each family devotes itself to some industry and accumulates its surplus over and above its needs, and exchanges its products for those of other families. And now the way is opened to civilization and progress. This grouping of families, in order to be permanent, has need of authority, which makes for security, order, and peace, and in general provides for what is necessary to the common good. Since God intends men to live together in harmony and order, He likewise desires such authority in the community as will have the right to procure what is needful for the common good. This authority, considered in itself and apart from the human vehicle in which it is placed, comes immediately from God, and hence, within its proper sphere, it imposes upon the consciences of the subjects the duty of obedience. In the light of this, deduction from the primitive State, howsoever small this may be. By further development, or by coalition with other States, larger States the virtually corporate power is vested with its proper dignity and inviolability, and at the same time is circumscribed by necessary limitations. A group of families under a common authoritative head, and not subject to any similar aggregation, forms the primitive State, howsoever small this may be. By further development, or by coalition with other States, larger States come into existence. It is not the purpose of the State to supplant the families, but to safeguard their rights, to protect them, and to supplement their efforts. It is not to forfeit their rights or to abandon their proper functions that individuals and families combine to form the State, but to be secured in these rights, and to find support and encouragement in the discharge of the various duties assigned them. Hence the State may not deprive the family of its rights to educate and instruct the children, but must simply lend its assistance by supplying, wherever needful, opportunities for the better accomplishment of this duty. Only so far as the order and prosperity of the body politic requires it, may the State circumscribe individual effort and activity. In other words, the State is to posit the conditions under which, provided private endeavour had failed, each family might attain to true earthly happiness. By true earthly happiness is meant such as not only does not interfere with the free performance of the individual's moral duties, but even upholds and encourages him therein. Having defined the end and aim of the State, we are now in a position to examine in detail its various functions and their extent. Private morality is not subject to State interference; but it is the proper function of the State to concern itself with the interests of public morality. It must not only prevent vice from parading in public and becoming a snare to many (e. g. through immoral literature, theatres, plays, or other means of seduction), but also see to it that the public ordinances and laws facilitate and aid virtuous conduct. It may not, however, allow the adherence to the State to affect indifference as regards religion; the obligation to honour God publicly is binding upon the State as such. It is true that the direct supervision of religious matters in the present supernatural order was entrusted by Christ to His Church; nevertheless, it is the duty of the Christian State to protect and uphold the Church, the one Church founded by Christ. Of course, owing to the unceasing invasion of Christians into numerous religious systems, such an intimate relation between Church and State is at the present day but rarely maintained. The separation of Church and State, with complete liberty of conscience and worship, is often the only practical modus vivendi. In circumstances such as these the State has to be satisfied to entrust the regulation of various bodies, and to protect the latter in those rights which have reference to the general public order. The education and instruction of children belongs per se to the family, and should not be monopolized by the State. The latter has, however, the right and the duty to suppress schools which disseminate immoral doctrine or foster the practice of vice, beyond which control it leaves the individual liberty of parental influence to develop. It may, however, assist the individual in his efforts to secure an education, and, in case these do not suffice, it may establish schools and institutions for his benefit. Finally, the State has to exercise important economical functions. It must protect private property and see to it that in man's industrial life the laws affecting justice be carried out in all their force and vigour. But its duties do not stop here. It should pass such laws as will enable its subjects to procure what is needed for their respectable sustenance and even to attain a moderate competency. Both excessive wealth and extreme poverty involve many dangers to the individual and to society. Hence, the State should pass such laws as will favour the steady and slow climb of the labouring classes to their numbers. Much can be done to bring about this desirable condition by the enactment of proper tax and inheritance laws, of laws which protect the labouring, manufacturing, and agricultural interests, and which supervise and control trusts, syndicates, etc.
ETHICS

monarchy; the aristocracy; the democracy. The monarchy is hereditary or elective, according as success to supreme power follows the right of primogeniture of a family (dynasty) or is subject to suffrage. At the present day the only existing kind of monarchy is the hereditary, the elective monarchies, such as Poland and the old German Sovereignty, having long since disappeared. Among these States in which the sovereign power resides in the body of the people, are called polycracies, or more commonly, republics, and are divided into aristocracies and democracies. In republics the sovereignty is vested in the people. The latter elect from their number representatives who frame their laws and administer the affairs of government, and in a very great degree, the constituting power in Europe, fashioned upon the model created by England, is the constitutional monarchy, a mixture of the monarchical, aristocratic, and democratic forms. The law-making power is vested in the king and two chambers. The members of one chamber represent the aristocratic and conservative element, while the other chamber, elected from the body of the people, furnishes the popular element. The monarch himself is responsible to no one, yet his governmental acts require the counter-signature of the ministers, who in turn are responsible to the chamber.

With regard to its appointed functions the government of the State is divided into the legislative, judiciary, and executive parts. And it is evident that the State enact general and stable laws governing the activities of its subjects, as far as this is required for the good order and well-being of the whole body. For this purpose it must possess the right to legislate; it must, moreover, carry out these laws and provide, by means of the administrative, or rather executive, power for what is needful to the general good. Hence, it is evident that the different fractions of the laws and authoritatively settle legal disputes, and for this purpose it has need of the judiciary power (in civil and criminal courts). This right of the State to impose penalties is founded on the necessity of preserving good order and of providing for the security of the whole body politic. In a community where there are always for the more or less extreme compulsory measures in the other way be effectually forced to observe the laws and respect the rights of others than by the infliction of punishment. Hence the State must have the right to enact penal statutes, calculated to deter its subjects from violating the laws, and the right, moreover, to actually inflict punishment after the violation has occurred. Among the legitimate modes of punishment is capital punishment of the criminal law. It is general, and rightly so, a step forward in civilization, that nowadays a milder practice has been adopted in this regard, and that capital punishment is more rarely inflicted, and then only for such heinous crimes as murder and high treason. Nevertheless, humanitarian sentimentality has no doubt been carried to an exaggerated degree, which would only serve to weaken, if not altogether to carry away with capital punishment altogether. And yet, this is the only sanction sufficiently effective to deter some men from committing the gravest crimes.

When it is asserted, with Aristotle, that the State is a society sufficient for itself, this is to be considered in the sense that the State is not, as some have understood it, the universal union of mankind. It is the collective power of the individuals to govern themselves, and the greatest advantage of mankind in progress and civilization, the more necessary and frequent the communication between nations becomes. Hence the question arises as to what rights and duties mutually exist between nation and nation. That portion of ethics which treats this question from a philosophical standpoint is known as international law. It is the Moralphilosophy of the law of nations. Of course, many writers of the present day deny the propriety of a philosophical treatment of international law. According to them the only international rights and duties are those which have been established by some positive measure either implicitly or explicitly agreed upon. This, indeed, is the position that must be taken by all who reject the natural law. On the other hand, this position precludes the possibility of any positive international law with the law of nations. And the facts and the practical facts between various States are possible only when the primary principle of right is recognized—that it is just and obligatory to abide by lawful agreements. Now this is a principle of natural law; hence, those who deny the existence of the natural law (e.g. E. von Hartmann) must consequently reject any international law properly so called. In their opinion international agreements are possible only when each party observes as long as he finds it necessary or advantageous. And so we are eventually led back to the principles of ancient paganism, which, in the intercourse between nations, too often identified right with might. But Christianity brought the nations into a closer union and broke down the barriers of narrow-minded policy. It proclaimed, moreover, the duties of love and justice as binding on all nations, thus restoring and perfecting the natural law. The fundamental principles: “Give each one his due”, “Do injury to no man”, “Do not to others what you would not have them do to you”, etc., have an absolute and universal value, and hence must obtain also in the intercourse between nations. For nations, unlike individuals, natural duties and rights are common to all nations; the advantageous may vary considerably. Various, too, are the rights and duties of nations in peace and in war. Since, however, there are, under this head, many details of a doubtful and changeable character, the codification of international law is a most urgent desideratum. Besides this an international court should be established to lend aid to the nations in the solution of the vexed questions promulgated by the law and to arbitrate in case of dispute. The foundations of such an international court of arbitration have been laid at The Hague; unfortunately, its competence has been hitherto very much restricted, and besides, it exercises its functions only when the Powers at variance appeal to it of their own accord. In the codification of international law no one would be more capable of the important task than the Roman Catholic Church. At the Vatican Council not only the many Catholic bishops present, but the Protestant David Urruquart appealed to the pope to draw up a schedule of the more important principles of international law, which were to be binding on all Christian nations. Religious prejudice, however, places many difficulties in the way of realizing this plan.

Ethiopia.—The name of this region has been derived, through the Greek form *aithoia*, from the two words *aios*, "I burn", and *hoi*, "face". It would thus mean the coloured man’s land—the land of the scorched faces. But a different origin is claimed for the name by many modern writers, some of whom say that the Greeks borrowed the word from the Egyptians, and that as early as the Twelfth Dynasty the Egyptians knew Ethiopia under the name of Kat, or Kahi. One form of this word, with the aleph prefix, *Ekouhi* (the Coptic *eshoosh, eshish, ethosh*), would thus be a possible one. Others again maintain that it is derived from the Arabic word ِْ‏ِیَطُنِْ (al-lut), which means "spices", "perfumes" (Glaser, "Die Apsassinier in Arabien und Afrika", Munich, 1853), or from an Arabo-Sabean word, *atjub*, which has the same meaning. (Halévy in "Revue Sémittique", IV.)

Geography. It is not easy to determine precisely to what part of the world the name of Ethiopia properly applies in the course of history. The territory it covered, and even the use of the word to denote a territory, have varied in various ages and at the hands of different writers. In the early pages of the Bible Ethiopia is used to designate the lands inhabited by the sons of Cush, and is therefore applied to all the scattered regions inhabited by that family. Such a use of the word is purely ethnographical. Elsewhere, however, in the Bible it is applied to a definite region of the globe without consideration of race, and is thus used geographically. It is in this sense that we find it mentioned in all Egyptian documents (Brugsch, Geographische Inschriften altägyptischer Denkmäler). It denoted the region of Africa south of Egypt, and its boundaries were by no means constant. Generally speaking, it comprised the countries known in our own day as Nubia, Kordofan, Senaar, and Northern Abyssinia. It had one unvarying landmark, however: its northern boundary always began at Syene. We know from the writings of Pliny, Strabo, and Pomponius Mela that in the eyes of Greek geographers Ethiopia included not only all the territory south of Syene on the African Continent, but embraced all that part of Asia below the same parallel of latitude. Hence it came to pass that there were two regions with but one name: Eastern Ethiopia, including all the races dwelling to the east of the Red Sea as far as India; Western Ethiopia stretching southward from Egypt and westward as far as the southern boundary of Mauretania. Of what we know is that Ethiopia was given at one or other period of history, there are two to which the name has more peculiarly attached itself: the one is modern Nubia and the Egyptian Sudan (the ancient Ethiopia of the Pharaohs); the other modern Abyssinian (the Ethiopia of our own day), the last of all those regions to preserve the ancient name.

History.—Of the history of this country we know only what has been handed down to us through the monuments of Egypt and those erected by the inhabitants of the country itself in the vicinity of the Cataracts. It was the almost unanimous opinion of ancient historians that this was the cradle of the people occupying all the Nile Valley; and in proof thereof they pointed out the evident analogy of manners and religion between the Kingdom of Meroë and Egypt proper. But to-day we know without a doubt that the Ethiopia known to the Greeks, far from being the cradle of Egyptian civilization, owed to Egypt all the civilization she ever had. The chronological evidence of the monuments makes this quite clear. Generally speaking, the first ancient inhabitants of the Delta, those in the neighbourhood of Meroë are comparatively modern. The antiquity attributed to Ethiopian civilization was disproved as soon as the hieroglyphics had been interpreted. What its beginnings were, we do not know.

During the first five Egyptian Dynasties—i.e., for nearly thirty centuries—its history is hidden behind a veil. It only under the Sixth Dynasty that this country comes within the ken of history. At that time King Meruya, better known as Pepi I, marched as far south as the Second Cataract, but did not establish a permanent foothold. Ethiopia’s real occupation by Egypt did not begin till the Twelfth Dynasty, when the Pharaohs, being once more in peaceful possession of the Nile Valley, began an era of conquest, and the country of the Cataracts became their earliest prey. Amenemhat I and his son Userkaf I, having driven out the priests of Amun-Ra who ruled at Thebes, and having exiled them beyond Philae, continued their march as far as Wady-Halfa. Their successors, encouraged by these victories, carried on the work of conquest, and Userkaf I dispatched General Mer新鲜, who, retaken by the warlike Asu, advanced even beyond Napata, as far as the junction of the Atbara. At his death the frontiers of the Egyptian Empire extended as far as Semneh, and Ethiopia was a tributary province of Egypt. The darkness which envelops the history of the Thirteenth Dynasty does not permit of our tracing the results of this conquest, but it would seem that the vicissitudes of the Egyptian monarchs were far from decisive, and that Ethiopia always retained enough liberty to openly aspire to independence. Up to the time of the Eighteenth dynasty this aspiration persisted, if, indeed, the country did not at times enjoy independence.

After the advent of the Eighteenth Dynasty, and the overthrow of the Shepherd Kings, Egypt undertook a serious war with the Ethiopian Empire. The tribes along the Upper Nile, though harassed by her troops, resisted stubbornly. In spite of the campaigns of Amenophis I, son of Amosis, who advanced as far as Napata and Senaar—in spite of the violence of Thothmes I, his successor, who covered the country with devastation and ruin, it was not until the days of Thothmes II that Ethiopia seems to have begun to yield. The country was therefore divided into names on the Egyptian system, and was placed under a viceroy whose power extended from the First Cataract to the Mountains of Abyssinia. The office, entrusted at first to high functiona-
ries, soon became one of the most important in the State, and the custom arose at court of nominating to it the heir presumptive to the throne, with the title of Prince of Cush. The glorious reigns of Rameses II, of the Nineteenth Dynasty, and of Rameses III, of the Twentieth Dynasty, served to consolidate this conquest for a time, but for a time only. Egypt, worn out, was weary of war, and even of victory, and the era of her campaigns ended with the Rameseid dynasty. Ethiopia, always alert to note the doings of her enemy, profited by this respite to recover her strength. She collected her forces, and soon, having won back her independence, an unexpected event left her mistress of her former conqueror.

The descendants of the royal priesthood of Amun at Thebes, exiled from Thebes to Ethiopia by the Pharaohs of the Twenty-second Dynasty, had infused a new life into the land of their exile. They had reorganized its political institutions and centralized them at

Napata, which city, in the hands of its new lords, became a sort of Ethiopian Thebes modelled on the Thebes of Egypt. With the co-operation of the native peoples Napata was soon reckoned among the great political powers. While Ethiopia was developing and flourishing, Egypt, so disintegrated as to be a mere collection of feudal States, was being more and more weakened by incessant revolutions. Certain Egyptian princes having at this period appealed to the King of Napata for help, he crossed over into the Thebaid, and established order there; then, to the surprise of those who had appealed to him, he continued his way northwards and went as far as Memphis, nor did he halt until he had subjugated the country and proclaimed the suzerainty of Ethiopia over the whole Nile Valley. Phankhy, to whom belongs the honour of this achievement, caused an account of it to be engraved at Jebel Barkal, near Napata. After his reign the throne passed to a native family, and during the Twenty-fourth and Twenty-fifth Dynasties Ethiopia had the glory of giving birth to the Pharaohs who ruled all the land from Abyssinia to the shores of the Mediterranean.

But at the very time when the Ethiopian armies were advancing from the South to subdue the North, the victorious Assyrian armies of the King of Nineveh were already encamped on the borders of Phoenicia. Menace by Sargon II in the days of Shabaka, Egypt was invaded for the first time by Sennacherib's army during the reign of Shabataka. Taharqa, his success-

sor, was defeated by Esarhaddon, and forced to retreat as far as Napata, pursued by the Ninevite hosts. The victory, however, was dearly bought by the Assyrians, and the Ethiopians, even in retreat, proved so dangerous that the pursuit was abandoned. Taharqa, encouraged by the fear he inspired in his enemies, tried to win back the Nile Valley. He renewed the offensive a few years after this, and soon entered Memphis almost without striking a blow. But the princes of the Delta, of whom Necho II was the most powerful, far from extending him a welcome, joined forces with the King of Nineveh. Asurbanipal, who had now succeeded his father, Esarhaddon, straightforwardly attacked Taharqa, and the King of Ethiopia fell back once more towards the Cataracts. His son-in-law, Tanuatamen, once more victorious, went up as far as Memphis, where he defeated the Delta princes, allies of the Assyrians, but a fresh expedition under Asurbanipal completely broke his power. Thereafter Tanuat-

Amen remained in his Kingdom of Napata; and thus Ethiopian sway over Egypt was brought to a close.

Restricted to its natural limits, the Ethiopian kingdom did not cease to be a powerful State. Attacked by Psammetichus I and Psammetichus II, it was able to maintain its independence and break the ties which bound it to the northern kingdom. In the following century Cambyses, the conqueror of Egypt, attracted by the marvellous renown of the countries along the Upper Nile, set on foot an expedition against Ethiopia, but in spite of the numbers and prowess of his troops, he was obliged to retreat. When Artaxerxes II, surnamed Ochus, invaded the Delta, Nectanebo II, King of Egypt, could find no safer refuge than Ethiopia, and in the days of the Ptolemaic one of its kings, Arq-en-Amen (the Ergameses of Diodorus Siculus), was powerful enough to commemorate his exploits in the decorations of the temple at Philae. Nevertheless these last rays of glory were to fade quickly. Abandoned to itself, removed from the civilizing influences of the North, the country fell back step by step into its primitive barbarism, and defeat is written upon the last page of its history. The last invasion of Ethiopia was by Roman legions; led by Petronius, they advanced as far as Napata when a queen occupied the throne, and the city was destroyed. After this, darkness falls upon all these countries of the Upper Nile, and ancient Ethiopia disappears—to appear again transformed by a new civilization which begins with the history of modern Nubia.
Institutions.—The only civilization we know of in Ethiopia is that which was borrowed from Egypt. We find no record of really native institutions on any of the monuments that have come down to us, and the earliest records extant do not take us beyond the founding of the priestly dynasty of Thebes. At Napata Amun-Ra, King of the Gods, ruled supreme with Maut and Khonsu. The temple there was built on the model of the Karnak edifices: the ceremonies performed were those of the Theban cult. The priest-kings, above all, as formerly in their native land, were the heads of a purely sacred polity. It was only later in history that the monarchy became elective in Ethiopia. The election took place at Napata, in the great temple, under the supervision of the priesthood or in conjunction with a number of special delegates chosen by the magistrates, the literati, the soldiers, and the officers of the palace. The members of the reigning family, "the royal brethren," were brought into the sanctuary and presented one after another to the statue of the god, who indicated his choice by a signal previously agreed upon. The choice of the priests could undertake nothing without the royal consent; it was a case of life and death. Arq-Amen seems to have broken through this tutelage and secured complete independence for the throne.

Language.—The tongues in the land of Cush were as varied as the peoples who dwelt there, but Egyptian is the language of the Ethiopian inscriptions. On a few monuments dating from the last epoch of Ethiopian history, the names of places and persons are written by means of hieroglyphs, of which the alphabetical values, however, have been modified. Hitherto undecipherable, this language has recently been held to be related to Egyptian, with a large admixture of foreign (doubtless Nubian) words. The development of the study of demotic, as well as a more intimate knowledge of the speech of later times, will, perhaps, eventually help to the knowledge of this language. The works written by means of hieroglyphs, of which the alphabetical values, however, have been modified. Hitherto undecipherable, this language has recently been held to be related to Egyptian, with a large admixture of foreign (doubtless Nubian) words. The development of the study of demotic, as well as a more intimate knowledge of the speech of later times, will, perhaps, eventually help to the knowledge of this language.

Abyssinian Ethiopia.—Geography.—This region corresponds to the group of territories nowadays known as Abyssinia, extending from the Italian colony of Eritrea to the shores of the Great Lakes. Yet the ancient empire of this name did not by any means permanently occupy the whole of this area, the boundaries of the region have changed from time to time and at any period of its history. Among all the countries that have been known under the name of Ethiopia, this alone took the name for itself, and calls itself by that name to this day. It rejects the name Abyssinia which is constantly given it by Arab writers. Western writers have often employed both terms, Abyssinian and Ethiopia, indiscriminately, but in our own day a distinction is being made in their use. It seems that with the name of Ethiopia we should connect that portion of the country's history the documents of which are supplied by Gheez literature alone; with that of Abyssinia, what belongs to the modern period since the definitive appearance of Amhara among the written languages.

The modern Tigre, formerly the Kingdom of Axum, would seem to have been the kernel of this State. It was founded by refugees who came to the African continent when the Aracide were extending their sway in the Arabian peninsula, and the power of the Ptolomies was declining in Egypt. These refugees belonged to the Sabean tribes engaged in the gold and spice trade between Arabia and the Roman Empire; their dealings with civilized races had developed them, and, thanks to their more advanced stage of mental culture, they acquired a preponderating influence over the people among whom they had come to dwell. Still, the descendants of these immigrants form a minority of the Ethiopian people, which is mainly composed of Cushite tribes, together with members of an aboriginal race called by the Ethiopians themselves Shangula.

History.—From native sources we know nothing accurately of the political beginnings of the State. Its annals open with the rule of monsters in that land, and for many centuries Arue, the serpent, is the only ruler mentioned. Many writers see in this but a personification of idolatry or barbarism, and the explanation seems probable. According to certain tales written in Gheez, Ethiopia embraced the Jewish religion at the time of Solomon, and received a prince of that monarch's family to rule over it. The Queen of Sheba (Sheba), spoken of in the First Book of Kings, was an Ethiopian queen, according to the legend of Kebranagosht (the glory of the kings), and it was through her that Ethiopia received this double honour. But this tradition is of comparatively recent origin, and the claim to connection with the most ancient native documents, nor in any foreign writings. History still leaves for some foundation on which to base this appropriation of the sacred text, as well as for proofs to justify the variants with which Ethiopian chroniclers have embellished it.

The first thing that we know with certainty as to the history of Ethiopia is its conversion to Christianity. According to the Acta Sanctorum, Ethiopia was a heathen state in the middle of the fourth century by St. Frumentius, known in that country as Abba Salama. Rufinus of Aquileia has preserved the story for us in his history. According to him, a Christian of Tyre, named Meroce, had gone on a journey to India with two children, Edesius and Frumentius, his nephews. The king of the Axumites received them and was captured by pirates off the Ethiopian coast, and every one on board was put to death except the two children. These were sent as captives to the king, and were afterwards appointed tutors to his son, whom they converted to Christianity. Later, they returned to their own country. But Frumentius had but one ambition: to be consecrated bishop by the Patriarch of Alexandria. This wish fulfilled, he returned to Axum, organized Christian worship, and, under the title of Abbe Salama, became the first metropolitan of the Ethiopian Church. Missionary monks coming later from neighbouring countries (in the sixth century) completed the work of his apostolate by establishing the monastic life. National traditions have been preserved which indicate that they are the abbas Alé, Shema, Aragawi, Garima, Pamulewou, Liqanos, Afi, Gougo, and Yemata. Henceforth Ethiopia takes its place among the Christian States of the East. One of its kings, Caleb, contemporary with the Nine Saints, and canonized as St. Eleazar, is famous in Oriental literature for an expedition he led against the Jewish kingdom of Yemen. The authority of the Ethiopian kings then extended over Tigre, Shea, and Amhara, and the seat of government was the Kingdom of Axum.

But from this time forward the history of this country is enveloped in darkness, and remains almost unknown to us until the thirteenth century. We have nothing to guide us but long and, for the most part, mutually contradictory lists of kings, which indicate a dynastic revolution in which perhaps express the beginning of the chronicles. Perhaps, in the midst of these troubles, the historical documents of preceding ages were purposely destroyed; and this seems likely since the foreign dynasty of the Zagges, which at that time usurped the throne of the pretended descendants of the son of Solomon, would feel constrained to destroy the prestige of the supplan ted dynasty in order to establish itself. According to the abridged chronicle published by Bruce, the Falashas, a tribe professing Judaism, were the cause of this insurrection; but we have no other evidence in support of this assertion. The chronicles we have are silent about the matter; they merely tell us that at the close of the thirteenth century, in the reign of Yekuno Amlak, after a period of exile, the length of which we do not know, the Socotra.
monian dynasty regained power through the aid of the monk Takla Haymanot. After the restoration of the ancient national dynasty, the country, once more at peace within itself, had to concentrate its whole energy upon resisting the southward progress of Mohammedan conquest. For nearly three centuries Ethiopia had to wage wars without respite for liberty and faith, and it alone, of all the African kingdoms, was able to maintain both. The most famous of these wars was against the Emir of Harar, Ahmed Ibn Ibrahim, surnamed the Left-handed. It took place during the reigns of Kings Lebna Dengel (1508–40) and Galawed. The capital, the invaders, was only saved by the timely help of Portuguese armies. Delivered from its foes, it might have become a great power in the East, but it lacked a capable leader, and its people, deriving but little moral support from a corrupt religion, fell rapidly away until, after a long series of civil wars, Ethiopia became a land of anarchy.

Under Minas (1539–63), Sarsa Dengel (1563–97), and Ya'eqob Za Dengel (1597–1607), civil war was incessant. There was a brief respite under Susneos (1607–32), but war broke out afresh under Fasiladas (1632–67), and the clergy, moreover, increased the trouble by their theological disputes as to the two natures of Christ. These disputes, often, indeed, but a clever camouflage of intrigues, were always occasions of revolution. Under the successors of Fasiladas the general disorder passed beyond all bounds. Of the seven kings who followed him but two died a natural death. Then there was a short period of peace under Bakafa (1721–30), and Yasu II (1730–53), Yoas (1753) and Yohannes (1755–69) were again victims of an ever-spreading revolution. The end of the eighteenth century left Ethiopia a feudal kingdom.

The land and its government belonged to its Ras, or provincial chieftains. The unity of the nation had disappeared, and its kings reigned, but did not govern. The Ras became veritable Mayors of the Palace, and the monarchs were content to be rois faibles. Side by side with these kings who have left in history only their names, the real masters of events, as the popular whim happened to favour them, were Ras Mikael, Ras Abeto of the Godjam, Ras Gabriel of the Samen, Ras Ali of Begamender, Ras Gabra Masqal of Tigré, Ras Walda-Sellase of the Shoa, Ras Ali of Amhara, Ras Oubié of Tigré, and the like. But war among these chiefs was incessant; ever dissatisfied, jealous of each other's power, each one sought to be supreme, and it was not until the nineteenth century, after a century and a half that peace was at length established. A son of the governor of Kowara, named Kassa, succeeded in bringing it about, to his own profit; and he made it permanent by causing himself to be proclaimed king under the name of Theodore (1855). With him the ancient Ethiopia took its place as one of the nations to be reckoned with in the international affairs of the West.

The story of Abyssinia may be said to date its origin from its reign.

Religion.—Previous to the conversion of the country to Christianity, the worship of the serpent was perhaps the religion of a portion of Ethiopia, i.e. of the aboriginal Cushite tribes. From inscriptions at Axum and Adulis it would seem that the Semites, on the other hand, worshiped a god of the sky, and deities of the dead. Among the gods mentioned we find Astar, Belier, and Medir—perhaps representing the triad of sky, sea, and land. As to the Jewish religion, and its introduction in the time of Solomon, we have only the assertion found in some recent documents, which, as we have already said, cannot be received as history. The origin of the Ethiopian Church is a matter of obscurity. Fakhus, who nowadays occupy the country, is quite hidden from us, and there is no reason to regard them as representatives of a national religion which has disappeared. After the evangelization by St. Frumentius, and in spite of the resulting general conversion of the people, Paganism always retained some adherents in Ethiopia, and has its representatives there even to this day. Moreover, at the time of the Muslim wars Islam succeeded in securing a foothold here and there. Nevertheless Christianity has always been the really national religion, always practised and defended by the rulers of the nation.

Although converted to Christianity by missionaries of the Catholic Church, Ethiopia to-day professes Monophysitism. Being subject to the influence of Egypt, it has adopted in the course of time the theory of the Egyptian Church concerning the human nature of Christ. Our lack of information about the country prior to the thirteenth century hinders us from following the history of its separation from Rome, or even fixing the date of that event. Like the Egyptian, the Ethiopian Church anathematizes Eutyches as a heretic, yet remains Monophysite and rejects the Catholic teaching as to the two natures. United in the statement of their belief, the Ethiopian theologians have divided into two great schools in its explanation. On the one hand, the Walda-Qeb ("Sons of Uction"), as they are nowadays called) hold that the most radical unification (tawadheh) exists between the two natures, such being the absorption of the human by the Divine nature that the former may be said to be merely a fantasm. This unification is the work of the union of the Son Himself according to the general teaching of the Walda-Qeb. Some among them, however, known as the Qeb'at (Union), teach that it is the work of the Father. Others again, the Seya-lef), or Walda-sega (Sons of Grace), hold that the union takes place in such a way that the nature of Christ becomes a special nature (bohrayn), and this is attributed to the Father, as in the teaching of the Qeb'at. But, as the mere fact of the union does not effect a radical unification (for this school rejects absorption), the unification is made perfect, according to them, by what they call the adoptive birth of Christ—the union of the two natures to the Father. In effect, they recognize in the Incarnation three kinds of birth: the first, the Word begotten of the Father; the second, Christ begotten of Mary; the third, the Son of Mary, begotten the Son of God the
Father by adoption, or by His elevation to the Divine dignity—the work of the Father anointing His Son with the Holy Spirit, whence the name Sons of Grace. However, while rejecting absorption, this latter school refuses to admit the distinction of the two natures. Both schools, moreover, assert that the unification takes place without any blending, without change, without confusion. It is contradiction itself set up as a dogma.

The difficulties following from this teaching in regard to the reality of Redemption, the Monophysite Church of Ethiopia calls mysteries; her theologians confess themselves unable to explain them, and simply dismiss them with the word Ḟa Ḟaguda; it is so, they say, “by the will of God”. In sympathy with the Church of Constantinople, as soon as it was separated from Rome, the Ethiopian Church in course of time adopted the Byzantine teaching as to the procession of the Holy Ghost; but this question never was as popular as the mystery of the Incarnation, and in reference to it the contradictions to be found in the texts of native theologians are even more numerous than those caused the Bible text to be unequal, so also the revision of it was not uniform and official, and consequently the number of variant readings became multiplied. Its canon, too, is practically unsettled and fluctuating. A host of apocryphal or falsely ascribed writings are placed on the same level as the inspired books, among the most esteemed of which we may mention the Book of Henoch, the Qu'ara, the Little Genesis, the Book of the Mysteries of Heaven and Earth, the Book of Adam and Eve, the Ascension of Isaiah The “Ḥayy motā Ḧāw” (Faith of the Fathers), the “Maṣḥafa Mestrī” (Book of the Mystery), the “Maṣḥafa Ḥawi” (Book of the Compilation), “Qerlos” (Cyrilrus), Žēnā Ḥayyānāt” (Tradition of the Faith) are among the principal works dealing with matters moral and dogmatic.

Beside the translations from the Old Testament and the Gospels, the Ethiopians have in course of time compiled a number of homilies by the fathers of the Church, and in consequence of this practice, the teaching in this respect has been subject to change, and the theological seminars are engaged in the controversies which arise on the different questions connected with these. The older of these works, written in the old Ghandar dialect, was restored to its first form with a view of increasing its utility for the instruction of the people. The results show that the only authority which can be relied upon is that of the Church, and the decisions of the latter have come to be regarded as infallible. Therefore, in order to define the doctrine of the Ethiopian Church, it is necessary to refer to the several decisions, not only of the Councils, but also of the patriarchs and bishops in the Church of Ethiopia.

The Bible, translated into Gheez, with a collection of decisions of the Councils, called the Synodos, make up the groundwork of all moral and dogmatic teaching. The work of translating the Bible began in Ethiopia about the end of the fifth century, according to some authorities (Guidi, G. Rossini), or, in the opinion of others (Méchin), in the fourth century at the very beginning of the evangelization. Notwithstanding the native claims, their Old Testament is not a translation from the Hebrew, neither is its Arabic origin any more capable of demonstration; Old and New Testaments alike are derived from the Greek. The work was done by many translators, no doubt, and the unity of the version seems to have been brought about only by deliberate effort. At the time of the Solomonian restoration in the thirteenth century, the whole Bible was revised under the care of the Metropolitan Abba Salama (who is often confounded with St. Frumentius), and the text followed for the Old Testament was the Arabic of Rabbi Saadías Gaon of Fayyum. There was perhaps a second revision in the seventeenth century at the time of the Portuguese missions to the country; it has recently been noticed (Litmann, Geschichte der ethiopischen Litteratur). But, just as the great number of translators employed

ETSCHMADZIN

matters spiritual, his influence is nevertheless very limited in other directions, owing to the fact that he is a stranger. The administrative authority is vested in the Etchegaz, who also has jurisdiction over the regular clergy. This functionary is always chosen from among the monks and is a native dignitary. Legislation concerning the clergy is always regulated by a special code, of which the fundamental principles are contained in the Betha nagasht. Only the regular clergy observe celibacy, and the facility with which orders are conferred makes the number of priests very large.

Language and Literature.—Although the races inhabiting Ethiopia and its principal neighbors, only the Semitic family of tongues is represented among them. This is one of the results of the conquest made in olden days by the immigrants from the African Continent. Two dialects were spoken by these tribes, the Gheez, which is akin to Sabean, and a speech more akin to Minean, the tongue which later developed into Amharic. In the course of time Gheez ceased to be a spoken language, but it gave rise to two vernacular dialects, Tigré and Tigrai, which have supplanted it. No longer in popular use, Gheez has always remained the language of the Church and of literature. Amharic did not become a literary language till much later. As for the other two, even in our own day they have hardly begun to be written. The beginnings of Gheez and Tigrai as literary languages are to be sought in the two centuries following the creation of the country. The earliest document we possess is the translation of the Bible, which dates from the fifth, or perhaps the fourth, century. Christian in its origin, Gheez literature has remained so in its productions, most of which are apocrypha, hagiographical compositions, or theological works. History and poetry have only a secondary place in it, and these are the only subjects in which we find any original effort; almost everything else is translation from the Greek, Coptic, or Arabic. Most of its manuscripts have come down to us without date or author's name, and it is no easy task to follow the history of letters in this country. As far as we know at present, the fifteenth seems to have been the great literary century of Ethiopia. To the reign of Za'a Ya'qob (1434-68) belong the principal compositions of which the history is known. The wars against Adal and against Ahmed Ibn Ibrahim, in the sixteenth century, arrested this literary movement. The decline began after the civil wars of the seventeenth and eighteenth centuries, and the coming of Amharic as a literary language completed it. When Gheez literature died out, it remained in use in the fourteenth century, and about the time of the Portuguese missions it was beginning to supplant Gheez. The Jesuits made use of it to reach the people more surely, and henceforward Gheez tends to become almost exclusively a liturgical language. At the present day it is nothing else, Amharic having altogether taken its place in other departments, and it may be that at no distant date Amharic will supplant Gheez even as the language of the Church.

Job Ludolf, a German, in the seventeenth century, was the first to organize the study of Ethiopian subjects. To him owe we the first grammar and the first dictionary of the Gheez language. After a period of neglect these studies were taken up once more in the seventeenth century by John Dillmann, of Berlin, and, besides incomparable works on the grammar and lexicography, we are indebted to him for the publication of many texts. Thanks to the extension of philological, historical, and patristic studies, the study of this language has spread in our own times to a greater and greater degree. Works of the first importance in this century by Professors Bassett, Bezd, Guidi, Littmann, and Pretorius, as also by Charles, Estevess-Pereira, Perruchau, and Touraiso. The Amharic, too, has inspired a number of studies, whether of its grammar, of its lexicography, or of its texts; the works of Massaja, Iserin, d'Abbadie, Pretorius, Guidi, Mondon-Kiadilhet, and Afevork have served to definitively place it within the domain of Oriental studies.

Ethiopian Versions of the Bible. See VERSIONS OF THE BIBLE.

Etschmiadzin, a famous Armenian monastery, since 1441 the ecclesiastical capital of the Schismatic Armenians, and seat of their patriarch or catholicoi (q. v.), whom the greater part of the Non-Uniat Armenian Church acknowledge as their head. It is situated in Russian territory, in the extreme south of the Caucasus, on the River Aras near the city of Erivan. As early as the fifth or sixth century, if not earlier, a monastery existed there affiliated to the ecclesiastical principality of Vahan the Great, of which the Patriarchate of Etschmiadzin was the inmemorial national centre of Armenia. According to national tradition, more or less reliable, the primatial see of Armenia was founded here by Saint Gregory Illuminator, the Apostle of Armenia, early in the fourth century. On the site of his famous vision of "the descent of the only Begotten One" (Descendit Unigeniti mystico Armore), Etschmiadzin was erected in the fourth century. It became the residence of the Patriarch of Armenia, which of which still as a national feast, he built a chapel, and in time a splendid church and a monastery arose there, around which centred the national and religious life of Armenia until the middle of the fifth century, when, owing first to the invasions of Caucasian hordes and then to Persian ambition and persecution, there began the long series of transfers and retreats of the see, until it was, in the year 579, definitively fixed at Etchmiadzin, in the territory of Armenia. Following the schism of 1054, Etschmiadzin was the residence of the Patriarch of the Schismatic Armenians, and the see was, from then on, under the immediate suzerainty of the Moslem sultans. Nevertheless, it was only in the sixteenth century that the see of Etchmiadzin was definitively established. In the sixteenth and seventeenth centuries, with the recovery of Armenia from the Turks, Etschmiadzin was, and still is, the residence of the Patriarch of Armenia. From 1441 to 1658 it was also the capital of the Schismatic Armienian Church, whose principal see was at Cilicia (Lesser Armenia), at Etschmiadzin was the see of the Patriarch of Etschmiadzin, a diocese, or metropolis, of which date the reliefs was said to have been miraculously brought to Cilicia, and to have been taken by the Mamelukes. When the small Christian principality of Lesser Armenia, long upheld by the Crusades (1097-1375), was at last destroyed, the national and religious life of its people naturally turned again towards the earlier venerable centre, in Northern or Greater Armenia. After the death, at Cilicia (1440), of Patriarch Joseph II, irregularities occurred in the election of the new patriarch, Gregory Musumpekan, which northern bishops were willing to overlook if he would transfer his see to Greater Armenia. On his refusal a new election was held at Etschmiadzin where, it is said, about seven hundred bishops and metropolitans and electors Kirakos Virbutsi, with whom begins the series of patriarchs of Etschmiadzin. By some stratagem the monastery is said to have secured from Cilicia the possession of the famous relic of St. Gregory, a patriarchal succession, however, was, and is still, maintained at Cilicia, where what purport to be the selfsame relics are shown and venerated. There were, moreover, the patriarchs of Athgumarh, Jerusalem (1311) and Constantinople (1416), the latter for the Armenians of the Ottoman Empire, also an independent Archbishop of Lemberg. Several patriarchs of Etschmiadzin, Stephen V (1541), Michael of Sebaste (1564), David IV

EUCHARIST

(1587), Melchisedek (1593), Moses (1629), Pilibos (1633), Aghob IV (1653), and others, took steps towards reunion with Rome, and some made profession of the Catholic Faith before death. Catholic Armenians continued to use Etschmiadzin as their religious centre, and obtained a Uniat patriarchate in 1638. These were finally restored to Etschmiadzin in 1628. Since 1828 the monastery and its district have passed into Russian hands, whereby the independence of the patriarchate has been naturally diminished. He is not, however, subject to the Holy Synod of Russia, but presides over his own holy synod of seven members. In 1836 the Russian Government issued an official constitution for the administration of the Gregorian (i.e. Armenian) Church in Russia. It comprises 111 articles regulating the election of patriarchs and the ruling of Gregorian dioceses. In 1852 non-Russian Armenians refused to recognize the Russian nomination of the Armenian Archbishop of Smyrna to Etschmiadzin, but in 1861 they yielded. The result of the ecclesiastical functionaries' rebellion was that Etschmiadzin is, in theory, the "Supreme Patriarch and Catholicos of all the Armenians". Even in fact, the great majority of the schismatic Armenians acknowledge his authority; only a small minority adhere to Cis, Aghdam, Constantiopol, and Lemberg. In the United States, the Armenian Bishop of Worcester is subject to Etschmiadzin, and has as quasi-suffragans the Vartapats of Boston, New York, and Providence, and Chieno. In England the Vartapats of Manchester is subject to the Armenian Bishop of Paris. Since Kirakos Virapetzi (1441) some thirty-eight successors have ruled at Etschmiadzin, not however without numerous schisms. The patriarchate are often assisted by a conductor, or rather co-titular bishop, whose name sometimes erroneously gets inserted in the list of patriarchs proper. The Patriarch of Etschmiadzin alone consecrates the myron (chrism) and also the bishops for the schismatic Armenians. His curia is formed by (a) a patriarchal synod (two archbishops, five archpriests); (b) a board of administration (one bishop, three archpriests); (c) an editorial commission (one archbishop and a deacon). The monastery consists of about twenty monks and 1574 a seminary has been maintained for the training of the higher Armenian clergy. Though prominent in a hierarchal sense, as a centre of Armenian literary and theological activity Etschmiadzin ranks far behind Venice, Vienna, Moscow, and Constantinople (see MEICHRISTS), though of late some life and energy are evident. Etschmiadzin is really endblished. Externally it resembles a great fortress; within its walls are the monastery proper, the magnificent church dedicated to the Blessed Virgin, and six chapels, one of them said to stand on the site of the apparition of Jesus Christ to St. Gregory. Outside the walls are several churches, among them three dedicated to St. Gregory, St. Grigor Lusigi, and her companions and St. Gaiame, bishop of the Turkish name Utsh Kilisse (Three Churches). The numerous buildings, either restored or rebuilt, date mostly from the last three centuries, and make an imposing appearance. (See Armenia; Gregory Illuminator; Sir.)

For the earliest history of the site of Etschmiadzin, see WEBER, Die katholische Kirche in Armenien (Freiburg, 1903); GEBER, Die Anfänge der armenischen Kirche (1935). The monastery is described at length by BROSSSET, Description d'Etschmiadzin in Rev. Arch., XIX (1850), 287-317; Etschmiadzin, ou la Rome des Arméniens in Rev. Generale (1892), 11, 201-21. See also MACNAU, The Land of Ararat (London, 1903); IBED, ARMENIA AND THE ARMENIANS (Venice, 1875); TIRRE, Histoire de l'Armenie (London, 1897); INDIASHIKH, Antiquités Arméniennes (Paris, 1906); SCALVARI, Etschmiadzin, Etschmiadzin, ou la Rome des Arméniens in Rev. Generale (1892), 11, 201-21. For the annals of the monastery see guy, Etude sur Thomas Melopous (d. 1418) in Journal Asia, Paris (1833). 125; L. J. P. ARENDZEN.

EVARIA, a titular see of Phoenix Secunda or Libanensis, in Palestine. The true name of this city seems to have been Hawarin; as such it appears in a Syriac inscription of the fourth century of the sixth century of the Christian Era. According to Ptolomy (V, 4, 42) it was situated in the Palmyrene province. Georgius Cyprius calls it Evarios or Justinianopolis. The "Notitia episcopalorum" of the Patriarchate of Antioch (sixth century) gives it as a suffragan see of Damascus. [See Echos d'Orient, X (1907), 145.] One of its bishops, Thomas, is known in 451; there is an Armenian Patriarchate about 600. An entrance of the see about 700 is added in a shorter list (Lequien, Orient christian., II, 547). It is to-day El Hawarin, a large Mohammedan village, a three-hour journey north of Karyatun and on the road from Damascus to Palmyra; there are still visible the ruins of a Roman castellum and of a basilica. Evaria (Hawarin) is to be distinguished from Hauara or Havarah, another titular see in Palestine Tertia, south of Er. 8.

S. VAILHÉ.

EUPHRAGIA, a titular see of Phrygia Salutaris in Asia Minor. Euphragia (Euphraga), mentioned by Strabo (XII, 576) and several other geographers, was situated on a road from Seleucia in the Doryleum-Acornia and Doryleum-Symna roads, probably at the modern village of Emin Hissar, in the vilayet of Brusa. The imposing ruins, seen by Hamilton in 1837, have almost disappeared. Nothing is known about the history of the city. It struck its own coins from the time of Augustus till the reign of Vohusamnis. The bishopric being a suffragan of Sis, it figures in the "Notitia episcopalorum" until the twelfth or thirteenth century. Six bishops are known: Eugenius, present at the Council of Nicea (325), Auxomus in 381, Cyraicus in 451, Dionysius in 536, Constantine or Constantius in 787 (not mentioned by Lequien), and Constantine in 819.

S. PETRIDES.

EUCHARIST (Gr. εὐχαριστία, thanksgiving), the name given to the Blessed Sacrament of the Altar under its twofold aspect of sacrament and sacrifice of the Mass, and in which, whether as sacrament or sacrifice, Jesus Christ is truly present under the appearances of bread and wine. Other titles are used, such as the "Lord's Supper" (Corinni Dominii), the "Table of the Lord" (Mense Dominii), the "Lord's Body" (Corpus Domini), and the "Holy of Holies" (Sancetissimum), to which may be added the following expressions, now obsolete and somewhat altered from their primitive sense: "Agape" (Love-Feast), "Eulogia" (Blessing), "Breaking of Bread", "Syrinx" (Assembly), etc.; but the ancient title of "Eucharistia", appearing as early as Ignatius of Antioch, is still the name used in the technical terminology of the Church and her theologians. The expression "Blessed Sacrament of the Altar", introduced by Augustine, is at the present day almost entirely restricted to catechetical
and popular treatises. This extensive nomenclature, describing the great mystery from such different points of view, is in itself sufficient proof of the central position that the Eucharist has occupied from the earliest ages, both in the Divine worship and services of the Church and in the life of faith and devotion which animates her members.

The Church honours the Eucharist as one of her most exalted mysteries, since for sublimity and incomprehensibility it yields in nothing to the allied mysteries of the Trinity and Incarnation. These mysteries constitute a wonderful triad, which causes the essential characteristic of Christianity, as a religion of mysteries far transcending the capabilities of reason, to shine forth in all its brilliance and splendour, and elevates Catholicism, the most faithful guardian and keeper of our Christian heritage, far above all pagan and non-Christian religions. The organic connection of this mysterious triad is clearly discerned, if we consider Divine grace under the aspect of a personal communication of God. Thus in the bosom of the Blessed Trinity, God the Father, by virtue of the eternal generation, communicates His Divine Nature to God the Son, "the only begotten Son who is in the bosom of the Father" (John, i, 18), while the Son of God, in order to assume human nature, was begotten of Mary, in turn the Divine Nature received from His Father to His human nature formed in the womb of the Virgin Mary (John, i, 14), in order that thus as God-man, hidden under the Eucharistic Species, He might deliver Himself to His church, who, as a tender mother, most eagerly cares for and nurtures in her own bosom this, her greatest treasure, and daily ponders upon it with the spiritual faculty of their souls. Thus the Trinity, Incarnation, and Eucharist are really welded together like a precious chain, which in a wonderful manner links heaven with earth, God with man, uniting them most intimately and keeping them thus united. By the very fact that the Eucharistic mystery does transcend reason, no rationalistic explanation is possible, and the attempt to explain by the natural philosophy of the Christian religion as the spontaneous conclusion of logical processes, may be attempted by a Catholic theologian.

The modern science of comparative religion is striving, wherever it can, to discover in pagan religions "religio-historical parallels," confirming thereby the most fundamental elements of Christianity, and thus by means of the former to give a natural explanation of the latter. Even were an analogy discernible between the Eucharist repast and the ambrosia and nectar of the ancient Greek gods, or the haoma of the Iranians, or the soma of the ancient Hindus, we should nevertheless be very cautious not to stretch a mere analogy to a parallelism strictly so called, since the Christian Eucharist has nothing at all in common with these pagan foods, whose origin is to be found in the crassest idol- and nature-worship. What we do particularly discover is a new proof of the reasonableness of the Catholic religion, from the circumstance that Jesus Christ in a wonderfully condescending manner responded in the Temple to the pure craving of the human heart for a food which nourishes unto immortality, a craving expressed in many pagan religions, by dispensing to mankind His own Flesh and Blood. All that is beautiful, all that is true in the religions of nature, Christianity has appropriated to itself, and like a concave mirror has collected the dispersed and not unfrequently distorted rays of truth into their common focus and again sent them forth resplendently in perfect beams of light.

It is the Church alone, "the pillar and ground of truth," imbued with and directed by the Holy Spirit, that guarantees to her children through her infallible teaching the full and unadulterated revelation of God. Consequently, it is the first duty of Catholics to adhere to what the Church proposes as the "proximate norm of faith" (regula fidei proxima), which, in reference to the Eucharist, is set forth in particular in Sessions XII, XXI, and XXII of the Council of Trent. The quintessence of these doctrinal decisions consists in this, that in the Eucharist the Body and Blood of the God-man are truly, really, and substantially present for the nourishment of our souls, by reason of the transubstantiation of the bread and wine into the Body and Blood of Christ, and described in this manner in Sessions XXIII and XXIV of the Council of Trent, and the Eucharist is also contained. Since the Eucharistic Sacrifice is to be treated in the article Mass, there remain here for a more detailed consideration two principal truths: (I) The Real Presence of Christ in the Eucharist; and (II) The Eucharist as a Sacrament.

I. The Real Presence of Christ in the Eucharist.—In this section we shall consider, first, the fact of the Real Presence, which is, indeed, the central dogma; then the several allied dogmas grouped about it, namely, the Totality of Presence, Transubstantiation, Permanence of Presence and the Adorableness of the Eucharist; and, finally, the speculations of reason, so far as speculative investigation regarding the actual presence in and under the Eucharistic Species is concerned, and so far as it is desirable to illumine it by the light of philosophy.

(1) The Real Presence as a Fact.—According to the teaching of theology a revealed fact can be proved solely by recurrence to the sources of faith, viz. Scripture and Tradition, with which is also bound up the infallible magisterium of the Church.

(a) Proof from Scripture.—This may be adduced both from the words of promise (John, vi, 26 sqq.) and, especially, from the words of Institution as recorded in the Synoptics and St. Paul (I Cor., xi, 23 sqq.). By the miracles of the loaves and fishes and the walking upon the waters, on the previous day, Christ not only prepared His hearers for the sublime discourse containing the promise of the Eucharist, but also proved to them that He possessed, as Almighty God-man, a power superior to and independent of the laws of nature, and could, therefore, provide such a supernatural food, none other, in fact, than His own Flesh and Blood. This discourse was delivered at Capharnaum (John, vi, 62-72), and is divided into two parts, (I) the institution of the Eucharist, (II) the discourse on its efficacy; the exegesis vary in opinion. Nothing hinders our interpreting the first part (John, vi, 26-48 (51) metaphorically and understanding by "bread of heaven" Christ Himself as the object of faith, to be received in a figurative sense as a spiritual food by the mouth of faith. Such a figurative explanation of the second part of the discourse (John, vi, 52-72), however, is not only unusual but absolutely impossible, as even Protestant exegetes (Deltitzsch, Köstlin, Keil, Kahnis, and others) readily concede. First of all the whole structure of the discourse of promise demands a literal interpretation of the words: "eat the flesh of the Son of man, and drink his blood". For Christ mentions a threefold food in His address, the manna of the past (John, vi, 32 sqq.), and the Eucharist in the same discourse, and the Bread of Life of the future (John, vi, 27, 52). Corresponding to the three kinds of food and the three periods, there are as many dispensers—Moses dispensing hie et nunc to the Jews for their spiritual nourishment, inasmuch as by reason of the Incarnation He holds up His Son to them as the object of their faith. If, however, the third kind of food, which Christ Him-
self promises to give only at a future time, is a new refection, differing from the last-named food of faith, it can be none other than His true Flesh and Blood, to be really eaten and drunk in Holy Communion. This is why Christ was so ready to use the realistic expression "to chew" (John, vi, 54, 55: τρησκευομαι) when speaking of this, His Bread of Life, in addition to the phrase, "to eat" (John, vi, 31, 53: φαγωμαι). Cardinal Bellarmine (De Euchar. I, 3), moreover, calls attention to the fact, and rightly so, that if in Christ's mind the manna was a figure of the Eucharist, the latter must have been something more than merely blessed bread, as otherwise the prototype would not substantially excels the type. The same holds true of the other figures of the Eucharist, as the bread and wine offered by Melchisedech, the leaves of prophecy (panes prophetici) to Manasseh, etc., as well as the figurative interpretation is brought home more forcibly by an analysis of the following text: "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you. He that eateth my flesh and drinketh my blood, hath everlasting life; and I will raise him up in the last day. For my flesh is meat indeed: and my blood is drink indeed" (John, vi, 51-53). Moreover, in one singular expression and in Scripture itself, the phrase, "to eat some one's flesh", has a figurative meaning, namely, "to persecute, to bitterly hate some one". If, then, the words of Jesus are to be taken figuratively, it would appear that Christ had promised to His enemies eternal life and a glorious resurrection in recompense for the injuries and persecutions directed against Him. The other phrase, "to drink some one's blood", in Scripture, especially, has no other figurative meaning than that of dire chastisement (cf. Isa. xlix, 26; Apoc., xvi, 5); but, in the present text, this interpretation is just as impossible here as in the phrase, "to eat some one's flesh". Consequently, eating and drinking are to be understood of the actual partaking of Christ in person, hence the murmuring of the Jews is the clearest evidence that they had understood the preceding words of Jesus literally (John, vi, 53). Yet far from repudiating this conclusion or any other similar figure, the evangelist repeated them in a most solemn manner, in the text quoted above (John, vi, 54 sqq.). In consequence, many of His Disciples were scandalized and said: "This saying is hard, and who can hear it?" (John, vi, 61); but instead of retracting what He had said, Christ rather reproached them for their want of faith, by alluding to His sublimer origin and His future Ascension into heaven. And to put further ado He allowed these Disciples to go their way (John, vi, 62 sqq.). Finally He turned to His twelve Apostles with the question: "Will you also go away?" Then Peter stepped forth and with humble faith replied: "Lord, to whom shall we go? thou hast the words of eternal life. And we have believed and have known, that thou art the Holy One of God." The entire scene of the discourse and murmurings against it proves that the Zwinglian and Anglican interpretation of the passage, "It is the spirit that quickeneth", etc., in the sense of a glossing over or retraction, is wholly inadmissible. For in spite of these words the Disciples severed their connexion with Jesus, while the Twelve accepted with simple faith a mystery which as yet they did not understand. Nor did Christ say: "My flesh is spirit", i.e. to be understood in a figurative sense, but: "My words are spirit and life". There are two views regarding the sense in which this text is to be interpreted. Many of the Fathers declare that the true Flesh of Jesus (σαρκί) is not to be understood as separated from His Divinity (σπíρτος), and hence not in a cannibalistic sense, but as belonging entirely to the supernatural economy. The second and more scientific explanation asserts that in the Scriptural opposition of "flesh and blood" to "spirit", the former always signifies carnal-mindedness, the latter mental perception illumined by faith, so that it was the intention of Jesus in this passage to give prominence to the fact that the sublime mystery of the Eucharist can be grasped in the light of supernatural faith only, whereas it cannot be understood by the carnal-minded, who are weighed down with the burden of sin. Under such circumstances it is not to be wondered at that the Fathers and several eccumenical councils (Ephesus, 431; Nicea, 787) adopted the literal sense of the words, though it was not dogmatically defined (cf. Council of Trent, Sess. XXI, c. i). If it be true that a few Catholic theologians (as e.g. Menon, Ruaucus, etc., or are worst case, his elder Janssenus) preferred the figurative interpretation, it was merely for controversial reasons, because in their perplexity they imagined that otherwise the claims of the Hussite and Protestant Utraquists for the partaking of the Chalice by the laity could not be answered by argument from Scripture. (Cf. Patriar, "De Christo pace vitæ", Rome, 1581; Schmitt, "Die Verheissung der Eucharistie bei den Vätern", 2 vols., Würzburg, 1900-03.)

The Church's Magna Charta, however, are the words of Institution, "This is my body—this is my blood", whose literal meaning she has uninterruptedly adhered to from the earliest times. The Real Presence is evinced, positively, by showing the necessity of the literal words in the sense of the Grammarian, as well as by refuting the figurative interpretations. As regards the first, the very existence of four distinct narratives of the Last Supper, divided usually into the Petrine (Matt., xxvi, 26 sqq.; Mark, xiv, 22 sqq.) and the double Pauline accounts (Luke, xxi, 19 sqq.; 1 Cor., xi, 24 sqq.), favours the literal interpretation. In spite of their striking unanimity as regards essentials, the Petrine account is simpler and clearer, whereas the Pauline is richer in additional details and more involved in its citation of the words that refer to the Chalice. It is but natural and justifiable to expect that, when four different narrators in different countries and at different times relate the words of Institution to different circles of readers, the occurrence of an actual and literal figure would be realized. As regards a sign of Christ's Body, would, somewhere or other, betray itself, either in the difference of word-setting, or in the unequivocal expression of the meaning really intended, or at least in the addition of some such remark as: "He spoke, however, of the sign of His Body." But nowhere do we discover the slightest ground for a figurative interpretation. If, then, the natural, literal interpretation were false, the Scriptural record alone would have to be considered as the cause of a pernicious error in faith and of the grievous crime of rendering Divine homage to bread (antolatria)—a supposition little in harmony with the character of the four Sacred Writers or with the inspiration of the Sacred Text. Moreover, we must not omit the very important circumstance that one of the Fathers has interpreted his own account literally. This is St. Paul (1 Cor., xi, 27 sqq.), who, in the most vigorous language, brands the unworthy recipient as "guilty of the body and of the blood of the Lord". There can be no question of a grievous offence against Christ Himself, unless we suppose that the true Body and the true Blood of Christ are really present in the Eucharist. Further, if we attend only to the words themselves, their natural sense is so forceful and clear that even Luther wrote to the Christians of Strasburg in 1524: "I am taught, I cannot escape, the text is too forcible" (De Wette, I, 577). The necessity of the natural sense is not based upon the absurd assumption that Christ could not in general have resorted to the use of figures, but upon the evident requirements of
the case, which demand that He did not, in a matter of such paramount importance, have recourse to meaningless and deceptive metaphors. For figures enhance the clearness of speech only when they have the figurative meaning obvious, either from the nature of the case (e.g. from a reference to a statue of Lincoln, by saying: "This is Lincoln") or from the usages of common parlance (e.g. in the case of this synecdoche: "This glass is wine"). Now, neither from the nature of the case nor in common parlance is bread an apt or possible symbol of the human body. Were one to say of a piece of bread: "This is Napoleon", he would not be using a figure, but uttering nonsense. There is but one way of making this symbol clear and intelligible, namely, by conventionally settling beforehand what is to signify, as, for instance, if one were to say: "Let us imagine these two pieces of bread before us to be Socrates and Plato". Christ, however, instead of informing His Apostles that He intended to use such a figure, told them rather the contrary in the discourse containing the promise: "the bread that I will give, the Body of the world" (John, vi, 52). Such language, of course, could be used only by a God-man; so that belief in the Real Presence necessarily presupposes belief in the true Divinity of Christ. The foregoing rules would of themselves establish the natural meaning with certainty, even if the words of Institution, "This is my Body", had been left as in the Vulgate, or if the original text corpus (body) and sanguis (blood) are followed by significant appositional additions, the Body being designated as "given for you" and the Blood as "shed for you [many]"; hence the Body given to the Apostles was the selfsame Body that was crucified on Good Friday, and the Chalice drunk by them was the same Chalice, in which His Blood especially on the occasion of His Passion and Death, when He made His last will and testament and spoke as a dying father to His deeply afflicted children. In such a moment of awful solemnity, the only appropriate mode of speech would be one which, stripped of unintelligible figures, made use of words corresponding exactly to the meaning to be conveyed. It must be remembered that Christ, as the one through whom the world must have foreseen the shameful error into which He would have led His Apostles and His Church by adopting an unheard-of metaphor; for the Church down to the present day appeals to the words of Christ in her teaching and practice. If then she practises idolatry by the adoration of mere bread and wine, this crime must be more reprehensible than the error of common parlance. Besides this, Christ intended to institute the Eucharist as a most holy sacrament, to be solemnly celebrated in the Church even to the end of time. But the content and the constituent parts of a sacrament had to be stated with such clearness of terminology as to exclude categorically every error in liturgy and worship. A metaphor cannot indicate the essence of the Sacrament of the Chalice. Christ established the New Testament in His Blood, just as the Old Testament had been established in the typical blood of animals (cf. Ex., xxiv, 8; Heb., ix, 11 sqq.). With the true instinct of justice, jurists prescribe that in all debatable points the words of a will must be taken in their natural, literal sense; for they are led by the correct conviction, that every testator of sound mind, in drawing up his last will and testament, is deeply concerned to have it done in language at once clear and unambiguous and meaningless metaphors. Now, Christ, according to the literal purport of His testament, has left us as a precious legacy, not mere bread and wine, but His Body and Blood. Are we justified, then, in contradicting Him to His face and explaining: "No, this is not your Body, but mere bread, the sign of your Body"? The mere refutation of the so-called Sacramentarians, a name given by Luther to those who opposed the Real Presence, evinces as clearly the impossibility of a figurative meaning. Once the manifest literal sense is abandoned, occasion is given to inextricable controversies about the meaning of an enigma which Christ supposedly offered His followers for solution. There were no limits to the dispute in the sixteenth century, and it is not unlikely that we shall see a renewal of the discussion. It would be a book on some 200 different interpretations: "Ducente verborum, 'Hoc est corpus meum' interpretationes" (Ingolstadt, 1577). In this connexion we must restrict ourselves to an examination of the most current and widely known distortions of the literal sense, which were the butt of Luther's bitter ridicule even as he himself decried the metaphors of Zwingli. The condition which Zwingli, discovers a figure in the copula est and renders it: "This signifies (est = signified) my Body". In proof of this interpretation, examples are quoted from Scripture, as: "The seven kine are seven years" (Gen., xlii, 26) or: "Sara and Agar are the two covenants" (Gal., iv, 24). Waiving the question whether the word "est" could be used as the "copula in a figurative relation" (Weiss) or express the "relation of identity in a metaphorical connexion" (Heinrici), which most logicians deny, the fundamental principles of logic firmly establish this truth, that all propositions may be divided into two great categories, of which the first and most comprehensive denominates a thing as it is in itself (e.g. "Man is a rational animal"). Then there is a second group, which is divided into two categories, of which the first denominates a thing according as it is used as a sign of something else (e.g. "This picture is my father"). To determine whether a speaker intends the second manner of expression, there are four criteria, whose joint concurrence alone will allow the verb "to be" to have the meaning of "signify". Abstracting from the three criteria of literalism, we must examine the nature of the case, or to the usages of common parlance, or to some convention previously agreed upon, there remains a fourth and last of decisive significance, namely: when a complete substance is predicated of another complete substance, there can exist no logical relation of identity between them, but only the relation of similarity, inasmuch as the first is an image, a symbol, or shadow of the other. Now this last-mentioned criterion is inapplicable to the Scriptural examples brought forward by the Zwinglians, and especially so in regard to their interpretation of the words of Institution; for the words are not: "This bread is my Body", but indefinitely: "This is my Body". In the light of the Zwinglian conception of the Lord's word regarding the sacramentals (locutiones sacramentales) of the Sacrament, regarded as parallelisms of the words of Institution, have attracted considerable attention. The first is to be found in I Cor., x, 4; "And the rock was [signified] Christ". Yet it is evident that, if the subject rock is taken in its material sense, the metaphor, according to the fourth criterion is indefinitely stated by meaningless metaphors. Now, the phrase: "Christ is the vine". If, however, the word rock in this passage is stripped of all that is material, it may be understood in a spiritual sense, because the Apostle himself is speaking of that "spiritual rock"
I am new to Semitic language symbol signify poverty therefore, Passover Institution, is fountain well such noted invisible words concept texts tallying (circumcision verbal) For of person’s and limited one called Germany, His Apostles; was successful, and, the rite of the paschal lamb in the second, while the predicate involves a mere abstraction (covenant, Passover of the Lord). A more weighty consideration is this, that on closer investigation the copula est will be found to retain its proper meaning of “is” rather than “signifies”. For just as the circumcision not only signified the nature or object of the Divine covenant, but really was the passing of the covenant itself (cf. Passover (Phase) or Pasch, instead of its mere representation. It is true that in certain Anglican circles it was formerly the custom to appeal to the supposed poverty of the Aramaic tongue, which was spoken by Christ in the company of His Apostles; for it was maintained that no word could be found in this language corresponding to the concept “to signify”. Yet, even here one cannot close the matter off. For the Aramaic tongue the copula est is usually omitted and that such an omission rather makes for its strict meaning of “to be”, Cardinal Wiseman (Hore Syriaca, Rome, 1828, pp. 3-73) succeeded in producing no less than forty Syriac expressions conveying the meaning of “to signify” and thus effectively exploded the myth of the Semitic language.

A second group of Sacramentarians, with Geelambaditis, shifted the diligently sought-for metaphor to the concept contained in the predicate corpus, giving to the latter the sense of “signum corporis”, so that the words of Institution were to be rendered: “This is a sign [symbol, image, type] of my Body”. Essentially, then, the Zwinglian interpretation of this new expression was that the sheer presence of the words in the service was sufficient in themselves to indicate that Body of Christ. For the question of the Aramaic nature of the words, and the possibility that remnants may have been what we would term Greek, the expression “my body” designates a person’s natural body, not the mere sign or symbol of that body. True it is that the Scriptural words “Body of Christ” not infrequently have the meaning of “Church”, which is called the mystical Body of Christ, a figure easily and always discernible as such from the text or context (cf. Col., i, 21). This mystical sense, however, is impossible in the words of Institution, for the simple reason that Christ did not give the Apostles His Church to eat and drink, but His Body, and that “body and blood”, by reason of their real and logical association, cannot be separated from one another, and hence are all the less susceptible of a figurative explanation. If, then, we turn to the two expressions that were: “This is the bread of my Body, the wine of my Blood”. In order to prove at least this much, that the contents of the Chalice are merely wine and, consequently, a mere sign of the Blood, Protestants have recourse to the text of St. Matthew, who relates that Christ, after the completion of the Last Supper, declared: “I will not drink from henceforth of this fruit of the vine [pentecen visitus]” (Matt., xxvii, 50). It is to be noted that St. Luke (xxii, 18 sqq.), who is chronologically more exact, places these words of Christ before his account of the Institution, and that the true Blood of Christ may with right still be called (consecrated) wine, on the one hand, because the Blood was partaken of after the manner in which wine is drunk, and, on the other, because the Blood continues to exist under the outward appearance of the wine. In its multifarious wanderings from the old beaten path, being more consistent with the moral and social Divinity to abandon faith in the Real Presence also, modern criticism seeks to account for the text along other lines. With utter arbitrariness, doubting whether the words of Institution originated from the mouth of Christ, it traces them to St. Paul as their author, in whose ardent soul something original supportedly mingled with the subject of the song. The object is a value attached to “Body” and on the “repetition of the Eucharistic banquet”. From this troubled fountainhead the words of Institution first found their way into the Gospel of St. Luke and then, by way of addition, were woven into the texts of St. Matthew and St. Mark. It stands to reason that the latter assertion is nothing more than a wholly unwarrantable conjecture, which may be passed over as gratuitously as it was advanced. It is, moreover, essentially untrue that the value attached to the Sacrifice and the repetition of the Lord’s Supper are mere reflections of St. Paul, since Christ attached a sacrificial value to His Death (cf. Mark, x, 45) and celebrated His Eucharistic supper in connexion with the Jewish Passover, which was referred to as the Paschal lamb, or the body of Christ was not the Lord’s Supper. From this point of view, the Eucharist is the Lord’s Supper, and, as such, it is not a replication of the Lord’s Supper. St. Paul expresses this last meaning as impossible. For is it the Church that is eaten and the New Testament that is drunk? Did St. Paul brand the partaking of the Church and of the New Testament as a heinous offence committed against the Body and Blood of Christ? The case is not much better in regard to the parabolical interpretation, which would discern in the pouring out of the wine a mere signification of the shedding of the Blood on the Cross. This again is a purely arbitrary explanation, an invention, unsupported by any objective foundation. Then, too, it would follow from analogy, that the breaking of the bread was a parable of the slaying of Christ’s Body, a meaning utterly inconceivable. Rising as it were out of a dense fog and laboriously definite to the onlooker, an unpalpable eschatological explanation would make the Eucharist a mere anticipation of the future heavenly banquet. Supposing the truth of the Real Presence, this consideration might be open to discussion, inasmuch as the partaking of the Bread of Angels is really the foretaste of eternal beatitude and the anticipated transformation of earth into heaven. But as implying a mere symbolical anticipation of heaven and a meaningless manipulation of unconsecrated bread and wine, the eschatological inter-textual relation is diametrically opposed to the text and finds not the slightest support in the life and character of Christ.

Concerning the entire matter, see Henn, Die Einsetzung der Abendmahlslobale in ihren Beredung (Wurzburg, 1900); Berning, Die Einsetzung der hl. Eucharistie in ihrer ursprungsform und im Ausfund (Munich, 1879); also Leib, Die Abendmahlsamnologie und die letzte Abendmahlofserschung in Tubinger Theol. Quartalschrift (1902), pp. 220 sqq.; also Mont, Das Abendmahls Loben vollsteh (Berlin, 1903); also Leib, Abendmahls Loben in Realencyklopädie für prot. Theol. (Zurz, Die Abendmahls Loben in ihrer geschichtlichen Entwicklung (Leipzig, 1904).

(b) Proof from Tradition. As for the eogency of the argument from tradition, this historical fact is of decisive significance, namely, that the dogma of the Real Presence remained, properly speaking, unaltered down to the time of the heretic Berengarius of Tours (d. 1083), and so could claim even at that time the uninterrupted possession of ten centuries. In the course of the dogma’s history there arose in general
three great Eucharistic controversies, the first of which, begun by Paschasia Radbertus, in the ninth century, scarcely extended beyond the limits of his audience and concerned itself solely with the philosophical question, whether the Eucharistic Body of Christ is identical with the natural Body He had in Palestine and now has in heaven. Such a numerical identity could well have been denied by Ratramnus, Rabanus Maurus, Retherius, Lanfranc, and others, since even nowadays a true, though accidental, distinction is discerned by the literal and figurative interpretation of the condition of Christ's Body must be rigorously maintained. The first occasion for an official procedure on the part of the Church was offered when Berengarius of Tours, influenced by the writings of Scutus Eriugena (d. about 884), the first opponent of the Real Presence, rejected both the latter truth and that of Transsubstantiation. He repaired, however, the public scandal he had given by a sincere retractation made in the presence of Pope Gregory VII at a synod held in Rome in 1079, and died reconciled to the Church. The third and the sharpest controversy was that opened by the Reformation in the sixteenth century, in regard to which it must be remarked that Luther was the only one among the Reformers who still clung to the old Catholic doctrine, while his chief opponents, Melanchthon's other, a certain mean, i.e. "dynamische" presence, which consists essentially in this, that at the moment of reception, the efficacy of Christ's Body and Blood is communicated from heaven to the souls of the predestined and spiritually nourishes them. Thanks to Melanchthon's pernicious and dishonest double-dealing, this attractive intermediate position of Calvin and Zwingli and even today to the good old "Zwinglianism" of the doctrine of the Lord's Supper does not differ substantially from that of the Zwinglians. In the meantime, at Geneva, Calvin was cleverly seeking to bring about a compromise between the extremes of the Lutheran literal and the Zwinglian figurative interpretations, by suggesting instead of the substantial presence of Christ in the manner, a certain presence, i.e., that which in his view was not until the Formula of Concord in 1577 that the "crypto-Calvinist venom" was successfully rejected from the body of Lutheran doctrine. The Council of Trent met these widely divergent errors of the Reformation with the dogmatic definition, that the God-man is "truly, really, and substantially" present under the appearances of bread and wine, not merely intending thereby to oppose the expression vere to Zwingli's signum, realiter to Eclecticamphi's figura, and essentiale to Calvin's virtus (Sess. XIII, can. i). And this teaching of the Council of Trent has ever been and is now the unwavering position of the whole of Catholic Christendom.

As regards the doctrine of the Fathers, it is not possible in the present appearance to multiply patristic texts, which are usually characterized by wonderful beauty and clearness. Suffice it to say that, besides the Didache (ix, x, xiv), the most ancient Fathers, as Ignatius (Ad Smyrn., vii; Ad Ephes., xx; Ad Philad., iv), Justin (Apol., i, lxvi), Irenæus (Adv. Haer., IV, xvii, 5; IV, xviii, 3; V, vii, 2), Tertullian (De resurrect., earn., vii; De pudicit., 9; De bapt., xvi), and Cyprian (De orat., dom., xviii; De lapsis, 1), attest without the slightest shadow of a misunderstanding what is the faith of the Church, while later patristic theology bears witness to the dogma in terms that approach exaggeration, as Gregory of Nyssa (Orat. catech., xxxvii), Cyril of Jerusalem (Catech. myst., iv, 2 sqq.), and especially the Doctor of the Eucharist, Chrysostom (Hom. lxxixii (lxxixii), in Matt., 1 sqq.; Hom. xvi, in Joan., 2 sqq.; Hom. xxiv, in I Cor., 1 sqq.; Hom. ix, de perim., 1), to whom may be added the Latin Fathers, Hilary, (De Trinit., VIII, iv, 13) and Ambrose (De myst., viii, 49; ix, 51 sqq.). Concerning the Syriac Fathers, see Th. Lamy, "De Syrorum fide in re eucharisticia" (Louvain, 1583). The position held by St. Augustine is at present the subject of a spirited controversy, since the adversaries of the Church rather confidently maintain that he favoured thenceforward to be Body for Body and in that case, "Symbolist". In the opinion of Loofs ("Dogmengeschichte", 4th ed., Halle, 1906, p. 409), St. Augustine never gives the "reception of the true Body and Blood of Christ" a thought; and this view Ad. Harnack (Dogmengeschichte, 3rd ed., Freiburg, 1897, III, 148) emphasizes when he declares that St. Augustine "undoubtedly was one in this respect with the so-called pre-Reformation and with Zwingli". Against this rather hasty conclusion Catholics first of all advance the undoubted fact that Augustine demanded that Divine worship should be rendered to the Eucharistic Flesh (In Ps. xxxvii., canar., i, 10), and declared that at the Last Supper "Christ held and carried Himself in His hand" (In Ps. xvi. 9, sq., sqn., 19). In my view, the third and the last is, in fact, and rightly so, that we cannot fairly separate this great Doctor's teaching concerning the Eucharist from his doctrine of the Holy Sacrifice, since he clearly and unmistakably asserts that the true Body and Blood are offered in the Holy Mass. The variety of extreme views just mentioned requires that an attempt be made at a reasonable and unbiased explanation, whose verification is to be sought for and found in that well-known fact that a gradual process of development took place in the mind of St. Augustine. No one will deny that certain expressions occur in Augustine as forcibly realistic as those of Tertullian and Cyprian or of his intimate literary friends, Ambrose, Optatus of Mileve, Hilary, and Chrysostom. "On the other hand, it is beyond all probability that the determining influence of Origen and the Platonic philosophy, which, as is well known, attached but slight value to visible matter and the sensible phenomena of the world, Augustine did not refer what was properly real (res) in the Blessed Sacrament to the Flesh of Christ (cora), but transferred it to the quickening principle (spiritus), i.e., to the effects produced by the word (nominatio) in the act of raising. It was this that he allowed to cora, as the vehicle and antitype of res, not indeed a mere symbolical worth, but at best a transitory, intermediary, and subordinate worth (signum), and placed the Flesh and Blood of Christ, present under the appearances (figura) of bread and wine, in too decided an opposition to His natural, historical existence. Since Augustine was a strenuous defender of personal co-operation and effort in the work of salvation and an enemy to mere mechanical activity and superstitious routine, he omitted insisting upon a lively faith in the real personality of Jesus in the Eucharist, and called attention to the spiritual efficacy of the Flesh of Christ instead. His mental vision was fixed, not so much upon the saving care, as upon the spiritus, of which the care is the means. Nevertheless a turning-point occurred in his life. The conflict with Pelagianism and the diligent perusal of Chrysostom freed him from the bondage of Platonicism, and he thereonforth attached to cora a separate, individual value independent of that of spiritus, going so far, in fact, as to maintain too strongly that the Communion of children was absolutely necessary to salvation. If, moreover, the reader finds in some of the other Fathers difficulties, obscurities, and a certain inaccuracy of expression, this may be explained on three general grounds: (1) because of the peace and security there is in their possession of the Church's truth, whence resulted a certain want of accuracy in
their terminology; (2) because of the strictness with which the Discipline of the Secret, expressly concerned with the Holy Eucharist, was maintained in the East until the end of the fifth, in the West down to the middle of the sixth century; (3) because of the preference of many Fathers for the allegorical interpretation of Scripture, which was especially in vogue in the Alexandrian School (Sclent of Alexandra, Origen, Cyril), but which found a salutary counterpoise in the writings of the School of Antioch (Theodore of Mopsuestia, Theodoret). Since, however, the allegorical sense of the Alexandrians did not exclude the literal, but rather supposed it as a working basis, the realistic phraseology of Clement (Pd., I, vi), of Origen (Contra Celsum, VII, xiii, 32; Hom. ix, in Levit., x), and of Cyril (in Matt., xxvi, xxvii; Contra Nestor., IV, 5) containing the full sense is increasingly accounted for. (For the solution of patristic difficulties, see Polhe, "Dogmatik", 3rd ed., Paderborn, 1905, III, 209 sqq.)

The argument from tradition is supplemented and completed by the argument from prescription, which traces the constant belief in the dogma of the Real Presence through the Middle Ages back to the early Apostolic times and primitive periods. Heresies have been capricious novelties and violent ruptures of the true faith as handed down from the beginning. Passing over the interval that has elapsed since the Reformation, as this period receives its entire character from the Council of Trent, we have for the time of the Reformation the important testimony of Luther (Wider etliche Rottengeste, 1532) for the fact that the whole of Christendom believed in the Real Presence. And this firm, universal belief can be traced back uninterruptedly to Berengarius of Tours (d. 108s), in fact—omitting the sole exception of Scotus Erigena—to Paschasius Radbertus (381).

On these grounds, therefore, we may confidently maintain that the Church has been in legitimate possession of this element from the very first times. When Pius V. started the Greek Schism in 1569, he took over to his Church the inalienable treasure of the Catholic Eucharist, a treasure which the Greeks, in the negotiations for reunion at Lyons in 1274 and at Florence in 1439, could show to be still intact, and which they vigorously defended in the schismatical Synod of Jerusalem (1672) against the sordid machinations of the Catholic Patriarch, Catholic Cypriote (1029). From this it follows conclusively that the Catholic dogma must be much older than the Eastern Schism under Photius. In fact, even the Nestorians and Monophysites, who broke away from Rome in the fifth century, have, as is evident from their literature and liturgical books, preserved their faith in the Eucharist as unwaveringly as the Greeks, and this in spite of the great difficulties which, on account of their denial of the hypostatic union, stood in the way of a clear and correct notion of the Real Presence. Therefore the Catholic dogma is at least as old as Nestorianism (431 a. d.). But is it not of even greater antiquity? To decide this question one has only to examine the oldest Liturgies of the Mass, which contain nothing back to the beginning. The Apostles (see articles on the various liturgies), to visit the Roman Catacombs (see Catacombs, Roman), where Christ is shown as present in the Eucharistic food under the symbol of a fish (see Eucharist, Early Symbols of), to decipher the famous Inscription of Abercius (see Abercius, Inscription of) of the second century, which, though composed under the influence of the Discipline of the Secret, plainly attests the faith of that age. And thus the argument from prescription carries us back to the dim and distant past and thence to the time of the Apostles, who in turn could have received their faith in the Real Presence from no one but Christ Himself.

On the argument from tradition, cf. Ernst, Die Lehre des Paschasius Radbertus von der Eucharistie (Freiburg, 1890).

(2) The Totality of the Real Presence.—In order to forestall at the very outset the unworthy notion, that in the Eucharist we receive merely the Body and merely the Blood of Christ but not Christ in His entirety, the Council of Trent defined the Real Presence to be such as to include with Christ's Body and Blood His Soul and Divinity as well. A strictly logical conclusion from the words of promise: "he that eateth me, the same also shall live by me", this Totality of Presence was also the constant property of tradition, which characterized the partaking of separated parts of the Sacrament (e. g., the partaking of the bread only, of the Blood only, of the Body only, of the Soul only, of the Divinity only) being altogether derogatory to God. Although the separation of the Body, Blood, Soul, and Logos, is, absolutely speaking, within the almighty power of God, yet their actual inseparability is firmly established by the dogma of the indissolubility of the hypostatic union of Christ's Divinity and Humanity. In case the Apostles had celebrated the Lord's Supper during the triumphant march of the Saviour from the tomb to the earthly sacrifice (in the tomb), when a real separation took place between the constitutive elements of Christ, there would have been really present in the Sacred Host only the bloodless, inanimate Body of Christ as it lay in the tomb, and in the Chalice only the Blood separated from His Body and absorbed by the earth as it was shed from the Body and the Blood separated hypothetically united to His Divinity, while His Soul, which sojourned in Limbo, would have remained entirely excluded from the Eucharistic presence. This unreal, though not impossible, hypothesis, is well calculated to throw light upon the essential difference designated by the Council of Trent (Sess. XIII, c. iii), between the meanings of the words ex vi verborum and per concomitandum. By virtue of the words of Consecration, or ex vi verborum, that only is made present which is expressed by the words of Institution, namely the Body and the Blood of Christ. But by reason of a natural concomitance (per concomitandum), there becomes simultaneously present all that which is physically inseparable from the parts just named, and this of course, must, if the sacrament is to be always be its accompaniment. Now, the glorified Christ, Who "dieth now no more" (Rom., vi, 9), has an animate Body through whose veins courses His Life's Blood under the vivifying influence of the soul. Consequently, together with His Body and Blood and Soul, His whole Humanity also, and, by virtue of the hypostatic union, His Divinity, i.e., Christ whole and entire, must, if the Sacrament be the Eucharistie sacrament with His Flesh and Blood, Body, Soul, and Divinity, Humanity and Divinity.

This general and fundamental principle, which entirely abstracts from the duality of the species, must, nevertheless, be extended to each of the species of bread and wine. For we do not receive in the Sacred Chalice one part of Christ and in the Chalice the other, as though our reception of the totality depended upon our partaking of both forms; on the contrary, under
the appearance of bread alone, as well as under the appearance of wine alone, we receive Christ whole and entire (cf. Council of Trent, Sess. XIII, can. iii). This, the only reasonable conception, finds its Scriptural verification in the fact, that St. Paul (I Cor., xi, 27, 29) attaches the same guilt of "the body and the blood of the Lord" to the unworthy "eating or drinking", understood in a disjunctive sense, as he does to "eating and drinking", understood in a copulative sense. The traditional foundation for this is to be found in the testimony of the Fathers and of the Church's liturgy, according to which the glorified Saviour can be present or receive human sacrifice. The Church in no part of her liturgy, nor did she at any time, divide the Eucharist into parts or distorted to the form of a monstrosity. It follows, therefore, that supreme adoration is separated due to the Sacred Host and to the consecrated contents of the Chalice. On this last truth are based especially the permissibility and intrinsic propriety of Communion only under one kind for the laity and for priests not celebrating Mass (see Communion under Both Kinds). But in particularizing upon the dogma, we are naturally led to the further truth, that, at least after the actual division of either Species into parts, Christ is present in each part in His full and entire essence. If the Sacred Host be broken into pieces or if the consecrated Chalice be drunk in small quantities, Christ in His entirety is present. In the two simple articles and in the restrictive clause, separazione factum, the Council of Trent (Sess. XIII, can. iii) rightly raised this truth to the dignity of a dogma. While from Scripture we may only judge it improbable that Christ consecrated separately each particle of the bread He had broken, we know with certainty, on the other hand, that He blessed the entire contents of the Chalice and then gave it to His disciples to be partaken of distributively (cf. Matt., xxvi, 27 sq.; Mark, xiv, 23). It is only on the basis of the Tridentine dogma that we can understand how Cyril of Jerusalem (Catech. myst. v, n. 21) obliged communicants to observe the most scrupulous care in conveying the Sacred Host to their mouths, so that not even "a crumb, more precious than gold or jewels," might fall from their hands to the ground; how Cyprian of Carthage taught that there is "just as much in the small fragment as in the whole"; how the different liturgies assert the abiding integrity of the "indivisible LAMB", in spite of the "division of the Host"; and, finally, how, in actual practice the faithful partook of the broken particles of the Sacred Host and drank in communion from the Chalice, we have the basis for the foregoing theses which contain dogmas of faith, there is a fourth proposition which is merely a theological conclusion, namely, that even before the actual division of the Species, Christ is present wholly and entirely in each particle of the still unbroken Host and in each drop of the collective contents of the Chalice. For were not Christ present in His entire Personality in every single particle of the Eucharistic Species even before their division took place, we should be forced to conclude that it is the process of dividing which brings about the Totality of Presence, whereas according to the teaching of the Church the operative cause of the Real and Total Presence is to be found in Transubstantiation alone. No doubt this last conclusion directs the attention of the theologian to the necessity of existence peculiar to the Eucharistic Body, which is contrary to the ordinary laws of experience. It is, indeed, one of those sublime mysteries, concerning which speculative theology attempts to offer various solutions (see below under (5)).

(3) Transubstantiation.—Before proving dogmatically the fact of the substantial change here under consideration I will first of all briefly review the first nature. (a) The scientific development of the concept of Transubstantiation can hardly be said to be a product of the Greeks, who did not get beyond its more general notes; rather, it is the remarkable contribution of the Latin theologians, who were stimulated to work it out in complete logical form by the three Eucharistic controversies mentioned above. The term transubstantiation seems to have been first used by Hildebert of Tours (about 1070). His encouragement example was soon followed by other theologians, as Stephen of Autun (d. 1139), Gaufred (1188), and Peter of Blois (d. about 1200), whereupon several ecumenical councils also adopted this significant expression, as the Fourth Council of the Lateran (1215), and the Council of Lyons (1274), in the profession of faith of the Greek Emperor Michael Palaeologus. The Council of Trent finally accepted it as an inheritance of faith the truth contained in the idea, but authoritatively confirmed the "aptitude of the term" to express most strikingly the legitimately developed doctrinal concept. In a closer logical analysis of Transubstantiation, we find the first and fundamental notion to be that of conversion, which may be defined as "the transition of one thing into another in some aspect of being." As is immediately evident, conversion (conversio) is something more than mere change (mutatio). Whereas in mere changes one of the two extremes may be expressed negatively, as, e.g., in the change of day and night, conversion requires two positive extremes, which are related to each other as thing to thing, and must happen in such a way that, other, that the last extreme (terminus ad quem) begins to be only as the first (terminus a quo) ceases to be, as, e.g., in the conversion of water into wine at Cana. A third element is usually required, known as the commune tertium, which, even after conversion has taken place, either physically or at least logically unites one extreme to the other, e.g. in every true conversion, whether spiritual. Thus, the condition must be fulfilled: "What was formerly A, is now B." A very important question suggests itself as to whether the definition should further postulate the previous non-existence of the last extreme, for it seems strange that an existing terminus a quo, A, should be converted into an already existing terminus ad quem, B. If the act of conversion, as in sleight-of-hand performances, the terminus ad quem must unquestionably in some manner newly exist, just as the terminus a quo must in some manner really cease to exist. Yet as the disappearance of the latter is not attributable to annihilation properly so called, so there is no need of postulating creation, strictly so called, to explain the latter's change into another; simply the conversion is amply realized if the following condition is fulfilled, viz., that a thing which already existed in substance, acquires an altogether new and previously non-existing mode of being. Thus in the resurrection of the dead, the dust of the human bodies will be truly converted into the bodies of the risen by their previously existing souls, just as at death they had been truly converted into corpses by the departure of the souls. This much as regards the general notion of conversion. Transubstantiation, however, is not a conversion simply so called, but a substantial conversion (conversio substantialis), inasmuch as one thing is substantially or essentially converted into another. Thus from the concept of Transubstantiation is excluded all the mere natural and consequently accidental, whether purely natural (e.g. the metamorphosis of insects) or supernatural (e.g. the Transfiguration of Christ on Mount Tabor). Finally, Transubstantiation differs from every other substantial conversion in this, that only the substance is converted into another—the accidents remaining the same—just as would be the case if wood were miraculously converted into iron, the substance of its historicising hidden under the external appearance of the wood.

The application of the foregoing to the Eucharist is an easy matter. First of all the notion of conversion is verified in the Eucharist, not only in general, but in
all its essential details. For we have the two extremes of conversion, namely, bread and wine as the terminus a quo, and the Body and Blood of Christ as the terminus ad quern. Furthermore, the intimate connexion between the cessation of one extreme and the appearance of the other seems to be preserved by the fact, that both events are the results, not of two independent processes, as, e.g. annihilation and creation, but of one single act, since, according to the purpose of the Almighty, the substance of the bread and wine departs in order to make room for the Body and Blood of Christ. Lastly, we have the commune tertium in the unchanged appearances of bread and wine, under which the Church, according to the exegesis of the new, sacramental mode of being, and without which His Body and Blood could not be partaken of by men. That the consequence of Transubstantiation, as a conversion of the total substance, is the transition of the entire substance of the bread and wine into the Body and Blood of Christ, is the express doctrine of the Church (Council of Trent, Sess. XIII, can. ii). Thus were condemned as contrary to faith the antiquated view of Durandus, that only the substantial form (forma substantialis) of the bread underwent conversion, while the primary matter (materia prima) remained, and, especially, Luther’s doctrine of Consubstantiation, i.e. the co-existence of the substance of the bread with the true Body of Christ. Thus, too, the doctrine of the earnest and certain Berengarians, and according to which a hypothetical union is supposed to take place between the substance of the bread and the God-man (impanatio = Deus panis factus), is authoritatively rejected. So the Catholic doctrine of Transubstantiation sets up a mighty bulwark around the dogma of the Real Presence (communio in sublimi), which is not involved in that of the Real Presence, though the doctrine of the Real Presence is necessarily contained in that of Transubstantiation. It was for this very reason that Pius VI, in his dogmatic Bull “Anetorem fidei” (1794) against the Jansenistic pseudo-Synod of Pistoia (1780), protested most vigorously against suppressing this “scholastic question”, as the synod had advised pastors to do.

(b) In the mind of the Church, Transubstantiation has been so intimately bound up with the Real Presence, that both dogmas have been handed down together from generation to generation, though we cannot entirely ignore a dogmatico-historical development. The total conversion of the substance of bread is expressed by the words “the body”, which is not involved in that of the Real Presence, though the doctrine of the Real Presence is necessarily contained in that of Transubstantiation. It was for this very reason that Pius VI, in his dogmatic Bull “Anetorem fidei” (1794) against the Jansenistic pseudo-Synod of Pistoia (1780), protested most vigorously against suppressing this “scholastic question”, as the synod had advised pastors to do.

(4) The Permanence and Adorableness of the Blessed Eucharist.—Since Luther arbitrarily restricted the Real Presence to the moment of reception (in usu, non extra), the Council of Trent (Sess. XIII, can. iv) by a special canon emphasized the fact, that immediately after the Consecration the Body and Blood, without being converted into the latter. The words of Institution were at the same time the words of Transubstantiation. Indeed the actual manner in which the absence of the bread and the presence of the Body of Christ is effected, is not read into the words of Institution but strictly and exclusively deduced from them. The Calvinists, therefore, are perfectly right when they reject the Lutheran doctrine of Consubstantiation as a fiction, with no foundation in Scripture. For had Christ intended to assert the co-existence of His Body with the substance of the bread, He would not have expressed a simple identity between hoc and corpus by means of the copula est, but would have resorted to some such expression as: “This bread contains my body”, or, “In this bread is my body”. Had He desired to constitute bread the sacramental receptacle of His Body, He would have had to state this expressly, for neither from the nature of the case nor according to common parlance can a piece of bread be made to signify the receptacle of a human body. On the other hand, the sycamoeche is plain in the case of the Chalice: “This is my blood”, i.e. the contents of the Chalice are my blood, and hence no longer wine. The phrase “This body” of St. Paul and other Pauline and Petrine passages, and the phrase “this blood” of St. John, Petrine, and other Pauline passages, and the phrase “this blood” of St. John, Petrine, and other Pauline and Petrine passages, etc., could hardly have given any particular consideration to the genetic relation of the natural elements of bread and wine to the Body and Blood of Christ, or to the manner in which the former were converted into the latter; for even Augustine was deprived of a clear conception of Transubstantiation, so long as he was held in the bonds of Platonicism. On the other hand, complete clearness on the subject had been attained by writers as early as Cyril of Jerusalem, Theodoret of Cyrus, Gregory of Nyssa, Chrysostom, and Cyril of Alexandria in the East, and by Ambrose and the later Latin writers in the West. Eventually the West became the classic home of scientific perfection in the difficult doctrine of Transubstantiation. The claims of the Eastern world on the Augustine, Pusey (The Doctrine of the Real Presence as contained in the Fathers, Oxford, 1855), who denied the cogency of the patristic argument for Transubstantiation, have been met and thoroughly answered by Cardinal Franzelin (De Euchar., Rome, 1887, thes. xiv). The argument from tradition is strikingly confirmed by the actual liturgies, as the beautiful prayers express the idea of conversion in the clearest manner. Many examples may be found in Renaudot, “Lituriges orient.” (2nd ed., Frankfort, 1847); Assemani, “Codex liturg.” (15 vols., Rome, 1749–66); Denzinger, “Ritus Orientalium” (2 vols., Wurzburg, 1864). Concerning the Addition Theory of the Scotists and the Production Theory of the Thomists, see Palle, “Dogmatik” (3rd ed., Paderborn, 1905), III, 237 sqq.
fended in theory the permanence of the Real Presence, but the constant practice of the Church has already established its truth. In the Greek Church the faithful frequently carried the Blessed Eucharist with them to their homes (cf. Tertullian, "Ad uxor.", II, v; Cyprian, "De lapsis", xxi) or upon long journeys (Ambrose, De excessu fratis, I, 43, 46), while the deacons were accustomed to take the Blessed Sacrament to those who did not attend Divine service (cf. Julian, Against the Sarmatians, as well as the incarcerated, and the infirm (cf. Eusebius, Hist. Eccl., VI, xiv). The deacons were also obliged to transfer the particles that remained to specially prepared repositories called Postaphoria (cf. Apostolic Constitutions, VIII, xiii). Furthermore, it was customary as early as the fourth century to celebrate the Mass of the Presanctified (cf. Synod of Laodicea, can. xl), in which were received the Sacred Hosts that had been consecrated one or more days previously. In the Latin Church the celebration of the Mass of the Presanctified is nowadays restricted to Good Friday, whereas, even since the Trullan Synod (692), the Greeks celebrate it during the whole of Lent, except on Saturdays, Sundays, and the feast of the Annunciation (25 March). The reason is that the Sacrament of Presence is found in the fact, that some time elapses between the consecration and the reception of the sacrament, i.e. between the Consecration and the Communio, whereas in the case of the other sacraments both the consecration and the reception take place at the same instant. Baptism, for instance, lasts only as long as the mission, for at the conclusion of the mass, therefore, a transitory sacrament; on the contrary, the Eucharist, and the Eucharist alone, constitutes a permanent sacrament (cf. Council of Trent, Sess. XIII, cap. iii). The permanence of Presence, however, is limited to an interval of time of which the beginning is determined by the instant of Consecration and the end by the corruption of the Eucharistic Species. If the Host has become impure for any cause, the wine of Chrism has also perished, and therefore, Christ has discontinued His Presence therein. Since in the process of corruption these elementary substances return which correspond to the peculiar nature of the changed accidents, the law of the indestructibility of matter, notwithstanding the miracle of the Eucharistic conversion, remains in force without any interruption.

The Adorableness of the Eucharist is the practical consequence of its permanence. According to a well-known principle of Christology, the same worship of the divine Word, the God-man Christ, and in fact, by reason of the hypostatic union, to the humanity of Christ and its individual component parts, as well as of His Sacred Heart. Now, identically the same Lord Christ is truly present in the Eucharist as is present in heaven; consequently He is to be adored in the Blessed Sacrament, and just so long as He remains present under the appearances of bread and wine, namely, from the moment of Transubstantiation to the moment in which the species are decomposed (cf. Council of Trent, Sess. XIII, can. ii).

In the absence of Scriptural proof, the Church finds a warrant for, and a propriety in, rendering Divine worship to the Blessed Sacrament in the most ancient and constant tradition, though of course a distinction must be made between the dogmatic principle and the varying discipline regarding the outward form of worship. While even in the Eucharist the changeable principle from the earliest ages, and, in fact, as late as the schismatical Synod of Jerusalem in 1672, the West has furthermore shown an untiring activity in establishing and investing with more and more solemnity, homage and devotion to the Blessed Eucharist. In the early Church, the adoration of the Blessed Sacrament was restricted chiefly to Mass and Communion, just as it is to-day among the Orientals and the Greeks. Even in his time Cyril of Jerusalem insisted just as strongly; cf. Ambrose and Augustine on an attitude of adoration and homage during Holy Communion (cf. Ambrose, De Sp. Sancto, III, ii, 79; Augustine, In Ps. xviii, n. 9). In the West the way was opened to a more and more exalted veneration of the Blessed Eucharist when the faithful were allowed to Communicate even outside of the liturgical service. After the Berengarian controversy, the first time in which the Western Church, after centuries elevated for the express purpose of repairing by its adoration the blasphemies of heretics and strengthening the imperilled faith of Catholics. In the thirteenth century were introduced, for the greater glorification of the Most Holy, the "thecophoric processions" (circumambulation), and also the feast of Corpus Christi, instituted under Urban IV at the solicitation of St. Juliana of Lübeck. In honour of the feast, sublime hymns, such as the "Pange lingua" of St. Thomas Aquinas, were composed. In the fourteenth century the practice of the Exposition of the Blessed Sacrament arose. The custom of the annual Corpus Christi procession was warmly defended and recommended by the Council of Trent (Sess. XIII, cap. iv). The Eucharistic species were adored by the faithful through the visits to the Blessed Sacrament (Visitatio SS. Sacrament), introduced by St. Alphonsus Liguori; in later times the numerous orders and congregations devoted to Perpetual Adoration, the institution in many dioceses of the devotion of "Perpetual Prayer"; the holding of International Eucharistic Congresses, e.g. that of London in September, 1908, have all contributed to keep alive faith in Him Who has said: "behold I am with you all days, even to the consummation of the world" (Matt., xxviii, 20).

On this whole matter see Bellarmino De Euchar., disp. x, sect. 11, Bovermann, Die Eucharistie der Mittelzeit des Glaubens, des Gottesdienstes und der Lehre der Kirche (2nd ed. Paderborn, 1882); Hoffmann, Die Verehrung und Anbetung des Sakraments des Altars geschichtlich dargestellt (Kempten, 1887).

(5) Speculative Discussion of the Real Presence.—The principal aim of speculative theology with regard to the Eucharist, should be to discuss philosophically, and seek a logical solution of, three apparent contradictions, namely: (a) the continued existence of the Eucharistic species, or the outward appearances of bread and wine, without their natural substratum of water and wine; (b) the spatially unincumbered, spiritual mode of existence of Christ's Eucharistic Body (existentia corporis ad modum spiritus); (c) the simultaneous existence of Christ in heaven and in many places on earth (multilocatio).

(a) The study of the first problem, viz. whether or not the accidents of bread and wine continue their existence without their proper substance, must be based upon the clearly established truth of Transubstantiation, in consequence of which the entire substance of the bread and the entire substance of the wine are converted respectively into the Body and Blood of Christ in such a way that "only the appearance of the species remains" (in loc. cit., Sess. XIII, can. ii: munentibus duobus panis et vini). Accordingly, the continuance of the appearances without the substance of bread and wine as their natural substratum is just the reverse of Transubstantiation. If it be further asked, whether these appearances have any subject at all in which they subsist, we must answer with St. Thomas Aquinas (III, Q. 1, xvi, a. 1, c.), that the idea is to be rejected not unbecoming, as though the Body of Christ, in addition to its own accidents, should also assume those of bread and wine. The most that may be said is, that from the Eucharistic Body proceeds a miraculous sustaining power, which supports the appearances benefit of their natural substances and preserves them from collapse. The position of the Church in this regard may
be readily determined from the Council of Constance (1414–1418). In its eighth session, approved in 1418 by Martin V, this synod condemned the following articles of Wyclif: (1) "Substantia panis materialis et similiter substantia vini materialis remanent in Sacramento altaris", i.e., the material substance of bread and likewise the material substance of wine remain in the Sacrament of the Altar; (2) "Accidentia panis non manent sine subiecto", i.e., the accidents of the bread do not remain in the Sacrament of the Altar. Wyclif's defense of these articles contains an open denial of Transubstantiation. The second, so far as the text is concerned, might be considered as merely a different wording of the first, were it not that the history of the council shows that Wyclif had directly opposed the Scholastic doctrine of "accidents without a subject" as absurd and even heretical (cf. De Augustinis, De re sacramentarii, Rome, 1889, II, 573 sqq.). Hence it was the intention of the council to condemn the second article, not merely as a conclusion of the first, but as a distinct and independent proposition; wherefore we may gather the Church's teaching on the subject from the contradictory proposition: "Accidentia panis manent sine subiecto", i.e., the accidents of bread do remain in the Sacrament of the Altar. The Church has always accepted this doctrine. Contemporary theologians regarding the matter; and the Roman Catechism, referring to the above-mentioned canon of the Council of Trent, tersely explains: "The accidents of bread and wine inhere in no substance, but continue existing by themselves." This being the case, some theologians in the seventeenth and eighteenth centuries, beginning with Descartes, as E. Mainguet, Drouin, and Vitasse, displayed but little theological penetration when they asserted that the Eucharistic appearances were optical illusions, phantasmagoria, and make-believe accidents, ascribing to Divine omnipotence an immediate influence upon the five senses, whereby a mere subjective impression was to be credited to the accidents of bread and wine. It was, however, Descartes (d. 1650) who, by discarding the necessity of corporeal substance in its actual extension and recognizes only modal accidents metaphysically united to their substance, it is clear, according to his theory, that together with the conversion of the substance of bread and wine, the accidents must also be converted and thereby made to disappear. The Church, however, has always contended that in that form and motion of a body. Those accidents were designated abstract, whose objective reality was adequately distinct from the reality of their substance, in such a way that no intrinsic repugnance was involved in their separability, e.g., the body and the soul. Hence the Church taught (Metaphys., VI, 3rd ed. of Bekker, p. 1029, a. 13), that quantity was not a corporeal substance, but only a phenomenon of substance. Modern philosophy, on the other hand, has endeavored since the time of John Locke, to reject altogether from the realm of ideas the concept of substance as something imaginary, and to rest satisfied with qualities abstract as the excitants of sensation, a view of the material world which the so-called psychology of association and actuality is trying to carry out in its various details. The Catholic Church does not feel called upon to follow up the ephemeral vagaries of these new philosophical systems, but bases her doctrine on the everlasting philosophy of sound reason, which rightly and constantly points to the characteristics qualities (colour, form, size, etc.). Though the "thing in itself" may ever remain imperceptible to the senses and therefore be designated in the language of Kant as a noumenon, or in the language of Spencer, the Unknowable, yet we cannot escape the necessity of seeking beneath the appearances the thing which has no mode of sensible existence, and beneath the form that which has form, i.e., the substratum or subject which sustains the phenomena. The older philosophy designated the appearances by the name of accidents, the subject of the appearances, by that of substance. It matters little what the terms are, provided the things signified by them are rightly understood. What is particularly important regarding material substance and its accidental qualities is the necessity of proceeding cautiously in this discussion, since in the domain of natural philosophy the greatest uncertainty reigns even at the present day concerning the nature of matter, one system pulling down what another has reared, as is proved in the latest theories of atomism and energy, of ions and electrons.

The old theology tried with St. Thomas Aquinas (III, Q. lxxvii) to prove the possibility of abstract accidents on the principles of the Aristotelian-Scholastic hylo-morphism, i.e., the system which teaches that the essential constitution of bodies consists in the substantial union of materia prima and forma substantialis. Some theologians of to-day would seek to come to an understanding with modern science, which bases all natural processes upon the very fruitful theory of energy, by trying with Leibniz to explain the Eucharistic accidentia sine subiecto according to the dynamism of natural philosophy. Assuming, according to this system, a real distinction between form and its manifestations, between energy and its effects, it may be concluded that under the accidents of the Eucharist there is the energy (substance) necessary for the essence of bread is withdrawn by virtue of conversion, while the effects of energy (accidents) in a miraculous manner continue. For the rest it may be said, that it is far from the Church's intention to restrict the Catholic's investigation regarding the doctrine of the Blessed Sacrament to any particular view of natural philosophy or even to require him to establish its truth on the principles of medieval physics; all that the Church demands is, that those theories of material substances be rejected which not only contradict the teaching of the Church, but also are repugnant to experience and sound reason, as Panteism, Hylozoism, Monism, Absolute Idealism, Cartesianism, etc.

(b) The second problem arises from the Totality of
Presence, which means that Christ in His entirety is present in the whole of the Host and in each smallest part thereof, as the spiritual soul is present in the human body (see above, (2)). The difficulty reaches its climax when we consider that there is no question here of the Soul or the Divinity of Christ, but of His Body, which, with its head, trunk, and members, has assumed a mode of existence spiritual and independent of space and time, a mode of existence in which neither experience nor any system of philosophy can have the least inkling. That the idea of conversion of corporeal matter into a spirit can in no way be entertained, is clear from the material substance of the Eucharistic Body itself. Even the above-mentioned separability of quantity from substance gives us no clue to the solution, since according to the best-founded opinions not only the substance of Christ’s Body, but by His own wise arrangement, its corporeal quantity, i.e. its full size, with its complete organization of integral members and limbs, is present within the diminutive limits of the Host and in each portion thereof. Later theologians (as Rossignol, Legrand) resorted to the unseemly explanation, according to which, as it is possible in dimensions of a certain and measurable sort of miniature body; while others (as Oswald, Fernandez, Casajoana) assumed with no better sense of fitness the mutual compenetration of the members of Christ’s Body to within the narrow compass of the point of a pin. The vagaries of the Cartesians, however, went beyond all bounds. Descartes had already, in a letter to P. Mesland (ed. Emery, Paris, 1811) explained that Christ’s Body is Eucharistic with His Heavenly Body was preserved by the identity of His Soul, which animated all the Eucharistic Bodies. On this basis, the geometrical Varignon suggested a true multiplication of the Eucharistic Bodies upon earth, which were supposed to be most faithful, though greatly reduced, miniature copies of the prototype, the Heavenly Body of Christ. Nor does the modern theory of n-dimensions throw any light upon the subject; for the Body of Christ is not invisible or impalpable to us because it occupies the fourth dimension, but because it transcends and is wholly independent of space. Such a mode of existence, it is clear, does not come within the scope of physics and mechanics, but belongs to a higher supernatural order. It is, perhaps, therefore, that there is no contradiction between these two modes of presence important, inasmuch as in the Eucharist both kinds are found in combination. For, in the first place, there is verified a continuous definitive multilocation, called also replication, which consists in this, that the Body of Christ is totally present in each part of the continuous and as yet incorporeal Host and actually present throughout the Host, i.e., as the human soul is present in the body. And precisely this latter analogy from nature gives us an insight into the possibility of the Eucharistic miracle. For if, as has been seen above, Divine omnipotence can in a supernatural manner impart to a body such a spiritual, unextended, spatially unreinscripted mode of presence, which is natural to the soul as regards the human body, one may well surmise the possibility of Christ’s Eucharistic Body being present in its entirety in the whole Host, and whole and entire in each part thereof.

There is, moreover, the discontinuous multilocation, whereby Christ is present not only in one Host, but in numberless separate Hosts, whether in the eucharist or even in the Host of the altar and of the subseveral Hosts. The intrinsic possibility of discontinuous multilocation is to be based upon the non-repugnance of continuous multilocation. For the chief difficulty of the latter appears to be that the same Christ is present in two different parts, A and B, of the continuous Host, it being immautural whether we consider the distant parts A and B joined by the continuous line AB or not. The marveld does not substantially increase, if by reason of the breaking of the Host, the two parts A and B are now completely separated from each other. Nor does it matter how great the distance between the parts may be. Whether or not the fragments of a Host are distant one inch or a thousand miles from one another is altogether immaterial in this consideration; one need not wonder, then, if Catholics adore their Eucharistic Lord at one and the same time in New
York, London, and Paris. Finally, mention must be made of mixed multilocatio, since Christ with His natural dimensions reigns in heaven, whence he does not depart, and at the same time dwells with His Sacramental Presence in numberless places throughout the world. This third case would be in perfect accordance with the two foregoing, were we per impossibile permitted to imagine that Christ were present under the outward appearances of bread exactly as He is in heaven and that He had relinquished His natural mode of existence. This, however, would be but one more marvel of God's omnipotence. Hence no contradiction is noticeable in the fact, that Christ retains His natural dimensional relations in heaven and at the same time takes up His abode upon the altars of earth.

There is, furthermore, a fourth kind of multilocatio, which would not be possible in the Eucharist, but would be, if Christ's Body were present in its natural mode of existence both in heaven and on earth. Such a miracle might be assumed to have occurred in the conversion of St. Paul before the gates of Damasen, when Christ in person said to him: "Saul, Saul, why persecutest thou me?" So, too, the biblical multilocations, prophetic and hagiographical, as, e.g., in the case of St. Alphonsus Liguori, cannot be arbitrarily cast aside as untrustworthy. The Thomists and some later theologians, it is true, reject this kind of multilocatio as intrinsically impossible and declare: biolocation to be nothing more than an "apparition" without corporeal presence. But then it is only this latter role of the apparition to deny its possibility might reflect unfavourably upon the Eucharistic multilocatio itself. If there were question of the vagaries of many Nominalists, as, e.g., that a bilocated person could be living in Paris and at the same time dying in London, hating in Paris and at the same time loving in London, the impossibility would be as plain as day, since an individual, regard it which way it will, cannot be in more than one place at the same moment. The case assumes a different aspect, when wholly external contrary propositions, relating to position in space, are used in reference to the bilocated individual. In such a bilocation, which leaves the principle of contradiction intact, it would be hard to discover an inconsistency.

On the foregoing matter see WILDY, Explanatio mirabilissimae divinae potentiae in Eucharistia Sacrament oriatur (Bonn, 1844); LENZ, Die Lehre vom Eucharistischen Anstehenden (in Opera inedita, etc. vol. VI, 149 sqq.); BLUMER, De mente Ecclesiae circa accidentia Eucharistiae (Riga, 1714); SALLER, Historia scholastica de sacratis locis sacris locorum (Leipzig, 1714); LORAND, De Lege sacra fidei Romana (Paris, 1819); XVII sqq.; JOHN RICKER, General Metaphysics (New York, 1880), 267 sqq.; BAXAG, De Dynamismo dans sa relation a l'Eucharistie (Paris, 1819); DECHAMPS, Vita abdonndabitur speciebus velata (Rome, 1728); Zeit- schrift für kath. Theologie (Innsbruck, 1894), pp. 105 sqq. (1903), pp. 423 sqq.; DUBOST, De Lehre von der ortslichen Gegenwart Christi (Vienna, 1893); SCHIRMER, Der Mystereon des Christentums (Freiburg, 1898); §§ 69 sqq.; POIRIE, Dogmatik (3rd ed., Paderborn, 1909), §§ 217-73.

II. THE BLESSED EUCHARIST AS A SACRAMENT.—Since Christ is present in the appearances of bread and wine in a sacramental way, the Blessed Eucharist is unquestionably a sacrament of the Church. Indeed, in the Eucharist the definition of a Christian sacrament as "an outward sign of an inward grace instituted by Christ" is verified. The investigation into the precise nature of the Blessed Sacrament of the Altar is beset with a number of difficulties. Its essence certainly does not consist in the Consecration or the Communion, the former being merely the sacrificial action, the latter the reception of the sacrament, and not the sacrament itself. The question may eventually be reduced to this, whether or not the sacramentality is to be sought for in the Eucharistic species, or in the Body and Blood of Christ hidden beneath them. The majority of theologians rightly respond to the query by saying, that neither the species themselves nor the Body and Blood of Christ by themselves, but the union of both factors constitute the moral whole of the Sacrament of the Altar. The species undoubtedly belong to the essence of the sacrament, since it is by means of them, and not by means of the invisible Body of Christ, that the Eucharist possesses the outward sign of the sacrament. Equally certain is it, that the Body and the Blood of Christ belong to the concept of the essence, because it is not the mere unsubstantial appearances which are given for the food of our souls, but Christ concealed beneath the appearances. The twofold number of the Eucharistic elements of bread and wine does not interfere with the unity of the sacrament; for the idea of refection embraces both eating and drinking, nor do our meals in consequence doubt their number. In the doctrine of the Holy Sacrament of the Mass (see Mass), there is a question of even a higher relation, in that the separated species of bread and wine also represent the mystical separation of Christ's Body and Blood or the unbloody Sacrifice of the Eucharistic Lamb. The Sacrament of the Altar may be regarded under the same aspects as the other sacraments, because every rite, in which the Eucharist is a permanent sacrament [see above I. (4)]. Every sacrament may be considered either in itself or with reference to the persons whom it concerns. Passing over the Institution, which was discussed above in connexion with the words of Institution, the only essentially important points remaining are the presence of the Blood of Christ and the grace (effects of Communion), to which may be added the necessity of Communion for salvation. In regard to the persons concerned, we distinguish between the minister of the Eucharist and its recipient or subject.

(1) The Matter or Eucharistic Elements.—There are two Eucharistic elements, bread and wine, which constitute the remote matter of the Sacrament of the Altar. The fact, however, that one or other than the Eucharistic appearances under which the Body and Blood of Christ are truly present.

(a) The first element is wheaten bread (panis triticius), without which the "confection of the Sacrament does not take place" (Missale Romanum: De defectibus, §3). Being true bread, the Host must be baked, with pure wheaten flour, and not artificially prepared. The bread required is that formed of wheaten flour, not every kind of flour is allowed for validity, such, e.g., as is ground from rye, oats, barley, Indian corn or maize, though these are all botanically classified as grain (frumentum). On the other hand, the different varieties of wheat (as spelt, amel-corn, etc.) are valid, inasmuch as they can be proved botanically to be genuine wheat. The new duty of wheaten bread is as immediately derived from the words of Institution: "The Lord took bread" (τὸ ἄρτον), in connexion with which it may be remarked, that in Scripture bread (ἄρτος), without any qualifying addition, always signifies wheaten bread. No doubt, too, Christ adhered unconditionally to the Jewish custom of using only unleavened bread in his meals. The unleavened bread is Leavened bread (fermentum, Νήσιον) is meant such wheat bread as requires leaven or yeast in its preparation and baking, while unleavened bread (σμήνη, Νήσιον) is formed from a mixture of wheaten flour and water, which has been kneaded to dough and then baked. After the Greek
Patriarch Michael Cerularius of Constantinople had sought in 1053 to palliate the renewed rupture with Rome by means of the controversy concerning unleavened bread, the two Churches, in the Decree of Union at Florence, in 1439, came to the unanimous dogmatic decision, that the distinction between leavened and unleavened bread did not interfere with the consecration of the sacrament, though reasons based upon the Church’s discipline and practice, the Latins were obliged to retain unleavened bread, while the Greeks still held on to the use of leavened (cf. Denzinger, Enchirid., Freiburg, 1908, no. 692). Since the Schismatics had before the Council of Florence entertained doubts as to the validity of the Latin custom, a brief, though not sufficient, use of unleavened bread will not be out of place here. Pope Innocent Eleven (1054) issued a protest against Michael Cerularius (cf. Migne, P. L., CXLI, 775), in which he referred to the Scriptural fact, that according to the three Synoptics the Last Supper was celebrated “on the first day of theazymes” and so the custom of the Western Church received its solemn sanction from the example of Christ Himself. The Jews, moreover, were accustomed even the day before the fourteenth of Nisan to get rid of all the leaven which chance to be in their dwellings, that so they might from that time on partake exclusively of the so-called mazoth as bread. As regards tradition, it is not for us to settle the dispute of learned authorities, as to whether or not in the first six or eight centuries the Latins also celebrated Mass with unleavened bread (benedictio without leaven, Kraus) or have observed the present custom ever since the time of the Apostles (Mabillon, Probst). Against the Greeks it suffices to call attention to the historical fact that in the Orient the Maronites and Armenians have used unleavened bread from time immemorial, and that according to Origen (in Matt., XII, n. 6) the people of his day ate unleavened bread. Before this rule, made use of leavened bread in their Liturgy. Besides, there is considerable force in the theological argument that the fermenting process with yeast and other leaven, does not affect the substance of the bread, but merely its quality. The reasons of congruity advanced by the Greeks in behalf of leavened bread, which would have us consider it as a beautiful symbol of the Lord’s union of Flesh and Blood, will be at least as acceptable, if not more, than the representation of the savour of this heavenly Food, will be most willingly accepted, provided only that due consideration be given to the grounds of propriety set forth by the Latins with St. Thomas Aquinas (III, Q. lxxiv, a. 4) namely, the example of Christ, the aptitude of unleavened bread to be regarded as a symbol of the purity of His Sacred Body, free from all corruption (as), and finally the instruction of St. Paul (I Cor., v, 8) to keep the Pasch “not with the leaven of malice and wickedness, but with the unleavened bread of sincerity and truth”.

(b) The second Eucharistic element required is wine of the grape (vinum de vite). Hence are excluded, not only the juices extracted and prepared from fruits (such as the so-called artificial wines, even if their chemical constitution is identical with the genuine juice of the grape. The necessity of wine of the grape is not so much the result of the authoritative decision of the Church, as it is presupposed by her (Council of Trent, Sess. XXII, cap. Iv), and is based upon the example of the ancient Synods, whose expressly professed purpose was to consecrate the natural wine of grapes into His Blood. This is deduced partly from the rite of the Passover, which required the head of the family to pass around the “cup of benediction” (calix benedictionis) containing the wine of grapes, partly, and especially, from the express declaration of Christ, that henceforth He would not drink of the “fruit of the vine” (gen- men vitis). The Catholic Church is aware of no other tradition and in this respect she has ever been one with the Greeks. The ancient Hydroparastatae, or Aquarians, who used water instead of wine, were heretics in her eyes. The counter-argument of Ad. Harnack (“Texte und Untersuchungen”, new series, VII, 2 (1891), 115 sqq.), that the most ancient of Churches was indifferent as to the use of wine, and more concerned with the action of eating and drinking than with the use of the wine, is not convincing if one considers that we have no knowledge as to whether we are in view not only of the earliest literature on the subject (the Didache, Ignatius, Justin, Irenaeus, Clement of Alexandria, Origen, Hippolytus, Tertullian, and Cyprian), but also of non-Catholic and apocryphal writings, which bear testimony to the use of bread and wine as the only and necessary elements of the Blessed Sacrament. On the other hand, a very ancient and unbroken practice of doing to with the validity of the sacrament, prescribes that a little water be added to the wine before the Consecration (Decr. pro Armenis: aqua modicissima), a practice, whose legitimacy the Council of Trent (Sess. XXII, can. ix) established under pain of anathema. The rite of this law of the Church may be traced to the ancient custom of the Romans and Jews, who mixed water with the strong southern wines (see Prov., ix, 2), to the expression of calix mazoth found in Justin (Apol., I, lxv), Irenaeus (Adv. haer., v, ii, 3), and Cyprian (Ep. Lxiii, ad Caecil., n. 13 sq.), and especially to the deep symbolic meaning contained in the mingling, insuch manner as are represented the flowing of blood and water from the side of the Crucified Saviour and the intimate union of the faithful with Christ (cf. Council of Trent, Sess. XXII, cap. vii).

In this connexion, see Giese, Streitfrage über den Gebrauch der Azymen (Münster, 1852); FINK: Die Abendmahlsbeilteile bei Justin in Kirchenansch. Abhandlungen und Untersuchungen (Paderborn, 1897), I, 278 sqq.; SCHRIEBER, Die Elemente der Eucharistie in den ersten drei Jahrhunderten (Mainz, 1903).

(2) The Sacramental Form or the Words of Consecration.—In proceeding to verify the form, which is always made up of words, we may start from the inductive fact, that Christ did not consecrate by the mere fiat of His omnipotence, which found no expression in articulate utterance, but by pronouncing the words of Institution: “This is my body . . . this is my blood”, and that by the addition: “Do this for a commemoration of Me.” Do this for a commemoration of Me! This is the holy day dedicated to follow His example. Were the words of Institution a mere declarative utterance of the conversion, which might have taken place in the “benediction” unannounced and articulatedly unexpressed, the Apostles and their successors would, according to Christ’s example and mandate, have been obliged to consecrate in this mute manner also, a consequence which is altogether at variance with the far more probable and true, that Pope Innocent III (De Sacro altaris myst., IV, vi) before his elevation to the pontificate did hold the opinion, which later theologians branded as “temerarious”, that Christ consecrated without words by means of the mere “benediction”. Not many theologians, however, followed him in this regard, among the few bishop, Dr. Peter Pacher, of Brezlau, and Dr. Hoppe, by far the greater number preferring to stand by the unanimous testimony of the Fathers. Meanwhile, Innocent III also insisted most urgently that at least in the case of the celebrating priest, the words of Institution were prescribed as the sacramental form. It was, moreover, not until comparatively recent times that the Church was led to use the famous “Confessio fidei orthodoxa” of Peter Martini (cf. Kimmel, “Monum. fidei eccl. orient.”, Jen, 1850, I, p. 180), that the Schismatical Greek Church adopted the view, according to which the priest does not at all consecrate by virtue of the words of Institution, but only by means of the Epiklesis occurring shortly after them and expressing in the Oriental Liturgies a petition to the Holy Spirit “that the bread and wine may be converted into the Body and Blood of Christ”.

EUCHARIST 585

EUCHARIST

EUCHARIST
The venerable antiquity of the Oriental Epiklesis, its peculiar position in the Canon of the Mass, and its interior spiritual unction, oblige the theologian to determine its dogmatic value and to account for its use. Take, for instance, the Epiklesis of the Ethiopian Liturgy: "We implore and beseech Thee, O Lord, to send forth the Holy Spirit and His Power upon this Bread and Chalice and convert them into the Body and Blood of our Lord Jesus Christ." Since this prayer always follows after the words of Institution have been pronounced, the theological question arises, as to how it may be made to harmonize with the words of Christ, which alone possess the consecratory power. Two explanations have been suggested, which, however, can be merged in one. The first view considers the Epiklesis to be a mere declaration of the fact, that the conversion has already taken place, and that in the conversion just as essential a part is to be attributed to the Holy Spirit as Co-Consecrator as in the allied mystery of the Incarnation. Since, however, because of the brevity of the actual instant of conversion, the part taken by the Holy Spirit could not be expressed, the Epiklesis takes us back in imagination to the process of Consecration as just about to occur. A similar purely psychological retrospective transfer is met with in other portions of the Liturgy, as in the Mass for the Dead, wherein the Church prays for the departed as if they were still upon their bed of agony and could still be rescued from the gates of hell. Thus considered, the Epiklesis refers us back to the Consecration of the Mass, to the centre about which all the significance contained in its words revolves. A second explanation is based, not upon the enacted Consecration, but upon the approaching Communion, inasmuch as the latter, being the effective means of uniting us more closely in the organized body of the Church, brings forth in our hearts the mystical Christ, as is read in the Roman Canon of the Mass, "I receive Thee, for Thou art the true bread," that it may be made for us the body and blood. It was in this purely mystical manner that the Greeks themselves explained the meaning of the Epiklesis at the Council of Florence (Mansi, Collect. Concil. XXXI 106). Yet since much more is contained in the plain words than this true and deep mysticism, it is desirable to combine both explanations into one, and so we may think of the newly consecrated Bread as already in a certain manner, at the very time, as the significant connecting link, placed midway between the Consecration and the Communion in order to emphasize the part taken by the Holy Spirit in the Consecration of bread and wine, and, on the other hand, with the help of the same Holy Spirit to obtain the realization of the true Presence of the Body and Blood of Christ by their fruitful effects on both priest and people.

On the subject-matter of the foregoing section, see Oros, De Invocatione S. Spiritus in Liturgia Graecis et orientalis (Milan, 1731); Horrocks, Die Epiklesis der griechischen und orientalischen Liturgie (Schaffhausen, 1864); Franz, Die eucharistische Wandlung und die Epiklesis (Wurzburg, 1880); Scheeben, Mysterien der Priestertum (1886), pp. 679 ff.; Bunge, Zeitschrift für kathol. Theologie (1896), pp. 743 sqq.; (1897), pp. 51 sqq.; Semeria, La Mensa nella sua storia e nei suoi simboli (Rome, 1904), 153 sqq.

(3) The Effects of the Holy Eucharist.—The doctrine of the Church regarding the effects or the fruits of Holy Communion centres around two ideas: (a) the union with Christ by love and (b) the spiritual repast of the soul. Both ideas are often verified in one and the same effect of the Holy Eucharist.

(a) The first and principal effect of the Holy Eucharist is union with Christ by love (Decr. pro Armeniis: adunatio ad Christum), which union as such does not consist in the sacramental reception of the Host, but in the spiritual and mystical union with Jesus by the theological virtue of love. Christ Himself designated the idea of Communion as a union by love: "Ile that eateth my flesh, and drinketh my
blood, abideth in me, and I in him" (John, vi, 57). St. Cyril of Alexandria (Hom. in Joan., IV, xvii) beautifully represents this mystical union as the fusion of our being into that of the God-man, as "when melted wax is fused with other wax." Since the Sacrament of Love is not satisfied with an increase of habitual love only, but tends especially to fan the flame of actual love to an intense ardour, the Holy Eucharist is specifically distinguished from the other sacraments, and hence it is precisely in this latter effect that Suarez recognizes the so-called "grace of the sacrament," which otherwise is so hard to discern. It stands to reason that the essence of the body and blood of Christ is more connotative of that between soul and body, nor in a hypostatic union of the soul with the Person of the Word, nor finally in a pantheistical delication of the communicant, but simply in a moral but wonderful union with Christ by the bond of the most ardent charity. Hence the chief effect of a worthy Communion is to a certain extent a foretaste of heaven, in fact a foretaste of the love, affection, and pledge of our future union with God by love in the Beatific Vision. He alone can properly estimate the precious boon which Catholics possess in the Holy Eucharist, who knows how to ponder these ideas of Holy Communion to their utmost depth. The immediate result of this union with Christ by love is that we are made sharers in the life of our Redeemer himself, as St. Paul says: "For we, being many, are one bread, one body, all that partake of one bread" (1 Cor., x, 17). And so the Communion of Saints is not merely an ideal union by faith and grace, but an eminently real union, mysteriously constituted, maintained, and guaranteed by partaking in common of one and the same Christ. It is evident that this union with Christ by love is an incense of sanctifying grace in the soul of the worthy communicant. Here let it be remarked at the outset, that the Holy Eucharist does not per se constitute a person in the state of grace as do the sacraments of the dead (baptism and penance), but presupposes such a state. It is, therefore, one of the sacraments of the living. It is impossible for the soul in the state of mortal sin to receive this Heavenly Bread with profit, as it is for a corpse to assimilate food and drink. Hence the Council of Trent (Sess. XIII, can. v), in opposition to Luther and Calvin, purposely defined, that the "chief fruit of the Eucharist does not consist in the forgiveness of sins." For though Christ said of the Chalice: "This is my blood of the new testament, which shall be shed for many unto remission of sins" (Matt. xxvi, 28), He had in view an effect of the sacrifice, not of the sacrament; for He did not say that His Blood would be drunk unto remission of sins, but shed for that purpose. It is for this very reason that St. Paul (1 Cor., xi, 28) demands that rigorous "self-examination," in order to avoid the heinous offence of being guilty of the body and Blood of the Lord by "eating and drinking unworthily," and that the Fathers insist upon nothing so energetically as upon a pure and innocent conscience. In spite of the principles just laid down, the question might be asked, if the Blessed Sacrament could not at times per accidens free the communicant from mortal sin, if he approached the Table of the Lord unconscious of the sinful state of his soul. Such a shield should be held up only under the condition the Eucharist be other than sacramentally efficacious or unfruitful Communion after the restoration of the soul's proper moral condition has been effected, the Eucharist being different in this respect from the sacraments which impart a character upon the soul (baptism, confirmation, and Holy orders). Together with the increase of sanctifying grace there is associated another effect, namely, a certain spiritual relish or delight of soul (delectatio spiritualis). Just as food and drink delight and refresh the heart of man, so does this "Heavenly Bread containing within itself all sweetness" produce in the soul of the devout communicant an ineffable bliss, which, however, is not to be confounded with an emotional joy of the soul or with sensible sweetness. Although both may occur as the result of a special grace, its true nature is manifested in a certain cheery and willing attendance in all that regards this "sacrament of Love," hence a Communion in the state of one's state of life, a disposition of soul which is perfectly compatible with interior desolation and spiritual dryness. A good Communion is recognized less in the transitory sweetness of the emotions than in its lasting practical effects on the conduct of our daily lives.

(c) This, Holy Communion does not per se remit mortal sin, it has nevertheless the third effect of "blotting out venial sin and preserving the soul from mortal sin" (Council of Trent, Sess. XIII, cap. ii). The Holy Eucharist is not merely a food, but a medicine as well. The destruction of venial sin and of all affection to it, is readily understood on the basis of the two central ideas mentioned above. Just as material food banishes the appetites of the body, so in the same way the soul's physical strength from being impaired, so does this food of our souls remove our lesser spiritual ailments and preserve us from spiritual death. As a union based upon love, the Holy Eucharist cleanses with its purifying flame the smallest stains which adhere to the soul, and at the same time serves as an effective prophylactic against grievous sin. It only remains for us to inquire into the clearness of this observance. In this case, the effect of a Communion of the soul is a most powerful influence against relapse into mortal sin is exerted. According to the teaching of the Roman Catechism, it is effected by the allaying of concupiscence, which is the chief source of deadly sin, particularly of impurity. Therefore it is that spiritual writers recommend frequent Communion as the most effective remedy against impurity, since its powerful influence is felt even after other means have proved unavailing (cf. St. Thomas, III, Q. lxix, a. 6). Whether or not the Holy Eucharist is directly conducing to the remission of the temporal punishment due to sin, is disputed by St. Thomas (ibid., a. 5), since the Blessed Sacrament of the Altar was not instituted as a means of satisfaction; it does, however, produce an indirect effect of satisfaction, as it gives the communicant's love and devotion. The case is different as regards the effects of grace in behalf of a third party. The pious custom of the faithful of "offering their Communion" for relations, friends, and the souls departed, is to be considered as possessing unquestionable value, in the first place, because an earnest prayer of petition in the presence of the Spouse of our souls will readily find a hearing, and then, because the fruits of Communion as a means of satisfaction for sin may be applied to a third person, and especially per modum suffragii to the souls in purgatory.

(d) As a last effect we may mention that the Eucharist is the "pledge of our glorious resurrection and eternal happiness" (Council of Trent, Sess. XIII, cap. ii). According to the teaching of the ancient Fathers, as Ignatius (Ephe. 20), Irenaus (Adv. haer., IV, xviii, 4), and Tertullian (De resurr. carn., viii), as well as later patristic writers, insisted so strongly upon our future restoration of the same body and Blood of Christ which we enter upon unending happiness. There can be nothing incongruous or improper in the fact that the body also shares in this effect of Communion, since by its physical contact with the Eucharistic species,
and indirectly with the living Flesh of Christ, it acquires a moral right to its future resurrection, even as the Blessed Mother of God, inasmuch as she was the former abode of the Word made flesh, acquired a moral claim to her own bodily assumption into heaven. The further discussion as to whether some of physical quality (1) (Contenson) or a “sort of genial immortality” (Heimbeiether) is implanted in the body of the communicant, has no sufficient foundation in the teaching of the Fathers and may, therefore, be dismissed without any injury to dogma. 

See Dallin, The Holy Communion, its Philosophy, Theology and Practice (Dublin, 1891, and many later editions); Heimbeiether, Wirkungen der hl. Kommunion (Ratisbon, 1881); Licht, Die entwickelten Wirkungen der Eucharistie (Mainz, 1885); Pape, Die hl. Kommunion und das Heil (Frankfurt am Main, 1895); Raczynski, Die unverniindert lebende Wirkung (Cologne, 1893); 230 sqq.

(1) *The Necessity of the Holy Eucharist for Salvation.*

We distinguish two kinds of necessity, (1) the necessity of means (necessitas medi) and (2) the necessity of precept (necessitas praep). In the first sense a thing or action is necessary because without it the given end cannot be attained; the eye, e.g. is necessary for vision. The second sort of necessity is that which is imposed by the free will of a superior, e.g. the necessity of fasting. As regards Communion a further distinction must be made between infants and adults. It is easy to prove that in the case of infants Holy Communion is not necessary to salvation, either as a means or end. When infants are brought to the use of reason, they are free from the obligation of positive laws; consequently, the only question is whether Communion is, like Baptism, necessary for them as a means of salvation. Now the Council of Trent under pain of anathema, solemnly rejects such a necessity (Sess. XXI, cap. iv.) and declares that the Council of Trent was not based upon the erroneous belief of its necessity to salvation, but upon the circumstances of the times (Sess. XXI, cap. iv.) since according to St. Paul’s teaching (Rom., viii, 1) there is “no condemnation” for those who have been baptized, every child that dies in its baptismal innocence, even without Communion, must go straight to heaven. The only exception is made by the Fathers, with the exception of St. Augustine, who from the universal custom of the Communion of children drew the conclusion of its necessity for salvation (see Communion of Children). On the other hand, Communion is prescribed for adults, not only by the law of the Church, but also by a Divine command (John 6:56, 1st Vespers). Yet the Church recommends it as a means to salvation there is no more evidence than in the case of infants. For such a necessity could be established only on the supposition that Communion per se constituted a person in the state of grace or that this state could not be preserved without Communion. Neither supposition is correct. Not the first, for the simple reason that the necessary element presupposes the state of sanctifying grace; not the second, because in case of necessity such as might arise, e.g., in a long sea-voyage, the Eucharistic graces may be supplied by actual graces. It is only when viewed in this light that we can understand how the primitive Church, without going counter to the Divine command, withheld the Eucharist from infants even on holy days. The reason is, however, a moral necessity on the part of adults to receive Holy Communion, as a means, for instance, of overcoming violent temptation, or as a viaticum for persons in danger of death. Eminent divines, like Suarez, claim that the Eucharist, if not absolutely necessary, is at least a relatively and morally necessary means by which those who have long sustained their spiritual, supernatural life who neglects on principle to approach Holy Communion. This view is supported, not only by the solemn and earnest words of Christ, when He promised the Eucharist, and by the very nature of the sacrament as the spiritual food and medicine of our souls, but also by the fact of the helpfulness and perversity of human nature and by the daily experience of confessors and directors of souls.

Since Christ has left us no definite precept as to the frequency with which He desired us to receive Him in Holy Communion, it belongs to the Church to determine the Divine command more accurately and prescribe what the limits of time shall be for the reception of the sacrament. In the course of centuries the Church’s discipline in this respect has undergone considerable change. Whereas the early Christians were not required to receive Communion more than once a year, the Liturgy, which probably was not celebrated daily in all places, or were in the habit of Communicating privately in their own homes every day of the week, a falling-off in the frequency of Communion is noticeable since the fourth century. Even in his time Pope Fabian (236-250) made it obligatory to approach the Holy Table three times a year, viz. at Christmas, Easter, and Pentecost, and this custom was still prevalent in the sixth century (cf. Synod of Agde (506), c. xviii). Although St. Augustine left daily Communion to the free choice of the individual, his admonition, in force even at the present day, was: Sie vive, ut quotidie possis sumere (De dono persue., c. xiv). “So live, that you may receive every day.” From the tenth to the fourteenth century, Sanctification was almost per se a factor in Communion more frequently during the year was rather rare among the laity and obtained only in cloistered communities. St. Bonaventure reluctantly allowed the lay brothers of his monastery to approach the Holy Table weekly, whereas the rule of the Canons of Chrodegang prescribed this practice. When the Council of Trent (1545-1563) unani- mously recommended a Communion on every Sunday and Holy-days, it was not so much in the light of a solemn dogma, as at the suggestion of the Papal Congregation, and expressed the will of the universal Church in the light of the teaching of-theologians of the later Middle Ages, as Eckhart, Tauler, St. Vincent Ferrer, Savonarola, and later on St. Philip Neri, the Jesuit Order, St. Francis de Sales, and St. Alphonsus Liguori were zealous champions of frequent Communion; whereas the Jansenists, under the leadership of Antoine Arnauld (De la frequente communio, Paris, 1643), strenuously opposed it, because it was considered as a condition for every Communion the “most perfect penitential dispositions and the purest love of God”. This rigorism was condemned by Pope Alexander VIII (7 Dec., 1690); the Council of Trent (Sess. XIII, cap. viii; Sess. XXII, cap. vii) and Innocent XI (12 Feb., 1679) had already emphasized the permissibility of even daily Communion. To root out the last vestiges of rigorism, Pope Pius X issued a decree (21 Dec., 1905) wherein he allows and recommends daily Communion to the entire laity and requires but two conditions for its permissibility, namely, the state of grace and a right and pious intention. Concerning the non-requirement of the twofold species as a means necessary to salvation see Communion of the Entire Species.

See Hofmann, Geschichte der Laterankonzession bis zum Tridentinum (Speyer, 1891); Behringer, Die hl. Kommunion in ihren Wirkungen und ihrer Heilswissenschaft (Ratisbon, 1898); Bastien, De frequenti quotidianae Communion (Rome, 1905).

(5) *The Minister of the Eucharist.*—The Eucharist being a permanent sacrament, and the consecration (consecratio) and reception (reception) of the Host separated from each other by an interval of time, the minister may be and in fact is twofold: (a) the minister of consecration and (b) the minister of administration.
(a) In the early Christian Era the Peupians, Collyridians, and Montanists attributed priestly powers even to women (cf. Epiphanius, De hier., xlix, 79); and in the Middle Ages the Albigenses and Waldenses ascribed the power to consecrate to every layman of upright disposition. Against these errors the Fourth Lateran Council (1215) confirmed the ancient Catholic teaching, that "no one but the priest [sacerdos], regularly ordained according to the keys of the Church, has the power of consecrating this sacrament". Rejecting the hierarchical distinction between the priesthood and the laity, Luther later on declared, in accord with his idea of a "universal priesthood" (cf. I Peter, ii, 5), that every layman was qualified, as the appointed representative of the faithful, to consecrate the Sacrament. Hence, this teaching of Luther, and not only confirmed anew the existence of a "special priesthood" (Sess. XXII, can. i), but authoritatively declared that "Christ ordained the Apostles true priests and commanded them as well as other priests to offer His Blood and Body in the Holy Sacrifice of the Mass" (Sess. XXII, can. ii). By this decision it was also declared that the power of consecrating and that of offering the Holy Sacrifice are identical. Both ideas are mutually reciprocal. To the category of "priests" (sacerdos, episcopos) belong, according to the teaching of the Church, only bishops and priests; deacons, subdeacons, and those in minor orders are excluded from this dignity.

Scripturally considered, the necessity of a special priestly power of consecrating is derived from the fact that Christ did not address the words, "Do this", to the whole mass of the laity, but exclusively to the Apostles and their successors in the priesthood; hence the latter alone can validly consecrate. It is evident that tradition has understood the mandate of Christ in this sense and in no other. We learn from the Acts of the First and Second Councils of Augustine, and others, as well as from the most ancient Liturgies, that it was always the bishops and priests, and they alone, who appeared as the properly constituted celebrants of the Eucharistic Mysteries, and that the deacons merely acted as assistants in these functions, while the faithful participated passively therein. When in the fourth century the abuse crept in allowing the laity to communicate the hands of deacons, the First Council of Nicaea (325) issued a strict prohibition to the effect, that "they who offer the Holy Sacrifice shall not receive the Body of the Lord from the hands of those who have no such power of offering", because such a practice is contrary to "rule and custom". The sect of the Luciferians, which was founded by the Apostle alone has throughout to do, and her regulations regarding the Conununion rite may vary according to the circumstances of the times.

In general it is of Divine right, that the laity should as a rule receive only from the consecrated hand of the priest (cf. Trent, Sess. XIII, cap. viii). The practice of the laity giving themselves Holy Communion was formerly, and is to-day, allowed only in case of necessity. In ancient Christian times it was customary for the faithful to take the Blessed Sacrament to their homes and Communicate privately, a practice (Ter- tullian, Ad uxor., II, v), to which, even as late as the fourth century, St. Basil makes reference (Ep. xcvii, ad Cesariam). Up to the ninth century, it was usual for the priest to place the Sacred Host in the right hand of the recipient, who kissed it and then transferred it to his own mouth; women, from the fourth century onward, were confined in this practice, to the width of their right hand. The Precious Blood was in early times received directly from the Chalice, but in Rome the practice, after the eighth century, was to receive it through a small tube (fistula); at present this is observed only in the pope's Mass. The latter method of drinking the Chalice spread to other localities, in particular to the Cistercian monasteries, where the practice of the laity was partially continued into the eighteenth century.

Whereas the priest is both by Divine and ecclesiastical right the ordinary dispenser (minister ordinarius) of the sacrament, the deacon is by virtue of his order the extraordinary minister (minister extraordinarius), yet he may not administer the sacrament except ex delegatione, i.e. with the private permission of the priest. As already been mentioned above, the deacons were accustomed in the Early Church to take the Blessed Sacrament to those who were absent from Divine service, as well as to present the Chalice to the laity during the celebration of the Sacred Mysteries (cf. Cyprian, De lapsis, nn. 17, 25), and this practice was observed until Communion under both kinds was discontinued. Since the Second Council of Lateran (1139), the deacons were allowed to administer only the Chalice to the laity, and in case of necessity the Sacred Host also, at the bidding of the bishop or priest. After the Communion of the laity under the species of wine had been abolished, the deacon's powers were more and more restricted. According to a decision of the Sacred Congregation of Rites (25 Feb., 1797), still in force, the demand is to administer Holy Communion only in case of necessity and with the approval of his bishop or his pastor. (Cf. Funk, "Der Kommunionritus" in his "Kirchengesichtsh. Abhandlungen und Untersuchungen"), Paderborn, 1897, p. 293 sqq.; see also "Theol. praktische Quartschrift", Linz, 1906, LIX, 95 sqq.)

(1) "The Dispensations of the Eucharist.—The two conditions of objective capacity (capacitas, aptitudo) and subjective worthiness (dignitas) must be carefully distinguished. Only the former is of dogmatic interest, while the latter is treated in moral theology (see Communion and Communion of the Sick). The first requisite of aptitude or capacity is that the recipient be "human"; the Chalice is meant for man only. The second condition is that Christ instituted this Eucharistic food and drink and commanded its reception. This condition excludes not only irrational animals, but angels also; for neither possess human souls, which alone can be nourished by this food unto eternal life. The expression "Bread of Angels" (Ps. Ixxxvii, 25) is a mere metaphor, which indicates that in the Beatific Vision where Iesu is not concealed under the Veil, we shall feed eternally and spiritually feast upon the God-man, this same prospect being held out to those who shall gloriously rise on the Last Day. The second requisite, the immediate deduc- tion from the first, is that the recipient be still in the "state of pilgrimage" to the next life (status via- toris), since it is only in the present life that man can validly Communicate. Exaggerating the Eucharist's necessity as a means to salvation, Rosmini advanced the untenable opinion that at the moment of death
this heavenly food is supplied in the next world to children who had just departed this life, and that Christ could have given Himself in Holy Communion to the holy souls in Limbo, in order "to render them apt for the vision of God". This evidently impossible view, together with other propositions of Rosmini, was condemned in 1867 by Pope Pius IX. In the fourth century the Symbol of Hippo (393) forbids the practice of giving Holy Communion to the dead as a gross abuse, and assigned as a reason, that "corpses were no longer capable of eating". Later synods, as those of Auxerre (578) and the Trullan (692), took very energetic measures to put a stop to a custom so difficult to eradicate. The third requisite, finally, is that the "very pure and incorruptible bodies" of the banqueters could always truly be present. It was the understanding that the Eucharistic body is "spiritually present", i.e., in the "spiritual door" to the means of grace contained in the Church. A Jew or Mohammedan might, indeed, materially receive the Sacred Host, but there could be no question in this case of a sacramental reception, even though by a perfect act of contrition or of the pure love of God he had put himself in the state of sanctifying grace. Hence in the Early Church the catechumens were strictly excluded from the Eucharist. (Cf. Schanz, Die Lehre von den hl. Sakramenten der Kirche, Freiburg, 1893, sect. 35.)

The literature on the subject of the Eucharist is very extensive, hence only the most important works are cited here. The special literature on the subject has been indicated in connection with the various subdivisions of this article. Concerning the Eucharist in general, see: The Schoolmen are: Albert the Great, De SS. Corpore Domini sacramentis (Ratisbon, 1853); St. Thomas Aquinas, Summa theol., III, Q. 76, De sacramento; Opusc. xvii. Maria, vol. III, pp. 160 sqq. (Città di Castello, 1886). See also the commentaries on St. Thomas, e.g., Billeeart, Summa S. Thomas (ed. Lequette), VI, 894 sqq. The following is valuable even at the present day: BELLARMIN, Controversia de sacra- mentis, lib. viii (Venice, 1673). VIGOUROUX, Les diverses interprétations de l'Éucharistie à travers les âges, Paris, 1870; R. DUCHESNE, Les monuments illustrés Eucharistiae sacramenti, ed. Fournais (Paris, 1892), III and IV; DUPERRON, Traité du sacrément de l'Eucharistie (Paris, 1903). M. R. de S. J., The Eucharist. Sakramente der katholischen Kirche (Freiburg, 1902). I. SCHREIBER-ATZBERGER, Handbuch der katholischen Dogmatik (Freiburg, 1905); GRABENBECK, Lehrbuch der Dogmatik (Paderborn, 1908). Much material may be had from the following: CARROL AND LECLAIRE, Monu- ments de la foi catholique, vol. xvi, 1905; COLOMB, Dictionnaire de théologie catholique (Paris, 1903); SCHMID in Kirchenlex., s. v. Altar-sacrament.

J. POHLE.

**Eucharist, Early Symbols of the.** Among the symbols employed by the Christians of the first ages in decoration and art is the "banquet scene", and it seems as if the Eucharist held a place of the first importance. The monuments of greatest occurrence on which these symbols are depicted exist, principally, in the subter- ranean cemeteries of early Christian Rome, better known as the Roman catacombs (see CATACOMBS, ROMAN; CEMETERY, Early Roman Christian Ceme- teries, this vol.), but many of these were reopened in the latter half of the nineteenth century or in the latter part of the year 1903. In more or less obscure allusions in early Christian literature. In this way Catholic theology now pos- seeses supplementary information of appreciable value bearing on the belief in, and the manner of celebrating, the Eucharist in the sub-Apostolic age. According to Wilpert, an expert scholar in this field of Christian archaeology, the symbolic representations of the catacombs which refer to the Eucharist form three groups, inspired by three of Christ’s miracles, namely the miraculous multiplication of the loaves and fishes, the banquet of the seven Disciples by the Sea of Galilee after the Resurrection, and the miracle of Cana. It is to the first two of these miracles, probably, that we owe the famous fish symbol, which briefly summed up the chief articles of the Christian belief (see Fish, Symbolism of the). The earliest possible symbolic representations of the multiplication of the loaves and fishes; the banquet of the seven Disciples appears only in one (second-century) catacomb scene; the miracle of Cana in two, one of which is of the early third, the other of the fourth, century.

**I. THE MIRACLE OF THE MULTIPLICATION.**—On two occasions Christ fed with loaves and fishes miraculously multiplied, a large concourse of people who had followed Him into the desert. On the first of these occasions, recorded by all four Evangelists, five loaves and two fishes supplied the needs of five thousand people, while on the second occasion, mentioned only by St. Matthew (xv, 32 sq.), seven loaves and a few fishes were given to a still larger company. Whether the loaves were eaten, the number of which the presence at the miracle of the superabundance is conveyed by the symbols of fragments of bread in the hands of the master and of the rame of the table, the banquet scene. The number of baskets represented is not always historical, this being regarded as a matter of indifference so far as the symbol was concerned; six Eucharistic frescoes show each seven baskets, but in three others the number is two, eight, and twelve, respectively. The number of discourses in all symbols of this Eucharist is invariably seven, a peculiarity which Wilpert regards as due to the early Christian fondness for the symbol-ism of numbers. According to St. Augustine (Tract. cxxxii, in Joan. i.), the number seven represented the totality of the Christian world. The most ancient representations of the Eucharist in the catacombs is the fresco found as the altarpiece of the Capella Greca, in the cemetery of St. Pris- eilla. Wilpert attributes this, with other paintings of that chapel, to the early part of the second century, and his opinion is generally accepted. The scene represents seven persons at table, reclining on a semi-circular dais, and is depicted on the wall above the apse of this little underground chapel, consequently in a more proximate position to the seat of the celebrant, as the high altar. One of the banqueters is a woman. The place of honour, to the right (in cornu dextro), is occupied by the “president of the Brethren” (described about 150–155 by Justin Martyr in his account of the Christian worship), i.e., the bishop, or a priest deputed in his place for the occasion (Apol., i, lvii). The act of distribution is represented as “breaking bread”; hence the name “Eucharistia” (ἡ ἑυχαριστία τοῦ ἔργου), appropriately given to the fresco by its discoverer. It is to be noted that these words are frequently used in the earliest non-inspired Christian literature as a synonym for the Eucharist (for the texts see Wilpert, Fractio Panis, Freiburg, 1892). The moment represented, therefore, is that immediately before the Communion, when the celebrant, then
as now, divided the Sacred Host. And, as though to exclude all doubt as to the character of his subject, the artist added a detail found in no other representation of the Eucharist; in front of the celebrant he placed a two-handled cup, evidently the chalice (calix ministerialis) of the second century. Such is the earliest representation in Christian art of the act of offering of the Mass. A recent writer regards the scene as representing the celebration of the Eucharist in connexion with the funeral agape on the anniversary of some person interred in the chapel. The guests partaking of the banquet, in this view, represent the relations of the deceased assisting at an anniversary Mass (sacramentum pro dormitante) for the repose of his soul (Wieland, Mensa und Confessio, p. 139). In addition to these unique details showing a real celebration of the Mass in the early second century, the author of this fresco depicted, side by side with the reality, a symbol of the Eucharist. In the centre of the table are two plates, one containing five loaves, the other two fishes, while on the right and left of the divan seven baskets of bread are distributed symmetrically.

After the "Fructio Panis" the most remarkable frescoes in which the miraculous multiplication is employed as a symbol of the Eucharist are two in the crypt of Lucina, the most ancient part of the catacomb of St. Callistus. Each consists of a fish and a basket of bread on a green field. At first view it would seem as though the fishes were represented each carrying a basket of bread, in the act of swimming. A closer examination of the frescoes made by Wilpert, however, has shown that the baskets are placed very close to, but not on, the fishes, and that the supposed blue surface is really green. The subject, therefore, is the miraculous multiplication, the green surface representing a field. As a symbol these pictures are particularly striking from the introduction of two glasses, containing a red substance, into the baskets. Evidently the artist in this detail had in mind the Eucharistic matter of wine. Consequently, the frescoes as a whole conveyed to an onlooker in the second century a meaning somewhat as follows: the miraculously multiplied bread, together with wine, formed the matter of the Eucharist, which, in turn, by a still greater miracle, became the substance of the Body and Blood of the Divine Jew, Jesus Christ. The various Eucharistic banquet scenes of the catacombs appropriately symbolized the reception of Holy Communion. In one early instance the artist portrayed, besides a representation of this character, a new symbol having special reference to the Consecration. This consists of a scene showing two persons beside a tripod, on which are placed a loaf and fish. One of the figures is clad in the lama and pontifical vestments, in early Christian art to persons of sacred character, while the other, at the opposite side of the tripod, stands in the attitude of an orans. The sacred personage holds his hands extended over the loaf and the fish, somewhat after the manner of a priest holding his hands over the chalice before the Consecration. Wilpert's interpretation of the scene is that the figure with extended hands represents Christ performing the miracle of the multiplication, which act, in the intention of the artist, is symbolic of the Consecration. The orans, symbols of the deceased, who through the reception of Holy Communion, has obtained eternal happiness: "He that eateth this bread shall live forever" (St. John, vi, 59). The representation described forms one of a series comprising three subjects, all relating to the Eucharist. The second of the series is the usual banquet of seven persons, symbolizing Communion, while the third depicts Abraham and Isaac in the orans attitude. In the miraculous multiplicity, Isaac was regarded as a figure of Christ, whence the inference that this representation of Abraham's sacrifice was figurative of the Sacrifice of the Cross.

II. THE BANQUET OF THE SEVEN DISCIPLES.—The repast of the seven Disciples by the Sea of Galilee is recorded by the Evangelist St. John (xxxi, 9 sqq.). St. Peter and his fellow-fishermen, seven altogether, after taking the miraculous draught of fishes, drew their boats on shore, where they found "hot coals
fishes, while baskets of bread are distributed at the
sides. In one instance, however, the guests are omitted, and only a tripod with loaves and fishes and
the baskets of bread are depicted. This fresco, which
occupies a lunette of the Sacrament Chapel containing
the symbol of the seven Disciples, Wilpert regards as
a sort of compendium of the two symbols of the
Consecration and the Communion described above.
In the third century a new mode of representing the
favourite Eucharistic symbol was adopted in a num-
ber of frescoes. This consisted in a scene showing
Christ performing the miracle of multiplication by
touching with a rod one of several baskets of bread
placed before Him. In the loaves, also, incisions,
seem to indicate the previous cutting of the bread.
Paintings of this class were symbols of the Consecra-
tion. One of them (chapter III in the catacomb of
St. Domitilla) is of more than ordinary interest.
Unfortunately it has suffered serious injury at the hands
of collectors. By the aid of a design made for Bosio,
Wilpert has been able to reproduce the picture. It
consists of three scenes. In the first, Christ has per-
fused the miracle of multiplication with a rod. To
the right of this He is again represented, His right
hand raised in the oratorical gesture, while within the
folds of His pallium five loaves marked with a cross
are visible. Balancing this figure on the left is the
Samaritan woman drawing water from the well of
Jacob. According to the general plan of the frescoes,
early in the third century, some relationship was here
intended between the three persons. Ordinarily the
Samaritan woman was a symbol of the refrigerium
(refreshment) petitioned for in the Memento for the
Dead at Mass. In the present instance Wilpert re-
